At the beginning of the Civil War, infantry regiments were authorized to have bands of 26 musicians (18 for cavalry regiments), but in 1862 in the intersets of economy regimental bands were abolished and brigade bands of 16 musicians authorized. Enforcing regulations in so large an army was difficult, and some regimental, militia and post bands continued to serve until the end of the war.

10. Boston Brass Band, with (from right to left), four soprano saxhorns, four alto (or tenor) saxhorns, cymbals, drums, three over-the-shoulder trombones and three bass saxhorns: engraving from 'Gleason's Pictorial Drawing Room Companion' (9 August 1851)

Ex.5 Gift Polka from Dodworth's *Brass Band School* (1853)

The band of the 107th US Colored Infantry (fig.11), typical in size and instrumentation of the many brigade bands in service, was a regimental unit.

Civilian brass bands proliferated after the Civil War. At a time when there were few orchestras, a band was seen as a status symbol: 'it is a fact not to be denied that the existence of a good brass band in any town or community is at once an indication of enterprise among its people, and an evidence that a certain spirit of taste and refinement pervades the masses' (Patton, D(i)1875). Some Indian brass bands were formed in British Columbia in the 1880s and 90s. In the USA, however, except for Salvation Army bands, the brass band period gradually drew to a close with the coming of Patrick S. Gilmore who, with the standards and instrumentation set by his mixed wind band, inspired other bands throughout the country to reintroduce the woodwind instruments (see §III, 4, above).

In 1982 Perry Watson spearheaded a movement to introduce British brass bands into North America. The North American Brass Band Association (NABBA) was formed in 1983 to 'foster, promote, and otherwise encourage the establishment, growth, and development of amateur and professional British-style brass bands throughout the United States and Canada'. The NABBA holds yearly graded competitions (Youth through advanced Championship level). In 1996 there were more than 70 member bands in the USA and Canada and more than 1400 individual members. The NABBA publishes a journal-newsletter, *Brass Band Bridge*. Some contemporary American composers who have written for the British brass band are James Curnow, Bruce Broughton, Joseph Turrin and Stephen Bulla.

5. Other brass bands. The British brass band idiom is imitated most strongly in those parts of the world, such as Australasia, where British colonization was strong in the 19th century. Many European countries have brass band traditions, and some have cloned the British model. In general, the instrumentation of other European bands is not predictable; they are sometimes less serious in their quest for virtuosity, less motivated by a contesting ethos, and individual bands tend to relate more to their own communities than to a broad national movement as in Britain. This does not, however, mean that these traditions are less robust, or less important in the musical life of their countries. Brass bands in central Europe, particularly Bulgaria, are extremely strong and well organized, and their repertories often expose strong ties with other forms of vernacular music. The brass bands of some Scandinavian countries have a strong tradition. This is especially true in Finland, where the form known as *Torviseitsikko* can be reliably traced to the 1870s. *Torviseitsikko* is, in its classic form, a brass septet made up of three cornets, tenor horn, baritone, euphonium and tuba.

In many countries brass bands have tended to reflect an alchemy of vernacular traditions and aspects of the received art music values imported with colonizing powers. In several Asian, African and Pacific regions instrumental line-ups are often similar to those of British bands, and marches, transcriptions and other music from the Western repertory may be performed. But Western playing styles are not always imitated. Often these bands have developed their own distinctive sound-aesthetic, and some include percussion instruments to provide accompanying rhythmic figurations that owe more to local traditions and customs than to a colonial inheritance. Brass bands are particularly popular in South Asia, though many of these include clarinets and saxophones. Indian bands – sometimes known locally as 'band parties' – are owned and run by entrepreneurs called *māliks*. They

11. Band of the 107th US Colored Infantry at Fort Corcoran, Arlington, Virginia, November 1865

are employed for various functions, particularly weddings, and it has been estimated that there are 500,000–800,000 people in India involved in such bands. Here, as in other parts of the world, the use of Western brass instruments does not obscure more indigenous musical traditions and functions. Repertory in South Asia is almost entirely indigenous, often deriving from film music (*see* INDIA, §VIII, 1(v)).

V. Jazz bands

Each successive style of jazz has produced its own characteristic instrumental formations to suit its musical demands. Hence there is no such thing as a standard jazz band, but rather a historical chain of different combinations with certain classical groupings emerging as paramount. However different their instrumentation, all these groupings have one common principle: the distinction between the rhythm section (consisting of piano, drums, bass and optional guitar or banjo), and the melody section (including not only the brass and reed instruments, but also the vibraphone, electric guitar, etc.). Despite the many changes in instrumentation over the years, and although the capability of 'rhythm' players to improvise full-scale solos has increased, this basic distinction between rhythm and melody sections is still valid. Since about 1935 a distinction has also been made between a 'combo' and a 'band'. A combo is a small formation of up to seven or eight players (though usually no more than five), whereas the term 'band' is generally reserved for larger groups. (For further discussion and illustration, *see* JAZZ.

1. THE NEW ORLEANS OR DIXIELAND BAND. Recent research has discovered many regional variants and corresponding differences of instrumentation in early jazz. Jazz instrumentation was to a large extent dependent on the social circumstances surrounding the performance: violins might be appropriate for the indoor, social occasions of the white or Creole middle classes, but not for outdoor funerals or cane-cutting contests, where black brass bands predominated. By 1917, however, when the first jazz recordings were issued, white New Orleans musicians had settled on a certain standard combination consisting of three melody instruments (trumpet or cornet, clarinet and trombone) and two rhythm instruments (piano and drums). This combination was chosen by the first recorded jazz group, the Original Dixieland Jazz Band; their extraordinary popular success spawned an enormous number of imitators throughout the world, known collectively as 'The Fives'. However, early photo-

graphs and recordings of black New Orleans groups sometimes reveal quite different forces: KING OLIVER's 1923 recordings added a banjo and second cornet to the five-man Dixieland group; Louis Armstrong's *Hot Fives* of 1925 dispensed entirely with drums; and 'Jelly Roll' Morton's widely varying ensembles of the 1920s almost always included a tuba or double bass. Although Morton sometimes called on as many as ten musicians, the polyphonic basis of New Orleans jazz made a small number of melody instruments of differing timbres desirable, and by the time this style was revived in the late 1930s a six-piece combination consisting of trumpet or cornet, clarinet, trombone, piano, drums and double bass had become standard.

2. BIG BAND. From the mid-1920s to about 1950 the jazz orchestra was continually enlarged. It was necessary to accommodate the many emerging soloists in an ensemble with written, or at least fixed, accompaniment. The number of instrumental combinations attempted were many and varied, but by 1928 both DUKE ELLINGTON and FLETCHER HENDERSON in New York had established identical formations consisting of a four-piece rhythm section, three trumpets, two trombones and a multi-instrument reed section of three players, who could double on the clarinet and any member of the saxophone family. Although it had occasionally been used in New Orleans jazz, the saxophone was the most important permanent new addition to the jazz band. It gradually took over the ensemble function of the clarinet, which was reserved for solos or special colouristic effects; by about 1945 the clarinet had become a rarity in big band arrangements and the saxophone the most favoured instrument of younger jazz musicians.

Both the Ellington and Henderson bands clearly divided the melody instruments into brass and reed sections, and this distinction was even more evident in the South-West and Kansas City groups which began to dominate ensemble jazz from the mid-1930s. By 1935 most large jazz bands consisted of 14 players: a four-man rhythm section (with guitar instead of banjo, and double bass instead of the earlier brass or reed bass instruments), a brass section of three trumpets and three trombones, and a four-piece reed section. The instrumental soloists were drawn from the various sections of the band, and some groups regularly featured vocalists. The 14-piece big band has proved remarkably versatile, as is shown, for example, by the wide range of colours produced by the Ellington-Strayhorn groups. During the 1940s, and particularly in STAN KENTON's 'progressive' bands, the numbers were expanded to five trumpets (one a high-note specialist), four trombones and five saxophones. This combination has served as the basis of most big band jazz ever since, as well as the many 'stage bands' found in North American high schools and colleges. Variations include the addition of horns and tuba to Claude Thornhill's band, the use of bass trombone and tuba in Shorty Rogers's groups and, since the advent of electronic amplification, the appearance of flutes in the 'reed' section. The oboe and bassoon, on the other hand, have never been incorporated comfortably into the big band setting; and although string sections appeared regularly in 'sweet' dance bands of the 1930s, their use in big bands is generally regarded by jazz musicians as a concession to popular taste.

3. SWING AND BOP COMBOS. As swing-band arrangements of the late 1930s became more commercialized and stereotyped it became customary for jazz musicians to perform in smaller group settings. These groups were generally drawn from larger bands: there are many recordings of COUNT BASIE's sidemen using his celebrated four-piece rhythm section, and similar Ellington subgroups. BENNY GOODMAN's first chamber ensemble was a trio of piano, clarinet and drums, to which he later added vibraphone, electric guitar and double bass; and Artie Shaw's Gramercy Five sometimes featured a harpsichord instead of a piano. One especially enduring combination was the trio of piano, drums and guitar or double bass explored by NAT 'KING' COLE from 1939; there was also some experimentation with duos, such as the Duke Ellington–Jimmy Blanton partnership in recordings made in 1940.

The bop style developed in the early 1940s from these smaller swing groups; since it was almost entirely an improvised art, there was no need for a large ensemble. Furthermore, the complex rhythmic interaction and harmonic explorations of the players rendered the rhythm guitar obsolete, and it was consequently dropped from the rhythm section, just as the clarinet and trombone largely disappeared from the melody instruments. The classic bop combo consisted of two 'horns' (usually trumpet and tenor or alto saxophone) and a rhythm section of piano, double bass and drums; any instrument might be called on to play solos. Innumerable bop and hard bop groups of the 1940s and 1950s followed this arrangement, and it has become the standard vehicle for jazz instruction at conservatories and universities. Attempts by musicians such as DIZZY GILLESPIE to transfer the bop style to a big band setting were singularly unsuccessful, possibly because a closer rapport between performers is necessary.

4. COOL AND WEST COAST ENSEMBLES. While bop relied on a standardized small group, the cool and West Coast styles of jazz thrived on unusual combinations of instruments, for example the various nonets and 'tentettes' of GERRY MULLIGAN, MILES DAVIS and TEDDY CHARLES, the chamber groups of JIMMY GIUFFRE, and Mulligan's 'pianoless' quartets, which consisted of baritone saxophone, bass, drums, and trumpet or valve trombone. Perhaps the most important 'cool' arranger for jazz band was GIL EVANS, who made full use of symphonic wind instruments such as the piccolo, tuba, bassoon and bass clarinet, and also employed instruments even more unusual to jazz, such as the harp. Evans's and other cool groups produced music of high artistic value, yet their unusual instrumental combinations were seldom adopted by later musicians.

5. FREE JAZZ. Free-jazz musicians of the 1960s were largely content to explore further solo possibilities of familiar jazz instruments. In the 1970s and 1980s, however, they systematically expanded jazz instrumentation in several directions at once to include previously untried variants of conventional instruments (e.g. Don Cherry's 'pocket trumpet'), new inventions or personal adaptations (e.g. Roland Kirk's 'stritch' and 'manzello', both modifications of the saxophone) and a vast number of exotic instruments and noise-makers reminiscent of the novelty effects of the 1920s, ranging from kazoos and harmonicas to slide whistles and steer horns. Many of

these were employed as much for theatrical effect as for their acoustical properties. At the same time, there was a large influx of instruments from non-American (especially African) cultures, signifying the increasing internationalization of this music. The size of the groups ranged widely from intimate duos to Sun Ra's twenty-piece ensembles, and a new sub-genre emerged in the saxophone quartet. As a rule, however, free-jazz musicians distinctly avoided electric instruments and electronic distortion, and by the late 1980s they had returned to variants of more familiar combo formats.

6. FUSION GROUPINGS. New instrumentation was a key feature of the jazz fusion music which arose after 1970, combining elements of jazz and rock. This was apparent in the electronic amplification of the entire ensemble and particularly in the use of electric bass guitar, electric piano or synthesizers, and distortion devices such as wah-wah pedals, fuzz bass and bend bars. Another instance of the influence of rock was the new solo importance accorded to the electric guitar, which supplanted the saxophone to some extent. Additional percussion instruments, especially Latin American instruments such as congas, claves, gourds and berimbaus, were quite frequently added for colouristic effect. The number of players in jazz fusion groups varied widely from the four regular members of WEATHER REPORT to the massed rhythm sections in Miles Davis's groups of the early 1970s, which often called for two electric pianos, two drum kits, electric guitar, electric bass guitar, bass clarinet and much additional percussion to accompany a small number of improvising soloists.

7. SUMMARY. Today all the styles of jazz history are still being avidly cultivated, and with them their characteristic ensembles: the six-piece New Orleans ensemble among amateurs and semi-professionals, the big band at high school and jazz clinics, the bop combo at jazz clubs and concert circuits, and avant-garde groupings in the loft scene and European festivals. The timbral experiments of the 1970s have left a permanent mark on the jazz drum kit and the use of ancillary percussion, and the electric bass guitar and keyboard have replaced their acoustic counterparts in the big band. At the end of the 20th century, although the eclectic and international character of jazz makes the precise constitution of the modern jazz band difficult to define, offshoots of the standard bop combo, divided into two or three melody instruments and rhythm section, are still very much in evidence.

VI. Rock bands

In structural terms, the foremost aim of a rock band's instrumentation is to enable the occupation of four distinct textural layers. These may identified as: the explicit 'beat' layer, the harmonic 'bass', the 'tune' and the harmonic 'filler'. The first of these is the function of the drums or other unpitched percussion; the second is supplied by the bass guitar (or double bass or, very occasionally, a keyboard instrument); the third may be heard through a solo voice or through a melodic instrument such as a solo guitar, a keyboard, saxophone, violin or flute; while the fourth can be the preserve of one or more guitars or keyboards, sometimes supplemented with or substituted by an orchestration such as a horn or string section, or backing voices. Within this list can be found those instruments which dominate the rock ensemble: electric guitar, electric bass guitar, drum kit and keyboards (organ, piano or synthesizers). Occasionally, an unusual instrument (in a rock context) can help to define a band's sound, e.g. flute (Jethro Tull), violin (early King Crimson), or organ and piano combined (The Band).

As particular band formations have become established they have remained open to appropriation by other bands, often with very different stylistic goals. This article discusses the instruments that are played by members of rock bands and which are the basis of their sound in live performance. Once a band enters a recording studio there is limitless potential for adding the instruments or voices of session musicians who for economic or aesthetic reasons may not travel with the band on tour, or specially created sounds which, until the advent of sequencers, could not be recreated on stage. A live performance by a rock band and the creation of a recording of the same music by the same group may be approached as two completely different art forms (*see* POP, §II).

The ways that the early rock and roll bands of the 1950s approached the layering in their instrumentation varied according to the influence of the musical tradition from which each band arose. Thus, Chuck Berry inherited the guitar-dominated line-up of Chicago rhythm and blues (solo voice, one or two amplified guitars, double bass, drums, and occasionally piano), making much use of 'call and response' phrases between his voice and his guitar. Fats Domino's New Orleans-rooted style combined a dominant piano (playing a rhythmically articulated 'filler') with a sizable horn section (tenor and baritone saxophones, trumpet), bass and drums. Bill Haley's band, the Comets, which came from the jive and western swing traditions, consisted of guitars, saxophone, double bass and drums. Although in this period the individual identities of sidemen were not considered to be particularly important, certain instrumentalists (such as Scotty Moore, Elvis Presley's guitarist) played a crucial role in defining the singer's sound.

The skiffle bands of mid-1950s Britain emphasized the role of the guitar at the expense of the piano, partly out of a desire to imitate the 'wild' American rock and rollers, and partly out of a need (for aesthetic as well as economic reasons) for instruments that were both cheap and portable. The line-up of their successor, the 'beat combo' (short for 'combination'; by the 1990s the term was used only derogatively), was formalized in the late 50s by the Shadows as two guitars, electric bass, guitar and drums. The roles of the two guitars were distinct: Bruce Welch played rhythm guitar, largely strumming conventional chord shapes with rhythmic definition, while Hank Marvin played lead, exploiting the instrument's upper register and its ability to sustain sound.

Early rock bands in the 1960s tended to organize their sound either around guitars (e.g. the Rolling Stones and the Beatles) or around keyboards (the Animals), depending on their principal American stylistic models. The difference in technique is crucial to the sound of the band: whereas a keyboard player can perform separable lines simultaneously (fulfilling both 'filler' and 'tune' functions) and many varieties of chord voicings, the guitar's strengths lie in picking patterns, repeatable chord 'shapes' and, following developments in amplification in the mid-60s, in the physical control of feedback by the guitarist as an expressive device. From this period onwards, in styles where the influence of rhythm and blues or soul was prominent, for example in the work of Van Morrison, the keyboard-dominated ensemble was supplemented by two

to six 'horns' (various combinations of trumpets, saxophones and trombones).

In the early music of the Kinks (1965–6), the role of the rhythm guitar dwindled to the point where it simply provided riffs (very short, repeatable melodic ideas which minimally outline the song's harmonies). In the contemporaneous work of the Who the rhythm guitar was dispensed with altogether and Pete Townshend tended to cover both guitar roles, although he did not play many of the florid solos associated with other virtuoso lead guitarists of the day. Indeed, their song *Substitute* (1966) is notable in that the 'guitar solo' was taken by the bass player, John Entwistle. The use of controlled feedback on the guitar enhanced its power to fill out musical space, such that the Who's practice of using a single guitar, bass and drums was developed by the end of the 60s into the so-called 'power trio', defined by bands such as Cream and the Jimi Hendrix Experience, in which one or more of the players also took up the vocal duties. This combination was subsequently employed by the Jam (in the late 1970s) and by Nirvana (in the late 80s), where it connoted a return to the 'no frills' raw essentials of music, allied with an aggressive, confrontational aesthetic. The unavailability of overdubbing facilities in live performance meant that some compromises had to be made: on record, Cream's Eric Clapton would often add a rhythm guitar part in addition to playing lead (hence the differences between the studio and live recordings on the album *Wheels of Fire*, 1969), while Led Zeppelin's bass player John Paul Jones would sometimes move over to the organ in live performance, requiring exceptional power from the drummer John Bonham to cover the lack of the bass layer.

There was a resurgence in the use of the keyboard in rock with the development of PROGRESSIVE ROCK (also in the late 60s), with its stylistic references to European art music, too foreign to the blues-based guitar styles of the time. Keyboard players such as Keith Emerson and Rick Wakeman transplanted the visual spectacle of the guitar virtuosos to the keyboard. A concurrent trend was towards using two lead guitars (e.g. Derek and the Dominos, the Allman Brothers Band, and Wishbone Ash); this has survived as an aspect of 'stadium rock' (Big Country) and also in heavy metal (Saxon).

In the late 70s, a new guitar-based style flourished: PUNK ROCK. Its nihilistic, audience-disdaining stagecraft was an antidote to the lavish spectacle and huge touring forces employed by groups such as Emerson, Lake and Palmer (who were accompanied on tour by three massive trucks, a revolving drum kit and even an entire orchestra of individually microphoned musicians). The second resurgence of the keyboard was due to the new generation of cheap and portable synthesizers and sequencers of the late 1970s, as bands such as the Human League went on stage with everything except the vocals pre-recorded (i.e. sequenced for live playback). Within the next two decades this approach to performance became dominant in the dance music of the nightclub scene.

One aspect of the use of synthesizers and sequencers, particularly since the invention of MIDI, has been the ability to reproduce during live performance a host of sounds originally created in the recording studio. A line-up of keyboard and guitar can be balanced in different ways: equally (early Yes), with the keyboard dominant (Elvis Costello and the Attractions) or with the guitar dominant (early Deep Purple).

The early 1980s tended to be overrun with bands made up entirely of synthesizers and sequencers (e.g. Depeche Mode, Soft Cell and Ultravox). Against this background, a space was left for a new generation of bands who paraded the 'authenticity' of their line-ups to create a sense that their emotional expression was to be trusted. For Bruce Springsteen's seven-piece touring band (including two keyboard players), the song lyrics and Springsteen's emotional intensity were crucial. Bands like U2 or, in the 1990s, the Manic Street Preachers, emphasized the idea that the guitarist is directly, physically in touch with his or her sound-producing source in a way that the synthesizer player is not. A similar desire or perceived need appears to have promoted the occasional return of established artists such as Eric Clapton and Rod Stewart to acoustic-only performances, most famously in MTV's 'unplugged' concert series.

Another line of development, exemplified by British 'indie' bands such as the Smiths in the early 80s and the Inspiral Carpets later in the decade, reinvestigated the classic guitar-led line-ups and used them in new musical contexts. Bands such as the Stone Roses adopted Hendrix-inspired guitar techniques, and guitar-work was prominent in the various waves of BRITPOP in the 1990s (The Verve, Oasis, Suede, etc.). The strong sense of recalling the 1960s has also led to a resurgence of the use of analogue keyboards (Pulp uses a Farfisa organ in its line-up) and even small string sections (Catatonia).

Band (ii) (Ger.). *See* FRET.

Band, the. Canadian rock group. It was led by (James) Robbie Robertson (*b* Toronto, 5 July 1944; guitar); its other members were Levon Helm (*b* Marvell, AR, 26 May 1942; drums), Richard Manuel (*b* Stratford, ON, 3 April 1945; *d* Winter Park, FL, 4 March 1986; keyboards), Rick Danko (*b* Simcoe, ON, 9 Dec 1943; *d* Hurley, NY, 10 Dec 1999; bass guitar, fiddle and mandolin), and Garth Hudson (*b* Eric Hudson; London, ON, 2 Aug 1942; organ, saxophone and euphonium). Except for Hudson, all members of the group also sang. They first played together as part of Ronnie Hawkins' group in the late 1950s and early 1960s.

Having left Hawkins in 1964, they were engaged the following year by Bob Dylan as his backing group; they took part in his world tour in 1965–6. They developed a style of songwriting that combined Dylan's allusive lyrics with their own eclectic, stately and enigmatic brand of rock. They recorded a number of songs that showed an extraordinary attention to detail despite the rough quality of the recording; these were widely issued illegally before their commercial release in 1975 on the album *The Basement Tapes*.

In 1968 the Band recorded *Music from Big Pink*; this album is notable for the freedom with which the vocal lines intertwine and overlap with one another, in contrast to their later recordings. Before returning to live performances the group recorded its second album, *The Band* (1969). At this time they were briefly regarded as a country-rock group, but their arrangements, which were characterized by calm tempos, economical playing by Robertson and Helm, and the use of two keyboard instruments, also suggested hymns, parlour songs, Cajun music, brass bands, blues and other American styles.

Between 1971 and 1977 the Band continued to record original and other people's material in studio and concert performances, and in 1974 they joined Dylan for his album *Planet Waves* and a tour of America. The group gave its final performance in 1976, which included guest appearances by Dylan, Eric Clapton, Joni Mitchell, Muddy Waters, Neil Young and others, and was documented in Scorsese's *The Last Waltz* (1978). During the 1980s the Band reunited a number of times for concert tours without Robertson, and in 1993 Danko, Helm and Hudson recorded the album *Jericho*.

The Band's music drew on the basic vocabulary of rock, blues and country, and its restrained style can be seen as a reaction to the musical excesses of the psychedelic rock era. Their first two albums contain deeply felt, carefully crafted rock, but as Robertson's productivity as a songwriter declined, the group's music became increasingly formulaic and less consistently satisfying.

Banda turca (It.). *See* JANISSARY MUSIC.

Banderali, Davidde (*b* Lodi, 12 Jan 1789; *d* Paris, 13 June 1849). Italian tenor and singing teacher. He made his début at the Teatro Carcano, Milan, in 1806, but after a few years as a singer, specializing in *buffo* roles, he turned to teaching. In 1814 he became director of the Teatro dei

Filodrammatici, Milan, where in the following year the 18-year-old Giuditta Negri, later to be known as Pasta, made her début in Scappa's *Le tre Eleonore*. In 1817 he sang Marco Orazio in two performances of Cimarosa's *Gli Orazi ed i Curiazi* at La Scala, with Josephina Grassini as Orazia. He taught in Milan from 1821 to 1828, and then for 20 years in Paris. His pupils included Pasta, the sopranos Adelaide Comelli-Rubini and Henriette Méric-Lalande, and the baritone Paolo Barroilhet.

ELIZABETH FORBES

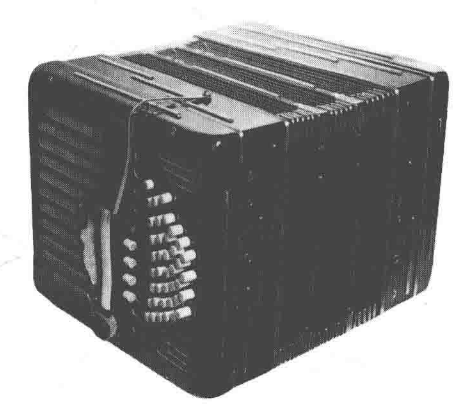
Bandiera, Lodovico (*fl* Rome, 1663). Italian composer. He was a Minorite, a doctor of theology and for a time *maestro di cappella* of the church of SS Apostoli, Rome. He published *Psalmi vespertini dominicales una cum quatuor antiphonis*, for four voices and continuo (Rome, 1663), as a thanksgiving to St Anthony for relief from difficulties. The psalms are concerted pieces in which sections for the full complement of voices alternate with solo episodes. As well as these and the antiphons, the volume contains a *Magnificat*, litanies and a responsory.

GIUSEPPE VECCHI

Bandmaster (Fr. *chef d'harmonie*; Ger. *Kapellmeister*; It. *capobanda*). The master, leader or director of a band (see BAND (i)). Earlier titles included Music Master, Music Major and Leader of the Band. Bandmasters normally hold officer's rank in the armed forces; in the 18th century and the 19th they were often civilians. Army bandsmen in Britain have been formally trained as bandmasters since 1857 at Kneller Hall (Royal Military School of Music); *see* LONDON, §VIII, 3 (ii). Some eminent bandmasters of the past are: Julius Fučík (1872–1916), Josef Gung'l (1809–89), Andreas Leonhardt (1800–66) and C.M. Ziehrer (1843–1922) in the Austro-Hungarian Empire; Carl Boosé (1815–68), Dan Godfrey (1831–1903), Charles Godfrey (ii) (1839–1919) and Ladislao Zavertal (1849–1942) in Britain; J.J. Gagnier (1885–1949), Charles O'Neill (1882–1964) and Joseph Vézina (1849–1924) in Canada; F.-J. Gossec (1734–1829), H.E. Klosé (1808–80), J.-G. Kastner (1810–67), Jean Paulus (1816–98), Gabriel Parès (1860–1934) and Bernard Sarrette (1765–1858) in France; Wilhelm Wieprecht (1802–72) in Germany; Alessandro Vessella (1860–1929) and Giovanni Orsomando (1895–1989) in Italy; and A.A. Clappé (1850–1920), Herbert L. Clarke (1867–1945), Merle Evans (1894–1987), Henry Fillmore (1881–1956), P.S. Gilmore (1829–92), E.F. Goldman (1878–1956), A.A. Harding (1880–1958), Frank Johnson (1792–1844), K.L. King (1891–1971), Arthur Pryor (1870–1942), W.D. Revelli (1902–94) and J.P. Sousa (1854–1932) in the USA (for information on early British history and many additional eminent bandmasters see *Grove5*; *see also* MILITARY MUSIC, §3 and for bibliography *see* BAND (i)).

H.G. FARMER/RAOUL F. CAMUS

Bandola. A flat-backed lute of South and Central America, descended from the BANDURRIA (*see also* MANDORE). The modern *bandola* of Colombia has a tear-drop shape, with a flat or concave back. It has six courses of strings, three steel strings in each of the four upper courses, and two copper-wound strings in each of the two lower courses, tuned *f♯–b–e'–a'–d''–g''*. It is played with a plectrum and, as in mandolin playing, a note may be sustained by a tremolo. In the Colombian Andes it plays in the *murga* ensemble to accompany dancing and the singing of *coplas*; the *murga* is sometimes augmented by a second *bandola*, the two playing in characteristic parallel 3rds and 6ths. The *bandola* is used in Chilean Andean music, where it accompanies solo shepherd songs, and in the Guatemalan *zarabanda* ensemble (*see* GUATEMALA, §II, 2). There are two types of Venezuelan *bandola*: the first, found in the western plains, has four single strings, tuned *b–e'–b'–f''*; the second, from north-eastern Venezuela, has four double courses, the lower pairs tuned in octaves and the higher strings in unison, as follows: *A/a–e/e'–b'/b'–f♯''/f♯''*.



Bandolim (Port.). *See* MANDOLIN.

Bandolin (Sp.). *See* MANDOLIN.

Bandoneon [bandoneón]. Square-built button accordion or CONCERTINA developed in the 1840s by Heinrich Band of Krefeld, but similar to the 'Chemnitz' concertina of C.F. Uhlig, invented in the previous decade. All early models were diatonic: they produced different notes on the push and pull of the bellows (see illustration). In 1921 a chromatic model was introduced that produced the same note on the push and the pull: this instrument has almost totally eclipsed the diatonic variety. Most bandoneons have two reed banks and no shifts (register changes). Different models may have 64, 88, 104, 106, 128, 154, 176, and even 220 notes; the South American instrument usually has 38 keys or buttons for the high and medium registers and 33 for the lower register. The bandoneon has been used since about 1900 as a solo virtuoso instrument in tango orchestras of Argentina, Uruguay and Brazil. Perhaps its most famous exponent was the Argentine Astor Piazzolla (1921–92). *See also* ACCORDION.

Bandora [pandora] (Fr. *pandore*, *bandore*; Ger. *Bandoer*, *Pandora*). A plucked chordophone (classified as a lute) of bass register with metal strings and a scalloped and festooned body outline, said to have been invented in London in 1562. Besides having a considerable solo repertory, it was required to accompany some of the earliest printed English songs, and was one of the six obligatory instruments of the mixed CONSORT. There are many references to its use in the theatre and in court entertainments through the late 16th century and the 17th, but by the 18th it was falling into disuse.

The bandora has a flat or slightly domed back and a flat soundboard into which is set a circular ornamental

Arnold diatonic bandoneon

'rose' soundhole. It is strung with iron and brass wires, the lowest of which are twisted from two or more strands, not overspun like modern ones. Bacon (*Sylva Sylvarum*, 1627) writes of 'a *Wreathed String* such as are in the Base Strings of Bandoraes'. The strings run in double courses from the pegbox, usually 'viol' type with lateral pegs, over the fingerboard and soundboard to the bridge, which is glued in position, as on a lute. The bandora has a special method of string attachment at the bridge, that is, a fret-like strip of brass and a row of hitch-pins along its bottom edge. Although the bandora has been described as a kind of bass cittern, its fixed bridge and the lute-like system of bars under its flat soundboard make it acoustically quite distinct. Whereas the cittern was normally a plectrum instrument, the bandora was played with the fingers (although Roger North reported in the late 17th century that the 'pandora' was 'struck with a quill'). The only features the two instruments have in common are the metal strings and sheet brass frets, secured in tapering slots in the fingerboard by hardwood wedges.

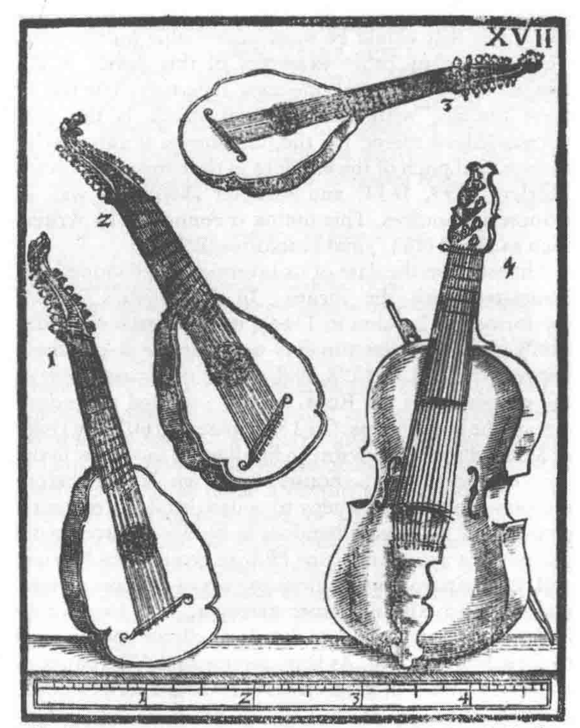
Praetorius (2/1619) stated that the bandora was an English invention, which is confirmed in the sixth edition of John Stowe's *Annales, or a General Chronicle Of England* (1631);

In the fourth yere of Queen Elizabeth John Rose, dwelling in Bridewell, devised and made an instrument with wyer strings, commonly called the Bandora, and left a son, far excelling himselfe in making Bandoraes, Voyall de Gamboes and other instruments.

The undulating outline very probably had an allegorical or symbolical meaning, perhaps connected with the scallop shell (see Wells, 1982); the shape was also used on certain viols, at least one of which is attributed to Rose. The alternative spelling, *pandora*, may be an allusion to the legend of Pandora's box. There seems to be no connection with the Spanish *bandurria* nor with the 'pandora' whose invention Alessandro Piccinini claimed in 1623; this was apparently a lute with extension bass strings and additional short metal strings in the treble, perhaps akin to the English POLIPHANT.

The earliest illustrations of both the bandora and its close relative, the orpharion, are in William Barley's *New Booke of Tabliture* (1596). This was published in parts, containing instructions and music for the lute as well as for these two wire-strung instruments. At first glance, the two illustrations look remarkably similar, though the orpharion is shown with seven pairs of strings and the bandora has only six. Furthermore, whereas the bandora has its bridge and frets placed in the normal way, at right angles to the strings (fig.1), the orpharion has them set obliquely, to give a progressive increase in length from treble to bass (*see* ORPHARION, fig 3). This innovation was probably crucial to the subsequent development of the two instruments, and seems to have taken place only a few years before Barley's book was printed. In a letter from Francis Derrick in Antwerp to a friend in London, dated 9 October 1594, there is a postscript:

I am requested by Throck: to write unto you verie earnestly to buy him a bandora or orpheryo[n] of the new fashion w[ch] hath the bridge and the stoppes slope and aswell the treble as the oth[er] stringes wyre. The best you can fynde wherin you must use the help of some [who] can skill in that instrument. and also to procure some principall les[sons] for the bandora of Ho[l]bornes makinge or other most conninge men i[n that instru]ment And whatsoever you lay out either for the instrument or the lessons he will repay you w[th] great thankes ...



(Cecil Papers 28/83)

1. *Title-page, with woodcut of a bandora, from William Barley's 'A New Booke of Tabliture for the Bandora' (London, 1596)*

Subsequent illustrations for the bandora, including those of Fludd (1617), Praetorius (2/1619; fig.2), Mersenne (1636–7), Trichet (*c*1640) and others all show this feature, although some of the engravers have not understood the absurdity of a sloping bridge with straight frets, or vice versa. The measurements recorded by Talbot (*c*1695) also indicated the sloping arrangement.

Barley is the earliest source for the tunings of both bandora and orpharion, which he gives in tablature, indicating the intervals between the courses but not the nominal pitch. For a six-course bandora, starting from the bass, the intervals are 2nd, 4th, 4th, major 3rd, 4th

2. *Bandora (1), with an orpharion (3), penorcon (2) and 'Italian' lyra da gamba (4): woodcut from Praetorius's 'Syntagma musicum' (Wolfenbüttel, 2/1619); note that the orpharion and penorcon are wrongly numbered in the illustration*

(2–4–4–3–4). The double courses were tuned in unison; the first writer to indicate that the lower four pairs of strings were tuned in octaves was Talbot, a century later. Some of the solo pieces in Barley's anthology of bandora music require a seven-course instrument, with the extra course a 4th below the sixth (4–2–4–4–3–4). The last part of Derrick's first sentence above serves as a reminder that at the time (and indeed until about 1900) even the best steel wire was inferior to gut in tensile strength. It seems that, with parallel bridge and frets, the extension in range was at first only possible by using gut for the top course; the 'new' combination of sloping frets and bridge with 'steel' wire for the highest pair of strings allowed the use of metal throughout. Outside of the arrangements for consort and voices by Sir William Leighton, all of the extant parts for consort call for the six-course bandora. On the other hand, many pieces in the solo literature call for the seventh course.

The question of pitch is still unanswered. Praetorius (2/1619) states that the Bandora was tuned in 'Chorton', a step lower than 'Cammerton'. However, there is reason to believe that, in the consort at least, the bandora was pitched at the higher level (Segerman, 1988). Ian Harwood (1981) has also suggested that there was a high-pitch bandora at a 4th above the larger size. Barley's collection of music included four songs with accompaniment for six-course bandora which give clues to the nominal pitch. However, if the vocal pitch is taken at its face value, the result is somewhat confusing. In two songs the apparent bandora tuning is *F–G–c–f–a–d′*; in one it is a tone higher, and in another a fourth lower, *C–D–G–c–e–a*. These variant tunings are most probably a 'transposition of convenience', to avoid the singer's having to read in key signatures that would be most improbable for the time. There are many other examples of this device in the English and continental lute-song repertory. The last of these tunings, with *a* as the top string, is the only acknowledged tuning for the instrument. It agrees with the nominal pitch of the bandora in the consort lessons of Morley (1599, 1611) and Rosseter (1609), as well as manuscript sources. This tuning is confirmed by writers such as Fludd (1617) and Praetorius (2/1619).

Almost from the date of its invention the bandora was associated with the theatre. In Gascoigne's *Jocasta* (performed in London in 1566), it is named (as 'bandurion') among the instruments used for the dumb-show between the acts. In 1598, Philip Henslowe's inventory of the properties of the Rose Theatre included a bandora among the instruments. On 18 September 1602, the Duke of Stettin-Pomerania wrote in his diary of the music in the indoor Blackfriars Playhouse: 'For a whole hour before the play begins, one listens to a delightful instrumental consort'; he included a bandora in his list of instruments played. The actor Augustine Phillips bequeathed his bass viol, lute, cittern and bandora to two of his apprentices, and Edward Alleyn, actor, manager, and founder of Dulwich College, left a lute, bandora, cittern and six viols to the school in 1626. As Dart commented, 'The pandora positively smells of greasepaint' (*Two Consort Lessons*, London, 1957).

The bandora was by no means confined to the theatre, however. It enjoyed a great vogue in courtly circles, particularly as a member of the mixed consort. The 'consorte of broken musicke' seems to have been first heard at Kenilworth in 1575, during the lavish entertainment given for Queen Elizabeth by the Earl of Leicester; it was later called on to perform at almost every entertainment devised for her famous 'progresses'. During the visit of the queen to Elvetham in Hampshire in 1591 there was a performance by 'an exquisite consort; wherein was the lute, pandora, base violl, citterne, treble viol and flute', the same instruments used in the 'consort lessons' published by Morley and Rosseter. In such music as this, the cittern and bandora play the upper and lower halves of what amounts to a plucked 'continuo' part. However, the bandora part fulfills a second role. It also serves a 16′ double bass function as its lowest notes and melodies often sound and double an octave below that of the bass viol. The peculiarly 'binding' quality of the bandora in the mixed consort is most noticeable, and was remarked on by several writers. Trichet (*c*1640) stated: 'this instrument can be of great use in consorts which are made of several kinds of instruments, for it seems that they become more harmonious by the conjunction and mixture of its sweet temperament'. Later Roger North, in his *Essay, of Musical Ayre*, wrote: 'those pandoras, by way of the thro-base, had a better and more sonorous effect in the mixture, than now may be ascribed to harpsichords'.

The bandora was well known outside England. Trichet's manuscript includes a good drawing of a seven-course example. However, there seems to have been some confusion between bandora and orpharion in continental references; Mersenne (1636–7) described and illustrated a 'pandore', but said that it was tuned like a lute. Other references occur in the inventories of Parisian instrument makers around 1600, including (in 1617) 'une pandorre petite', which may have been a bandora at high pitch or simply an orpharion. 17th-century Italian references hearken back ultimately to Mersenne.

The bandora seems to have lasted longest in Germany: the Berlin court orchestra owned one in 1667 and there is another in the frontispiece to Walther's *Lexicon* (1732). It is mentioned as a possible continuo instrument in the *Erster Theil allerhand Oden unnd Lieder*, published by H. Krusen (Sohra, 1642, 1647, 1650, 1651, and 1664). While its North European acceptance as an accompaniment instrument is clear, it is curious that no bandora solo music has been found that distinctly derives from the continent. The sole surviving continental source, the Königsberg manuscript (Ness and Ward, 1989), contains only music of English derivation. The 2–4–4–3–4 tuning survived even longer, being used for the large German MANDORE and gallichone (*see* COLASCIONE). It is noteworthy that the two orpharions brought to light in the early 1980s are in German collections (*see* ORPHARION).

Although we have the measured drawings of Praetorius and the dimensions noted by Talbot as well as several drawings, no specimens of early bandoras appear to have survived. Ian Harwood (1981) has suggested that the exquisite *cymbalum decachordon* (for illustration *see* ROSE, JOHN) made by John Rose in 1580, and belonging to the Tollemache family of Helmingham Hall, Suffolk, is an early high-pitch bandora. Though this speculation has some merit, there has been little other evidence to support this theory. It has been thought to be an orpharion, but it does not match known measurements or string disposition of that instrument either. Several collections contain instruments having bodies with three outcurving lobes that are listed as 'bandora', but they are examples of the later French *pandore-en-luth*, 'Lutherie'

section of Diderot and d'Alembert's *Encyclopédie* (Paris, 1751–80). One or two examples are modelled after this illustration in having no soundhole, and may perhaps be later reconstructions.

The main use of the bandora on the Continent seems to have been as a continuo instrument; its solo, consort and song repertory are found in English sources. The printed bandora partbook for Morley's *Consort Lessons* (1599) survives, and there are other consort parts in a number of manuscripts. Also extant is William Leighton's *Teares or Lamentacions* (1614), which includes sacred music for four voices with an accompaniment for the six instruments of the mixed consort. In total, there are 69 of these consort parts currently known. There are also six songs, most predating the publications of the lute 'ayres'.

Although Barley published some of the best known music for the instrument, the greatest share of the bandora repertory is found in manuscripts of lute music, where it is often identifiable only by its different tuning. There are 93 known solo pieces, which include nearly every form of the late 16th and early 17th centuries: fantasias, dances, and settings of popular tunes and grounds. However, the bass quality of the instrument led composers to write more pavans and fantasias, where the sustaining quality of the instrument was put to greatest use. In contrast to the consort parts, which are on the whole technically undemanding, the technique required in the solo music is considerable. With a total of nineteen compositions, Antony Holborne was the most prolific composer (cf Francis Derrick's letter quoted above); Alfonso Ferrabosco (i) composed six pieces, John Dowland five, and John Johnson (i) three. Emanuel Adriaenssen is the only continental composer found in these sources. However, this single piece seems to be an arrangement of a solo lute composition. As the music for solo bandora appears for the most part in manuscripts containing lute music, it is not surprising that there are many concordances between the two genres and it is usually difficult to ascertain whether the bandora version or the lute version is the original. With some of the music of Holborne it seems that the bandora version was the original.

After the second decade of the 17th century we find no more tablature music for this instrument. Judging by the comments of Roger North (see above) we can assume that the bandora was used as a continuo instrument well into the 17th century. However, it was probably gradually replaced in ensembles by the THEORBO, which covered the same range.

Bandrowski-Sas [Brandt; Barski], **Aleksander** (*b* Lubaczów, 22 April 1860; *d* Kraków, 28 May 1913). Polish singer. He sang from 1881 in Lwów, Kraków, Łódź and Poznań as a baritone in operetta under the name Aleksander Barski. After studying in Milan and Vienna, he became one of the finest tenors of his time, excelling in Wagner (under the stage name Brandt). From 1887 to 1899 he sang in many of the principal west European houses, including La Scala; he had a permanent contract in Frankfurt (1889–1901). At Dresden in 1901 he created the title role in Paderewski's *Manru*, which he later sang in Lwów, Philadelphia, Boston, Chicago and at the Metropolitan. Bandrowski-Sas wrote three opera librettos: *Stara baśń*, after J.I. Kraszewski (music by W. Żeleński, 1907), *Bolesław Śmiaíy*, after S. Wyspiański (L. Różycki, 1909) and *Twardowski* (Wallek-Walewski, 1911); he also translated into Polish various excerpts from Wagner's librettos and the whole of *Die Meistersinger*, and published a thematic analysis of the *Ring*, *Rozbiór tematyczny Ryszarda Wagnera trylogii z prologiem* (Lwów, 1907).

IRENA PONIATOWSKA

Bandstand (Fr. *kiosque à musique*; Ger. *Musikpavillon*). A small, usually covered building to shelter brass bands, wind bands and military bands giving open-air concerts. It is usually polygonal, less frequently square, round or shell-shaped, and made sometimes of wood but more often of iron or cast iron, or (if built after 1920) of concrete. In form its origin was the Chinese pavilion as introduced into English landscape gardens early in the 18th century (for instance at Stowe and Kew), but in use from the 15th century in Turkey (the French *kiosque* comes from Turkish *köşk*). Its functional origin was in the London pleasure gardens. As a result bandstands were erected in public places (walks and promenades, squares and gardens) full of greenery and intended for relaxation.

Their first purpose was to provide wholesome, free entertainment for social classes with little previous interest in art music. Large family audiences met at the bandstand, made up of people ranging from labourers and artisans, nursemaids and soldiers, to small shopkeepers and the

lower middle classes, and consequently it encouraged new kinds of social intercourse and new ways of listening to music; the audience could sit, stand, or continue strolling and talking. The rituals of the middle-class concert were abandoned for the behaviour of natural, everyday life. Another purpose of the bandstand was to educate this new public by inviting it to share the culture of the élite, as a way of breaking down social barriers, and here it had a pioneering role in the tradition of the French Revolution. The omnipresence of military bands shows that the bandstand was also an excellent means of reinforcing social cohesion by stirring up patriotic sentiments. As one of the first mass leisure forms, bandstand concerts may be seen as a concrete manifestation of the great movement towards democratizing music and amateur musical practice, encouraged by the inventions of Adolphe Sax. Consequently the proliferation of bandstands, which were soon being sold in kit form by foundries and metalwork construction companies, went hand in hand with the rise of choral societies in the second half of the 19th century. These societies were an exceptionally useful tool for rising in the social scale, and it is easy to explain their concentration in mining and industrial areas, particularly in the north of England (Lancashire, Yorkshire), France, Belgium, Luxembourg and western Germany. The phenomenon spread rapidly, and at the end of the 19th century almost every village had its bandstand. The fashion reached spas and seaside resorts, where bandstand concerts were popular as daily meeting-places.

In such fashionable towns the music might be played by an instrumental ensemble consisting of strings, a piano and some wind instruments, performing light music or café music, but the usual bandstand repertory was the same as that of wind bands and brass bands. It was tripartite, consisting of military music (marches, galops, quick marches), dance-tunes (quadrilles, polkas, mazurkas, schottisches and waltzes) and extracts from operas in the form of a potpourri or fantasia, with the arias arranged for solo instrumentalists. There were also transcriptions of symphonies (by Mozart, Beethoven, Mendelssohn), overtures (by Mozart, Beethoven, Berlioz), and orchestral suites (by Massenet and Saint-Saëns). Wagner thought bandstands particularly suitable for his music, which was popular in such settings in France before his success at the Paris Opéra. In the 1920s the repertory opened up to include jazz.

In spite of the limitations of transcriptions, bandstands occupy a position central to the mass dissemination of musical culture. They can also be the scene of experimentation: much of the work of Charles Ives and his ventures into polytonality and polyrhythm cannot be understood without reference to them. Bandstands and brass bands play an important part in American festivities, generating a convivial atmosphere especially popular with young people, who can also hear rock music in bandstands. As a formal and cultural model the bandstand has spread far and wide beyond Europe, particularly in former European colonies (cf its social role in Latin America and South America). At present there is a renewal of interest in Europe too; more bandstands are being built, attempts are being made to revive older forms of convivial gatherings, and composers including Berio and Michel Decoust have contributed new works to the repertory.

MARIE-CLAIRE MUSSAT

Bandura [bandoura]. A hybrid instrument of the Ukraine combining elements of a lute and box zither, possibly derived from the 10th century Arabic and Persian *pandura* and the *kobuz* of the Kipchak and Polovtsian peoples. It has a short neck, a shallow oval wooden body and a resonating hole on the upper soundboard (seeillustration). There may be a varying number of strings; four to eight bass (*bunti*) strings on the neck, plucked by the left hand, and between seven and thirty metal strings (*pidstrunki*, tuned chromatically) across the soundboard, plucked by the right hand. Older examples are tuned diatonically.

The *bandura* (also known as the *kobza* until the end of the 19th century) was widely used by the Cossacks during the 16th and 17th centuries. The performers, called

Ukrainian bandura of the psaltery type (Royal College of Music, London)

banduristï or *kobzari*, were itinerant singer-instrumentalists who used the *bandura* to accompany the epic *dumï*, historical songs, ballads and other forms. The instrument was also adopted by the Polish gentry. The *bandura* was taught by traditional players, who were often blind. The instrument is now taught at state-run institutions and alto, bass and contrabass *banduras* have been developed for ensemble performances of 'folkloric' music.

SOFIA HRYTSA

Bandurichen (Ger.). *See* MANDORE.

Bandurria [mandurria]. A plucked lute. A hybrid of the guitar and cittern families, it is found in Spain and parts of Latin America. It has a small, cittern-shaped body with comparatively deep ribs, flat back, short fretted neck, and large peg-holder with pegs projecting from the rear as on a guitar. The strings pass over a large central soundhole and are usually fixed to a string-holder. In Spain a *púa* (plectrum) is used to pick out melody.

The term 'mandurria' was mentioned in the 14th century by Juan Ruiz in his *Libro de buen amor*. In 1555 Juan Bermudo described the bandurria in his *Comiença el libro llamado declaraciõ de instrumetos* [sic] as a three-string instrument, but he also mentioned other types with four or even five strings. He said that the outer courses were tuned an octave apart, with the middle course either a 5th or a 4th above the lowest. Later, five- and six-course bandurrias were tuned in 4ths throughout, a tuning that is still used (*see* BANDOLA). The bandurria provided music at a child's wake in Jijona, Alicante Province, in the early 1870s (see J.C. Davillier: *L'Espagne*, Paris, 1874, p.409). In Cuba before 1900 the bandurria, with other instruments, accompanied the *zapateo*, a dance derived from the Spanish *zapateado* and introduced by tobacco cultivators from the Canary Islands. It still accompanies Iberian-derived folksong in Cuba and is found also in central and north-eastern Guatemala and in the Andes of Colombia and Chile. The bandurria is said to have flourished about 1800 among the Peruvian blacks. In the early 20th century duos of harp and bandurria performed in Lima (*see* PERU, fig.4), where today the bandurria is still found in ensembles accompanying the popular *vals peruano*, or *vals criollo*.

JOHN M. SCHECHTER

Banerjee, Nikhil Ranjan (*b* Calcutta, 14 Oct 1931; *d* Calcutta, 27 Jan 1986). Indian *sitār* player. He was trained initially by his father Jitendra Nath Banerjee, an amateur *sitār* player, showing such promise that he won the All-Bengal Sitar Competition at the age of nine. He studied briefly with a number of musicians including Jnan Prakash Ghosh (*tablā*, vocal) and Birendra Kishore Roy Choudhury. Choudhury introduced him to Ustad Allauddin Khan, with whom he stayed in Maihar from 1947 to 1954. Later he studied with Allauddin Khan's son Ustad Ali Akbar Khan and daughter Annapurna Devi.

He pursued a highly successful career as a concert and recording artist, touring all over the world. He held a number of teaching posts including professor of music at the Ali Akbar College of Music, Calcutta, and visiting professor of music at the Californian Center for World Music (1970–78), the American Society for Eastern Arts, California (1970–78) and the University of Santiniketan (1977–8). Honours included the Padma Shri (1968) and a Padma Bhushan awarded shortly after his untimely death from a heart attack.

Banerjee was regarded as one of the most accomplished *sitār* players of his time, many connoisseurs judging him the equal of his contemporaries Pandit Ravi Shankar and Ustad Vilayat Khan. The tone of his instrument was quite distinctive, while he excelled in every aspect of the *sitār* player's art; command of *rāg* and *tāl* allied to superb technique, including phenomenal speed as well as the most exquisite control, made him one of the most profoundly affecting performers in the Hindustani tradition.

MARTIN CLAYTON

Banevich, Sergey (*b* Okhansk, 2 Dec 1941). Russian composer. He attended the N.A. Rimsky-Korsakov Music School until 1961 studying composition under Ust-vol'skaya. He graduated from the Leningrad Conservatory in 1966, and went on to complete postgraduate studies with Yevlakhov in 1969. In 1991 he became the organizer and artistic director of an international music festival for children, and in 1995 set up an international competition for children playing piano duets called *Brat'ya i syostrï* ['Brothers and Sisters']. Since 1992 he has been managing director of the music and educational publishers *Severnïy Olen'* ['Reindeer']. Music for children is the main area of Banevich's creative work. Banevich has stated that 'children experience everything that adults do, only far more vividly and acutely'. He writes about children and for them; he also appeals to adults through the prism of a childlike perception of the world. He became an Honoured Representative of the Arts of Russia in 1982.

Banevich writes principally for the stage. He has worked in a variety of genres such as the musical, dramatic operetta, fairy tale operetta, opera-ballet and television opera. His style is lyrically Romantic: the harmony is reminiscent of Puccini and Saint-Saëns, but he also alludes to the language of the American musical, the French chanson and the hits of the Soviet variety stage. Dramatically, he relies on humour of the absurd and free association which he deems appropriate when dealing with children. Banevich is a master of attractive melody,

inventive orchestration and operatic ensemble writing, and has the ability to unify material of various styles through the use of developing leitmotifs.

WORKS
(*selective list*)

Stage: Beleyet parus odinokiy [White is the Lonely Sail] (op, 3, V. Roshchin, after V. Katsev), 1969, Odessa, Opera and Ballet Theatre, 1969

MARINA NEST'YEVA

Banfi [Banfo], **Alfonso.** *See* BAMFI, ALFONSO.

Banfield, Stephen (David) (*b* Dulwich, 15 July 1951). English musicologist. He studied music at Cambridge (BA 1972) and Oxford (DPhil 1980), studying with Hugh Macdonald both as an undergraduate and postgraduate, and was Frank Knox Fellow at Harvard University, 1975–6. In 1978 he became a lecturer in music at Keele University, becoming senior lecturer in 1988. In 1992 he became Elgar Professor of Music at the University of Birmingham; he was head of the School of Performance Studies, 1992–7, and head of the Department of Music, 1995–9. His main areas of research are British music of the late 19th century to the 20th, and popular musical theatre and vernacular bourgeois music in both Britain and America during the same period.

Banfield's work is characterized by seriousness of intellectual and artistic enquiry combined with a stylish and approachable literary style. His particular interest in music and the literary arts is reflected in his pioneering work on the English art song, which includes a useful catalogue with over 5000 entries. His book on the musicals of Stephen Sondheim uses primary source studies – an approach unprecedented in the literature of Broadway – to trace their compositional development and complex relationship with the European operatic tradition. His monograph on the life and work of Gerald Finzi is the first to assess the achievement of a relatively neglected British composer.

ROSEMARY WILLIAMSON

Banfield, Volker (*b* Oberaudorf, Bavaria, 9 May 1944). German pianist. At the age of 14 he entered the Nordwestdeutsche Musikakademie in Detmold, later travelling to the USA, where he studied with Adele Marcus at the Juilliard School of Music in New York and Leonard Shure at the University of Texas, from whom he acquired a deep-seated affinity with the Russian school of virtuosity and the German intellectual tradition exemplified by Schnabel. Since his return to Germany he has toured extensively, appearing regularly in the world's major music centres. Banfield's tastes and repertory are wide, but he has tended to focus on music of the later 19th century and the 20th, with special emphasis on Debussy, Skryabin, Rachmaninoff, Prokofiev, Bartók and Messiaen. A number of contemporary composers, most notably Ligeti and Detlev Mueller-Siemens, have dedicated works to him. His playing combines an unflamboyant virtuoso technique with a keen analytical mind, a wide-ranging tonal palette and an emotional spontaneity which serves him particularly well in Schumann, of whom he has become an increasingly ardent champion. Among his recordings are the Schumann sonatas and concertos by Goetz, Busoni and Pfitzner.

JEREMY SIEPMANN

Banister [Bannester]. English family of musicians. (2) John (i) was said by Anthony Wood to have been the 'Son of Banister, one of the musicians or public waits of S. Giles' Parish near London'. He was the father of (3) John (ii), and was probably (1) Jafery Banister's brother. James and Henrietta Banister may have been children of (1) Jafery Banister or (2) John (i). James joined the 24 Violins in May 1676 and served until the end of Charles II's reign, and Henrietta taught Princess Anne the harpsichord between 1679 and 1682. The son of (3) John (ii), also called John (*b* London, 27 Dec 1686), a recorder player, is mentioned in concert announcements between 1702

and 1704 in connection with his father. He was still alive on 5 September 1730, when his father made his will.

(1) Jafery [Jeffrey] Banister (bur. London, 2 Sept 1684). Violinist, music copyist and composer. He was sworn in as an extraordinary member of the 24 Violins on 27 October 1662, and received a salaried place from Michaelmas 1663. The text of Thomas Duffett's masque *Beauty's Triumph* (London, 1676) shows that he and James Hart were running a 'New Boarding-School for Young Ladies and Gentlewomen' in Chelsea. He apparently left royal service in February 1684, when he was given a passport to travel abroad, but died that summer, probably before he could undertake the trip. He seems to have been the copyist of two violin books (*GB-En* 5777, and Scottish Record Office, Edinburgh, GD 45/26/104) that originate respectively from Newbattle Abbey, Midlothian, and Panmure House, Angus, suggesting that he had worked for the Ker and Maule families in Scotland or London. The latter contains a suite signed 'Jafery Bannester'.

(2) John Banister (i) (*b* London, 1624/5; *d* London, 3 Oct 1679). Violinist, flageolet player and composer. He was a member of the ensemble that accompanied Davenant's opera *The Siege of Rhodes* (1656). He joined the 24 Violins at Christmas 1660, and was issued with a passport on 2 December 1661 'to goe into France upon Some speciall Service & returne with all possible expedition'; according to Anthony Wood he went 'to see and learn the way of the French compositions'. On his return he was promoted as an English Lully. On 18 April 1662 he was given the authority to choose 12 violinists to accompany the king to Portsmouth to meet Catherine of Braganza, and the next month they were constituted as a 'Select Band' under his command, doubtless inspired by Lully's *petits violons*. He was also given Davis Mell's place as a violinist in the Private Music; a painting at Nostell Priory near Wakefield seems to show him with other members of the group. He was a leading member of the Corporation of Music in 1663–4.

Banister's prominent court position lasted only until winter 1666–7. Luis Grabu succeeded Nicholas Lanier as Master of the Music in spring 1666, rapidly exerting his authority over the 24 Violins and the Select Band. On 29 March 1667 the 24 Violins sent in a 'remonstrance' against Banister, listing occasions going back to 1663 when he had embezzled money due to them. Without Banister's side of the story it is impossible to judge the case, though it seems that the king bore him ill will for a moment of insubordination. Wood wrote that 'for some saucy words spoken to His Majesty (viz. when he called for the Italian [?French] violins, he made answer that he had better have the English) he was turned out of his place'. Pepys wrote in his diary (20 February 1667) that 'the King's viallin, Bannister, is mad that the King hath a Frenchman come to be chief of some part of the King's music'.

Banister retained his place in the 24 Violins, but turned increasingly to promoting public concerts. According to Pepys, he was already giving concerts in 1660 at the Mitre tavern in Fleet Street, though newspaper advertisements for them exist only from December 1672. He moved them from the George in Whitefriars to Chandos Street in 1675, to Lincoln's Inn Fields in 1676, and to Essex Buildings in 1678. Roger North gave the impression that they were cheap and cheerful, held in 'an obscure room in a publik house' and given by 'most of the shack-performers in towne', though the wordbook *Musick, or A Parley of Instruments* (London, 1676) shows that Banister was able to put on a large-scale semi-dramatic piece with an astonishing array of wind, bowed and plucked instruments, and that his concerts were just one aspect of the activities of a boy's school, the 'Academy in Lincoln's Inn Fields'. According to North, one of the attractions of Banister's concerts was his flageolet playing 'in consort, which was never heard before nor since, unless imitated by the high manner upon the violin'.

He is presumably the John Banister, a widower aged 46 of St Margaret's, Westminster, who married the widow Mary Wood on 14 January 1671. He is listed in 1677 as Princess Anne's music master, and Henrietta Banister received the post in 1679, the year of his death. He and his son John were given a passport to travel abroad on 28 July, but he died on 3 October and was buried in Westminster Abbey the next day.

Banister wrote a good deal of consort music in the genres associated with the 24 Violins, though much of it only survives in fragments. One suite, *The Musick att the Bath* (*GB-Och* Mus.1183), was apparently written for the queen's visit to Bath in September 1663, while another (*En* 5777) seems to come from a 1671 court masque; much of his other dance music was probably written for court balls or other entertainments. The 24 Violins also worked in the London theatres, and Banister wrote the earliest surviving theatre suite, for John Dryden and Sir Robert Howard's play *The Indian Queen* (1664; *US-NYp*). He contributed songs or other music to Sir Samuel Tuke's *The Adventures of Five Hours* (1663), Katherine Phillips's *Pompey* (?1663), Dryden's *Sir Martin Marall* (1667), the Davenant-Dryden version of *The Tempest* (1667), Davenant's *The Man's the Master* (1668), Sir Charles Sedley's *The Mulberry Garden* (1668), Thomas Shadwell's *The Royal Shepherdess* (1669), a revival of Ben Jonson's *The Devil is an Ass* (?1669), Aphra Behn's *The Forc'd Marriage* (1670), part i of Dryden's *The Conquest of Granada* (1670), John Crowne's *Juliana* (1671), William Wycherley's *The Gentleman Dancing Master* (1672), Shadwell's *Epsom Wells* (1672) and Charles Davenant's *Circe* (1677). He also wrote music for Thomas Duffett's masque *Beauty's Triumph* (1676), put on at the Chelsea girl's school run by James Hart and (1) Jafery Banister. It is difficult to reconcile North's judgment that Banister had 'a good theatricall vein, and in composition a lively style peculiar to himself' with the evidence of his shortwinded songs, or the apparently incompetent part-writing of much of his consort music, though the latter may be partly the fault of corrupt sources.

WORKS

Consort suites, dances and grounds, 1662^{8}, 1677^{4}, 1678^{4}, 1678^{5} (ed. P.J. Lord, Oxford, 1970), *The Division Violin* (London, 1684), *IRL-Dtc*, *GB-CDp*, *Cu*, *En*, *Lbl*, *Lcm*, *Ob*, *Och*, *W*, *US-NH*, *NYp* [incl. The Indian Queen, ed. M. Laurie, *Henry Purcell: The Indian Queen*, Purcell Society, xix (London, 1994), appx D]

30 songs, 1667^{6}, 1673^{3}, 1673^{4}, *The Ariels Songs in the Play Call'd the Tempest* (London, 1675), 1675^{7}, *The Circle, or Conversations on Love and Gallantry* (London, 1675), 1679^{7}, 1686^{4}, 1688^{6}, *GB-Lbl*, *Och*

Inst and vocal music for *The Slighted Maid* (play, R. Stapylton), 1663, lost

(3) **John Banister (ii)** (bap. London, 11 Sept 1662; *d* London, 9 Jan 1736). Violinist, recorder player, publisher and composer, son of (2) John (i). He was admitted to his father's place among the 24 Violins on 6 November 1679 and continued to serve until his death. He has generally been taken to be the 'J.B. gent' who compiled *The Most Pleasant Companion, or Choice New Lessons for the Recorder or Flute* (London, 1681) and signed the preface of the first oboe tutor, *The Sprightly Companion* (RISM 1695[14]). In 1686 he and John Carr published from 'his chambers in Essex Street the next door to the Clock' a set of recorder duets by Raphael Couteville (i). The same year he married and then moved to Brownlow Street, off Drury Lane. In 1700 and 1702 he and Robert King were the agents for music by Corelli and Nicola Cosimi. For James Talbot's manuscript he was to have provided material concerning the wait (shawm), kit and treble violin. By 1698 and probably earlier he was promoting concerts at York Buildings and Exeter Change, and by 1702 he was first violin in the Drury Lane Theatre band and regularly played in concerts there and at York Buildings with colleagues such as Jean Baptiste Loeillet (i), James Paisible and Gasparo Visconti. In 1708 he became one of the first violins in the opera orchestra at the Queen's Theatre, Haymarket, remaining there until at least December 1710; about 1715 he was associated with the new Lincoln's Inn Fields Theatre. His violin and recorder playing were praised by contemporaries; Roger North noted his skill at extempore ornamentation and said he was an excellent singing teacher. Hawkins (*History*), perhaps confusing him with Paisible, claimed he was famous 'for playing on two flutes [i.e. recorders] at once'. His few surviving compositions consist of dance movements influenced by both French and Italian styles, and demonstrating some melodic and rhythmic imagination.

WORKS

3 tunes, for vn, 1687[7], 1691[5]; 12 tunes for 2 rec, 1693[8], 1694[7], 1695[6], 1696[9]

Banister, Henry Charles (*b* London, 13 June 1831; *d* London, 20 Nov 1897). English composer and teacher. His first studies were with his father, H.J. Banister, a well-known cellist in his day. In 1846 he won the King's Scholarship at the Royal Academy of Music, where he studied with Cipriani Potter. He subsequently became a sub-professor at the RAM and, from 1853, professor of harmony. From 1880 he was professor at the Guildhall School of Music and he also taught at the Royal Normal College for the Blind. Banister was a prolific composer of songs, piano pieces and overtures, but most important was his contribution to the mid-19th-century British symphony. Today, however, he is remembered primarily as a theorist.

Banister, Henry Joshua [John] (*b* London, 1803; *d* Clerkenwell, London, 27 Sept 1847). English cellist. Son of the composer Charles William Banister (1768–1831), he was active in London as an orchestral player and chamber musician, and from 1835 participated frequently in chamber music concerts. His Quartet Parties, given at his residence in Burton Crescent in 1844, were the first West End chamber concerts to exclude vocal items. He wrote a number of didactic works for the cello and made arrangements of operatic overtures for small ensembles. In 1843 the *Musical World* published a series of Bannister's letters, which argued that music lovers among the English aristocracy should patronize music more extensively by employing groups of resident musicians; the correspondence was subsequently published at his own expense as *Domestic Music for the Wealthy, or a Plea for the Art and its Professors* (1843). His brother Joseph Banister (1812–90), a violinist, was a member of the Philharmonic Society and an active chamber musician; his son Henry Charles Banister was a composer and teacher.

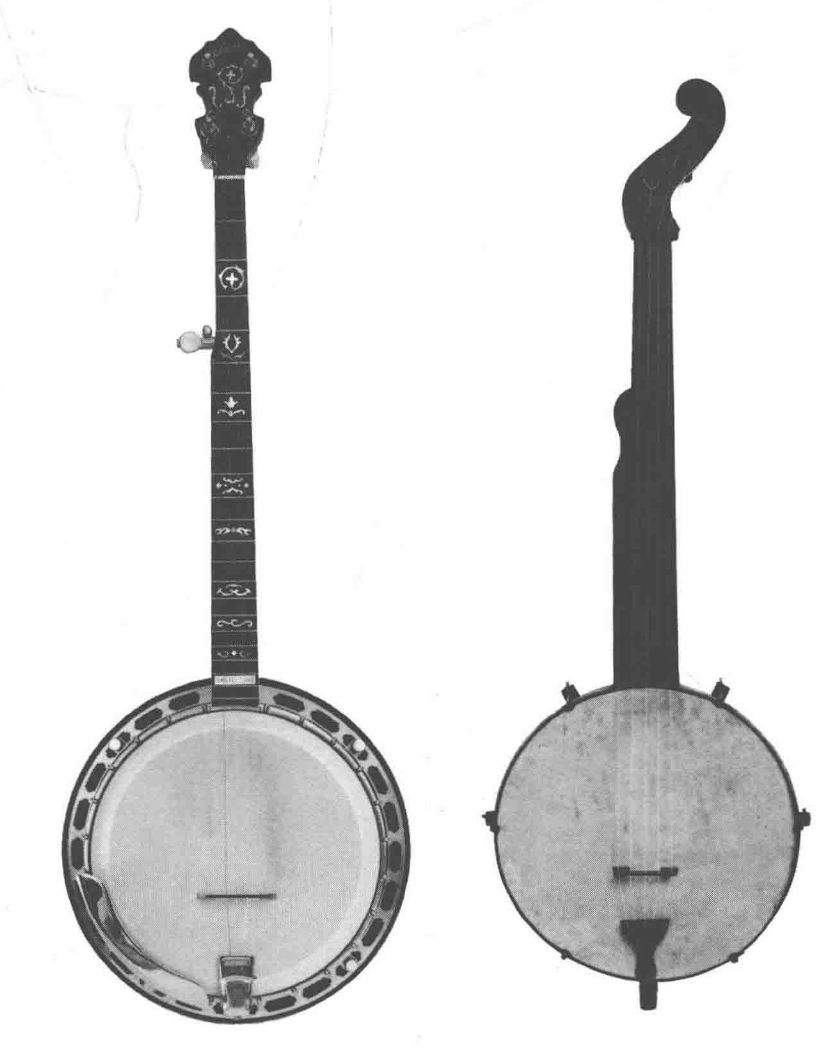
CHRISTINA BASHFORD

Banjeaurine. A small banjo, pitched a 4th higher than the standard instrument, invented by SAMUEL SWAIN STEWART.



Banjo. A plucked string instrument with a long guitar-like neck and a circular soundtable, usually called the 'head', of tautly stretched parchment or skin (now usually plastic), against which the bridge is pressed by the strings. The banjo and its variants have had long and widespread

popularity as folk, parlour and professional entertainers' instruments. The name of the instrument probably derives from the Portuguese or Spanish *bandore*.

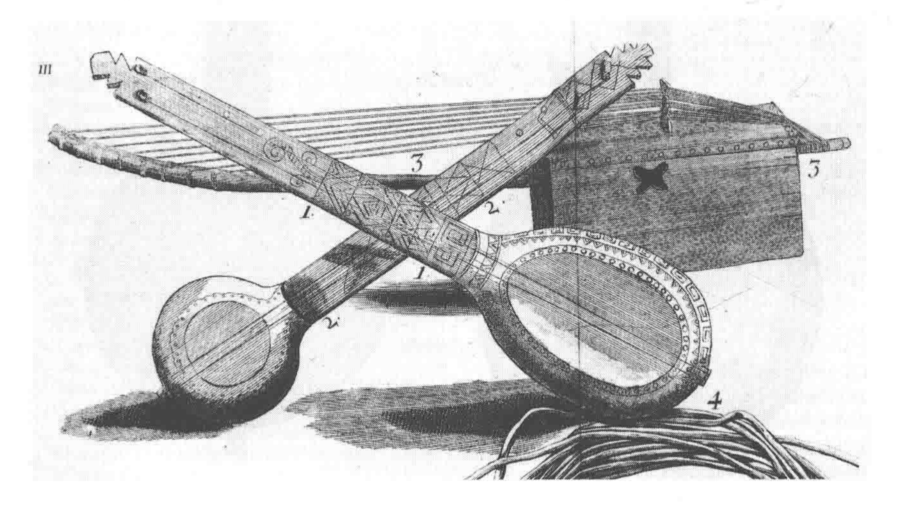
1. Structure. 2. History.

1. STRUCTURE. The modern five-string banjo is normally fitted with raised frets and strung with five steel wire strings, the lowest in pitch being overspun with fine copper alloy wire. It is tuned *g′–c–g–b–d′* (C tuning) or *g′–d–g–b–d′* (G tuning), but many other tuning patterns, e.g. *g′–c–g–c′–d′*, *g′–d–g–c′–d′* and *g′–d–g–a–d′*, are used to facilitate the playing of particular songs. There are usually 24 or more screw-tightening brackets (for adjusting the head tension) attached to the outer side of a tambourine-like rim of laminated wood about 28 cm in diameter. In banjos of high quality the upper edge over which the head is stretched is often of complicated design, as in an early (1920s) 'Mastertone' system of O.H. Gibson (fig.1*a*), which used a tubular metal 'tone tube' resting on spring-supported ball-bearings, or the 'Electric' design of A.C. FAIRBANKS. A pan-shaped wooden 'resonator' is often attached to the lower side of the otherwise open-backed body and serves to reflect outward the sound emitted by the underside of the head. The 'thumb string' (sometimes known in older literature as 'chanterelle'), the short fifth string (fig.1), is placed adjacent to the lowest-pitched string and secured by a peg inserted into the side of the neck at the fifth fret position.

Until the early 20th century banjos were normally strung with gut strings, and these or nylon strings are still used by 'classical' banjoists. Raised frets were advocated by James Buckley in *Buckley's New Banjo Method* (New York, 1860) but did not become common until the 1880s. George C. Dobson's *'Victor' Banjo Manual* (Boston, 1887) describes frets inlaid flush with the fingerboard as position markers but states that 'the latest and most modern manner ... is with raised frets'. Mid-19th-century commercial banjos were larger than modern ones and were tuned to the lower-pitched A tuning of *e′–a–e–g♯–b*. Smaller banjos and higher pitches later became increasingly popular, until by the 1880s most banjos were of modern proportions and commonly tuned to the modern C tuning (which maintains the same interval relationship). By 1890 in the USA the banjo was treated as a transposing instrument pitched in C with music still written in A, a situation that continued until 1909 when the American Guild of Banjoists, Mandolinists, and Guitarists voted to abandon the old A notation and write the music in C or 'English notation'. In England both the written and tuning pitch were fixed at the modern level by the 1880s.

1. Banjos: (a) Mastertone model by the Gibson Co., Kalamazoo, Michigan, c1924; (b) by William Boucher, Baltimore, Maryland, 1846 (both Smithsonian Institution, Washington, DC)

A number of hybrid and specialized banjos were developed during the late 19th and early 20th centuries, including cello and piccolo banjos (tuned an octave below and above the standard banjo); banjeurines; concert and 'ladies' banjos (tuned a whole tone above and below the standard banjo); guitar, mandolin and UKULELE banjos (strung and tuned like their parent instruments); and plectrum banjos (identical to the standard banjo but lacking the fifth string). The tenor banjo (tuned *c–g–d′–a′*) is identical with the standard banjo but has a shorter neck and no fifth string. Like the plectrum banjo it was developed for use in jazz and dance orchestras and is played with a plectrum. It has been widely adopted by players of traditional music in Ireland and England.



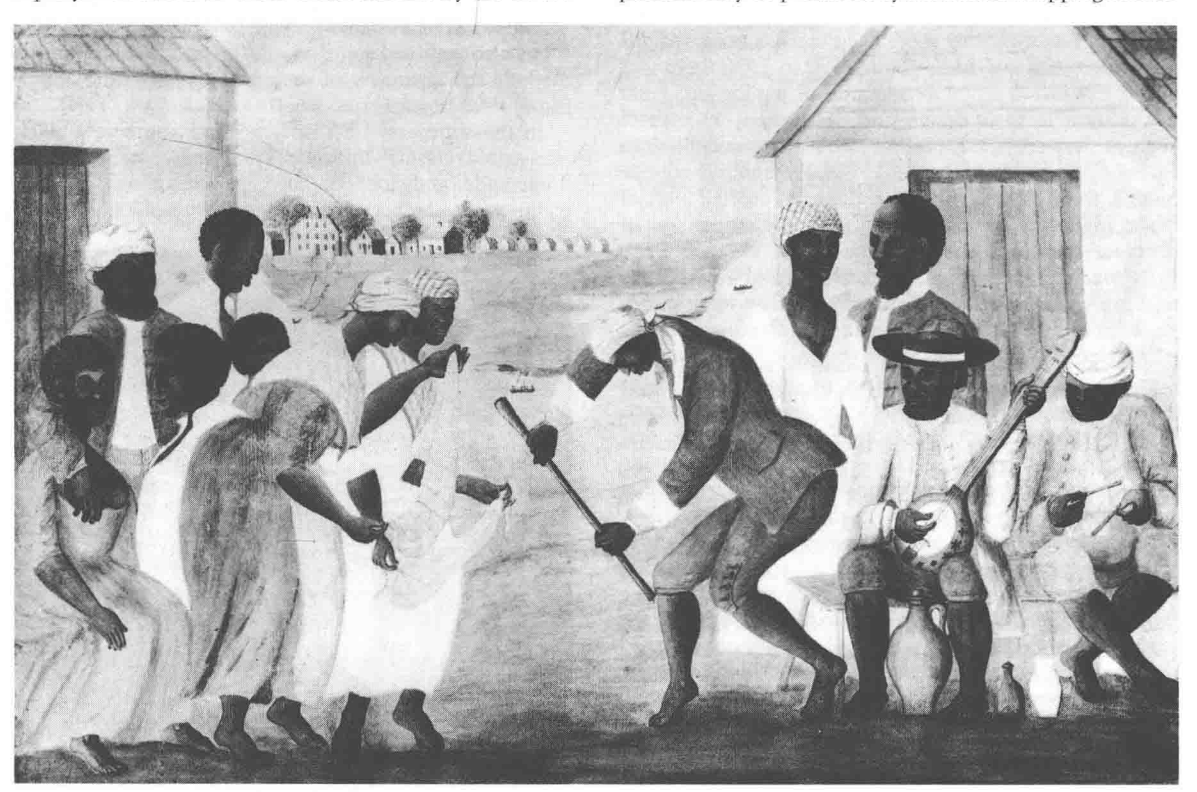
In England and Australia banjos with six or more strings were common during the late 19th century, the additional strings serving to extend the compass downwards. Another English type, the 'zither banjo' (distinct from C.L. Steffen's 'banjo zither', invented in Stettin in 1879), had first, second and fifth strings made of wire (the others were gut or wire-covered silk), frets, and geared tuning machines instead of the more usual friction pegs. It had a closed back which reflected the sound outwards through spaces between the head and rim, functioning much like a modern resonator, as do two banjos now in the collection of the Smithsonian Institution, Washington, DC, by the American makers Henry Dobson and George Teed of New York (US Patent 34,913, 8 April 1862).

2. HISTORY. The development of the modern banjo began in the second quarter of the 19th century as an increasingly commercial adaptation of an instrument used by West African slaves in the New World as early as the 17th century. The earliest known illustration of the instrument is in Sir Hans Sloane's *A Voyage to the Islands of Madeira, Barbados, Nieves, S. Christopher and Jamaica* (London, 1707), written in 1688, which depicts two Jamaican negro 'strum-strumps' with long necks and skin-covered gourd bodies (fig.2). In the French colonies, where the instrument was usually known as the *banza*, it was often associated with the calinda, a dance unsuccessfully suppressed by acts of the Martinique government as early as 1654 and as late as 1772.

In the British colonies the instrument was usually known as *banjer* or *banjar*, pronunciations still common in the southern USA. The Rev. Jonathan Boucher, describing life in Maryland and Virginia before he returned to England in 1775, wrote in *Boucher's Glossary of Archaic and Provincial Words* (London, 1832): 'The favorite and almost only instrument in use among the slaves there was a *bandore*; or, as they pronounced the word, *banjer*. Its body was a large hollow gourd, with a long handle attached to it, strung with catgut, and played on with the fingers'. Thomas Jefferson, in his *Notes on Virginia* (Paris, 1784, and Richmond, Virginia, 1853) stated of the negroes: 'The instrument proper to them is the Banjar, ... its chords [strings] being precisely the four lower chords of the guitar'. The common ENGLISH GUITAR of the period was tuned *C–e–g–c′–e′–g′*; hence the *banjar* would have been tuned either *C–e–g–c′*, if by 'lower' Jefferson meant 'lower in pitch', or else *g–c′–e′–g′*, if he meant 'lower in position when held by the player'. The former interpretation gives a traditional tuning pattern still sometimes used for the banjo's four full-length strings; the latter gives the pattern of the modern G tuning.

Although long-necked instruments with skin soundtables are common in North Africa, the Middle East and Asia, the banjo almost certainly derived from one or more of those in Northwest Africa. Coolen (1991) and Conway (1995) favour the Senegalese *xalam* as the closest match in terms of structure and performance style. The *xalam* shares the banjo's characteristic short thumb string, but it and other banjo-like African instruments, such as the *nkoni* of the Manding peoples and *tidīnīt* of Mauritania all have round necks. The *banza* probably acquired its flat fingerboard after enslaved musicians in the New World became familiar with European and English plucked string instruments, all of which have flat fingerboards. A similar instrument, the RAMKIE, has existed in South Africa since the early 18th century. Percival Kirby, whose *Musical Instruments of the Native Races of South Africa* (Johannesburg, 1926) includes several *ramkie* illustrations, makes a good case for its being an adaptation of the Portuguese *rabequinha* or *cavaquinho*, possibly introduced by slaves from the Malabar Coast of India, long under Portuguese domination. Even if not directly related to the *ramkie*, the *banza* may have developed in a similar manner since Portuguese slave traders were active in West Africa as early as the 15th century.

The first depiction in the Americas of the modern banjo's distinctive short 'thumb string' appears in J. Stedman's book, *Narrative of a Five-Year's Expedition Against the Revolted Negroes of Surinam from the Year*



2. Two banjos, or 'strum-strumps' (foreground), and a harp-lute: engraving from Hans Sloane's 'A Voyage to the Islands of Madeira, Barbados, Nieves, S. Christopher and Jamaica' (London, 1707)

1772 to 1777 (1796, 2/1806/*R*). Pl.lxix illustrates a *creole bania*, and a very similar instrument, collected by Stedman about the same time, is now in the Rijksmuseum voor Volkenkunde, Leiden. They both have one short and three long strings and a skin-headed gourd or calabash body. A watercolour entitled *The Old Plantation* (painted between 1777 and about 1800 in South Carolina; fig.3) shows a group of slaves dancing to the music of a gourd-bodied banjo which, like the Stedman instrument, has three full-length strings plus a short thumb string. An inaccurate drawing of this instrument, included in an article by A. Woodward, 'Joel Sweeney and the First Banjo', *Los Angeles County Museum Quarterly*, vii/3, 1949, p.7, omitted the thumb string and contributed to the incorrect popular legend that this feature of the modern banjo was invented by Joel Walker Sweeney (1810–60). Nevertheless, as the first well-known and widely travelled white banjoist, Sweeney played a major role in bringing the banjo to the attention of urban audiences in the USA and England and presumably in popularizing the type of banjo that he played. One owned and said to have been made by him is in the Los Angeles County Museum. Fretless and of light construction, it had screw-tightening brackets (now missing) for adjusting the head tension, four full length strings and a short fifth string. It is also similar to a modern banjo in having a body made of a thin bentwood rim instead of a gourd, and is thus better suited to commercial mass-production.

Through the influence of Sweeney, Daniel Emmett and many other popular minstrel-show banjoists (for illustration *see* EMMETT, DAN), many of whom had lived near and learned from black banjo players, the banjo was rapidly introduced to white urban culture. By the 1840s and 1850s banjos were being produced by the first commercial maker, William Boucher of Baltimore (see fig.1*b* above), whose banjos were almost identical with Sweeney's, and James Ashburn of Wolcottville, Connecticut. The latter applied an improved tuning-peg to a banjo in 1852 (US Patent 9268).

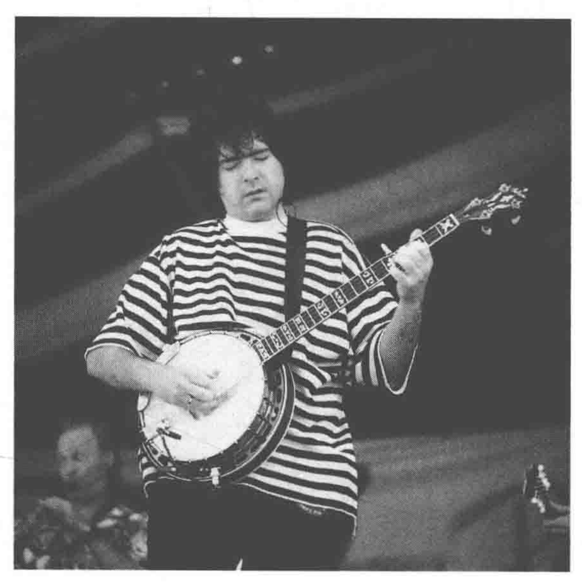
By the end of the Civil War the banjo had also taken root among traditional white musicians of the rural South, who, like Sweeney, had learned about it from direct contact with black musicians and, also, touring minstrel shows, medicine shows, and circuses. The banjo joined the fiddle to initiate a tradition of what is now called 'old-time string band music,' and was also played as a solo instrument and to accompany songs. The black tradition remained fairly strong in the rural South through the 1930s, but by the 1990s there were few black players (see Conway, 1995). Until the latter decades of the 20th century interplay between the black and white traditions was common.

Two general classes of playing styles, each with many variations, have developed. Apart from numerous accounts from the 17th century to the 19th of the banjo's use by black musicians to accompany singing and dancing, no detailed descriptions or notations are known before the 1850s, when the first minstrel banjo tutors were published. The 'stroke' style they teach produces a sound similar to that described in many of the earlier accounts. It is similar to the earliest style of rural southern white banjo players, today known as 'clawhammer' or 'frailing', in which patterns of downward strikes by the index or middle fingernail are combined with downward strokes of the thumb against the fifth string. More complex patterns may be produced by the thumb dropping further

3. Banjo accompanying dancing slaves: 'The Old Plantation', watercolour, c1777–1800 (Abby Aldrich Rockefeller Folk Art Center, Williamsburg, VA)

down to pick individual notes on the full length strings. The other major family of styles, 'finger-picking', combines upward plucking by the first, and sometimes second and third fingers, with downward plucks of the fifth string by the thumb. In both styles the fingers of the left hand pluck, hammer and slide on individual strings to contribute additional notes and rhythmic accents.

Finger-picking is first mentioned by Briggs (1855), as an alternate, guitar-like way to accompany songs, and is more fully described in an 1865 tutor by Frank B. Converse, who credited the Buckley family with being the first to play it. By the 1890s it had become the dominant style on the minstrel, vaudeville and concert stages and for amateur urban musicians, but the down-stroking styles remained popular in many rural areas until well into the 20th century. Finger-style playing became increasingly well-established about 1900 in the rural folk tradition, both black and white, apparently in imitation of classical guitar technique. At first, folk finger styles were primarily two-finger picking (i.e. using thumb and index finger), but a three-finger style (which added the middle finger) was popularized in the 1920s by the North Carolina banjo player Charlie Poole, and somewhat later by Dewitt 'Snuffy' Jenkins and others from the region. In the 1940s it was further developed by Earl Scruggs into 'bluegrass picking', the most widely heard style today.



After the 1850s the banjo was increasingly used in the USA and England as a genteel parlour instrument for the performance of popular music. During the last quarter of the century S.S. STEWART of Philadelphia, and other banjo popularizers, sought to upgrade the instrument's social standing by downplaying its black origins and disparaging the 'old-fashioned' stroke style in favour of the more 'elevated' finger-picking style. Their marketing campaigns were successful and from about 1890 to 1930 there was a vast expansion in the production of banjos and great elaboration in their design and decoration, by makers such as Stewart, the Dobsons (New York and Boston) and A.C. FAIRBANKS (Boston). Besides making regular banjos, these makers (primarily Stewart) created a set of banjo orchestra instruments, all with five strings but of different sizes and pitches. From about 1890 to 1920 there was a craze for banjo, mandolin, and guitar clubs and orchestras; by the turn of the century most good-sized cities and colleges had such organizations. In this period specialized journals and great quantities of marches, rags and transcriptions of popular and light classical music were published for banjo by Stewart, Walter Little of Boston, Clifford Essex of London, and others.

The banjo's important relationship to popular music at that time is well illustrated in the case of RAGTIME. Nathan (1962) finds in some minstrel-show banjo tunes the earliest examples of the kinds of syncopation that later appear in the genre. Banjo pieces such as George Lansing's *The Darkie's Dream* (1887) are among the precursors of ragtime; ragtime itself immediately entered the banjo repertory, and banjo compositions from the mid-1890s onwards were heavily influenced by ragtime. The recorded output of the greatest turn-of-the-century banjo recording artists, VESS L. OSSMAN and Fred Van Eps, includes many rags, and banjo recordings of ragtime (available long before ragtime piano recordings were issued) were influential in increasing its popularity. Other important concert banjo virtuosos of the time included Parke Hunter, Alfred A. Farland and Fred Bacon.

By the 1920s the popularity of the five-string banjo was rapidly declining among urban players. It was displaced by the four-string tenor and plectrum banjos, which were favoured as rhythm instruments in the jazz and dance orchestras of the day, largely because a pick-played banjo was louder and better suited to the music for the fast, rhythmic new dance steps. The first true tenor banjo was probably the 'banjorine' marketed by J.B. Schall of Chicago in 1907, which was advertised as 'tuned like a mandolin and played with a pick.' Such an instrument found ready acceptance among mandolinists and violinists, whose original instruments did not adapt well to the new music. Regular banjoists converted more easily to the plectrum banjo. Once introduced, these instruments did not long remain as mere accompanying rhythm instruments; solo styles developed, as did virtuoso soloists such as Eddie Peabody and Harry Reser. The 'Jazz Age' created a new society craze for the banjo, this time in its four-string versions. By the 1940s, however, the four-string banjo was being replaced by the guitar, especially the electric guitar, as the rhythm instrument of choice; and by then the five-string banjo had also been abandoned by many rural musicians, either in favour of the guitar, or because of the decline in home music-making.

The five-string banjo regained something of its former popularity after World War II, largely because of the influence of the American banjoists Pete Seeger (*see* SEEGER family, (3)), who popularized traditional rural southern styles among urban players as one aspect of the folksong revival, and Earl Scruggs (*see* FLATT AND SCRUGGS), who became famous as the developer of the 'bluegrass' style of banjo playing (*see* BLUEGRASS MUSIC). It has also regained some popularity as a jazz instrument through the virtuosity of such performers as Bela Fleck (fig.4).

In the southeast USA, many white and a few black traditional country musicians still play banjos, often homemade and fretless; their many tunings, playing techniques and repertory include survivals of 19th-century

4. Bela Fleck

minstrel and black performing practice. The Archive of Folk Culture, Library of Congress, Washington, DC, has a good collection of field recordings of such music, as does the Southern Folk-Life Collection (Wilson Library, University of North Carolina, Chapel Hill, NC). In the USA the American Banjo Fraternity promotes classic banjo playing and holds biannual conventions. Among the few composers to score for the instrument are Weill (*Mahagonny*, 1927), Krenek (*Kleine Sinfonie*, op.58, 1928) and Davies (*The Boy Friend*, 1971).

Public instrument collections possessing banjos include the Smithsonian Institution, Washington, DC; the Metropolitan Museum of Art, New York; the Stearns Collection of Musical Instruments, University of Michigan, Ann Arbor; and the Victoria and Albert Museum, London.

JAY SCOTT ODELL, ROBERT B. WINANS

Banjulele [banjo ukulele]. A hybrid instrument combining a banjo body with a UKULELE fingerboard, stringing and tuning.

Bankole, Ayo [Theophilus Ayeola] (*b* Lagos, 1935; *d* Lagos, 6 Nov 1976). Nigerian composer. His parents, both music teachers, and the composers Fela Sowande and T.K. Ekundayo Phillips were his early musical influences. He pursued formal studies in composition, the organ and the piano at the GSM (1957) and read music at Cambridge (BA 1964); he became an FRCO in 1965. Bankole also studied ethnomusicology at UCLA. Although most of his early works do not emphasize African elements, his work at UCLA stimulated Bankole to incorporate traditional Yoruba musical elements into his choral pieces: *Jona* and *Ethnophony* are two works that employ African musical instruments exclusively. As exemplified in *Festac Cantata*, the tonal properties of the Yoruba language became a marked influence on his choral works. He was senior music producer at the Nigerian Broadcasting Corporation (1966–9), and a lecturer in music at the University of Lagos (1969–76).

WORKS
(*selective list*)

Pf: Ya Orule, 1957; Nigerian Suite (1957); Christmas Sonata, 1959; English Winterbirds, 1961; The Passion Sonata (1977); Fugal Dance

MSS in Iwalewa-Haus, U. of Bayreuth

DANIEL AVORGBEDOR

Banks, Benjamin (*b* Salisbury, 14 July 1727; *d* Salisbury, 18 Feb 1795). English violin maker. He lived and worked in Salisbury and, with Forster, did much to raise the standard of English violin-making in the second half of the 18th century. In 1741 he began an apprenticeship under his uncle, William Huttoft. Although it was intended to last seven years, the apprenticeship terminated abruptly on Huttoft's death in 1747. Banks's earliest known instrument is an English guitar branded, signed and dated 1757, and his first advertisement appeared in the *Salisbury and Winchester Journal* on 28 March 1757.

Benjamin Banks has been described as the 'English Amati', and fine examples of his work exist to support this statement. He was the first English maker to recognize the importance of Stradivari's 'long pattern', and his cellos and violins were made to 'Strad' specifications. His violas invariably have a Stainer influence. They are always on the small side, being never more than 39.7 cm along the back. English sycamore and pine were the basic woods

Benjamin Banks: silhouette by Charles Rosenberg, c1790

employed on all Banks instruments, and his varnish is of excellent quality, ranging in colour from brown, through orange-brown and orange-red to deep red. The claim that stain was first laid on as a filler is without foundation. Signatures and initials are to be found in a variety of places, although not all instruments carry labels.

The bows that Banks and most other 18th-century makers sold were made by the Dodd family. In Banks's case they varied in quality and were branded BANKS, sometimes over the Dodd name. This was common practice, and may be assumed to have been carried out with the Dodd family's permission. Banks never made trade instruments, although he did allow his agents, Longman & Broderip, to place their brand over his on the instruments they sold; only a few of these still exist.

Benjamin Banks married Ann Burtt in 1749; they had ten children, including a pair of twins. Their eldest child, Ann (1750–94), married the music publisher Thomas Cahusac (i) in 1780. Benjamin's sixth child, James (*b* Salisbury, 10 Aug 1758; *d* Liverpool, 15 June 1831), was already producing instruments of high quality at the age of 17. His ability and drive have been given less than the notice they deserve by previous writers. Under his direction the string section of the firm blossomed profusely until the business was sold in 1811. His younger brother Henry (*b* Salisbury, 15 Dec 1770; *d* Liverpool, 16 Oct 1830), whose name is always linked with James, served an apprenticeship in the piano department of Longman & Broderip. In 1795 (the year of his father's death), Henry proudly advertised his skills in tuning 'stringed instruments of all kinds' in the *Salisbury and Winchester Journal*. Benjamin Banks's third child, Benjamin (*b* Salisbury, 15 Sept 1754; *d* Liverpool, 22 Jan 1820), also made violins. He worked in London for a short time, but his work tends to be heavy and somewhat clumsy.

In 1785 a fire devastated workshops opposite Banks's house and main workshop in Catherine Street, Salisbury. Although £200 worth of stock was destroyed, it had little effect on production for that year. In 1811 the business was sold to Alexander Lucas, and Henry and James moved to Liverpool. It would seem that the few instruments dated after the move were remaining stock that was brought up from Salisbury and labelled in Liverpool.

Banks, Don(ald Oscar) (*b* South Melbourne, 25 Oct 1923; *d* Sydney, 5 Sept 1980). Australian composer. The son of a professional jazz musician, Banks grew up in a house full of musical instruments, and learned to play several. He developed an early interest in jazz, sitting in as trombonist in Roger and Graeme Bell's jazz band. Following wartime service, the army rehabilitation scheme enabled him to undertake musical studies at the University of Melbourne Conservatorium of Music (1947–9), where he studied composition with Nickson and Le Gallienne; his fellow students included the composer Keith Humble, with whom he formed a lifelong friendship. During this period he became the founder and pianist of the Don Banks Boptet which was one of Australia's first bebop groups.

In 1950 Banks went to London, where work as secretary to Edward Clark, the head of music at the BBC and a former Webern pupil, soon brought him into contact with the more progressive circles in London's musical life. He studied composition with Seiber, and later, in 1953, with Dallapiccola in Florence. Neither composer taught 12-note composition *per se* – they were more concerned with broadly applicable disciplines – but the combination of serialism and canonic technique in Dallapiccola's *Goethe Lieder* clearly impressed Banks, and is reflected in the sketches for works from this period. A course given by Babbitt in Salzburg in 1952 had already established Banks's interest in serial thought and this was confirmed by his attendance in 1956 at Nono's seminars in Gravesano, Switzerland.

Initially through Seiber, Banks gained substantial work as a commercial composer, beginning with cartoons and comedy films in the late 1950s, and then moving on to thrillers and horror movies, especially for Hammer Films. This was by no means just a money-spinner: in a musical climate generally hostile to modernism, it gave him instant access to an orchestra, and horror films in particular permitted him to try out all kinds of new resources. In the concert hall, on the other hand, there was a 12-year gap between the Four Pieces which were first performed by the LPO under Boult in 1953, and the fairly consistent stream of orchestral commissions that followed *Divisions* (1964–5). Jazz also proved to be an enduring passion in Banks's life; in London, it led to friendship with John Dankworth and Cleo Laine for whom, in 1966, he wrote the *Settings from Roget*. This was the first of many works espousing the 'third stream' fusion of jazz and contemporary concert music pioneered during the 1950s by Schuller; they include three pieces entitled *Equation*, and reach a peak in *Nexus*.

Following a brief trip to Australia in 1970 while head of music at Goldsmiths' College, University of London (1969–71), a Creative Arts Fellowship at the Australian National University in Canberra took Banks back again in 1972; following this he accepted a composition post at the Canberra School of Music. Ever altruistic, he immediately assumed a central role in the promotion of new music – just as he did in London through the Australian Musical Association, which he co-founded with Margaret Sutherland in the 1950s, and the SPNM – most notably as chair of the Music Board of the Australia Council, and as co-founder of the ACME Ensemble. In 1979 he became head of the school of composition studies at the NSW Conservatorium; by this stage, however, he was already suffering from cancer, compounded by a serious car accident, and he was able to complete only one more work, *An Australian Entertainment*, before his death.

Banks's output covers a wide variety of genres, from major orchestral works to brief choral pieces for school use, and a wide variety of styles. Though essentially a 12-note composer with a preference for tautly argued motivic textures – his finest and most characteristic works are probably the *Sonata da camera*, the concertos for horn and violin, and *Limbo* – he was also fascinated by the more radical musical activities of the 1960s. Witness to this are his graphic score *Form X* and the later *4/5/7*, hastily written on the back of a photocopy of Earle Brown's *December '52*, as well as the orchestral *Assemblies* and *Intersections*, both intended as 'young person's guides' to new music. In England, while at Goldsmiths', he had also taken a keen interest in electronic music, and especially in developments of the synthesizer, though his suspicion of the medium's potential for pretentiousness is reflected in the droll tape part of *Commentary*. In Australia, he was an adviser to Tony Furse in the early development stages of the Fairlight CMI, and a late work like *4 x 2 x 1* suggests that had he lived longer, electro-acoustic music would have played an increasingly prominent role in his work. Banks's continual openness and natural curiosity coupled with impeccable traditional craftsmanship was the key to his reputation as a composer and outstanding teacher.

Bannister, Henry(-Marriott) (*b* Oxford, 18 March 1854; *d* Oxford, 16 Feb 1919). English musical palaeographer. After reading classics and theology at Pembroke College, Oxford (1873–7), he held a number of ecclesiastical appointments before devoting himself to musical palaeography. He travelled extensively and accumulated an encyclopedic knowledge of library collections in his chosen field of the medieval liturgy and its music, in which he published numerous articles (in *Rassegna gregoriana, English Historical Review* and the *Journal of Theological Studies*). In 1917 he was appointed acting sub-librarian of the Bodleian Library.

Bannius, Joannes Albertus. *See* BAN, JOAN ALBERT.

Banse, Juliane (*b* Tettnang, 10 July 1969). German soprano. She studied at the training school of the Zürich Opera, then in Munich with Fassbaender and Daphne Evangelatos. She made her stage début at the Komische Oper, Berlin, in 1989 as Pamina, and followed that role with Ilia and Susanna at the same house. Since then she has appeared as Sophie at the Salzburg Festival, as Zerlina at Glyndebourne (the controversial Warner staging of 1994), at the Deutsche Oper Berlin as Pamina, Sophie and Manon, and at the Vienna Staatsoper as Susanna, Pamina, Marzelline, Sophie and Zdenka. In 1998 she was much praised for her assumption of the title part in the première of Holliger's opera *Schneewittchen* at Zürich. In 1999 she sang Ighino in a new production of *Palestrina* at the Vienna Staatsoper. She has a wide concert repertory ranging from Haydn (she has performed *The Creation* under Rattle with the Berlin PO and under Andrew Davis at the Proms) to Mahler and Berg, and is a leading exponent of lieder. Her recordings of, among others, Mozart, Schumann and Mahler have been much admired for her innate sincerity of purpose allied to a communicative manner, a pleasing timbre and a scrupulous care for the text.

ALAN BLYTH

Banshchikov, Gennady Ivanovich (*b* Kazan', 9 Nov 1943). Russian composer. He studied composition with Balasanian at the Moscow Conservatory (1961–4) and then at the Leningrad Conservatory under Arapov (1965–6) with whom he also undertook postgraduate work (1966–9). He joined the Composers' Union in 1967 and in 1980 was appointed board member of the St Petersburg branch.

He has taught at the St Petersburg Conservatory since 1974, was made senior lecturer in 1983 and professor of orchestration and composition in 1998. Any straightforward definition of Banshchikov's creative personality is precluded by his multifaceted nature: he eschews all aesthetic labels applied to his music. However, while descriptions such as Romantic, lyrical and conservative are in themselves inadequate, taken in aggregate they provide a general representation of his output. He combines the technical suavity, professional restraint and academic approach of the St Petersburg school with a certain impulsiveness and high emotional temperature. He also gives innovation due regard, so his particular link with German Romanticism does not prevent his language from being profoundly contemporary. He combines precise forms with Romantic angst; his kinship with Richard Strauss therefore comes as no surprise – the *Opera o tom, kak possorilsya Ivan Ivanovich s Ivanom Nikiforovichem* ('Opera About how Ivan Ivanovich Quarrelled with Ivan Nikiforovich') is dedicated to that composer's memory. Other works, such as the opera-parody *Lyubov' i Silin*, reveal Banshchikov's wit, sense of irony and comedy. The large scale of his designs is evident not only in his symphonies but also in his chamber and solo instrumental works, among which should be mentioned the first full-scale substantial sonatas for bayan.

WORKS

Stage: Ostalas' legenda [The Legend Remained] (radio op for children, F. Naftul'yev), 1967; Lyubov' i Silin (chbr op, 3, after Koz'ma Prutkov), 1968; Vestris (choreographic composition, L. Yakobson), 1969; Opera o tom, kak possorilsya Ivan Ivanovich s Ivanom Nikiforovichem [Opera About how Ivan Ivanovich Quarrelled with Ivan Nikiforovich] (op, 1, M. Lobodin, after N. Gogol'), 1971, rev. for chbr forces, 1982; Smert' korneta Klyauzova [The Death of Klyauzov's Cornet] (op, 1, A. Kleyman, after A. Chekhov: *Shvedskaya spichka* [The Swedish Match]), 1976; Gore ot uma [Woe in Wisdom] (op, 2, Banshchikov, after A. Griboyedov), 1979–83; Optimiticheskaya tragediya [An Optimistic Tragedy] (ballet, 2, A. Dement'yev, after V. Vishnevsky), 1985; Dama Pik [Dame Pique] (ballet, 2, A. Polubentsev, after A.S. IOSIF GENRIKHOVICH RAYSKIN

Banti, Brigida Giorgi (*b* Monticelli d'Ongina, nr Crema, 1755; *d* Bologna, 18 Feb 1806). Italian soprano. Her father, a street singer and mandolin player, took her to Paris when she was about 20; there she met de Vismes, director of the Opéra, who arranged her début there (1 November 1776) singing a song between the second and third acts of Gluck's *Iphigénie en Aulide*. She had some lessons from Sacchini, and in 1779 went to London, where she met the dancer Zaccaria Banti, whom she married in Amsterdam. She seems at this time to have been a very bad singer with a beautiful voice, and so lazy that she could not be taught. In 1780 she left England and travelled over Europe, singing in Vienna (1780), Venice (1782–3), most of the Italian cities, Warsaw (1789) and Madrid (1793–4) with increasing fame. In 1794 she returned to London, making her début in Bianchi's *Semiramide*, in which she introduced an air with violin obbligato from Guglielmi's *Deborae Sisara*; the song became a favourite with her audiences and was always encored. She was principal soprano at the King's Theatre from 1794 until her retirement in 1802.

Banti's fame was truly international, and she was particularly admired by Mount Edgcumbe, who called her 'far the most delightful singer I ever heard'. He composed *Zenobia* for her in 1800, and wrote in his *Musical Reminiscences*:

> Her voice was of most extensive compass, rich and even, and without a fault in its whole range – a true *voce di petto* throughout. In her youth it extended to the highest pitch and was so agile that she excelled most singers in the bravura style; but, losing a few of her upper notes, she modified her manner by practising the cantabile, to which she devoted herself and in which she had no equal. Her acting and recitative were excellent. Her spirits never flagged, nor did her admirers ever grow weary of her. They never wished for another singer.

After her death, Banti's larynx was examined by physiologists, who reported it to be extraordinarily large. Her son, Giuseppe Banti SJ, published a short biography of her in 1869, a copy of which is in the Civico Museo at Bologna.

BRUCE CARR/R

Bantock, Sir **Granville** (*b* London, 7 Aug 1868; *d* London, 16 Oct 1946). English composer. The son of a doctor, and educated for the Indian civil service, which may explain some of his cultural interests, Bantock did not enter the Royal Academy of Music until 1888. There he studied with Corder, a permissive and comparatively progressive teacher who, no doubt, encouraged Bantock's predilection for the music of Wagner and Richard Strauss. Bantock was the first winner of the Macfarren Scholarship, and several of his works were performed at concerts while he was still a student. These tended to be ambitious in scope, and some were inspired by Western concepts of oriental life. In 1890 the overture to his cantata *The Fire Worshippers* was publicly performed, and two years later he came to wider public attention with a concert version of his one-act opera *Caedmar*, already performed at the RAM, which was given at the Crystal Palace (conducted by August Manns), and subsequently produced at the Olympic Theatre. Bantock left the RAM in 1892, and from May of that year until February 1896 he edited the *New Quarterly Musical Review*. With this came an extensive period of conducting, which was useful experience. During 1894–5 he made a world tour with George Edwardes' *A Gaiety Girl* and the latter year he toured England with the more stimulating *Shamus O'Brien* of Stanford.

A characteristic generosity and interest in his fellow English composers early manifested itself. On 15 December 1896 he gave a concert of orchestral music by living English composers, followed in May 1897 by a similar concert of chamber works. He conducted for a while at the Royalty Theatre, and in July of the same year his overture *Saul* was performed at the Chester Festival, shortly before his appointment as musical director of The Tower, New Brighton, in August. At New Brighton the musical fare consisted mainly of dance music played by a military band, and Bantock set about raising the musical standard, firstly by gradually introducing more serious items between the dances, and then by introducing concerts devoted to the works of one composer. The band was gradually increased to a symphony orchestra, and much English music was played, Elgar, Parry and Stanford being among the composers invited to conduct their own works. In 1898 Bantock married Helena von Schweitzer, who wrote verse and provided the texts for many of his numerous songs. The marriage lasted, in spite of some strains. Bantock had a flair for detecting genius in others; he was one of the first outside Finland to encourage Sibelius, and the two composers became firm friends, Sibelius dedicating his Third Symphony to Bantock.

On Elgar's recommendation Bantock was appointed the first full-time salaried principal of the Birmingham and Midland Institute School of Music in 1900, an appointment that was to have a lasting effect on his career and on music in Birmingham. He succeeded Elgar as Peyton Professor at Birmingham University in 1908, and continued there until he left Birmingham in 1934. Bantock's aim at Birmingham was to give his students a complete musical education, with institute and university interacting with each other. To this end he extended the repertory studied to include the music of the Elizabethans, English church music, folksong, and recent works of contemporary composers such as Richard Strauss and Rimsky-Korsakov, in all of which he was showing some interest himself. It was under Bantock's direction that the first English performance of Gluck's *Iphigénie in Aulide* was given, by students, at Birmingham. At this time he developed an interest in large-scale choral composition, an interlude in his lifelong concern with the symphony orchestra. The first fruit of this new interest was his setting of Fitzgerald's very free translation of *Omar Khayyám*, the first part of which was first performed at the Birmingham Festival of 1906, the second at the Cardiff Festival of 1907, and the third at Birmingham in 1909. It was typical of Bantock to go to Fitzgerald rather than to a more authentic source, a tendency also indicated by his youthful plan to compose 24 symphonic scenes based on Southey's *The Curse of Kehama*.

Gradually his interest returned to symphonic music, beginning with revisions of earlier works, among them the symphonic poems *Dante and Beatrice* (1910) and *Fifine at the Fair* (1911). Bantock's output was prodigious, and between this time and his death he poured out, apparently effortlessly, orchestral and choral works, piano and chamber music, compositions for brass band, and hundreds of songs, mainly for children. On his retirement from his Birmingham posts he became associated with Trinity College of Music, for which he was already an examiner; he therefore moved house to London. Although a great home-lover, he also travelled widely, and even in old age his activities, including composition, spoke of inexhaustible energy. Admitted to hospital for a minor operation he fell and broke his femur; pneumonia set in and he died peacefully at the age of 78. He was a

Granville Bantock

prominent figure in the early years of the English musical renaissance, evincing genuine and long-lasting interests in the choral festival and brass band movements. For a while his music was widely performed, and, although offered many honours, apart from his knighthood Bantock refused to accept them. His music has passed out of fashion, for reasons easily understood. He was strongly influenced by Wagner and Richard Strauss, but failed to find a consistently distinctive musical language of his own. He never adopted the advanced harmonic idiom of *Tristan*, let alone *Salome* or *Elektra*. His style, both in orchestration and harmony, suggests rather such works as *Der fliegende Holländer* and *Guntram*. It is based on common chords and diatonic discords; the complex chromatic suspensions of *Tristan* are outside its scope, as is the dissonant counterpoint of Strauss's more advanced works. Bantock's textures are solidly homophonic, and such chromaticisms that appear are usually found in semi-oriental arabesques. His obsession with pseudo-eastern subjects was also a handicap, since it was the theatrical east of magnificent processions, the gigantic and the gaudy that attracted him; and although he travelled to several Asian countries, the subtlety and restraint of oriental thought escaped him. Among his other abiding interests were Greek subjects, Scottish folk music and Celtic legends. More profitable was the Hebridean influence, since Bantock's own attractive melodies to some extent resembled these folktunes even before he met the researches of Marjorie Kennedy-Fraser. He wrote a great many works, both large and small, on Hebridean themes, or using Hebridean melodies. The *Hebridean Symphony* (1915) itself is an evocative and imaginative piece which uses several Hebridean folktunes, as does *The Seal Woman* (1917–24). On the other hand, the *Celtic Symphony* (1940) is musically a much less ambitious work, despite demanding six harps to supplement the string orchestra. A slight French influence, not extending to the more radical complexities of Debussy's harmony, produced *The Pierrot of the Minute* (1908), an atmospheric work which reveals Bantock's orchestration in a more delicate, and less broad style than in some of his other works. The *Pagan Symphony* is a work of greater substance and power, and reveals more facets of his masterful handling of the orchestra.

Bantock felt that orchestral playing should be corporate and anonymous, and for this reason he refused to write concertos, although all other forms are represented in his output. His choral music is headed by the vast *Omar Khayyâm* and the choral symphonies *Atlanta in Calydon* (1911) and *The Vanity of Vanities* (1913). These last two, intended ideally for several hundred amateur singers were, together with numerous shorter choral settings, the major outcome of his involvement with choral societies and the competitive festival movement. However, as with many of Bantock's works, the length and the size of forces required is something of an obstacle to performance. Despite its initial success, *The Seal Woman*, too, no longer holds the stage, and, whereas the best of the songs, such as *A Feast of Lanterns* and *The Lament of Isis* have a definite merit, Bantock frequently set inferior verse with a matching banality of musical idiom. Although his music was popular until World War I, it gradually lost public attention, and towards the end of his life, despite a continuing output as well as revision of earlier compositions, relatively few of his new works were published. He was financially obliged at this time to write simple, often merely atmospheric, piano pieces, which he subsequently orchestrated for gramophone recordings. In addition he made easy piano arrangements of music by Johann Strauss, Chopin and others, sometimes with words provided by his wife. He wrote too much; there are too many works to sift through to separate the good from the mere note-spinners. However, although performances of his larger works are rare, the brass band music, most notably *Prometheus* (1933), and some of the smaller orchestral works are still performed.

WORKS
(*selective list*)

STAGE

Ramses II (incid music, Bantock), 1891
Aegypt, ballet, London, RAM, 1892, orchd 1899
Caedmar (op, 1, F. Corder), 1892, London, Olympic, 25 Oct 1892
The Pearl of Iran (op, 1, Bantock), 1893
Electra (incid music, Sophocles), ?1894, London, Court, 15 July 1909
Eugene Aram (op, 4 after E. Bulwer Lytton and T. Hood), unfinished, 1896
Hippolytus (incid music, Euripides, trans. G. Murray), 1908, Manchester, Gaiety, 6 Oct 1908
The Great God Pan, choral ballet, 1908–14, Glasgow, St. Andrew's Hall, 9 Dec 1919
Music for a Harlequinade (incid music, H.R. Barber: *The Cortege*), 1917, rev. 1920, London, Court, 11 March 1918
Salome (incid music, O. Wilde), 1918, London, Court, 19 April 1918
Judith (incid music, A. Bennet), Eastbourne, Devonshire Park 1919, orchd 1921, 7 April 1919
The Seal Woman (Celtic folk op, 2, Kennedy-Fraser), 1917–24, Birmingham Repertory, 27 Sept 1924
Macbeth (incid music, W. Shakespeare), 1926, London, Princes, 26 Dec 1926
Fairy Gold (incid music, A.L. Coburn), 1938, Huyton, Liverpool College for Girls, 15 July 1938

VOCAL ORCHESTRAL

The Fire Worshippers (Moore), solo vv, chorus, orch, 1892; Wulstan, v, orch, 1892; The Blessed Damozel (D.G. Rossetti), reciter, orch, 1892; Thorvenda's Dream, reciter, orch, 1892; Christus (Bible) [2 parts of projected 10], solo vv, chorus, orch, 1901; Ferishtah's Fancies, v, orch, 1905; Sappho, v, orch, 1905; Sea Wanderers (H.F. Bantock), chorus, orch, 1906; The Time Spirit (H.F. Bantock), chorus, orch, 1906; Omar Khayyâm (E. Fitzgerald), solo vv, chorus, orch, 1906–9
Song of Liberty (H.F. Bantock), chorus, orch, 1914; The March (J. Squire), v, orch, 1919; The Vale of Arden (A. Hayes), v, orch, 1921; The Song of Songs (Bible), solo vv, chorus, orch, 1922; Pagan Chants, v, orch, 1917–26; The Burden of Babylon (Bible), chorus, brass, drums, 1928; The Pilgrim's Progress (J. Bunyan), solo vv, chorus, orch, 1928; King Solomon (Bible), nar, chorus, orch, 1937; The Sphinx, v, orch, 1941; Thomas the Rhymer, v, orch, 1946

ORCHESTRAL

2 Orch Scenes from Southey's The Curse of Kehama, 1894; 3 Dramatic Dances, 1894; Saul, ov., 1897; Elegiac Poem, vc, orch, 1898; Helena Variations, 1899; Russian Scenes, 1899; Tone Poem no.1 'Thalaba the Destroyer', 1899; Tone Poem no.2 'Dante', 1901, rev. as Dante and Beatrice, 1910; Tone Poem no.4 'Hudibras', 1902; Tone Poem no.5 'The Witch of Atlas', 1902; Tone Poem no.6 'Lalla Rookh', 1902
Sapphic Poem, vc, orch, 1906; The Pierrot of the Minute, ov., 1908; Old Eng. Suite, small orch, 1909; Dante and Beatrice [rev. Tone Poem no.2], 1910; Fifine at the Fair, orch drama, 1911; Oedipus Coloneus, ov., 1911; In the Far West, serenade str, 1912 [based on Str Qt, 1900]; Scenes from the Scottish Highlands, suite, str, 1913; Celtic Poem, vc, orch, 1914
Hebridean Symphony, 1915; The Land of the Gael, suite, str, 1915; Coronach, str, hp, org, 1918; Hamabdil, vc, orch, 1919; The Sea Reivers, orch ballad, 1920; Caristiona: Hebridean Seascape, 1920; Pagan Sym., 1923–8; The Bacchae, ov., 1929, rev. 1945; The Frogs, ov., 1935

4 Chin. Landscapes, small orch, 1936; Aphrodite in Cyprus, sym. ode, 1939; Celtic Sym., str, 6 hp, 1940; Macbeth, ov. [arr. of incid music, 1926], 1940; Ov. to a Greek Comedy, 1941; Circus Life, ov., 1941; Dramatic Poem, vc, orch, 1941; 2 Heroic Ballads, 1944: Cuchullin's Lament, Kishmul's Gallery; Hebridean Poem: The Seagull of the Land-Under-Waves, 1944; The Birds, ov., 1946

CHORAL

Mass, B♭, male chorus, 1903; Atlanta in Calydon, choral sym., 1911; Vanity of Vanities, choral sym. 1913; A Pageant of Human Life, choral sym., 1913; Choral Suite from the Chinese, male chorus, 1914; Choral Suite, male chorus, 1926; 7 Burdens from Isaiah, male chorus, 1927; 3 Choruses for male vv, (R. Browning), 1929; 5 Choral Songs and Dances from the Bacchae, female chorus, 1945; many other works for male, female, mixed and children's choruses

CHAMBER

Str Qt, c, 1900, arr. str orch as In the Far West, 1912; Sonata, vc, pf, 1900, rev. 1940; Pibroch, vc, hp, 1917; Sonata, va, pf, 1919; Sonata, vc, 1924; Salve Regina, str trio, 1924; Sonata, vn, pf, 1929; Sonata, vn, pf, 1930; Str Qt 'In a Chinese Mirror', 1933; Sonata, vn, pf, 1940; Sonata, vc, pf, 1945

Over 400 songs incl. 40 song cycles and numerous partsongs, over 100 pf works, works for brass band, several hundred arrs. of own works and of works by others

MSS in *GB-Bu*

PETER J. PIRIE/DAVID BROCK

Banwart, Jakob [?Avia, Jacob] (*b* Sigmaringen, 19 May 1609; *d* Konstanz, *c*1657). German composer. He came from a respected middle-class family from Sigmaringen, residence of the Hohenzollerns, and received his first tuition in music from the court organist, Daniel Bollius. From 1629 he studied at Dillingen University, the centre of the south German Counter-Reformation, where he took his master's degree in 1631. He then went to Konstanz, where he was ordained in 1632 and first carried out mostly musical duties at the court of Prince-Bishop John VI, Lord High Steward of Waldburg-Wolfegg. From 1641 until his death he was Kapellmeister of the cathedral. The musical life of the Hohenzollern court and at the prince-bishop's residences at Konstanz and Meersburg, where Hieronymus Bildstein, an important pioneer of the new music, worked, were equally important for his artistic development. Thus Schmid included him, together with Johann Stadlmayr and Johann Donfrid, among the 'more prominent representatives of the south German church style'. His works were widely performed and are listed in inventories at Freising (1651), Würzburg (1694) and Feldkirch (1699), among others. Brossard praised the masses in his 1657 book as 'graves, harmonieuses et de très bon goût'. The humorous dialogues, quodlibets and other spirited pieces in his secular collection of 1652 are in sharp contrast to these, and if Gerber was right in stating that Banwart had originally published the book in 1650 under a pseudonym, Jacob Avia, it may have been because he felt it would be thought incongruous coming from one hitherto known as a composer of church music. He consciously modelled it on the 'new Italian manner', and, like two works in Kindermann's *Intermedium musico-politicum* (1643), some of the contents are based on pieces by Tarquinio Merula, from the second book of madrigals (1633).

WORKS

published in Konstanz

Liber primus sacrorum concentuum, 2–4vv, 2 vn, bc (1641)
Pars prima missarum brevium cantuque facilium, 4–5vv, 5 insts, chorus 4vv (ad lib), op.3 (1649)
Teutsche mit new componirten Stucken und Couranten gemehrte kurtzweilige Tafel Music von Gesprächen, Dialogen, Quodlibeten, 2–4vv (2/1652; Ulm, 3/1652) [possible earlier edn, 1650]
Pars secunda missarum, 4, 5vv, addita una 10/18vv, bc (org), op.1 posth., alias quintum (1657)
Motetae sacrae, selectae ex Thesauro musico Jacobi Banwart, 3–11vv, chorus 4vv (1661)
Missa unica, alias decima quinta, super motetam Congratulamini, 5vv, 2 vn, bc, chorus 4vv (ad lib) (1662)

WALTER PASS

Baptie, David (*b* Edinburgh, 30 Nov 1822; *d* Glasgow, 26 March 1906). Scottish musical biographer. He was inspired by the first publication of Grove's *Dictionary* (1879) to write a series of musical biographical dictionaries, in order to document glee composers and Scottish composers whom he feared Grove would neglect. Although he was prone to inaccuracy and erratic judgment, his biographies contain much valuable material. A reviewer in the *Scottish Musical Monthly* corrected many errors in *Musical Scotland Past and Present* (1894), nowadays his most used work and in effect the first comprehensive history of Scottish music. Baptie also compiled from 1846 a manuscript catalogue of partsongs, composed glees, and is said to have edited several hymnbooks. His son Charles Robertson Baptie (*b* Glasgow, 29 May 1870) was a successful minor composer whose works include music-hall songs and an operetta for children.

DAVID JOHNSON

Baptista, Johann. *See* SERRANUS, JOHANN BAPTISTA.

Baptist church music. Baptists are an evangelical Christian denomination whose name is derived from the distinctive doctrine of believers' baptism, usually administered by means of total immersion. Traditional Baptist beliefs also include the authority of the Bible, the soul-competency of the individual believer, a symbolic interpretation of the Lord's Supper, and the autonomy of the local church (although churches have often joined together in voluntary associations and conventions). In most other doctrines Baptists are similar to other mainstream evangelical groups. From modest beginnings in the 17th century Baptists have grown into one of the world's largest evangelical Christian denominations; in 1994 their numbers were estimated at over 37 million worldwide (Wardin, 1995, p.8).

1. GREAT BRITAIN.

(i) The 17th century. The earliest English Baptist churches grew out of 17th-century Separatism. In 1607 John Smyth, the pastor of a Separatist congregation at Gainsborough, led his flock to Amsterdam to avoid persecution. Smyth came under the influence of continental Anabaptist ideas and, in about 1609, rebaptized himself and others of his congregation. Smyth died in 1612 and his followers Thomas Helwys and John Murton led many of his congregation back to England, where they formed the first Baptist church on English soil. While in Amsterdam these Baptists had adopted the Arminian belief in general atonement; thus they and their followers became known as General Baptists.

A second Baptist group arose about 1638 when several members of a London Separatist church – called the Jacob-Lathrop-Jessey church after its succession of early pastors – rejected infant baptism and formed their own congregation. The 'mother church' eventually became a 'union' church of mixed Congregationalist and Baptist sentiments. Because of their Calvinistic views of a limited atonement the Baptists originating out of this congregation became known as Particular Baptists. General and Particular Baptists maintained distinct organizational structures until 1891, when they merged to form the Baptist Union of Great Britain and Ireland.

Like most 17th-century Separatists English Baptists rejected the use of choirs and musical instruments in the church, but some went even further and repudiated the practice of congregational song. In *The Differences of the Churches of the Seperation* (sic), published in Amsterdam in 1608, John Smyth claimed that 'singing a psalme is a part of spirituall worship' but that it must proceed from the spirit and not be read from a book. This was amplified in his *Certayne Demaundes from the Auncyent Brethren of the Seperation* (*c*1608/9), to suggest that 'in a Psalme one onely must speak' and that the use of 'meter, Rithme, and tune' quenched the Holy Spirit. Thus singing was to be allowed only if done by an individual through the direct inspiration of the Holy Spirit without using preset forms. The impracticality of this was evident to Henry Ainsworth, who pointed out that if Smyth and his congregation truly believed that singing is 'an ordinary part of worship, why perform they it not' (*A Defence of the Holy Scriptures*, 1609). Smyth's views, which were further enlarged upon in Thomas Grantham's massive *Christianismus primitivus* (1678), seem to have held sway in most General Baptist churches until well into the 18th century, although there is evidence of singing by a few of these Baptists in the 17th century. In 1684, the General Baptist pastor John Reeve published *Spiritual Hymns upon Solomon's Song* (1684, 2/1693), which he suggested could be 'sung in the ordinary tunes of the singing Psalms'. The matter of singing came before the General Assembly of the General Baptist Churches in England in 1689. At this time some churches were evidently using William Barton's *Book of Psalms in Metre* (1644), but the general conclusion of the body was that the churches should not 'admit to such Carnall formalities' (Whitley, 1909–10). In 1695 the London General Baptist churches in Paul's Alley and Turner's Hall united, agreeing to sing at the conclusion of morning worship and the Lord's Supper. In the following year, Richard Allen, the pastor of the united church, wrote *An Essay to Prove Singing of Psalms with Conjoined Voices a Christian Duty* (1696), perhaps in reaction to criticism for instituting this practice of singing. However, these early singers appear to have had few immediate imitators among the General Baptists.

Particular Baptist views on singing during the 17th century represent a curious blend of conservatism and radical innovation. There is no evidence of singing in Particular Baptist churches before 1650, and some early Particular Baptists wrote against the practice (e.g. Francis Cornwell, Edward Drapes and Thomas Collier). However, by the mid-1650s Particular Baptist writings in support of singing began to appear (William Kaye and Vavasor Powell) and some congregations had evidently adopted the practice. Psalmody was certainly practised early in the history of Bristol's Broadmead Baptist Church, for in 1671 a former sheriff complained that 'he could hear us Sing Psalmes from our meeting-place, at his house in Hallier's Lane'. The pastor of Horselydown church in London, Benjamin Keach (1640–1704), instituted singing about 1673–5 at the conclusion of the Lord's Supper. In 1680 Hercules Collins, a pastor at Wapping, called singing 'a Gospel-Ordinance' (in his *Orthodox Catechism*), thus placing it on the same plane as the other two ordinances generally recognized by Baptists – baptism and the Lord's Supper. By 1691 between 20 and 30 Particular Baptist congregations in London were singing.

This growing acceptance of singing by Particular Baptists was not universally approved, however. In 1690 Isaac Marlow attacked Keach's use of singing by publishing *A Brief Discourse Concerning Singing in the Public Worship of God* in which he reiterated some of the ideas of John Smyth and put forward the Zwinglian notion that 'singing' as used in New Testament passages such as *Colossians* iii:16 did not indicate a vocal utterance but a 'speaking' in the heart. Keach defended his use of singing in *The Breach Repaired in God's Worship* (1691). These publications touched off a pamphlet war between Marlow

and the supporters of Keach's position. By 1692 the issue had become so rancorous that the General Assembly of Particular Baptist churches took up the matter and proposed that several of the most vehement books be dropped from circulation; both sides were urged to exhibit more charitable behaviour. This action seems to have created a temporary lull in the controversy, although 22 members of Keach's church withdrew in 1693 and formed the Maze Pond church because of his use of singing. In 1696 Marlow undertook a response to Richard Allen's *An Essay to Prove Singing of Psalms* by publishing *The Controversie of Singing Brought to an End*. The title of Marlow's essay was perhaps wishful thinking, and the pamphlet war was now pursued with renewed vigour on both sides. From 1690 to 1698 at least 19 essays dealing directly with singing were published by Baptist authors. However, by 1699 the controversy was beginning to lose momentum, in part because the large majority of Particular Baptist churches and ministers favoured singing.

Ironically, at a time when some Particular Baptists rejected congregational singing altogether, and most Anglicans and Separatists restricted it to the metrical psalms (*see* PSALMS METRICAL, §III, 1–2), some Particular Baptists approved the use of 'hymns of human composure' and wrote such pieces for use in worship. In 1654 Anna Trapnell, a Fifth Monarchy Baptist, published a collection of prayers and 'spiritual songs', *The Cry of a Stone*, although if the texts were actually used in services they were probably sung as solos rather than congregational hymns. A collection of lyric poetry by Katherine Sutton, *A Christian Womans Experiences of the Glorious Working of God's Free Grace*, was published in Rotterdam in 1663. In the meantime, the Particular Baptist Thomas Tillam had published three hymns in *The Seventh-Day Sabbath* (1657), one each for the Lord's Supper, Pentecost and the Sabbath. Poems that might have been intended or used for congregational singing appeared in scattered sources by Baptist authors during the 1660s, 1670s and 1680s – particularly in children's books by Abraham Cheare, Benjamin Keach and John Bunyan – but the publication of real significance was Keach's *Spiritual Melody* (1691), a collection of 283 texts that probably reflects some of the hymnic repertory used at the compiler's own church. The book included hymns by non-Baptists such as John Patrick, William Barton and John Mason – often in considerably altered form – as well as original contributions by Keach. Keach published three more collections of hymns, but most of his poetry was doggerel, and his hymnals do not seem to have had much influence outside his personal circle. Nevertheless, these collections are significant for being among the earliest English hymnals to provide a well-rounded body of material that was expressly designed for congregational use. If Keach's poetic abilities were limited, the same cannot be said for Joseph Stennett (1663–1713), a Seventh-Day Baptist whose *Hymns in Commemoration of the Sufferings of Our Blessed Saviour Jesus Christ* (1697) and *Hymns Composed for the Celebration of the Holy Ordinance of Baptism* (1712) were written for the two Baptist ordinances.

(ii) The 18th century. Most General Baptist churches were still in a songless state at the dawn of the 18th century. The Virginia Street church in London began singing in 1722. A few other churches must have adopted singing soon after: a meeting of the General Assembly in 1733 agreed that 'singing' churches should not be disfellowshipped for this reason, but admonished such congregations to undertake 'a serious Examination of the Scriptures' on the subject (Whitley, 1909–10). The majority of General Baptist churches remained songless until after the middle of the century. In 1770 the New Connexion of General Baptists was formed under the influence of the Methodist revival and the first officially sanctioned General Baptist hymnal, *Hymns and Spiritual Songs*, was published in London in 1772. This was followed by Samuel Deacon's *A New Composition of Hymns and Poems* (1785, retitled *Barton Hymns* in its second edition of 1797), the General Baptist Association's *Hymns and Spiritual Songs* (1793), and John Deacon's *A New and Large Collection of Hymns and Psalms* (1800).

During the first third of the 18th century the majority of non-singing Particular Baptist churches began to admit the use of congregational song. Even the Maze Pond church introduced singing in 1733 when a prospective pastor insisted upon it as a condition of his acceptance of the post. A number of Baptists were active in the writing and publishing of hymns during the first half of the century; some of these and the dates of their collections were David Cully (1726), Anne Dutton (1734), Daniel Turner (1747), Benjamin Wallin (pastor at Maze Pond, 1750) and Edward Trivett (1755). The hymns of Isaac Watts were also popular among 18th-century English Baptists.

The 'Golden Age' of British Baptist hymnody began with the publication of Anne Steele's two-volume *Poems on Subjects Chiefly Devotional* (1760). Though intended for private rather than congregational use, Steele's texts were widely anthologized in subsequent hymnals. Among the better-known 18th-century English Baptist hymn writers who followed Steele's example were Edmund Jones, Benjamin Beddome, Robert Robinson, John Fawcett, Samuel Stennett, John Ryland, Samuel Medley, Joseph Swain, and the Welshmen David Williams and Benjamin Francis. The 18th-century Particular Baptist hymnals of greatest significance were John Ash and Caleb Evans's *Collection of Hymns* (1769) and John Rippon's *Selection of Hymns* (1787); these were eclectic collections that drew upon the works of both Baptist and non-Baptist authors. Rippon's hymnal, which was intended to be a supplement to Watts, achieved ten editions in 13 years and saw wide distribution in both England and America during the late 18th and early 19th centuries. Rippon additionally published *Psalms and Hymns of Dr. Watts Arranged by Dr. Rippon* (1801), familiarly known as 'Rippon's Watts'.

The 18th century also saw the beginnings of hymn writing and publishing among Welsh and Scottish Baptists. The most significant Welsh Baptist hymnal of this period was Benjamin Francis's *Aleluia*, which had editions in 1774 and 1786. William Sinclair's *Collection of Hymns and Spiritual Songs* (1751) was probably the first Scottish Baptist hymnal. The Scottish Baptist *A Collection of Christian Hymns and Songs*, initially published in 1786, was still in print in an enlarged edition as late as 1841.

All the Baptist hymnals mentioned to this point were words-only collections. The first British Baptist tune book, John Rippon's *A Selection of Psalm and Hymn Tunes* (1791), was important for its systematic provision of expression marks and tempo indications, its role as the largest musical companion to a particular hymnal, and its

being one of the best examples of Dissenting psalmody of the period. Furthermore, the book proved to be widely popular, appearing in numerous editions through the early 19th century.

The music of most 18th-century Baptist churches was restricted to *a cappella* congregational singing, but in a few places Baptists formed choirs and instrumental ensembles. At St Mary's Church in Norwich, for example, a singing school was instituted that formed the nucleus of a church choir (1779–88). East Lancashire was the home of the Deighn Layrocks (Larks of Dean), a group of vocal and instrumental musicians and composers from the village of Dean, many of whom became Baptists in 1747. At various times these musicians formed the nucleus of a separate church (at Lumb) or sang in the choir at other churches. The Larks continued to be active until an organ purchased for the Lumb church in 1858 rendered their services unnecessary.

(iii) The 19th and 20th centuries. By the beginning of the 19th century congregational singing was common in nearly all British Baptist churches. Ironically, the Maze Pond church, which had been formed in the 17th century by those opposed to Benjamin Keach's introduction of singing, was in the mid-19th century 'famed for the excellence of its congregational singing' (Price, 1941, p.205).

The most important 19th-century General Baptist hymnals were *The Hymn-Book of the New Connexion of General Baptists* (1830, a revision of John Deacon's 1800 hymnal), *The New Hymnbook* (1851, ed. J.B. and J.C. Pike) and *The Baptist Hymnal* (1879, ed. W.R. Stevenson). Rippon's *Selection* held sway among Particular Baptists until the 1828 publication of John Haddon's *A New Selection*, which was itself displaced by *Psalms and Hymns* (1858). A 'Psalms and Hymns Trust' was established in 1860 to promote sales of the latter book. C.H. Spurgeon's *Our Own Hymn Book* (1866), a collection issued primarily for use in the compiler's Metropolitan Tabernacle, was also widely used, and many Particular Baptists employed Stevenson's New Connexion *Baptist Hymnal* (1879). Strict Calvinistic Particular Baptists sang from John Stevens's *New Selection of Hymns* (1809), William Gadsby's *Selection of Hymns* (1814) and David Denham's *The Saints' Melody* (1837). The American Methodist I.D. Sankey's *Sacred Songs and Solos* (1873, and later editions) became popular in many English Baptist churches. Special mention must be made of Daniel Sedgwick, a Baptist who was one of the first Englishmen to undertake the systematic collection of material on hymnody for scholarly study.

Significant Welsh Baptist hymnals of the 19th century were Joseph Harris's *Casgliad o hymnau* (1821) and J.H. Roberts's *Llawlyfr moliant* (1880), edited on behalf of the Caernarvonshire Baptist Association by R.M. Jones and Spinther James. Scottish Baptists continued to sing from *A Collection of Christian Hymns and Songs* as well as from Duncan M'Dougall's *Gaelic Hymns* (1841) and Oliver Flett's *Christian Hymnal* (1871).

During the course of the 19th century British Baptist objections to choirs and instruments broke down almost completely. Many churches introduced a choir and bass viol (violoncello) or instrumental ensemble during the first half of the century. East Leake Baptist Church in Nottinghamshire used a bass viol from at least 1823, while at Beeston a bass viol and 'clarionet' accompanied the singing from 1838 to 1854. Few Baptist churches employed an organ before mid-century; two that did were the Particular Baptist Stone Chapel at Leeds, which was using such an instrument as early as 1817, and the George Street church in Nottingham (installed 1847). During the second half of the century the bass viol and instrumental ensembles began giving way to harmoniums and organs, and by the end of the century it was a rare Baptist church that did not possess a keyboard instrument. At the East Leake church the bass viol was replaced by a harmonium in 1868, while the Beeston congregation purchased a harmonium in 1854. Despite this proliferation of choirs and instruments some churches did not give up the practice of lining-out the congregational songs until quite late (for example, it was not abandoned at Beeston until 1863).

After the formation of The Baptist Union of Great Britain and Ireland in 1891 it was felt that a new hymnbook was needed as an expression of denominational unity. The Psalms and Hymns Trust that had been founded in 1860 was given the exclusive right to publish hymnals for the denomination, the profits of which were to go towards Baptist charitable causes. The Trust issued the *Baptist Church Hymnal* in London in 1900, followed by the *Baptist Church Hymnal: Revised Edition* (1933), and the *Baptist Hymn Book* (1962). Later, the Trust published a supplement of 104 hymns, *Praise for Today* (1974), and a full hymnal *Baptist Praise and Worship* (1991). The Baptist Union of Wales (formed in 1866) published its first hymnal in 1915 under the editorship of H.C. Williams. R.S. Rogers, E.C. Jones and T.E. Jones were responsible for the Union's *Y llawlyfr moliant newydd* (1956).

The music of British Baptist churches in the late 20th century generally followed either a traditional or a more charismatic approach. The traditonal churches have continued to use hymns, hymnals, and the organ; few of these churches maintain choirs, the music being almost entirely congregational and instrumental. Baptist churches that follow a more charismatic style of worship (though usually without the characteristic hallmark of tongue-speaking) employ worship choruses and use the piano as the basic accompanying instrument.

2. North America.

(i) The 17th and 18th centuries. The first Baptist church in America was founded in 1639 by Roger Williams at Providence, Rhode Island. In 1644 another church was formed at Newport, Rhode Island, and by 1700 there were 33 Baptist churches in the American colonies. While most British Baptist churches of the time were non-singing, there is evidence that several of the early Baptist churches in the colonies practised psalmody. In some cases singing was apparently abandoned when large numbers of non-singing English Baptists emigrated to the colonies and joined these churches. When objections to singing in Baptist worship began to die out in England during the early 18th century, many non-singing American churches adopted or reintroduced psalmody, while newly formed churches sang from their inception. According to Baptist historian Morgan Edwards, Delaware's Welsh Tract church 'was the principal if not sole means of introducing singing' into the Baptist churches of Middle Atlantic colonies.

British Baptists were not the only members of this communion to settle in the New World. In 1732 a

German, Conrad Beissel, founded the Ephrata community, a Sabbatarian Baptist communal sect, in Lancaster County, Pennsylvania. Unlike some of their British counterparts, the members of Beissel's group had no objections to singing, neither did they have any qualms about singing original hymns. Much of the music sung at Ephrata was written by Beissel himself in a rhythmically free, diatonic, chorale style that sometimes featured multiple choirs and antiphonal effects. The most important published hymnal of the Ephrata community was *Das Gesäng der einsamen und verlassenen Turtel-Taube* (1747).

The psalters and hymnals used by English-speaking Baptists in New England and the Middle Atlantic states during the 18th and early 19th centuries were mostly of British origin. Early Baptists probably used the Ainsworth or Sternhold and Hopkins psalters. After about 1740 many Baptists began singing from Tate and Brady's *New Version of the Psalms*. This was succeeded during the last third of the century by various editions of Isaac Watts's psalms and hymns, often supplemented by Rippon's *Selection of Hymns* (London, 1787, reprinted in New York and Elizabethtown, 1792). Earlier editions of Watts were replaced by 'Rippon's Watts', which was reprinted in Philadelphia in 1820. The ascendancy of Watts among New England Baptists was continued through James Winchell's *An Arrangement of … Watts* (1819). 'Rippon's Watts', continued in use in the Middle Atlantic states until the 1840s.

The earliest Baptist hymnal compiled in America, *Hymns and Spiritual Songs*, was published anonymously at Newport, Rhode Island, in 1766, but does not seem to have met with favour. Baron Stow and S.F. Smith's *The Psalmist* (1843) became the most widely used collection in the North, superseding both 'Winchell's Watts' and 'Rippon's Watts', and marking the turning away of Baptists from 'Watts entire', and from collections that were merely supplementary to Watts. Somewhat outside the mainstream of Baptist hymnody in the North was Joshua Smith's *Divine Hymns* (1791). This early collection of folk hymn texts had little impact on standard northern Baptist hymnals, but it did reach 12 editions. The collections noted above were words-only hymnals, but tunes for Baptist use were published in Morgan Edwards's *The Customs of Primitive Churches* (1768), Samuel Holyoke's *The Christian Harmonist … for the Use of the Baptist Churches* (1804), the anonymous *Boston Collection of Sacred and Devotional Hymns* (1808) and other scattered sources. Several New England psalmodists were associated with the denomination, including Oliver Holden, Oliver Brownson, J.C. Washburn and Oliver Shaw.

(ii) The 19th and 20th centuries. During the 18th century Baptist hymnody appears to have followed much the same course in the North and South. By the turn of the 19th century, however, Baptists of the South had begun to rely increasingly upon the folk hymn. The most popular southern collections – all of which incorporated numerous folk hymn texts – included J. Mercer's *The Cluster* (3/1810), Starke Dupuy's *Hymns and Spiritual Songs* (1811), William Dossey's *The Choice* (1820) and S.S. Burdett's *Baptist Harmony* (1834). Three widely used southern shape-note folk hymn tune collections, William Walker's *Southern Harmony* (1835), B.F. White and E.J. King's *Sacred Harp* (1844) and J.G. McCurry's *Social Harp* (1855), were compiled by Baptists (*see also* SHAPE-NOTE HYMNODY, §2). Controversies among Baptists caused a division of the denomination into Northern and Southern Baptist Conventions in 1845. A special edition of *The Psalmist* (1847) with a supplement by two Southern Baptist pastors, Richard Fuller and J.B. Jeter, saw some use in the South. The *Baptist Psalmody* (1850) of Basil Manly and Basil Manly jr gained immediate acceptance among Southern Baptists, holding much the same place that *The Psalmist* did among their Northern brethren.

The most important influence on late 19th-century Baptist hymnody was the emergence of the gospel song. Many prominent gospel songwriters were Northern Baptists (e.g. W.B. Bradbury, Robert Lowry and W.H. Doane). A few Northern collections such as E.H. Johnson's *Sursum corda* (1898) attempted to introduce hymnody of the English Oxford Movement. More widely accepted were books such as *The Baptist Hymnal* (1883) that attempted to balance liturgical hymnody with the gospel song. *The New Baptist Hymnal*, produced jointly by Northern and Southern Baptists in 1926, became popular in the North but did not find favour in the South. Two later hymnals of Northern Baptists (renamed the American Baptist Convention in 1950 and the American Baptist Churches in the USA in 1972), *Christian Worship* (1941) and *Hymnbook for Christian Worship* (1970), were jointly compiled with the Disciples of Christ.

Late 19th-century Southern Baptists wholeheartedly embraced the gospel song, which almost entirely replaced the folk hymn as the basis of their congregational singing. This emphasis on the gospel song continued well into the 20th century in such books as R.H. Coleman's *The Modern Hymnal* (1926) and *The American Hymnal* (1933), B.B. McKinney's *The Broadman Hymnal* (1940) and numerous informal songbooks. Later Southern Baptist hymnals, such as *Baptist Hymnal* (1956), *Baptist Hymnal* (1975) and *The Baptist Hymnal* (1991) have drawn from a wider range of hymnic styles and traditions. However, Baptist churches are free to use any hymnal they choose, and some employ collections from independent publishers or no hymnal at all. The strong status of hymnological scholarship among Southern Baptists is evident from the fact that the two most widely used college and seminary hymnology textbooks, W.J. Reynolds's *A Survey of Christian Hymnody* (1963, rev. 4/1999 by D.W. Music and M. Price) and Harry Eskew and H.T. McElrath's *Sing with Understanding* (1980, 2/1995), were written by members of this denomination. Companions for the 1956 and 1975 *Baptist Hymnals* were written by W.J. Reynolds (1964, 2/1967; and 1976), while a *Handbook to The Baptist Hymnal* was compiled by a group of writers and published in 1992.

Early hymnals published by and for Canadian Baptists included John Bowser's *Hymns and Spiritual Songs* (1807), John Buzzell's Free Will Baptist *Psalms, Hymns and Spiritual Songs* (1823), *The Canadian Baptist Hymn Book* (1873) and *The Canadian Baptist Hymnal* (1888). In about 1902 *The [Canadian] Baptist Church Hymnal* ('Canadian' appears on the cover but not on the title page) was published in London; this was a reprint of the 1900 *English Baptist Church Hymnal* with a 'Canadian Supplement' of 26 hymns, a few of which had tunes by Canadian Baptist composers. In 1936 the *Hymnary for Use in Baptist Churches*, a slightly revised edition of the 1930 *Hymnary* of the United Church of Canada, was

published in Toronto. Carol M Giesbrecht edited *The Hymnal* for the Baptist Federation of Canada in 1973.

Choirs were generally rejected in Baptist churches of the colonies until after 1770. The earliest record of Baptist choral singing in America dates from the year 1771, when a choir was formed at the First Baptist Church of Boston. Other urban churches in the North soon imitated this practice, and by 1820 most of the larger churches had instituted choirs. A few urban churches in the South formed choirs in the early 19th century, but even as late as 1868 some Southern Baptist churches were struggling with the propriety of admitting such ensembles. Early Baptist choirs were generally composed of volunteers who sat in the balcony facing the pulpit. In the late 19th and early 20th centuries the influence of the English Oxford Movement prompted many Baptist churches to vest their choirs and place them in full view of the congregation. The second half of the 20th century saw a proliferation of children's, youth and senior adult choirs in Baptist churches.

Even more controversial than the use of choirs was the introduction of musical instruments. Despite considerable opposition, the bass viol began appearing in Baptist churches of the North shortly after 1800. In about 1819 an organ was installed in the Baptist church at Pawtucket, Rhode Island, and the older, better-established New England Baptist churches soon began to acquire organs. Lingering objections to instruments prevented most Southern Baptist churches from acquiring organs until after 1850. Many churches made use of the melodeon as their first instrument, since these were generally cheaper to install and maintain than a pipe organ. Except for some conservative groups, most late 20th-century Baptist churches in the USA used some sort of instrument – usually organ and/or piano, sometimes an orchestra or pop ensemble, or sometimes pre-recorded tape or compact disc – in their services.

After World War I a few Baptist churches began to appoint staff members with some responsibility for music. Since the 1950s many of the larger Baptist churches have hired full-time ministers of music who are responsible for a church's entire music programme. The minister of music typically conducts or supervises choirs for different age groups, various types of instrumental ensemble, and the congregational singing. In smaller churches the minister of music is frequently a part-time or volunteer worker with more limited responsibilities.

Two important factors in the development of Southern Baptist church music during the 20th century were the establishment of the Church Music Department of the Baptist Sunday School Board in 1941 and the influence of music schools in several of the seminaries operated by the Southern Baptist Convention. The Church Music Department provides literature, music and training opportunities for church musicians, while the seminaries offer graduate-level instruction in sacred music.

From the 1970s onwards Baptist church music in America has been characterized by great variety. Some churches rely primarily on standard hymnody and choral or instrumental music of an artistic nature. Others, especially in the South, continue to emphasize the gospel song. Still others have dispensed with hymnals, choirs and organs in favour of 'worship' or 'praise' choruses printed on songsheets or displayed by overhead projectors. These are typically led by a 'worship team' of between four and eight singers and accompanied by a rhythm section with occasional participation by other instrumentalists. The worship team also provides 'special music', generally a 'contemporary Christian' song in pop style.

As is true of many denominations since the 1960s, the dichotomy between the 'traditional' and 'contemporary' in Baptist church music of North America, Great Britain and other English-speaking lands has led to much conflict within and between congregations, with those that prefer to remain rooted in traditional musical materials being accused of 'cultural irrelevancy' and those that employ pop music styles in their efforts to win converts being charged with 'cultural accommodationism'. Throughout their history, Baptists have been a populist denomination with a zeal for numerical growth and no authoritative hierarchy to set standards, and they have often relied upon unsophisticated cultural materials (e.g. the gospel song) to carry their evangelistic message. On the other hand, they have also been a largely conservative group – both theologically and in other ways – that typically places little value on change (as evidenced by their continued use of of the gospel song long after it had ceased to be a popular style in the culture as a whole). Many Baptist churches attempt to reconcile this difficulty by blending the traditional and contemporary, with varying degrees of balance and success.

Historically, the American Baptist Churches in the USA and the Southern Baptist Convention have contained the largest numbers of Baptists in America, but there are also numerous smaller bodies. Many of these groups follow essentially the same music patterns as churches that are affiliated with the larger denominational organizations, but a few have maintained distinctive musical practices. Among these are the Primitive Baptists, who originated in the 1830s as a predestinarian reaction against the increasing Arminianism of the major bodies, and some congregations of Regular Baptists, particularly in Appalachia. These Baptists reject the use of choirs and musical instruments, relying exclusively on *a cappella* congregational singing which often consists of folk hymns that are lined-out and sung in the 'old way'. The singing in Primitive Baptist churches typically begins about half an hour before the stated service time, with the songs chosen spontaneously at the time of singing. The two most widely used Primitive hymnals, Benjamin Lloyd's *Primitive Hymns* (1841/*R*) and D.H. Goble's *Primitive Baptist Hymn Book* (1887), are words-only collections. Some Primitive Baptist churches have adopted books with musical notation, particularly the *Old School Hymnal* (1920, 11/1983), which includes traditional Protestant hymns, tunes of the Mason/Hastings/Bradbury school, folk hymns and gospel songs.

Before the Civil War most black Baptists attended the same churches as whites and presumably sang the same congregational songs. After 1865 the number of African-American Baptist churches grew dramatically. In urban areas black Baptists relied primarily upon Northern Baptist hymnbooks such as *The Baptist Hymnal* (1883), while in rural congregations 'Dr Watts singing' – an unaccompanied style characterized by lining-out, slow tempos, embellishment of the melody and 'surge' singing – held sway. In 1895 black Baptists formed the National Baptist Convention, USA (NBCUSA), which began publishing songbooks in 1897 and issued its first major hymnal, the *National Baptist Hymnal*, in Nashville in

1903. While this contained a few hymns by African-Americans, the book was modelled largely on the 1883 *Baptist Hymnal*. Schisms in the Convention in 1916 and 1961 resulted in the formation of the National Baptist Convention of America (NBCA) and the Progressive National Baptist Convention, respectively. The former immediately began publishing songbooks, one of the most significant being *National Jubilee Melodies* (1916), a major collection of black spirituals. After founding a new publishing board, the NBCUSA issued *Gospel Pearls* (1921) – an important songbook containing a variety of standard hymns, spirituals and gospel songs by both white and black writers – and its first (and only) major hymnal, the *Baptist Standard Hymnal* (1924). The latter collection was reprinted in 1985 and remains in use in many churches. In 1977 the NBCA published the *New National Baptist Hymnal*, the volume now found most often in African-American Baptist churches. The Progressive National Baptist Convention has issued two hymnals, the *Progressive Baptist Hymnal* (1976) and the *New Progressive Baptist Hymnal* (1982), which were 'special editions' of the Southern Baptist *Broadman Hymnal* and NBCA's *New National Baptist Hymnal*, respectively.

By 1906 choirs were such a common feature in African-American Baptist churches that the NBCUSA published a *National Anthem Series* of 14 choral pieces by African-American composers, all of whom were 'choristers' in Baptist churches. Black Baptist churches were heavily influenced by gospel music during the 1920s and 30s and this has continued to be a dominant style for choral and congregational music in the churches. Some rural African-American Baptist churches continue to sing exclusively in 'Dr Watts' style, while 'upscale' urban congregations employ mainly music from the European-American and black spiritual traditions accompanied by pipe organ or piano. Many churches use both of these styles in addition to black gospel music accompanied by Hammond organ and piano or an instrumental ensemble.

3. OTHER COUNTRIES. English and American Baptists were in the forefront of the modern missions movement. The earliest British Baptist missionary, William Carey (1761–1834), arrived in India in 1793; Adoniram Judson, the first Baptist missionary from America, began work in Burma in 1813. During the 19th century Baptists established congregations and institutions on several continents, particularly Asia, Africa and South America, but most of the numerical and musical growth in these areas has come since World War II.

Throughout much of the history of this missionary activity Baptists, like other denominations, translated Anglo-American hymns and transplanted these and Western musical styles to the lands in which they worked. Since the period of greatest missionary expansion coincided with extensive use of the gospel song in British and American Baptist churches, this type of music became standard for churches in other countries as well. The approach to church music in these countries is often similar to that of Baptist churches in England and the USA, although the musical style may be different: congregations sing hymns and/or choruses; 'special music' is presented by choirs, small ensembles, or soloists; and pianos, organs, guitars or indigenous instruments accompany or play independently. Baptist seminary and combined church choirs in these lands occasionally present larger works of the Western choral repertory such as Handel's *Messiah* and Théodore Dubois' *Les sept paroles du Christ*; these are often seen in the host country as significant cultural events. However, in recent years more emphasis has been placed by missionaries and nationals alike on the cultivation of indigenous church music.

A significant development in Baptist church music in many countries has been the appointment of music missionaries by the Foreign Mission Board (renamed the International Mission Board in 1997) of the Southern Baptist Convention. The first music missionaries, Don and Violet Orr, were sent to Colombia in 1951. Subsequently, music missionaries have been appointed to other Latin American countries, Africa, Asia and Europe. The main responsibility of music missionaries is usually to promote music in the churches or to teach in seminaries, but their work often features a variety of activities, including the formation of choirs and ensembles, giving concerts, leading conferences, and composing, editing and publishing music.

(i) Mexico, Central and South America. Since Spanish is the dominant language in Mexico, Central and South America, Baptist congregations in these areas often make use of the same hymnals, especially those published by the Spanish Baptist Publishing House in El Paso, Texas, including *Himnos favoritos* (1951), *El nuevo himnario popular* (1955) and *Himnario bautista* (1978). However, many Latin-American Baptist churches cannot afford to purchase a hymnal and rely instead on locally produced words-only collections or no hymnal at all. The publishing house also provides Spanish-language choral music and other resources for use by Latin-American Baptist choirs, instrumentalists and music leaders.

The most important Brazilian Baptist hymnal, *Cantor cristão*, was initially compiled by the missionary Solomon Ginsberg in 1891. This went through 36 editions (the last revision in 1971) and grew from 16 to 581 selections, 387 of which were from I.D. Sankey's *Sacred Songs and Solos*. In 1991 Brazilian Baptists issued a new hymnal, *Hinário para o culto cristão*, under the general editorship of music missionary Joan Sutton. Among the 440 hymns were many adapted from or written in the style of Brazilian folk music. In 1957 a Church Music Department was organized by the Brazilian Baptist Convention under the direction of music missionary W.H. Ichter. One of the first publications of the department was a collection of anthems, *Antemas corais*, for use by Brazilian Baptist church choirs. These and similar publications have generally consisted of English-language works translated into Portuguese.

(ii) Africa. Baptist churches in Africa use a wide variety of materials, in part because of the many different language groups and the strong social contrasts between city and country dwellers. Urban churches are likely to use 'book music', that is, hymnals containing translations of songs in the Western tradition. Examples of this 'book music' that have been produced by Baptists in Africa are *Nyimbo za chigonjetso* (Lilongwe, Malawi, 1970), *Emo na, eja suine* (Nigeria, n.d.), *Sauti zetu mbinguni* (Nairobi, 1983), and *Baptist asore nnwom* (Kumasi, Ghana, n.d., rev. 1980). These books are usually produced and priced inexpensively and contain words only. In rural areas Baptist congregations are more likely to sing 'body music', which is unwritten and features call and response patterns, hand-clapping, dancing, and accompaniment

by traditional instruments such as the tambourine, kayamba and drum. Even when these congregations sing a Western hymn they are likely to adapt it to indigenous performing practice.

(iii) Asia. The use and publication of hymnals varies considerably in the Baptist churches of Asia. Early Chinese Baptist hymnals were mainly published under the auspices of British Baptist missions. *Gospel Hymns* (Canton, 1903), a words-only collection to which tunes were added in 1907, was reprinted with many variations and minor revisions until 1935. *Hymns of Praise* (Shantung, words 1901, music 1910) was the most important Mandarin hymnal before *Baptist Hymns of Praise* (1932), which in turn gave way to *New Hymns of Praise* (1941). The formation of the People's Republic of China in 1949 closed the mainland to missionary and overtly Christian activity, but Baptist hymnological developments continued in Taiwan, Malaysia and Hong Kong. A significant Chinese Baptist hymnal, *New Songs of Praise*, was issued in Hong Kong in 1973 under the editorship of G. Chi and Southern Baptist music missionary L.G. McKinney. Intended to serve Mandarin, Cantonese and Swatow constituencies, the hymnal was published in an English edition in 1976, a Taiwanese version in 1978, and a combined Chinese-English edition in 1988. The hymnal includes many indigenous productions from Chinese and other Asian sources.

Elsewhere in Asia, Baptist churches often rely on 'union' hymnals, such as the Korean *Chansonggah* (1983), published by a consortium of denominations. A significant Baptist hymnal from Indonesia, *Nyanyian Pujian*, was published at Bandung in 1982.

(iv) Europe and Russia. Although Baptist work began during the 19th century in most countries of Europe, numerical growth has been slow, particularly in areas dominated by the Roman Catholic and Orthodox communions. While almost all churches have traditionally employed instruments, and many of the larger ones have maintained choirs (some of them quite accomplished), hymnody continues to be the most important form of Baptist church music in Europe, as in other areas of the world. Germany – the source for the spread of Baptist principles into many other areas of Europe and the seat of one of the largest Baptist groups on the Continent – may be taken as an example. Early German Baptists sang Lutheran and Moravian chorales, in addition to hymns written by their own people, from collections such as Julius Köbner's *Glaubenstimme* (1849). A German edition of Bliss and Sankey's *Gospel Hymns* translated by the American Walter Rauschenbusch, *Evangeliums-Lieder 1 und 2* (New York, 1897), became very popular and in the late 20th century was still being used in some German-speaking European congregations. An 'official' Baptist hymnal, *Gemeindelieder*, appeared in Wuppertal in 1978, supplemented by a collection of *Neue Gemeindelieder* in 1993.

In the Russian Empire, Baptist work was particularly difficult owing to repression by the tsarist regime. The Revolution of 1917 initially brought about more favourable treatment of Baptists and other evangelical Christians as the government sought to counteract the influence of the Russian Orthodox Church, but during the 1930s the Stalin government closed most of the churches and banished or imprisoned many of their ministers. Overt persecution eased during World War II, and after the war Baptist churches were allowed to exist in the Soviet Union and Eastern bloc countries, although they were subject to various limitations, including the printing of religious literature such as hymnals. Because of the scarcity of such books, congregational song was generally done from memory or with the aid of lining-out. Most churches featured an organ and choir, the latter often singing as many as four or five anthems (sometimes from manuscript) during the two-hour service. Since before the break up of the Soviet Union the typical musical style of Baptists in Russia and other Commonwealth of Independent States countries has been the gospel song accompanied by piano or organ and occasionally guitar; but the churches generally rejected rock-based music and the use of instruments such as saxophones and drums because they were considered to be inappropriate to the seriousness of worship. However, as contact with English-speaking Baptists has increased, Russian Baptist youth have discovered Christian rock, some of which is likely to make its way eventually into the churches.

(v) Australia. Baptists in Australia have typically relied upon British Baptist hymnals such as the *Baptist Church Hymnal: Revised Edition* (1933) and *Baptist Hymn Book* (1962). I.D. Sankey's *Sacred Songs and Solos* was widely used, especially for the more informal evening services. Donald Crowhurst published an Australian *Hymnal* in 1967 which continues to be widely used in the churches. Australian Baptist congregations of the late 20th century have been greatly influenced by musical practices in Britain and America, and their music ranges from vested choirs singing traditional Western choral music with organ/piano accompaniment to pop ensembles leading charismatic-style choruses.

DAVID W. MUSIC

Baptiste [Anet, Jean-Jacques-Baptiste] (*b* Paris, 2 Jan 1676; *d* Lunéville, 14 Aug 1755). French violinist and composer. His father was JEAN-BAPTISTE ANET. About 1695–6 he travelled to Rome and studied under Corelli who, according to contemporary reports, was so pleased with Baptiste's performance of his music that he 'embraced him tenderly and made him a present of his bow', and subsequently regarded him as an adopted son. During 1699 and 1700 Baptiste travelled through Germany to Poland. On his return he entered the service of the Duke of Orléans, a position he abandoned after about a year to enter that of the Elector Maximilian Emanuel of Bavaria who, having lost his throne, was living in exile in France.

His début at the French court on 23 October 1701 attracted the notice of the Parisian newspaper *Le mercure galant*:

> After his supper, the king heard in his study an exquisite concert of Italian airs, performed by Messrs Forqueray on the viol, Couperin at the harpsichord, and the young Baptiste (who is in the service of the Duke of Orléans) on the violin. The king appeared surprised at the excellence of the latter whom he had not yet heard.

During the first three decades of the 18th century Baptiste appeared frequently in and around Paris – at court, at the homes of the nobility and after 1725 at the Concert Spirituel. During 1709 he was in Schwerin, where he was appointed musical director and concert master of the Hofkapelle; he returned to Paris in 1710. In 1715 Maximilian Emanuel regained his throne and returned to Bavaria; Baptiste left his service and soon entered that of Louis XIV. In 1724 he was granted a *privilège général* to publish 'several sonatas and other pieces of instrumental music'; between 1724 and 1734 he published six volumes. Two of them contain sonatas for violin and continuo, undoubtedly originally for his own use, while the others contain suites for the then popular *musette* (French bagpipes), and were dedicated to his friend, the musette virtuoso Colin Charpentier.

Baptiste's first appearance at the Concert Spirituel was as noteworthy an occasion as had been his first appearance at court. During Easter week 1725, reported *Le mercure de France*, those attending the Concert Spirituel heard:

> a species of duel between Messrs Baptiste, Frenchman, and [Jean-Pierre] Guignon, Piedmontese, who are regarded as the two best violinists in the world. They played by turns some instrumental pieces accompanied only by a bassoon and a bass viol, and they were both extraordinarily applauded. Mr Baptiste played without any accompaniment some preludes [i.e. improvisations] which were also extremely applauded.

The two violinists were heard together again in May and June of the same year. Abbé Pluche (1746) described Baptiste's playing:

> Mr Baptiste ... does not approve the ambition to devour all sorts of difficulties ... He gives no advantage to a piece whose performance appears prodigious, and he gives his highest esteem to that which pleases the listener surely. He looks for, he often says, not what makes the musician perspire, not what dazzles the apprentice by swiftness or deafens him by noise, but what possesses the ability to touch him, to ravish him ... This point of view requires that the instrumental sound be connected, sustained, mellow, impassioned, and conforming to the human voice, of which it is only the imitation and support ... German, Italian, English – to him it is all the same. If he finds nobility and graciousness there, he plays it and gives it its due by the purity of his intonation and the singular energy of his expressiveness. But he constantly refuses his ministrations to all that which has no other merit than to be difficult, bizarre or rough. The freedom and perseverance of his choice have often drawn him reproaches, sometimes as a too obstinate or even capricious man who yields to nothing, sometimes as a musician ignorant of frightening difficulties. He suffered a sort of persecution and exiled himself voluntarily before the honourable retreat which he enjoyed at the court of the King of Poland.

Baptiste left the 24 Violons du Roi in about 1735, undoubtedly for the reasons stated by Pluche but perhaps also due to his rivalry with Guignon, who only a year or so later also drove Leclair from the king's service. The self-exiled violinist remained in Paris until 1737 or 1738, when he became a violinist in the orchestra of Stanislaus Leszczynski, ex-king of Poland, at the court of Lorraine at Lunéville. Here he spent the rest of his days, playing the violin, hunting and fishing, and died poor after a lengthy illness, leaving no heirs.

The two major figures of the French violin school in the first quarter of the 18th century were Baptiste and Senaillé. Contemporary opinion held that the former was the superior performer, the latter the superior composer; this judgment appears to have been just. Baptiste was a moving performer, famed for his abilities as an improviser. He was the best French violinist before Leclair. His music is graceful and often interesting without being original: the first book of sonatas is strongly influenced by Corelli, while the second book is more French in character. The compositions for musette clearly constitute an attempt to please the popular French taste of the time. By the 1730s his style was already old-fashioned, and this may have hastened the decline of his career.

WORKS

all published in Paris

Premier livre de sonates, vn, bc (1724)
Deuxième oeuvre de M. Baptiste, contenant deux suites de pieces à deux musettes, qui conviennent à 2 fl/ob/vn/hurdy-gurdy (1726)

[10] Sonates, vn, bc, op.3 (1729)
Premier oeuvre de musettes (before 1730), same as Deuzième oeuvre, with addl piece in each suite
Second oeuvre de musettes (1730)
3e oeuvre de musettes, vns, fls, hurdy-gurdy (1734)

NEAL ZASLAW

Baptiste, Ludwig Albert Friedrich [Battista, Luigi Alberto Federigo] (*b* Oettingen, 8 Aug 1700; *d* Kassel, *c*1764). German composer, probably of French descent. He was a son of the dancing-master Johann Baptiste, who was at the Darmstadt court from 1703, and was taught dancing by his father. After 1718 he travelled to Paris, Italy and elsewhere in Europe, and in 1726 he was employed as a dancing-master in Kassel. The title-pages of his published works show that he must have been employed after the death of Count Carl (1730) by Carl's son Friedrich, who was at the same time King of Sweden, and his successor, Wilhelm VIII. Baptiste was considered an 'excellent violinist and composer for his instrument'; at the same time he was also praised on his travels as a 'musician and dancer'. Yet, with the exception of 24 minuets, only his chamber works are known. They are typical of the *galant* style around 1735, with uncomplicated melodies, simple counterpoint, and the contrast of major and minor or tonic and relative minor between sonata movements. There is scarcely any specifically virtuoso solo passage-work. Some works are wrongly attributed to Baptiste by Eitner; those in Christ Church, Oxford, are by Jean-Baptiste Lully, as is the *Branle de Mons. Baptiste* (*S-Uu*). Three sonatas in a manuscript belonging to Andreas Düben (ii) in 1692 are also not by him.

WORKS

[6] Sonate da camera, vn, bc/vc, op.1 (Kassel, before 1730), nos.4, 6 for vn/fl: ?MS formerly in *D-Kl* now lost, see Israel
6 sonate da camera, fl/vn, hpd/vc, op.2 (Augsburg, *c*1736)
24 menuets, 2 vn, 2 hn, bc, op.1 (Nuremberg, 1752)
Concerto à 4, fl, 2 vn, hpd, *SWl*
2 pieces, vn, 1728, *ROu*
Lost works: 12 concs., b viol, orch; 6 solos, vc; 6 trios, 2 ob, bc; more than 36 solos, b viol: all cited by Gerber; 12 solos, vn, cited by Lipowsky
Doubtful works: 6 concs., 2 vn, va, bc, *Kl*

CHRISTIANE BERNSDORFF-ENGELBRECHT

Baquedano, José de. *See* VAQUEDANO, JOSÉ DE.

Baqueiro Fóster, Gerónimo (*b* Hopelchén, 7 Jan 1898; *d* Mexico City, 29 May 1967). Mexican musicologist and composer. After learning to play the flute and the oboe in Mérida and working in several military and popular bands, he entered the National Conservatory of Music in Mexico City (1922), where he was a pupil of Julián Carrillo. He led the most enthusiastic supporters of Carrillo's microtonal system 'sonido 13', organizing several concerts and giving talks about it. He worked as a music critic until his appointment in 1929 as professor of acoustics, solfège and music history at the National Conservatory, a post he occupied until his retirement in 1965. Concurrently he undertook research on folk music in the states of Veracruz, Nayarit and Yucatán, the isthmus of Tehuantepec, the northern and southern states of Mexico, and the Middle East (Egypt, Israel, Iran, Turkey). In 1938 he founded the Unión Mexicana de Cronistas de Teatro y Música and in 1942 the *Revista musical mexicana*, which he edited until 1946. Besides his numerous pieces of music criticism on Mexican musical life, his most important work deals with the study of Mexican folk music and music history. He owned one of the most extensive and valuable music libraries in the country. Now at CENIDIM, the library contains a significant collection of 19th-century Mexican compositions and writings on music.

GERARD BÉHAGUE

Bar. In Western notation a vertical line drawn through the staff to mark off metrical units. Hence also the metrical unit thus indicated, which in American usage is called 'measure'. English usage often relies on context alone to make the distinction clear (e.g. 'up to the double bar', 'the end of the bar'), but 'bar-line' is also common.

Vertical lines were occasionally used in early polyphonic music, written in score to help align the voices and text (e.g. *GB-Lbl* 36881; *Cu* Ff.1.17; the Codex Calixtinus,

Ex.1

E-SC; facs. of *E-SC* f.187*v* in Besseler and Gülke). But most of the 'classical' repertories of the 13th (Notre Dame or Parisian, Ars Antiqua), 14th (Ars Nova, Ars Subtilior etc.), 15th and 16th centuries, though written in regular metres, did not use bars. Only the earliest of these repertories, however, regularly used score notation.

The earliest repertories to employ bar-lines at regular metric intervals – keyboard and lute (vihuela) music – were written in TABLATURE. Tablature never used ternary divisions of note values, and was in other respects less ambiguous than staff notation; possibly the fact that it usually represented polyphonic textures made further clarification desirable. Bar-lines are found in, for example, the Faenza Codex (*I-FZc* 117, written 1400–20, facs. in *MD*, xiii–xv, 1959–61), Conrad Paumann's *Fundamentum organisandi* (1452) and the Buxheim Organbook (*D-Mbs* mus.3752, written 1450–70, facs. in *DM*, 2nd ser., i, 1955). In England bars of irregular length are found in keyboard sources as late as the Fitzwilliam Virginal Book (*GB-Cfm* 32.g.29, written 1609–19).

Polyphonic vocal music of the Renaissance was not notated in bars, except when set out in keyboard PARTITURA ('score') at the end of the 16th century. Cipriano de Rore's *Madrigali ... a quattro voci spartiti et accommodati per sonar d'ogni sorte d'istromento perfetto*

Ex.2

et per qualunque studioso di contrapunti is the first such score (facs. in *Festschrift Karl Gustav Fellerer*, 1962, p.144). Solo parts and partbooks did not use bars until the beginning of the 17th century. (Besseler and Gülke, p.147, shows an opening from John Dowland's *First Booke of Songes or Ayres of Foure Partes*, 1597: the lute and cantus parts on the one page are barred, but not the other three parts on the opposite page.)

Bar-lines did not always immediately precede the main accented beat; in other words, first beat of the bar and strong beat did not always coincide, particularly in the late 16th and early 17th centuries. This might result in bars of shorter length than would be usual today, in other words with a bar-line after each beat rather than after each bar of modern transcription. There was often a preference for bars in duple or quadruple rather than ternary metre. Ex.1 shows a passage in *Altri canti di Marte* from Monteverdi's eighth book of madrigals: (*a*) gives the original barring, (*b*) a barring according to accent. Another well-known instance is the beginning of the *Partite sopra l'aria della Romanesca* from Girolamo Frescobaldi's *Toccate ... partite ... corrente ... libro primo* (1637; see illustration). Frescobaldi's barring does not recognize an upbeat, and simply divides the beats into arithmetical groups. Ex.2 gives a barring according to accent. (For many other such examples, from early operas, see H. Riemann: *Handbuch der Musikgeschichte*, ii/2, ed. A. Einstein, 1912, 3/1921, p.195.)

The illustration also shows accidentals repeated later in the bar if other notes intervene, a practice that persisted up to the mid-18th century (it is found in most Bach and Handel autographs). Subsequent practice allowed that an accidental be effective throughout the bar where it appeared, but not after it.

After the mid-17th century it became the rule to precede main beats with bar-lines; Stravinsky's *The Rite of Spring* (1913) is a classic example of a score barred irregularly for this reason.

DAVID HILEY

Beginning of 'Partite sopra l'aria della Romanesca' from Frescobaldi's 'Toccate ... partite ... corrente ... libro primo' (1637)

Bär, Joseph. *See* BEER, JOSEPH.

Bär, Olaf (*b* Dresden, 19 Dec 1957). German baritone. At the age of ten he joined the Dresden Kreuzchor and thereafter studied at the Musikhochschule in his native city. After winning the Walter Grüner Lieder Competition in London, he embarked on a career as a recitalist, quickly achieving a reputation for intelligence and sensitivity in his readings of lieder. In 1985 he joined the Dresden Staatsoper, singing Kilian in *Der Freischütz* at the reopening of the Semper Oper. The same year he made his Covent Garden début as Harlequin in *Ariadne auf Naxos*. In 1986 he sang Papageno, probably his best role, at both the Vienna Staatsoper and La Scala, subsequently recording the part with Marriner. Bär made his Glyndebourne début as the Count in *Capriccio* (1987) and returned as Don Giovanni (1991). His US opera début came in 1996, when he sang Papageno in Chicago. As a recitalist he has appeared at all the major festivals in Europe, including Salzburg and Hohenems, and has been a regular visitor to London's Wigmore Hall since the outset of his career. His other recordings include several choral works (notably Brahms's *German Requiem*), the major song cycles of Schubert and Schumann, and many of the songs of Hugo Wolf, all of which reveal his attractive soft-grained tone (occasionally lacking an ideal body) and sympathy for the shaping of music and text.

ALAN BLYTH

Baraka, Amiri [Jones, (Everett) LeRoi] (*b* Newark, NJ, 7 Oct 1934). American writer on music. He studied piano, drums, and trumpet privately and attended Howard University (BA 1954). In the early 1960s he achieved wide recognition for his poetry and plays and for his writings about jazz, which included articles for *Down Beat*, *Jazz* and *Jazz Review*; a selection of his writings, many from *Down Beat*, was published in 1967 as *Black Music*. His book *Blues People* (1963), the first full-length study of jazz by a black writer, is both a sociological enquiry, using blues and jazz as a means of understanding how blacks became assimilated into American culture, and a superb discussion of the cultural context of the music in the USA. Besides his activities as a writer, Baraka has been involved in many black cultural and community projects. He was a founder of the Black Arts Repertory Theater-School, which was in existence from 1964 to 1965, and has also taught African studies at SUNY since 1980.

Baraka has had a profound influence on jazz criticism, ranging beyond its conventional boundaries to examine such topics as the relationship to jazz and the blues of black nationalism and Marxism. In addition to his works on jazz his published writings include more than 20 plays (of which the best-known is *Dutchman*, New York, 1964) and 12 volumes of poetry.

DANIEL ZAGER

Bar-Am, Benjamin [Berman, Bernhardt] (*b* Wiesbaden, 20 July 1923). Israeli critic, composer and musicologist. He moved to Mandatory Palestine in 1936. After studying composition with Paul Ben-Haim, his most influential teacher, Bar-Am attended the Ecole Normale de Paris (1949–51). He studied musicology at Tel-Aviv University (BA 1977), where he became the principal lecturer for courses on Jewish music and Israeli contemporary music (1973–96) and the first director of the Archive of Israeli Music. The secretary general of the Israeli League of Composers (1960–76, 1976–8), he became chair of the organizing committee of the ISCM in Israel in 1980. Though most influential as the music critic of the *Jerusalem Post* between 1958 and 1995, Bar-Am also wrote many essays on Israeli music in Hebrew, English and German, notably 'A Musical Gateway between East and West' (*Jerusalem Post*, 20 April 1988). He ceased composing in the early 1970s but resumed in 1988. His music, mostly songs, song cycles and chamber music with voice, is influenced by the conservative style of Ben-Haim. In his Symphony (1992) he integrates aspects of the 'Mediterranean style' that was in vogue in the 1950s, particularly the evocation of a traditional Jewish melos.

RONIT SETER

Barandello (Old Fr.). *See* FARANDOLE.

Baranović, Krešimir (*b* Šibenik, 25 July 1894; *d* Belgrade, 17 Sept 1975). Croatian composer and conductor. He studied the piano and theory with Kaiser in Zagreb, the horn with Lhotka at the Croatian Institute of Music, and composition at the Vienna Music Academy (1912–14) and in Berlin (1921–2). As conductor (1915–43) and artistic director (1929–40) of the Zagreb Opera, he presided over a notable period in the company's history. He enriched its repertory, with the works to Russian composers especially, and paid particular attention to the performance of modern ballets. As well as the first Croatian performances of Musorgsky's *Boris Godunov* (1918), Shostakovich's *Katerina Izmaylova* (1937) and ballets by Stravinsky, he conducted the first performance of Smetana's *Libuše* outside Czech lands (1933). His tenure at the opera was interrupted when Anna Pavlova engaged him as the conductor for a European tour by her troupe (1927–8). He was also conductor for many years of the Lisinski choir in Zagreb. For three years he lived in Bratislava, first as the conductor of the Radio Orchestra (1943) and then as the artistic director of the opera company (1945–6). On his return to Yugoslavia, he became professor of conducting and orchestration at the Belgrade Academy of Music (1946–64) and from 1951 to 1961 the conductor and artistic director of the Belgrade PO. In 1954 he was elected to the membership of the Academy of Sciences and Arts in Zagreb.

Better than any other Croatian composer of the time, Baranović combined the Slavonic expressionism inherited from Janáček and late 19th-century Russian composers with a more cosmopolitan music style. In his most powerful works – the ballet *Licitarsko srce*, the vocal cycle *Z mojih bregov* and the comic opera *Striženo-košeno* – he found inspiration in the folklore of Hrvatsko Zagorje. With his exceptional instrumental skill (*Simfonijski scherzo*, Sinfonietta in E♭), his feeling for refined

rhythmic structures, and a particular sense of humour and the grotesque (*Imbrek z nosom*), Baranović avoided neo-classicism, broadening his harmonic language with parallel chords of 4ths and 7ths which support a fundamentally diatonic fabric, often rooted in modality. His works written after 1943 (such as the orchestral songs *Iz osame* and *Oblaci*) were free from dissonant harmonies, and his large-scale vocal-instrumental works from the 1960s and 1970s were marked by greater stylistic simplicity and the aesthetics of realism.

WORKS
(*selective list*)

Stage: Licitarsko srce [Gingerbread Heart] (ballet, 3 scenes) Zagreb, 17 June 1924; (Cvijeće male Ide [Little Ida's Flowers] (ballet, 3 scenes), Zagreb, 29 March 1925; Striženo-košeno [Shorn-head] (comic op, 3, G. Krklec), Zagreb, 4 May 1932; Imbrek z nosom [Imbrek with the Big Nose] (ballet, 4 scenes), 1934, Zagreb, 19 Jan 1935; Nevjesta od Cetingrada [The Bride from Cetingrad] (comic op, 3, M. Fotez), Belgrade, 12 May 1951; Kineska priča [Chinese Story] (ballet, 5 scenes, D. Parlić, after Klabund), Belgrade, 30 April 1955

Vocal: Z mojih bregov [From my Hills] (F. Galović), Bar, orch, 1927; Moj grad [My Town], 9 (V. Nikolić), female v, orch, 1941; Iz osame [In Loneliness] (Baranović), female v, orch, 1944; Pan (cant., M. Krleža), 1958; Goran (cant., I.G. Kovačić), 1960; Oblaci [The Clouds] (D. Cesarić), female v, orch, 1963; Šume, šume [Forests, forests], 1967; Titov naprijed (cant., V. Nazor), 1971; Balada o Titu (cant., B. Karakaš), 1972; Na moru [At the Sea] (G. Krklec) Bar, orch, 1973; choruses, songs

Orch: Koncertna predigra, ov., 1916; Simfonijski scherzo, 1921; Poème balcanique (1927); Sinfonietta, E♭ (1939); Pjesma guslara [Fiddler's songs], rhapsody, 1945; Conc., hn, orch, 1974

Over 20 Film scores

EVA SEDAK

Bararipton. Designation attached to a three-voice Gloria in manuscript *F-APT* 16bis; the piece is also transmitted in *I-IV* 115. The Apt manuscript is now thought to contain music from the court of the antipopes at Avignon in the late 14th century. It is not clear whether the word refers to the name of a composer or to something else; it is now known that 'Bararipton' was a mnemonic used in medieval logic for one of the categories of syllogisms. However, any possible musical meaning of the word remains a mystery.

The Gloria seems to be in discant style, with text underlay following the typical French pronunciation of Latin. The lower parts are rhythmically linked and run both in parallel and in contrary motion. The preponderance of 8-5 and 5-3 chords is interrupted, sometimes at closing cadences, by 6-3 chords. Likewise, the sequence of 8-5–6-3–8-5 chords often gives way to parallel 5ths between cantus and contratenor. (The Gloria is ed. in PSFM, 1st ser., x, 1936, p.131; CMM, xxix, 1962, p.45 [commentary in MSD, vii, 1962, pp.43–4]; PMFC, xxiii*a*, 1989, p.108 [commentary in PMFC, xxiii*b*, 1991, pp.477–8]).

Barat, Jean [Jehan]. *See* BARRA, HOTINET.

Barba, Daniel dal. *See* DAL BARBA, DANIEL.

Bārbad. [Barbad] (*fl* late 6th– early 7th century CE). Persian lutenist, music theorist and composer. He was active during the riegn of Khosrow II (ruled 591–628 CE). *See* IRAN, §§II, 5 and III, 1(i) and fig.11.

Barbaia [Barbaja], **Domenico** (*b* Milan, ?1778; *d* Posillipo, 19 Oct 1841). Italian impresario. He first earned his living as a scullion in local cafés and bars. In 1806 he obtained the lease of the gambling tables in the foyer of La Scala, Milan, and on 7 October 1809 was appointed manager of the royal opera houses in Naples (originally the S Carlo and Nuovo theatres, to which were later added the Fondo and Fiorentini). After the S Carlo burnt down in 1816, he obtained the contract for rebuilding it. Through the Austrian ambassador, Count Gallenberg, he also secured the management of the Viennese Kärntnertortheater and the Theater an der Wien from 1821 to 1828. For several years from 1826 he ran La Scala and the Cannobiana in Milan.

The most famous impresario of his day, Barbaia played an important role in early 19th-century opera. His Neapolitan seasons were of an unparalleled brilliance, with stars such as the tenors Giovanni Davide, Nozzari, García and, later, Rubini; the contralto Benedetta Rosmunda Pisaroni and the soprano Isabella Colbran. His operatic tastes ranged widely. He introduced Spontini's *La vestale* (1811) and Gluck's *Iphigénie en Aulide* (1812), so inaugurating the new tradition of Italian *opera seria* in which all recitative was orchestrally accompanied (early examples include Mayr's *Medea in Corinto* in 1813 and the Rossinian canon beginning with *Elisabetta, regina d'Inghilterra* in 1815). He was among the first to recognize Rossini's genius and in 1815 engaged him at Naples with a six-year contract with the obligation to compose two operas a year and to direct revivals of older works, all for the yearly sum of 12,000 francs and part of the proceeds of the gambling tables. It was to Rossini that Barbaia lost his mistress, Isabella Colbran (later Colbran-Rossini), though relations between the two men remained cordial. In 1822 he produced Rossini in Vienna with great success and the following year mounted Weber's *Euryanthe* at the Kärntnertor. Throughout his life he showed a flair for discovering young talent. Mercadante, Pacini, Carafa and Generali all owed to him many of their earliest opportunities. Through him Bellini first gained a footing at the S Carlo and La Scala. In 1827 Barbaia signed Donizetti to a three-year contract that obliged him to write four operas a year for Naples.

Rough in his manners and poorly educated, Barbaia was held in high esteem by both singers and composers (his word, said Pacini, was as good as a written contract), and his death was mourned throughout Italy. His personality inspired Emil Lucka's novel *Der Impresario* (Vienna, 1937), and he figures as a character in Auber's opera *La sirène* (1844).

JULIAN BUDDEN

Barbaja, Domenico. *See* BARBAIA, DOMENICO.

Barbandt [Barband, Barbant, Barbault], **Charles** [Stephan Carl Philipp] (bap. Hanover, 30 April 1716; *d* ?London, after 1775). German composer and instrumentalist. He was the only son and eldest child of Bartholomäus Barbandt (*b* Hanover, 3 July 1687; *d* Hanover, 6 May 1764), a musician of the court orchestra at Hanover, and Maria Catharina Barbandt (née Caligari). The first member of the Barbandt family to settle in Hanover seems to have been Joseph, Bartholomäus's father, who, according to records of the parish of St Clemens, Hanover, had come from Modena. Charles followed the example of his grandfather and father and became a member of the Hanoverian court orchestra. Although records do not indicate which instruments he played there, it is likely that he was employed mainly as a woodwind player, as later he often appeared as an oboist, flautist and clarinettist. The exact date of his entry into the orchestra is unknown, but he is listed in its payrolls until 1752 as 'Barbandt junior'. His father remained with the orchestra until his death in 1764, but Charles left for London in the early 1750s.

Barbandt's name first appears in a London concert programme on 14 January 1752, when a benefit concert was given for him at Hickford's Room in Brewer Street. On 4 January 1753 he married Anne Casanova at the Portuguese Embassy chapel and from about the same time appeared as an oboist and flautist in London theatres. In the 1754–5 season he was organist at Covent Garden Theatre and in 1756 embarked on his most ambitious project, a small-scale oratorio series, financed by subscription, at the Little Theatre in the Haymarket. A second series ran during January and February 1761. Barbandt's own concertos and solos were performed during the intervals. *Mr Barbandt's Yearly Subscription of New Music* appeared in monthly instalments between 10 March 1759 and 10 February 1760; it included symphonies (i.e. overtures), chamber music, Italian and English airs and duets, and sonatas. In 1764 he became organist of the Bavarian Embassy chapel in Warwick Street, Golden Square; his *Hymni sacri* was composed for use there. The Bavarian ambassador, Count Haslang, subscribed to some of Barbandt's works – as did a few of the composer's former Hanoverian colleagues – and was godfather to Barbandt's son Franz Xaver Ludwig (*b* 1753). Later Barbandt was also organist at the Portuguese Embassy chapel, but in 1776 he relinquished this post to a former pupil, Samuel Webbe (i).

According to the playbills, Barbandt's four oratorios each had a bipartite, rather than the more usual Handelian tripartite, structure. Barbandt's surviving works, with their even phrases, simple harmonic progressions and predominance of melodic line, show his awareness of the *galant* idiom, which, even in his sacred works, he preferred to a more solemn, contrapuntal style.

WORKS

ORATORIOS

lost; all first performed London, Little Theatre, Haymarket

Universal Prayer (A. Pope), 13 Feb 1755; 1 air in *Mr Barbandt's Yearly Subscription*, Dec 1759
Paradise Regained (J. Milton), 25 March 1756
On the Divine Veracity (E. Rowe), 9 March 1758
David and Jonathan, 28 Jan 1761

OTHER WORKS

6 Sonatas, 2vn/fl/ob, bc (vc/hpd), op.1 (London, 1752)
6 Sonatas or Duetts, 2 fl/vn, with 6 Lessons, 2 hn, op.2 (n.p., n.d.)
Conc., ?str, cls, hns, timp, lost, perf. in interval of Paradise Regained, 25 March 1756
4 Favourite Italian Songs, 1v, str, fl, ob, with 2 Sonatas, hpd, op.3 (London, ?1760)
Short and Easy Rules for the Thorough Bass, with minuet and 13 variations, hpd, op.4 (London, *c*1760), minuet also pubd as Lady Powis's Minuet with Variations (London, *c*1760)
6 Sonatas, hpd, op.5 (London, ?1760)
6 Symphonies, 2 hn, str, bc, op.6 (London, ?1760)
Sonata, hpd (London, 1764) [ded. George III]
Hymni sacri, antiphonae & versiculi, 2–4vv (London, 1766)
Quartetto, 3 vn/fl/ob, bc (vc/hpd) (London, n.d.)
God Save Great George the Third our King, vv, with Sonata, hpd, 1761, *GB-Lbl*

Miscellaneous works pubd in Mr Barbandt's Yearly Subscription of New Music (London, March 1759–Feb 1760): Sonata, A, hpd (March 1759); The glorious Restoration (Mr Redmond), ode, bound with April 1759 issue but probably later addn; Verra un di che la mia bella fugitiva pastorella, aria, S (April 1759); Sonata, C, 2 vn, 2 ob, 2 fl (May 1759); Lesson, C, cittera/gui (June 1759); Now the bright morning star, recit, Hail, bounteous May, aria, S (June 1759); Sinfonie, D, str, hns, bc (July 1759); Se l'idolo che adoro, S, S (Aug 1759); Sonata, G, hpd, vn/fl (Sept 1759); Occhi vezzosi, aria, S (Oct 1759); Sonata, G, 2 vn, 2 ob, 2 fl, bc (Nov 1759); 2 Lessons, C, gui/cittern (Dec 1759); Teach me to feel, air, S (Dec 1759); Sinfonie, E♭, str, hns, bc (Jan 1760); Per novo amor de lira, S, S (Feb 1760)

EVA ZÖLLNER

Barbarini Lupus, Manfred (*b* Correggio, nr Reggio Emilia; *fl* 1557–61). Swiss composer of Italian birth. He was Kantor at Locarno in 1557 and then made a journey to south Germany to visit certain scholars, among them the brothers Johann (Hans) Jakob and Georg Fugger at Augsburg. At Freiburg he probably also met Glarean, and at Augsburg may have met Andreas Schillen, tutor to the Fugger children. In 1561 Abbot Diethelm Blarer commissioned him to make four-part arrangements of chorales for the Wartensee monastery at St Gall, which makes it likely that he was there at that time. He is not heard of again. But he may be identifiable with the Martin Lupus (also known as Lupi or Wolf) from Correggio, who was organist at Chur Cathedral until 1572 and then (though he was a layman) at the convent church of St Leodegar,

Lucerne, until 1576 and who was also an accomplished organ repairer.

The extant works of Barbarini Lupus are in varying styles. While those in the *Symphoniae* unfold through regular, freely imitative five-part polyphony, those in the *Cantiones sacrae* are more discontinuous, now imitative, now homorhythmic, and include short duet and trio sections. The St Gall chorale arrangements are cantus firmus pieces in the old style, in which the chant, mainly in the tenor, moves in regular semibreves and the other three voices, which at times imitate each other, are rather neutral in character. The settings are of interest because they are partly for choir and partly for organ, a layout possibly, attributable to the copyist of the manuscripts, the organist Heinrich Keller.

WORKS

Symphoniae, seu insigniores aliquot ... super D. Henrici Glareani panegyrico de Helvetiarum tredecim urbium laudibus, 5vv (Basle, 1558)

Cantiones sacrae, 4vv (Augsburg, 1560)

Antiphonarium, 4vv, incl.: 3 masses, 14 introits, 14 graduals, tract, 15 sequences, 12 offertories, 13 communions, 44 antiphons, Te Deum, motet, 3 Passions, chorale arrangements, *CH-SGs*

ARNOLD GEERING

Barbarino, Bartolomeo ['Il Pesarino'] (*b* Fabriano, nr Ancona; *d* ?Venice, after 1640). Italian composer. He is first heard of as an alto at the Santa Casa, Loreto, in 1593 and 1594. From then until 1602 he was in the service of Monsignor Giuliano della Rovere at Urbino, and it was probably during these years that he also served the Duke of Urbino, as he mentioned in the dedication of his madrigal book of 1614 (Giuliano was a relative of the duke). He was organist of Pesaro Cathedral – hence his nickname – from 1602 to 1605, when he became a musician of the Bishop of Padua. Between 1608 and 1624 he pursued a freelance career in Venice as a singer, chitarrone player and composer, performing frequently as soloist or member of a hired group in the *cappella* of S Marco and for the feast day celebration at the confraternity of S Rocco. Between 1625 and 1639 nothing is known of his whereabouts, but on 30 May 1639 and 29 Dec 1640 he received payments for performing as an instrumentalist in S Marco, Venice, where his son, Francesco Pesarin, had recently become a member of the *cappella* choir.

Barbarino was one of the first monodists, and one of the most enthusiastic, for nearly everything he wrote, sacred as well as secular, is for solo voice and continuo. Most of his 120 or so secular monodies are madrigals; some respond expressively to the more pathetic type of text, others include a good deal of lighter aria-like writing. Unusually he named the poets he set, and he wrote some of the poems himself. In his collection of 1617 there are as many monodies as three-part madrigals; many of these multi-part madrigals (and others from a manuscript in *D-W*) exist in similar solo versions by the composer. In addition, Barbarino suggested in the preface to the 1617 collection that each voice be accompanied by its own chitarrone; to this effect he supplied a separate continuo line in each of the partbooks. *Misero e mesto* is a particularly good example of the fragmentary texture used in the trios, the three voices coming together only at cadences; and the very free use of chromatic inflection produces a wayward harmonic sense and abrupt modulations. Some of the canzonettas of 1616 are also wayward, though their tunes are predictably more catchy.

Barbarino's first book of solo motets contains the earliest surviving examples of sacred monodies sung in liturgical contexts: according to the dedication, the composer wrote much of the music in the 1590s and sang it 'at mass, with [his] raucous voice'. The inclusion of numerous Marian motets, especially the four Marian antiphons, in his second book of solo motets suggests the relevance of this collection to his freelance career in Venice, a city particularly noted for its reverence of the Virgin. He was as concerned as any of Giulio Caccini's followers about the quality of ornamentation to be applied to monodic music, and in his second book of solo motets he gave two versions of the vocal line, one simple, one ornamented, from which much can be deduced about contemporary taste in the embellishment of church (and other) music. In a prefatory note he explained how some singers had found difficulty with the divisions in his first book of motets and that the simplified versions were for them, as well as being a basic outline which experienced singers could embellish as they wished. The ornamented versions, he said, were for those who could sing ornaments but could not improvise them. Barbarino used embellishments to strengthen and diversify the melodic outline: he reserved florid passage-work for 4/4 time and lilting melismas and delightful hemiolas for triple time. As well as a fine use of sequence for the building of climaxes, some of his motets show a surer grasp of tonality than do many of his secular songs.

WORKS

SACRED

Il primo libro de mottetti ... da cantarsi da una voce sola, S/T (Venice, 1610)

Il secondo libro delli motetti ... da cantarsi a una voce sola, S/T (Venice, 1614)

7 motets, 1615[13], G. Puliti: Pungenti dardi spirituali (Venice, 1618), 1624[2], 1624[3], 1625[2]

6 sacred Italian pieces, 1613[3]; 1 dialogue ed. in Racek, 246ff

SECULAR

Madrigali, 1–2vv, chit/hpd/other inst (Venice, 1606); ed. in ISS, v (1986)

Il secondo libro de madrigali, 1v, chit/theorbo/hpd/other inst . . . con un dialogo di Anima e Caronte (Venice, 1607)

Il terzo libro de madrigali, 1v, chit/theorbo/hpd/other inst . . . con alcune canzonette nel fine (Venice, 1610)

Il quarto libro de madrigali, 1v, chit/theorbo/hpd/other inst . . . con un dialogo fra Tirsi & Aminta (Venice, 1614)

Canzonette, 1v (S/T), 2vv, chit/other inst (Venice, 1616)

Madrigali, 3vv, chit/hpd, con alcuni madrigali, 1v, chit/hpd (Venice, 1617)

1 madrigal, 1624[11]; 52 madrigals, 1–3vv, *D-W*

JEROME ROCHE/ROARK MILLER

Barbat [barbaṭ]. Sassanian short-necked lute. *See* IRAN, §II, 5.

Barbato, Angelo (*fl* Padua, 1583–7). Italian amateur music editor and composer. He lived at Padua, where the only definite reference to him concerns his loan of a portative organ to the cathedral *cappella* on 6 December 1583. He edited the important anthology *De floridi virtuosi d'Italia* (Venice, 1583[11]), for five voices, which includes works by Marenzio and Giovanni Gabrieli. The dedication, which he addressed to Prince Albert Radziwiłł, provides interesting evidence about musical relations between Italy and Poland. He also published an anthology of pieces by musicians who worked at, or had contact with, Padua, *Canzonette di diversi eccellentissimi musici, libro primo* (Venice, 1587[7]), for three voices. Alongside pieces by G.B. Mosto, Annibale Padovano, M.A. da Pordenon and Giulio Renaldi appear two canzonettas of his own composition, which with their homophonic textures and simple harmony are typical of canzonettas of the period.

PIER PAOLO SCATTOLIN

Barbay, Guillaume. *See* BARBEY, GUILLAUME.

Barbe [Barbé]. Flemish family of musicians.

(1) **Antoine** [Anthonis] **Barbe (i)** (*d* Antwerp, 2 Dec 1564). Composer. He was *maître de chapelle* of St Jacob, Bruges, before his appointment (1528) as *maître de musique* of the choir school of Antwerp Cathedral, where he remained until 1562. After his wife's death in about 1547 he was ordained; he first officiated as a priest on 11 January 1548. In 1562 he retired and was succeeded in 1563 by Geert van Turnhout. He was buried in the cathedral in 1564. In his mass, a light and mainly imitative parody of the popular late 15th-century chanson *Vecy la danse de Barberie*, he exploited the veiled reference to his own name in his use of the chanson's thematic material. The six-voice chanson *Alligiés moy doulce plaisante brunette*, attributed to him in a German collection of 1540 (RISM 1540[7]), is ascribed in other sources to Josquin (ed. A. Smijers, *Werken*, v/14), Le Brung and Willaert. His four-voice chanson *On doibt bien aymer le bon vin*, a four-in-one canon for male voices published in Lyons (1540[17]), provides an example of what has been called the 'secret chromatic art of the Netherlands': it requires considerable modulation flatwards for a satisfactory resolution. Another four-voice chanson, *Ung capitaine de Pillars*, is an anecdotal piece in gay syllabic counterpoint. Barbe's two five-voice chansons, like his two-voice motets, were copied in manuscripts owned by Johann Herwart of Augsburg.

WORKS

SACRED

Missa 'Vecy la danse de Barberie', 4vv, 1545[1]
3 motets: Qui sunt isti, 4vv, 1542[7]; Summa regis, Inter spinas, 2vv, *D-Mbs* 260; ed. in RRMR, xvi–xvii (1974)

SECULAR

Alligiés moy doulce plaisante brunette, 6vv, 1540[7], ed. in Collectio operum musicorum batavorum saeculi XVI, xii (Berlin, 1858); On doibt bien aymer le bon vin, 4vv, 1540[17], ed. in SCC, xxvii (1993); Ung capitaine de Pillars, 4vv, 1544[12], ed. in SCC, xxix (1994)
Och hoort doch ons bediet, 4vv, 1551[18]; ed. in RRMR, cviii (1997)
Ha je ne l'ose dire, J'ay bien cause d'avoir melancolie, 5vv, *D-Mbs* Mus.ms.1508

(2) **Antoine** [Anthonis] **Barbe (ii)** (*b* Antwerp, before 1547; *d* Antwerp, 13 Feb 1604). Composer and organist, son of (1) Antoine Barbe (i). He probably studied music with his father and served as a chorister at Antwerp Cathedral. According to Fétis he composed some pavanes and courantes which were included in *Petit trésor des danses et branles à quatre et cinq parties des meilleurs autheurs propres à jouer sur tous les estrumentz* (Leuven, 1573), an anthology of instrumental ensemble music, now lost. In 1601 he was organist at St Walburga, Oudenaard, but he died at Antwerp and was buried in the cathedral.

(3) **Antoine** [Anthonis] **Barbe (iii)** (*b* Antwerp, after 1573; *d* Antwerp, 10 June 1636). Theorist, organist and teacher, son of (2) Antoine Barbe (ii). On 23 February 1596 he was appointed organist of St Jacobskerk, Antwerp, and later acted as repairer and tuner of organs in other churches in the city. In 1597 he married a teacher in a girls' school where he taught music. His didactic interests are reflected in his treatise *Exemplaire des douze tons de la musique, et de leur nature* (Antwerp, 1599).

FRANK DOBBINS

Barbe, Helmut (*b* Halle, 28 Dec 1927). German composer. After studying at the Berlin Akademie für Kirchen- und Schulmusik (1946–52) with Ernst Pepping and Gottfried Grote, among others, he served as Kantor of the St Nikolai-Kirche in Berlin-Spandau (1952–75) and director of church music for West Berlin (1972–85). He founded the Kammerchor Helmut Barbe in 1977. His teaching appointments included posts at the Berlin Kirchenmusik-

schule (1955–75) and the Berlin Hochschule der Künste (professor 1975–95). His particular gift lies in his ability to write sacred music that adopts the musical methods of his time (he began to employ 12-note techniques in 1957), while remaining comprehensible to his audience. The expressive intensity of his compositions results from his use of harmonies, rhythms and timbres (often created by highly individual instrumental ensembles) to break up the otherwise static foundations of the music. In *Golgatha* (1972), a characteristic work, dissonant harmonies are combined with 16th-century choral settings, vocalises, glissandos, passages for solo percussion and the spoken word. A tendency towards homophony and transparency in the vocal music ensures the centrality of the text.

WORKS
(*selective list*)

Choral: Magnificat, 4vv, wind, timp, org, low str, 1956; Canticum Simeonis, T, 4vv, cel, perc, org, str, 1958; Die Auferweckung des Lazarus (cant.), A, T, 8vv, orch, org, 1959; Missa brevis, chorus, 2 fl, ob, eng hn, bn, vc, 1961; Ostergeschichte, A, Bar, 4vv, orch, elec gui, 1961; Chinesische Impressionen (Li Bai [Li Tai Po], trans. Klabund), 6vv, 1964; 2 Choralkonzerte, 2–4vv, org, 1967; Ye shall have a Song (cant.), female 4vv, ob, hn, hp, 1967; Bekenntnis (cant., M. Bollinger), 4vv, ob, str qnt, 1969; Inconstantia (cant., Bollinger), S, 4vv, gui, hpd, str, 1971; Magnalia D (Bible), Bar, chorus, org, tape, 1971; Golgatha, Bar, 3vv, str, perc, 1972; Ursuliner Messe, 4vv, fl, ob, cl, b cl, bn, tpt, 1972; TeD, Bar, 3 choruses, orch, 1976; Laudes 78, Bar, 4vv, org, perc, 1977; 3 Nachtstücke (Li Bai [Li Tai Po], trans. Klabund), 8vv, 1980; Verleih uns Frieden (cant.), 3 choruses, wind, org, perc, 1983; Wir wollen singn ein Lobgesang (cant.), 4vv, 2 tpt, 2 trbn, org, 1985; Magnificat, S, 6vv, 1986; Chorstücke zum 19. Sonntag nach Trinitatis, 1987; Herbst (G. von der Vring), 3 lieder, chorus, hp, 1988; Der du die Zeit in Händen hast (cant.), 2 choruses, congregation, (brass, perc)/org, 1989; Wir sind doch Pilger alle hier, 5 men's vv, 1990; Potsdamer TeD, Mez, 2 choruses, orch, org, 1992; An die Sterne (A. Gryphius), chorus, fl, hp, 1995–6; 1648 (chbr orat, Bible, M. Opitz, Gryphius), Bar, 2 choruses, chbr orch, 1997–8; Lichte Nacht (Gryphius), chorus, str sextet, 1997; Canti di Ungaretti, chorus, hp, accdn, 1998 [after Vivaldi]; motets, psalm settings, folksong arrs., other choral works

Other vocal: Musikantengruss (J. von Eichendorff), lieder, 1v, pf, 1953; Gesang der Abgeschiedenen (G. Trakl), 5 lieder, Bar, pf, 1957; Horoskop gefällig (M. Kaleko), 1v/chorus, cl, gui, db, pf, 1960; Requiem, S, fl, ob, bn, va, vc, db, 1965; Jeruschalajim (C. Heuser), high v, org, 1969; 5 Lieder (M.L. Kaschnitz, von der Vring, R.A. Schröder, P. Ludwig), S, pf, 1969; Ps xlii, high v, org, 1970; Preisungen (M. Buber), S, hp, org, 1974; Gott wohnt in einem Lichte (J. Klepper), T, org, 1992; folksong arrs.

Inst: Org Sonata, 1964; Vn Conc., 1966; Pf Trio, 1969; Hovs Hallar, chbr orch, 1970; Dialog mit J.S.B., org, 1977; 2 pièces, ob, vc, pf, 1979; Suite, 2 tpt, 2 trbn, 1979 [after von Eichendorff]; Nordische Bläsersuite, 3 tpt, 2 trbn, 1981; Die vier Jahreszeiten, wind, perc, 1981; Preces, org, 1990; 4 Choralvorspiele, 3 tpt, 3 trbn, 1995; Praeludien/Postludien für die Festzeiten des Kirchenjahres, org, 1995; choral fantasies, org; other org works, incid music

DIETER KRICKEBERG

Barbe, Jean-Baptiste (*b* Montferrand, nr Clermont-Ferrand, Oct 1675; *d* Clermont, Aug 1759). French amateur lutenist. He compiled an important late source of French Baroque lute music. During the final decade of the 17th century, following his law studies in Orléans, he was in Paris, where he probably received lute lessons. He was back in Clermont by 1703, the date of his nomination to the Cour des Aydes. Like Vaudry de Saizenay's manuscripts, Barbe's lutebook is a large retrospective anthology containing a wide assortment of 17th-century masterworks. Representative composers include Bocquet, Du But (*père* and *fils*), Du Fault, Hémond, Mouton and Pinel. It was formerly in the possession of Henri Prunières, and is now in the Bibliothèque Nationale, Paris (Rés.Vmb.7; facs. (Geneva, 1985), see Chauvel).

BRUCE K. BURCHMORE

Barbeau, (Charles) Marius (*b* Ste Marie-de-la-Beauce, PQ, 5 March 1883; *d* Ottawa, 27 Feb 1969). Canadian anthropologist and ethnologist. He studied humanities at the Collège de Ste-Anne-de-la-Procatière (1897–1903) and after completing law studies at Laval University (1907) he won a Rhodes scholarship to Oriel College, Oxford, where he took the BSc in anthropology (1910). Encouraged by M. Marett, M. Mauss and Raoul and Marguerite d'Harcourt, he decided to study the Amerindians. On his return to Canada in 1911 to head the department of anthropology at the National Museum, he began intensive fieldwork among the Huron, Salish, Wyandote, Iroquois and Tsimshian Indians; he became deeply interested in French-Canadian folklore, having encountered much in the oral traditions of Amerindian tribes that was retained from contacts with the early French settlers. His investigation of French-Canadian folksongs superseded the work of Ernest Gagnon.

Barbeau taught at the universities of Ottawa (lecturer 1942), Laval (lecturer 1942–5, professor agrégé from 1945) and Montreal (occasional lecturer). In 1946, with Luc Lacourcière, he established the folklore archives at Laval University. He retired from the National Museum in 1948, but continued to work independently. In 1957 he founded the Canadian Folk Music Society, serving as its president until 1963. He was elected president of the American Folklore Society in 1918 and also served as co-editor of its journal. In 1916 he was elected a fellow of the Royal Society of Canada. Two honorary doctorates were conferred on him by the universities of Montreal (1938) and Oxford (1952). He served as a vice-president of the IFMC (1957–69), and received the Canada Council Medal in 1961.

Barbeau's ethnomusicological contributions lay primarily in the area of field techniques and collecting. His thousands of recorded folksongs and melodies, representing a unique cross-section of Canadian folk traditions, are housed at the Canadian Centre for Folk Culture Studies, National Museum of Man, Ottawa.

Barbella, Emanuele (*b* Naples, 14 April 1718; *d* Naples, 1 Jan 1777). Italian violinist and composer. His first teacher was his father, Francesco Barbella, composer and *maestro di violino* at the Conservatorio di S Maria di Loreto. He was later instructed by Angelo Zaga and by Pasqualino Bini, a noted pupil of Tartini. In theory and composition he was the pupil of Michele Cabbalone until the latter's death in 1740 and subsequently, until 1744, he studied with Leonardo Leo. The story that Leo thought him stupid resulted from a misinterpretation of Barbella's humorous modesty in the autobiographical sketch he provided for Burney's *History*. In 1753 Barbella became first violinist at the Teatro Nuovo in Naples, and three years later he entered the royal chapel there. From 1761 until his death he was a member of the orchestra at S Carlo. It is possible that he visited England during the 1760s, for his op.1 was printed in London by Oswald 'for the author'.

Although there is no evidence that Barbella ranked among the finest Italian violinists, he was respected as a performer and admired as a teacher and composer. Burney, who became his friend and relied on his knowledge, confessed to some disappointment in his playing, complaining of lack of variety, 'drowsiness of tone', and 'want of animation'. Yet he found much to praise also, especially when hearing Barbella in a small room, and spoke of his 'taste and expression' and of his 'marvellously sweet tone'. Barbella's compositions, which evidently achieved a modest success in London and Paris, reflect his position as a disciple (through Bini) of Tartini. The craftsmanship is sure, but what seemed to Burney as 'a good deal of fancy' appears as no more than graceful imitation of Tartini's style. Occasional harmonic surprises (according to Burney, 'a tincture of not disagreeable madness'), may represent Barbella's interpretation of Tartini's harmonic theories. The humorous side of this attractive musician's personality is sometimes seen in bizarre programmatic titles and unusual tempo indications. His good temper and stable character probably contributed to his effectiveness as a teacher and to the esteem in which he was held by his contemporaries. Ignazio Raimondi was his most famous pupil.

CHAPPELL WHITE

Barber (Donald), Chris(topher) (*b* Welwyn Garden City, 17 April 1930). English jazz trombonist, arranger and bandleader. He studied the trombone and the double bass at the GSM in London, and formed his first traditional jazz band in 1949. In 1953 he helped to organize a band led by Ken Colyer, then the most ardent British propagandist for traditional New Orleans music. The following year Barber took over the band; Colyer was replaced by Pat Halcox, and the ensemble soon became one of the most popular and technically accomplished groups of its kind. From the mid-1950s Barber helped foster British interest in blues by bringing over such American musicians as Muddy Waters, the harmonica player Sonny Terry and the guitarist and singer Brownie McGhee. He made several tours of the USA beginning in 1959, and also recorded two albums with his American Jazz Band, which included Sidney De Paris, Edmond Hall and Hank Duncan. Barber expanded his interests, recording classic rags (scored for his band) long before the popular rediscovery of Scott Joplin, and working with musicians from other areas of jazz (notably the Jamaican saxophonists Bertie King and Joe Harriott). Renewed interest in traditional jazz in the early 1960s brought wide success to Barber and his group, which included as its singer his wife, Ottilie Patterson. After rhythm-and-blues achieved general popularity in the early 1960s he re-formed his group as Chris Barber's Jazz and Blues Band, and, while retaining his roots in New Orleans jazz, engaged rock and blues musicians guitarist John Slaughter and the drummer Pete York. During the 1970s the band toured frequently in Europe. In 1976 Barber made a tour of Britain entitled 'Echoes of Ellington'. In 1981–2 he collaborated with the

rock singer and keyboard player Dr John in the show *Take me back to New Orleans*, which was performed widely in Britain, Europe and the USA.

Barber is a skilful trombonist and a highly original arranger, and the identity he has achieved for his band has been imitated throughout Europe

CHARLES FOX/DIGBY FAIRWEATHER

Barber, Llorenç (*b* Alelo de Malferit, Valencia, 1948). Spanish composer. He studied piano, composition and art history at the universities of Valencia and Madrid, and was in charge of the University of Madrid computer music centre, 1979–84. From 1990 he taught at the Institute of Aesthetics and in 1992 he planned and supervised a series of concerts of 'alternative music' at the Circulo de Bellas Artes.

Since 1980 Barber has been engaged internationally as an improviser on his own personally constructed 'bell towers'. In addition he has fulfilled commissions from all over the world to write 'symphonies of bells', each specifically designed for individual towns and cities; in Spain he has composed one such work for bell towers situated at various points on a mountain range. A performance in Oaxaca, Mexico, in June 1991, was timed to coincide with a total eclipse; another was the closing event of the 1993 ISCM Festival.

A 'symphony of bells' involves making use of all the available bells and bell ringers in any locality, the performance being co-ordinated by stopwatches on each site. Most of these symphonies last 50 minutes and are exact in their contrasts of quiet episodes and great tumults of bell sounds. The same improvisatory and rhythmic processes were utilized to brilliant effect in an outdoor work for multiple school brass bands, *Alberomundo*, played in the Bull Ring at Alicante on 24 September 1995 as part of the annual contemporary music festival there. Barber has also collaborated with the singer Fatima Miranda and with the Fiatus Vocis Trio, exploring new relationships between phonetics and instrumental music; in this he has been influenced by the work of Robert Ashley.

MEIRION BOWEN

Barber, Robert (i) (*fl* Castleton, Derbys., 1723–53). English psalmodist and ?composer. In 1723 he published the first edition of *A Book of Psalmody* in conjunction with John Barber. A second edition, by Robert Barber alone, followed in 1733, and a third, entitled *David's Harp Well Tuned*, in 1753. He also published *The Psalm Singer's Choice Companion* in 1727. *A Book of Psalmody* enjoyed a good deal of popularity in the north Midlands. It was similar to other parochial collections, and most of its contents were derivative. The second edition, however, had a remarkable feature: it included, as well as chants for the canticles, a complete musical setting of Morning Prayer, litany and ante-communion on cathedral lines, but for alto, tenor and bass only. Barber made it clear on the title-page that this was designed for 'our Country Churches'. He thus brought to its logical conclusion the trend begun by Henry Playford, who published anthems for parish church use in *The Divine Companion* (1701), and John Chetham, who printed chants in his *Book of Psalmody* (1718). The anthem *By the rivers of Babylon*, attributed to Barber and first printed in his 1723 collection, is one of the finest examples of country church music of the period.

NICHOLAS TEMPERLEY

Barber, Robert (ii) (*b* Newcastle upon Tyne, *c*1750; *d* ?London). English composer and organist. His biography is obscure. He went to Aberdeen in autumn 1774 to take up the post of organist at St Paul's Episcopal Chapel, which he held until autumn 1783, being succeeded (probably at his own wish) by John Ross, also a native of Newcastle. During that time Barber played the harpsichord continuo for the Aberdeen Musical Society's weekly concerts, published several compositions, and performed further unpublished works. After 1783 he seems to have lived in London.

In 1788 Barber's cantata *Thomson's Hymn to the Seasons* was published in London. In about 20 movements, scored for chorus, soloists and large orchestra, on a text adapted from James Thomson, it is his outstanding surviving composition; the choral writing is Handelian, but the arias and *stromentato* recitatives are more modern, and may have been influenced by Gluck. Though written ten years earlier than Haydn's *Seasons*, it contains a duet 'Bleat out afresh' whose theme is identical to that of Haydn's chorus 'Come gentle spring'; it is at least possible that Haydn heard a performance of Barber's work during one of his two visits to London.

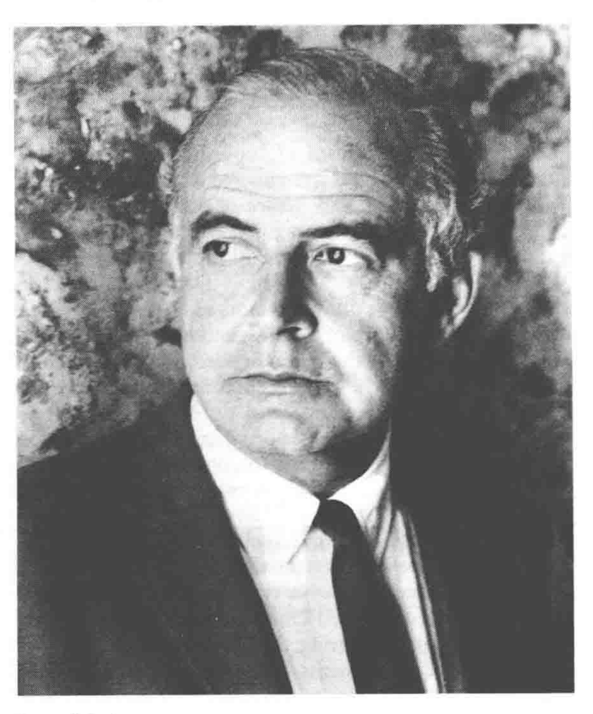
DAVID JOHNSON

Barber, Samuel (Osmond) (*b* West Chester, PA, 9 March 1910; *d* New York, 23 Jan 1981). American composer. One of the most honoured and most frequently performed American composers in Europe and the Americas during the mid-20th century, Barber pursued, throughout his

career, a path marked by a vocally inspired lyricism and a commitment to the tonal language and many of the forms of late 19th-century music. Almost all of his published works – including at least one composition in nearly every genre – entered the repertory soon after he wrote them and many continue to be widely performed today.

1. Life. 2. Works and style.

1. Life. From the age of seven, he displayed a prodigious talent for composing both vocal and instrumental music, writing an operetta, *The Rose Tree*, when he was ten to a libretto by the family's Irish cook. His musical studies were encouraged by his aunt and uncle – the contralto Louise Homer and the composer Sidney Homer, who, as his nephew's mentor for more than 25 years, profoundly influenced Barber's aesthetic principles. Early piano lessons were with William Hatton Green. At 14 he entered the newly founded Curtis Institute of Music, where he studied the piano with George Boyle and then with Vengerova, singing with Gogorza and composition with Scalero. Also at the institute in 1928, he met Menotti, an encounter which led to a lifelong personal and professional relationship. In 1934, shortly before his graduation, the founder of the Curtis Institute, Mary Curtis Bok, began to take a special interest in Barber; beyond providing financial help, she actively promoted his career.



Early travels and extended stays in Europe, Italy in particular, solidified his affinity with European culture and intensified his Romantic orientation. In Vienna in 1934, he studied conducting and singing with John Braun. After his graduation from Curtis he had a brief career as a baritone, performing on the NBC Music Guild series; in 1935 he won a contract for a series of weekly song broadcasts. His recording of his own setting of Arnold's *Dover Beach* was hailed as having 'singular charm and beauty', 'intelligently sung by a naturally beautiful voice'. First-hand experience as a singer and an intuitive empathy with the voice would find expression in the large legacy of songs that occupy some two-thirds of his output.

Barber gained early recognition as a composer, winning two Bearns awards – for a violin sonata (1928, lost) and for the overture to *The School for Scandal* (1931), his first published large-scale orchestral work. A Rome Prize enabled him to spend two years at the American Academy (1935–7), where he completed the Symphony in One Movement (1936), which received immediate performances in Rome, Cleveland and New York. Rodzinski conducted it at the opening concert of the Salzburg Festival in 1937, the first performance at the festival of a symphonic work by an American composer. His international stature was confirmed in 1938, when Toscanini and the NBC SO broadcast his *Essay* (no.1) and the *Adagio for Strings* (an arrangement of the second movement of the String Quartet). After that point, nearly all of Barber's works were composed on commission for prominent performers or ensembles.

He returned to the Curtis Institute in 1939 where he taught composition until 1942, though he was not really attracted to teaching and did not accept another position. In 1943 Mary Bok enabled Barber and Menotti to purchase 'Capricorn', the house in Mount Kisco, New York, which (until 1972) was the hermitage of Barber's most productive years, as well as a gathering place for many artists and intellectuals. In the same year he completed his Second Symphony, a commission from the US Army Airforce (in which he served from 1942 to 1945). The work was given its première by the Boston SO, as was the Cello Concerto, written for Garbousova, and the orchestral song *Knoxville: Summer of 1915*, commissioned by the soprano Eleanor Steber. His ballet score *Medea* (1946) was composed for Martha Graham; it was subsequently reworked both as an orchestral suite and as a separate orchestral tone poem, *Medea's Meditation and Dance of Vengeance*. The Piano Sonata (1949), commissioned by Irving Berlin and Richard Rodgers to celebrate the 25th anniversary of the League of Composers, was first performed by Horowitz. Its instant critical success was followed by numerous performances in America and Europe within the first year of its première; it retains a secure place in the repertory.

Barber had studied conducting with Reiner at the Curtis Institute and later with Szell, and in 1951 he was coached by Malko in preparation for the recordings of the Second Symphony, the Cello Concerto and the *Medea* ballet suite. Later that year he also conducted concerts of his Violin Concerto, the Second Symphony and *Medea* in Berlin and Frankfurt. But though he had ambitions as a conductor in the 1950s, these were to be short-lived.

While few think of Barber as a prominent standard-bearer for American music, he was more than once chosen to represent the USA: at an international music festival in Prague in 1946, as vice-president of the International Music Council in 1952, and as the first American composer to attend the biennial Congress of Soviet Composers in Moscow in 1962. He won the first of two Pulitzer Prizes in 1958 for *Vanessa*, staged initially by the Metropolitan Opera (1958) and later that year as the first American opera produced at the Salzburg Festival. Among the many other awards he received were the Henry Hadley Medal (1958) for his exceptional services to American music, nomination to the American Academy of Arts and Letters (1958), and the Gold Medal for Music at the

Samuel Barber

American Academy and Institute of Arts and Letters (1976).

At the peak of his career, Barber was commissioned to write three works for the opening of Lincoln Center: the Piano Concerto, commissioned for the inaugural week of Philharmonic Hall (1962), which won him the Pulitzer Prize; *Andromache's Farewell* (1962), a concert scene for soprano and orchestra based on Euripides; and the opera *Antony and Cleopatra* (1966), written for the opening of the new Metropolitan Opera House. But the third commission, in principle one of the greatest tributes to his work, turned out to be his nemesis. Prompted by a conviction that, in spite of the vitriolic reviews, the opera contained some of his best work, Barber directed much of his energy towards its revision over the following decade.

After 1966 he divided his time between Santa Cristina in Italy and New York. He struggled with depression, alcoholism and creative blocks that profoundly affected his productivity. Yet he continued to concentrate on what had always been for him the gratifying task of writing vocal music in short forms, as well as fulfilling a few commissions for larger works, including the cantata *The Lovers*. From 1978 to the end of his life, Barber was intermittently hospitalized for the treatment of cancer. His last composition, an oboe concerto of which only the second movement was completed, was published posthumously as *Canzone* for oboe and string orchestra.

2. WORKS AND STYLE. Unlike many of his contemporaries whose careers came to maturity between the two world wars, Barber rarely responded to the experimental trends that infiltrated music in the 1920s and again after World War II. Instead he continued to write expressive, lyrical music, using conventional formal models and the tonal language of the 19th century. Nine years of rigorous training in composition under Scalero, a student of Eusebius Mandyczewski, helped to preserve Barber's connection to the 19th-century tradition. That classical heritage was also reinforced by the personal guidance he received from Sidney Homer, who held up the European masters of the 19th century as role models, while at the same time directing Barber to trust the validity of his 'inner voice'.

Elements of modernism incorporated into his work after 1940 – increased dissonance and chromaticism (*Medea's Meditation and Dance of Vengeance* and the Cello Concerto), tonal ambiguity and a limited use of serialism (movements 1, 2 and 3 of the Piano Sonata, the *Nocturne* and *Prayers of Kierkegaard*) – were only of use in so far as they allowed him to pursue without compromise principles of tonality and lyrical expression. The 12-note rows in the Piano Sonata, for example, are not used as part of a rigid technique of organization. Their presence in melodic lines or accompaniment is rarely in conflict with – indeed often reinforces – the tonal structure. Barber's propensity for writing elegiac, long-lined melodies is exemplified by two of his best-known works, the justifiably admired *Adagio for Strings* and the Violin Concerto. These and such large-scale orchestral works as the three *Essays* from the early, middle and late stages of his career employ a rich orchestral palette and are characterized by well-crafted formal design, fluent counterpoint, and haunting themes – often assigned to solo woodwind instruments – that reflect a strong vocal orientation. The finale of the Violin Concerto and subsequent works from the 1940s, in particular the Second Symphony, *Medea's Meditation and Dance of Vengeance*, *Capricorn Concerto* (a 20th-century concerto grosso), and the Cello Concerto, show an increasing use of dissonance and syncopated rhythms, displaying some influence of Stravinsky.

A prolific composer of songs that are grateful to the voice as well as the ear, Barber favoured lyrical and nostalgic texts by European, often Celtic, poets. He set Joyce, Stephens, Graves, Spender and Rilke (in French) as well as the American poets Agee, Rothke and Dickinson. Arroyo, Bampton, Fischer-Dieskau and Steber, among others, have introduced his vocal works. *Sure on this shining night* op.13 no.3 – with its long, seamlessly lyrical canonic lines – is one of the most frequently performed of his songs. The cycle *Hermit Songs* op.29, commissioned by Elizabeth Sprague Coolidge and first sung by Leontyne Price, is a major work. The ten songs, based on comments written on the margins of medieval manuscripts by Irish monks, are infused with a modal harmonic language of great stylistic integrity; they led Schuman to hail Barber as an unmatched art-song composer. The intellectually and vocally challenging late cycle *Despite and Still* op.41, written for Price, has profound biographical significance, probing themes of loneliness, lost love and isolation – themes which call for a more dissonant harmonic language characterized by tonal ambiguity, tritones, a frequent use of the complete chromatic, conflicting triads, and whole-tone segments directed towards vivid expression of textual imagery.

Unaccompanied choral works written between 1930 and 1940 include a setting of Emily Dickinson's 'Let down the bars, O Death', a precursor of the sensitivity to textual expression that would come to characterize Barber's later choral compositions. His settings of three poems from *Reincarnations* reflect the exuberance, wit and melancholy of James Stephens's reinterpreted Gaelic texts through a wide variety of musical nuance, ranging from the rapid parlando rhythms of *Mary Hynes* to the chilling dirge *Anthony O'Daly*, its theme intensified by archaic-sounding open 5ths over an E pedal. The large-scale *Prayers of Kierkegaard* (1954), composed at the peak of Barber's maturity, fuses 20th-century, Baroque and medieval musical practice and stands unequivocally as one of the great spiritual works of the contemporary genre.

Barber's long-awaited first opera, *Vanessa* (1956), with a libretto by Menotti inspired by Isak Dinesen's *Seven Gothic Tales*, is in the grand operatic tradition. Eleanor Steber, in one of the great challenges of her career, took the title role. With set-piece arias, love duets, a glimpsed ball scene requiring a waltz, a folkdance ballet (reminiscent of *Yevgeny Onegin*) and a coloratura skating aria (cut from the revised version), it was described by Paul Henry Lang as 'remarkable and second to none on the Salzburg–Milan axis'; Sargeant extolled it as 'by far the finest and most truly "operatic" opera ever written by an American, as well as one of the most impressive things of its sort to appear anywhere since Richard Strauss's more vigorous days'. Predominantly neo-Romantic, the music highlights many of Barber's compositional strengths: metric flexibility that supports the natural rhythms of the text, a fluid use of harmonic colour to underscore the bittersweet poetry, and an abundance of accessible melody.

His second opera, *Antony and Cleopatra*, contains some of Barber's most dramatic vocal writing, but initial appreciation was eclipsed by the inflated Zeffirelli production with its problematic technical apparatus and gaudy costumes, and a press preoccupied with the social glitter of the occasion. Some of the most sensuous and soaring lyrical passages were composed especially with the voice of Price in mind, who created the role of Cleopatra. Revised by Barber and restaged by Menotti, the work subsequently received critical accolade with performances at the American Opera Center at the Juilliard School in New York in 1975 and at the Spoleto festivals in Charleston and Italy in 1984.

While he shared the concern of his generation for writing music accessible to a broadly based audience, unlike Copland, Harris, Blitzstein and Thomson, who searched for a music with national identity, Barber rarely incorporated popular, jazz and folk idioms into his compositions. Of his works that do include native elements, *Knoxville: Summer of 1915* is considered the most American. A reverie of childhood in a small Southern town, on a text by James Agee, it is a palpable evocation of folklore in a quasi-pastoral style, with frequent word-painting, hints of the blues, rich orchestral colour and freely varied metre. Diamond claimed *Knoxville* was 'the pinnacle beyond which many a composer will find it impossible to go'. Barber's few instrumental works that draw on the vernacular include *Excursions* (1941–2), a set of stylized piano pieces based on American idioms (a boogie woogie, a blues, a barn dance and a Latin American popular dance), the Piano Sonata (1949), with its paradigmatic contemporary fugue, and the Piano Concerto (1962), which makes use of motoric jazz rhythms.

Though deemed conservative by contemporary critics, Barber's lasting strength comes precisely from his conservation of a post-Straussian chromaticism along with a typically American directness and simplicity. The international recognition accorded him throughout most of his life and the new significance his works have gained since the arrival of the 'new romanticism' is testimony to the vitality and enduring viability of his extended tonal language and melodic invention.

BARBARA B. HEYMAN

Barberá, José (*b* Barcelona, 27 Jan 1876; *d* Barcelona, 19 Feb 1947). Catalan composer and teacher. In 1887 he entered the Barcelona Conservatory, to study the piano, harmony and composition, and later he was a pupil of Pedrell. He gave much of his time to teaching, collaborating in 1919 with María Montessori in studying music educational methods for primary schoolchildren. In his position at the Conservatory, he taught harmony, counterpoint, composition and orchestration, and was director until March 1938. He instructed many notable musicians, and was one of the driving forces behind Catalan musical life.

WORKS
(*selective list*)

Orch: Sym., a; Sinfonia sintética; Sinfonietta; Alfeu y Aretusa; Claro de luna; Crepúsculo de invierno; Danza fantástica; Els ballaires; Entierro de la bruja; El fumador de opio; Nenia; Paisaje nevado
Choral: Mass, 4vv
Pf pieces; many songs

CARLOS GÓMEZ AMAT

Barberiis, Melchiore de (*fl* Padua, *c*1545–50). Italian priest, composer, lutenist and guitarist. He composed or intabulated books 4, 5, 6, 9 and 10 in Girolamo Scotto's ten volume series of lute tablatures (Venice, 1546–9), which also included tablatures by Francesco da Milano, Rotta, Giovanni Maria da Crema and Borrono. Barberiis's name is absent from lists of prominent Paduan musicians of the time, and only two of his pieces were reprinted in later collections. At best, his five books preserve the practical repertory of a 'sonatore eccellentissimo di lautto' who had little or no formal musical training.

Barberiis's ricercares, fantasias and canzonas, some of which are in two or three sections, are usually constructed from a succession of chords (often drawn from madrigals or dances) filled out and linked by ornamental passage work. One fantasia is a simple gloss upon a composition by Francesco da Milano. Book 4 (1546) is dominated by an intabulation of the entire *Missa 'Ave Maria'* of Antoine de Févin with fantasias (called 'ricercari accomodati sopra il tuono di ditta messa' on the title-page) intended to serve as interludes between sections. Books 5 and 6 (1546) contain intabulations of four-part motets by Josquin, Andreas De Silva, Gombert and others of that generation, and intabulations of madrigals and chansons (one by Leo X). Book 9 (1549), dedicated to Torquato Bembo, son of the poet and papal secretary, consists largely of dances – passamezzos, pavans, saltarellos, galliards and pivas, some loosely grouped in suites in which paired dances share similar thematic material. The last book (1549) includes two lute duets and four short pieces for seven-string (four-course) guitar. The latter pieces, euphemistically called 'fantasias', are notable for their popular character; one uses the *bergamasca* and another employs a drone bass. Several 'discordate' fantasias require the tunings *F–B♭–f–a–d′–g′*, a tuning also used by Dalza, *G–d–g–a–d′–g′* and *G–c–f–a–e′–a′*. The canzona *Pas de mi bon compagni* from this volume is based on *Passe tyme with good companye* (in *GB-Lbl* Roy.App.58) attributed to Henry VIII, suggesting that this macaronic text was known in Italy, reversing the usual commerce of lute music from Italy outwards. All of the 1546 volumes contain a detailed instruction for tuning the instrument.

WORKS

Intabulatura di lauto, libro quarto, de la messa di Antonio Fevino sopra Ave Maria (Venice, 1546[22])
Intabulatura de lautto, libro quinto, de madrigali et canzon francese (Venice, 1546)
Intabulatura de lautto, libro sesto, di diversi motetti (Venice, 1546[23])
Intabolatura di lauto, libro nono, intitulato Il Bembo (Venice, 1549); 5 dances ed. in Chilesotti (1902)
Opera intitolata contina … Intabolatura di lauto … libro decimo (Venice, 1549[39]); incl. 4 fantasias for guitar, ed. in Koczirz (1921)

ARTHUR J. NESS

Barberini. Italian family of patrons. Of Tuscan origin, the Barberini gained their fortune in Rome beginning with the ecclesiastical career of Maffeo (1568–1644), who became a cardinal in 1606 and then Pope Urban VIII (1623–44). His literary and musical interests must be traced from dedications in musical scores, settings of his poetry, his participation in the Florentine Accademia degli Alterati and his sponsorship of such figures as the castrato Loreto Vittori and the poet Giovanni Ciampoli. In the spirit of humanistic textual criticism, the pope himself undertook the revision of the Latin hymns of the breviary (Rome, 1629), which engendered new, competing musical settings by A.M. Abbatini, Filippo Vitali and Gregorio Allegri, of which the last gained formal approval.

Urban VIII raised two of his nephews to the purple, Francesco (1597–1679) and Antonio (1607–71); a third nephew, Taddeo (1603–47), headed the line of the princes of Palestrina, followed by his son Maffeo (1631–85) and grandson Urbano (1664–1722). They were all active patrons of opera, oratorio and chamber music. The two cardinals sponsored numerous musical activities in their several ecclesiastical capacities, for celebrations at their titular churches and as protectors at various times of the Collegio Romano, Seminario Vaticano, Collegio Germanico, Collegio Inglese and several other institutions. Francesco also served as archpriest of the basilica of S Pietro from 1633 to 1667 and Antonio as archpriest of S Maria Maggiore and protector of the choir of the Cappella Sistina (from 1638). Taddeo not only sponsored operas at home and perhaps one of the first narrative ballets (in 1638), but as general of the papal armies he occasioned operas and other types of musical entertainments wherever he sojourned, most notably in Ferrara. Jules Mazarin's association with Barberini diplomacy and Cardinal Antonio's exile in Paris (1645–53) prompted the export of Italian opera to France, marked especially by Luigi Rossi's *Orfeo* (1647, Paris). These and other members of the family, including later cardinals, nuns and Barberini princesses married into other noble families after 1722, received dedications of musical prints and opera librettos from the 17th century on. Copying Florentine tradition, the Barberini subsidized publication of commemorative scores of their productions of *Sant'Alessio* (Rome, 1634; music by Stefano Landi), *Erminia sul Giordano* (Rome 1637; music by Michelangelo Rossi) and *La Vita humana* (Rome, 1658; music by Marco Marazzoli), all of which included scenographic engravings. What was significant about their patronage of opera in Rome, however, was its establishment as an annual dramatic entertainment for the carnival season, not tied to specific diplomatic or dynastic occasions. Various members of the family supported subscription opera in Rome, once it became established in the late 17th century. Cardinal Francesco the younger (1662–1738), for example, held a box at the Teatro Tordinona in 1690, while his brother Prince Urbano held one at the Capranica and paid one of his regular *aiutanti di camera*, Giovanni Antonio Haym, to play the violin there that season.

The musicians, poets and librettists that the family supported included one future pope, Clement IX (Rospigliosi) and numerous singers, composers and instrumentalists. Singers who joined the households of Cardinals Francesco and Antonio became virtually family members, often entering as young castratos and being retained well past the age for singing. Angelo Ferrotti, who served Francesco from the late 1620s and retired from the Cappella Sistina in 1654, continued to appear on the cardinal's salary lists in the 1660s.

116 volumes of the family's musical holdings were donated to the Vatican library in 1902, consisting largely of collections of secular vocal music of the 17th century and devotional music in Italian, along with some early works for oratories and books of lessons for the lute, guitar and keyboard used by the Barberini children. 11 anthologies of Roman and Venetian opera arias bear the arms of Prince Urbano. The additional 200 liturgical volumes have been catalogued (see Salmon).

The first Cardinal Francesco expressed academic as well as practical interest in music. Study of the drama and music of antiquity undertaken by G.B. Doni, one of his secretaries, influenced the first operas that Francesco commissioned, beginning in the 1630s, and also led to the reconstruction of Seneca's *Troades* in 1640 with music by Virgilio Mazzocchi (now lost). Francesco also maintained an interest in music of the immediate past, and under Mazzocchi maintained a viol ensemble to perform Italian madrigals. Theoretical treatises, both printed and manuscript, are included in the Barberini collection, including a 14th-century copy of the *Ars nova* of Philippe de Vitry and a manuscript presentation copy for Urban VIII of Doni's *Lyra Barberina amphichordos* (not published until 1763), seven treatises by Pier Francesco Valentini and the *Antiquae musicae auctores septem* (Amsterdam, 1652) of Marcus Meibom.

MARGARET MURATA

Barber Institute of Fine Arts. Birmingham arts centre opened in 1939, part of the University of Birmingham. *See* BIRMINGHAM, §2.

Barberis, Mansi (Clemansa) (*b* Iaşi, 12 March 1899; *d* Bucharest, 10 Oct 1986). Romanian composer. She studied music intermittently up to the age of 40 in Iaşi, Berlin, Paris and Vienna. She played the violin and the viola in the George Enescu Orchestra, Iaşi (1918–22), the Filarmonica Moldova, Iaşi (1942–4) and the Femina String Quartet, which she founded in 1944. She was also active as a singer, choral conductor and teacher of singing at the conservatories in Iaşi and Bucharest. She came into conflict with the communist authorities for several years and her activities were restricted for a time. She was later rehabilitated and concentrated her energies on the teaching of singing and composition. Her first composition was the song *La lune blanche* (1916, to a poem by Verlaine), and she followed this with over 100 works, including several for orchestra, of which the First Symphony (1941) and the Piano Concerto (1954) were among the most significant.

The post-Romantic style characteristic of her earlier works was maintained throughout her life, but from the late 1950s she moved away from large-scale instrumental forms and towards the theatre. She composed several full-length operas in the last three decades of her career, beginning with *Apus de soare* ('Sunset') in 1958 and including *Domniţa din depărtări* ('The Maiden from Afar'), first performed on Romanian Television in 1970.

WORKS

Stage: Apus de soare [Sunset] (musical drama, 3, G. Teodorescu after Barbu St Delavrancea), 1958, rev. 1968, Bucharest, Opera Română, 30 Dec 1967; Kera Duduca (op, 3, A. Ionescu Arbore), 1963, rev. 1969, Romanian TV, 26 July 1970; Domniţa din depărtări [The Maiden from Afar] (op 3, after E. Rostand), 1971, Iaşi Opera Română, 9 May 1976; Caruta cu paiate [A Cartful of Clowns] (op, 3, A. Ionesco Arbore after M. Stefănescu), 1981, Iaşi, Opera Română, 10 May 1982

OCTAVIAN COSMA

Barbershop. A style of unaccompanied singing that originated in the USA in the late 19th century. It is characterized by four-part harmony using chords that contain tritones. Dominant and diminished 7th chords, as well as half-diminished 7th and augmented 6th chords, are used, but major 7ths, flattened 9ths and chords of the 13th are considered stylistically inappropriate, as are non-chord notes. The melody is carried by the 'lead' (second) tenor, while the first tenor harmonizes above; the bass provides the foundation, and the baritone completes the harmony, frequently crossing above the melody. Chord progressions known as 'swipes' often compensate for the lack of instrumental accompaniment (ex.1).

Ex.1 Barbershop *swipes* from the song 'Sweet Adeline', (1903, public domain)

The barbershop quartet movement, which flourished between about 1895 and 1930, was given impetus by the fledgling recording industry. Performances by such professional groups as the Manhansett, Haydn, American and Peerless quartets became widely available and gave rise to the formation of thousands of amateur groups throughout the country during the movement's peak years (1910–25). A fundamental change in the American popular song also contributed to the development of barbershop harmony. Many tunes in the earlier decades of the 19th century were constructed around the tonic octave of the scale, but by about 1895 melodies with a dominant-to-dominant range had evolved. This meant that the bass part was less likely to double low melody notes, and it also allowed the upper tenor part to flow in a smooth line above the lead, mostly in 3rds and 6ths. The words of barbershop songs speak of commonplace ideas: home, spouse, children, love (both joyful and sad) and fond memories of earlier times. Interpretative liberties are taken in performance using rubato, and extended song endings known as tags are also used.

By the late 1920s and early 1930s the increasing popularity of jazz, sound films, records, cars and radio had led to a decline in the number of active quartets. In 1938, however, the Society for the Preservation and Encouragement of Barber Shop Quartet Singing in America was founded. By the end of the 20th century there were affiliated clubs with quartets and choruses in Britain, Scandinavia, Europe, Australia, New Zealand and South Africa. Two organizations for women barbershop singers, Harmony Incorporated and Sweet Adelines, were also formed, both with affiliated societies overseas. From the 1940s on, barbershop harmony was sung either by male or by female quartets and choruses, but in the later 20th century mixed-voice groups gained increasing popularity.

V. HICKS

Barbetta, Giulio Cesare (*b* ?Padua *c*1540; *d* after 1603). Italian lutenist and composer. Title-pages of his publications refer to him as 'Padoano'. Padua was one of the

centres of lute building and teaching. Barbetta's surviving lute books are among the most important Italian sources for the old six-course ('second l'uso antico') and new seven-course lute. The dedications of some of his publications to German aristocrats suggests connections with Germany (through German students at the University of Padua). His music was well known in northern Europe: ten gagliardas and two of the passamezzos from his first book (1569) were reprinted in *Theatrum musicum* (RISM 1571[16]) without attribution to Barbetta.

His compositions show the traditional Italian preference for lute fantasias, dance forms of all kinds and vocal intabulations. The first book of intabulations contains only pieces for solo lute: paduanas, gagliardas, passamezzos and fantasias. His 1582 book was issued in two versions, one with a Latin title and German text and another with Italian title and text. The collection contains original lute pieces (preambles, fantasies, dances) and intabulations of vocal works – madrigals and motets by Janequin, Wert, Lassus and Mouton. The *Intavolatura* of 1585 consists entirely of instrumental compositions for solo lute with the exception of six *Arie* – formulae to be used for singing 'Stanze e versi d'ogni sorte, secondo l'uso di Venetia'. The latter are similar to those in the Bottegari Lutebook. In addition to the traditional paduanas and gagliardas, three new dance types are added: the *moresca*, balletto and saltarello 'to be danced *à la gagliarda* in modern style'. Each of the 'Baletti di diverse nationi' has a title, *Baletto Francese*, *Baletto Polaco*, and so on. They are thematically related to the gagliardas.

Barbetta's final volume, printed in 1603, reflects the contemporary vogue for canzonettas, villanellas and *napolitane* for voice with lute accompaniment.

CAROL MacCLINTOCK/DINKO FABRIS

Barbey [Barbay, Barbet], **Guillaume** (*fl* Paris, *c*1716–42). French string instrument maker. He was particularly well known as a maker of viols and his instruments are highly valued as examples of French craftsmanship. The viol virtuoso Marin Marais is known to have owned an instrument by him. A lengthy description of his talent and skill survives in the correspondence of Jean-Baptiste Forqueray (1699–1782). Writing in 1767 or 1768, approximately 25 years after Barbey's death, Forqueray praised him as 'the greatest builder we had for the shape, thickness and correct dimensions' of the viol, and also commended his choice of English wood. Forqueray stated that his father, Antoine, had owned two instruments by Barbey, one for solo playing and the other for accompaniment; he played them for 25 years until his death in 1745, when the younger Forqueray took them over and praised their continuing improvement with age.

At least four bass viols by Barbey survive, all dating from about 1720, two with seven strings and two with six. A six-string pardessus de viole of 1742 is in the Paris Conservatoire.

Another Barbey (first name unknown) was active as a string instrument maker in the second half of the 18th century and may have been Guillaume Barbey's son.

MARY CYR

Barbier, Jane (? *b* London, bap. 8 Dec 1695; *d* London, will proved 9 Dec 1757). English contralto. She first appeared in *Almahide* (November 1711) and the *Spectator* commented on her becoming shyness and her 'agreeable Voice, and just Performance'. She had three seasons with the Italian opera, generally taking male roles, singing in Handel's *Rinaldo*, *Il pastor fido* and *Teseo*. She was Telemachus in Galliard's *Calypso and Telemachus*, which had an English libretto by John Hughes, whose poem *The Hue and Cry* described her dark good looks and headstrong nature. She appeared in masques by Pepusch, usually as the heroine, with Margherita de L'Epine as the hero, and from 1717 she sang with John Rich's company in musical afterpieces, pantomimes and English operas. After appearing in Dublin in the winter of 1731–2, she was in two new operas by J.C. Smith and played King Henry in Arne's *Rosamond*. Her career petered out after this; in 1737 the *Gentleman's Magazine* reported the death of 'Mrs Barbier, formerly a Noted Singer in the Opera's', but she sang twice in December 1740, when she was hissed.

OLIVE BALDWIN, THELMA WILSON

Barbier, René (Auguste Ernest) (*b* Namur, 12 July 1890; *d* Brussels, 24 Dec 1981). Belgian composer and conductor. He studied at the conservatories of Brussels (with Gilson) and Liège (with Sylvain Dupuis) and won the Belgian Prix de Rome with the cantata *La légende de Béatrice* in 1920. A professor of harmony at Liège (1920–49) and Brussels (1949–55), he also directed the Namur Conservatory (1923–55). In 1968 he was elected to the Belgian Royal Academy. He was prepared to tackle any genre, but had a preference for orchestral music, often of a descriptive

character. His music is notable for the richness of its orchestration, recalling Dukas and Wagner.

HENRI VANHULST

Barbieri, Antonio (*b* Reggio nell'Emilia; *fl* 1720–43). Italian tenor. From 1720 to 1731 (at least) he was in the service of the Landgrave of Hesse-Darmstadt, governor of Mantua, where he made his earliest known appearance, in the première of Vivaldi's *Candace* (1720). The composer seems then to have engaged him for Venice, where he sang in 23 operas from 1720 to 1738. He became well known throughout Italy, appearing in Reggio (1720), Rome (from 1724), Parma and Florence (both 1725 and 1734–5), Naples (1727–9) and Turin (1739–40). In 1731 he sang at Pavia in Vivaldi's *Farnace* alongside his wife, Livia Bassi Barbieri, who also performed at Venice and Florence, 1734–5; it is not known whether he was related to the contralto Santi Barbieri, who appeared in eight operas at Florence from 1730 to 1743. Later he was *maestro di maniera* at the Ospedale dei Mendicanti, Venice, from 1736 until (apparently) 1767 and at the Derelitti, 1741–3.

COLIN TIMMS

Barbieri [de Barbieri], **Carlo Emanuele** (*b* Genoa, 22 Oct 1822; *d* Pest, 28 Sept 1867). Italian conductor and composer. He received his musical training at the Naples Conservatory, studying singing with Crescentini and composition with Mercadante. Although he wrote operas and vaudevilles and some sacred music, he was known principally as a theatre conductor in central and northern Europe. From 1844 he conducted at the Carltheater in Vienna for two years, also serving as vocal coach at the Kärntnertortheater and composing music for several vaudevilles and pantomimes. He travelled extensively as an opera conductor: to Berlin, for the Königstädtisches Theater, in 1847–8, Dresden in 1849, Hamburg in 1850, Bremen in 1853, and Rio de Janeiro in 1854. From 1856 to 1862 he lived in Vienna, conducting in various Austrian cities, and from 1862 to 1867 he was conductor at the National Theatre in Buda. Barbieri's most important opera, *Perdita* (1865), is a free adaptation of Shakespeare's *The Winter's Tale*. Its musical structure is continuous (without separable numbers) in the Wagnerian manner but the music itself is old-fashioned: for example, the large orchestra usually accompanies or doubles the voices. The overture is a potpourri of tunes from the opera and the mostly diatonic melodies are frequently in lilting 6/8. The choruses are simple and squarely homophonic.

MARVIN TARTAK

Barbieri, Fedora (*b* Trieste, 4 June 1920). Italian mezzo-soprano. She studied at Trieste with Luigi Toffolo and at the school of the Teatro Comunale, Florence, with Giulia Tess. She made her début at Florence in 1940 as Fidalma in Cimarosa's *Il matrimonio segreto*. In 1941 she created Dariola in Alfano's *Don Juan de Mañara* at the Florence Maggio Musicale, and also appeared in Monteverdi revivals. She sang regularly at La Scala from 1942, and at the Metropolitan from 1950 until the 1970s, making her début there as Eboli in *Don Carlos* on the opening night of Sir Rudolf Bing's régime. She first visited England with the Scala company in 1950 when she was heard as Mistress Quickly and in Verdi's Requiem; she returned to Covent Garden in 1957–8 and in 1964. She later appeared in a number of comprimario roles, singing until she was well into her sixties. Her voice, of fine quality and considerable power, was well suited to the dramatic mezzo-soprano parts of Verdi and also capable of majestic calm in the works of Monteverdi, Pergolesi and Gluck. Among many recorded roles, Amneris, Ulrica, Azucena and Mistress Quickly represent her at her appreciate best.

DESMOND SHAWE-TAYLOR/ALAN BLYTHE

Barbieri, Francisco Asenjo (*b* Madrid, 3 Aug 1823; *d* Madrid, 17 Feb 1894). Spanish composer, musicologist, conductor and critic. Barbieri's father died in 1823 and the composer used his matronym throughout his life although, in the heated polemic wars of the period, that was sometimes held against him as an Italianate pretence.

1. Life and works. 2. Style.

1. Life and works. Barbieri received his early music training from his maternal grandfather and entered the fledgling Royal Conservatory in 1837, studying the clarinet with Ramón Broca, the piano with Albéniz y Basanta, singing with Saldoni and composition with Carnicer. In 1841 his family moved to Lucena, but

Barbieri remained in Madrid, eking out a living as a clarinettist, pianist, teacher and copyist. His earliest compositions were songs and dances, and a paso doble for a militia band in which he played. He also sang baritone roles in Italian operas at the Conservatory and the Teatro del Circo. He wrote the libretto for a one-act zarzuela but did not complete the music in time for its scheduled première in February 1843. Later that year he was hired as chorus master and prompter by a touring company performing Italian opera and the following year he served as director of a similar company. In April 1845 Barbieri became *maestro de música* at the school of San Eloy in Salamanca and director of the Liceo Salmantino. A manuscript volume of his orchestrations from this period contains his earliest surviving compositions, an orchestral *Introdución y gran vals* and the *Himno a la música* for soloists, chorus and orchestra. He returned to Madrid in July 1846, and in the following year completed a three-act opera buffa, only excerpts of which were performed. He joined a group of progressive musicians agitating for a national opera under the name La España Musical and in the following year joined the Madrid Liceo, for which he sang and composed. He began writing music reviews for *La ilustración* in 1849 and worked as a prompter in Italian operas at the royal palace.

Although his first zarzuela to reach the stage, *Gloria y peluca*, had been completed the previous summer, it opened behind schedule on 9 March 1850, on a typically mixed bill at the Teatro de Variedades. It was a great critical and popular triumph, as was *¡Tramoya!* in June. These successes secured Barbieri a place as one of the seven founding directors and shareholders of a new company formed in June 1851 to present zarzuelas at the Teatro del Circo. The new society's struggling first season was rescued when Barbieri's *Jugar con fuego* opened in October: the first zarzuela in three acts, it both saved the new theatre company and defined the future path of the genre. Generally the aristocracy had scorned native music theatre, preferring Italian opera, but so great was the popularity of *Jugar con fuego* that the queen mother, María Cristina, asked Barbieri to compose a group of rigadones on its themes for a palace ball. In 1856 the company launched a semi-official house paper, *La zarzuela*, which led its opening issues with an erudite yet skilfully polemical two-part article by Barbieri, defending the genre. Distressed by the excessive rent required for the dilapidated Circo, that year the company also purchased land and built the Teatro de la Zarzuela. It opened on 10 October with a mixed bill that included a large one-movement sinfonía composed by Barbieri on themes from the most popular zarzuelas of the time. In 1859 Barbieri initiated a concert series, featuring a large chorus and orchestra, held at the Teatro de la Zarzuela on the six Fridays of Lent. Nothing like this had been done in recent Spanish history and the concerts were artistic and financial successes. Nonetheless, the personal bickering and none-too-scrupulous insider dealing of the company had become too much for Barbieri and in the December of that year he sold his share to the composer Gaztambide and the baritone Francisco Salas, the only remaining partners of the original seven.

The following decade was dominated by the première of *Pan y toros*, one of the pinnacles of Spanish music theatre, in December 1864. That summer Barbieri became the artistic director of the Campos Eliseos, presenting Madrid's first open-air concerts in the gardens and a season of Italian and French opera in the new theatre there. In 1866 he organized his own orchestral concerts, conducting the first performances of a complete Beethoven symphony in Spain and establishing the durable and influential Sociedad de Conciertos. His only full season as conductor at the Teatro Real was that of 1869–70. Barbieri proved able to ride the ever-changing tides of theatre fashions in Madrid contributing another monument of the zarzuela, *El barberillo de Lavapiés* in 1874. He also composed the most artistically compelling works for the Bufos Madrileños, instituted by Francisco Arderius in imitation of the Parisian model, and for the *género chico* repertory. He continued composing until his death, with his last great success being *El Sr. Luis el tumbón* in 1891. A life-long book collector with a solid classical education, Barbieri published numerous scholarly papers on music and literature, culminating in the groundbreaking *Cancionero musical de los siglos XV y XVI* (1890). His artistic and scholarly honours were legion, including being the first musician seated in the Real Academia Española. The materials he bequeathed the Biblioteca Nacional form the foundation of its music holdings: after his name in the index of the published catalogue is the single word 'passim'.

2. Style. The range of Barbieri's scholarly curiosity is apparent in his music. He knew the music of Wagner, Verdi and Gounod intimately, to name only his leading foreign contemporaries in dramatic music, and it was he who established German symphonic compositions in Spain. But more than any other composer of his generation, he was critically and popularly identified with Spanish traditional and ethnic music, and where his harmonic usage differed significantly from that of his coevals in other countries was in the influence of that music. His chord progressions often suggest modality rather than tonal practice, with modulations commonly to 3rd-related keys and often accomplished by a single common tone rather than secondary dominants. He frequently raises or lowers the basic tonal level by a step and changes to minor mode, particularly in switching to the minor subdominant. Harmonic dissonance was usually functional for Barbieri, while melodic dissonance was used for colour. Special compositional techniques or unusual instrumentation were inevitably inspired by the dramatic situation, although occasionally he used imitative counterpoint simply for modulation. Barbieri was a master of combining seemingly disparate melodies to stunning dramatic effect. A justly famous example of this is in Act II of *Pan y toros* (1864), where the five principal protagonists sing a poignant prayer outside the palace of one of the villains, where a dance is taking place. The instrumental gavotte from the palace combines with the vocal supplication outside, and the union of these opposed elements strengthens both dramatically and musically.

His scoring employs important solo obbligatos and cadenzas for many instruments, as well as a predictably wide range of percussion instruments. It is most distinctive, however, in its use of onstage ensembles. Barbieri began his career as a chorister and chorus master, and he made greater and more effective use of the chorus than any other zarzuela composer, ranging from the convincingly antiquarian four-part Pavana of *Juan de Urbina* (1876) to the Seguidillas of *El secreto de una dama* (1862), in which the men's voices imitate the sound of a

plucked guitar while the women hum, all accompanying a tenor solo. Whenever resources and libretto permitted, Barbieri used *rondallas* (a traditional group of strolling musicians), consisting of *bandurrias* and guitars in various sizes, onstage throughout his career. He also pioneered the use of actual military bands onstage, some quite large.

For his contemporaries, the use of characteristically Spanish materials was a distinguishing feature of Barbieri's work. His repertory is filled with examples of boleros, *caleseras*, fandangos, habaneras, *jácaras*, *jaleos*, *jotas*, *muñeiras*, paso dobles, seguidillas, sevillanas, tangos, tiranas, villancicos, *vitos* and *zapateados*. Occasionally, motivated by a reference in the libretto, Barbieri might quote traditional thematic material but more often it was the distilled essence of the form that he presented. So definitive was his handling of traditional materials that a piece such as 'Te levaré a Puerto Rico' could be lifted virtually intact from *El hombre es débil* (1871) and reappear, in instrumental form and uncredited, as Sarasate's *Habanera*, op.21 no.2.

In most of his small-scale construction Barbieri relied on stringent, folkloric economy of materials: the repetition, ornamentation, development and expansion of the simplest basic motifs. This can be clearly heard in perhaps his most famous single number, Paloma's now oft-recorded canción from *El barberillo de Lavapié* (1874), but it is also quite apparent in more ostensibly 'art' music, such as the romanza 'Un tiempo fue' from *Jugar con fuego* (1851). In broad outline, Barbieri's ensemble numbers generally begin with an expository section, moving to a cantabile centre and ending with a dramatically important cabaletta. His largest ensemble structures are second-act finales, the point of dramatic crisis in his three-act zarzuelas. The greatest of these is undoubtedly also the most unusual, the second-act finale of *Pan y toros*. Although the structure is much larger than usual and the conflict is a serious political struggle rather than the usual lover's tiff, in gross form and character it seems to conform to Barbieri's conventions. But the exultant cabaletta, with its soaring vocal roulades, does not bring down the curtain; instead, a tense melodrama with the shocking onstage murder of the Santero follows, with the orchestra defining the psychology of the scene through a seething swirl of leitmotifs.

All of Barbieri's theatre works, even the slightest *género chico* pieces, are tightly organized harmonically and motivically, and this organization invariably reflects and enhances the drama. In *Chorizos y polacos* (1876) for example, the feuding theatre claques and the levels of the play-within-a-play action are defined by symmetrical, contrasting blocks of sharp and flat keys. *El barberillo de Lavapiés* is another meticulously planned zarzuela, harmonically closed in G major but with a marked katabasis at the centre of the work. In it, however, motivic relationships, play a more prominent part in unifying the work musically, and in characterization. Barbieri also changes identifying motifs to reflect changes in character, such as the Santero in *Pan y toros*. A hypocritical character, the Santero's identifying music is always at harmonic odds with its musical surroundings, and as the character breaks down, the motif also dissolves into barely coherent stammering.

Barbieri's music has survived both mythologizing adulation and dismissive condescension. In an era when the boundaries between classical and vernacular, national and international art are not as fiercely guarded as they were, the flexible music theatre synthesis that is the zarzuela has found new respect. New editions of Barbieri's writing and music appear regularly, as do fresh productions and recordings, revealing a rare genius for dramatic music of great formal sophistication and emotional immediacy.

JOHN EDWIN HENKEN

Barbieri, Lucio [Luzio] (*b* Bologna, 24 July 1586; *d* Bologna, mid-Nov 1659). Italian composer, organist and teacher. He was organist at S Giacomo Maggiore, Bologna, where he presumably received his musical training, when, on 6 October 1610, he was appointed organist at Bologna Cathedral, succeeding Manfredi Miglioli. Adriano Banchieri had declined the post. While working at the cathedral he also deputized from April 1612 for the ailing G.B. Mecchi at the second organ of S Petronio. On 16 December 1613, after Mecchi's death, he resigned from the cathedral and took up the S Petronio post permanently, drawing a monthly salary of 17 lire until November 1649, when he was appointed first organist and received 21 lire. On 26 February 1646, when he had been blind for several years, his salary increased to 30 lire and he obtained P.M. Alessandri as a deputy; on 6 September 1658 Alessandri was replaced by G.P. Colonna, who succeeded Barbieri after his death. In about 1654 Barbieri wrote a petition (now in *I-Bsp*) to the S Petronio authorities to restore a room there to be used for teaching.

Barbieri was known as a teacher of organ and composition; among his pupils was Pietro Paolo Banchieri, Adriano Banchieri's nephew, who in the dedication of his uncle's *La cartellina musicale* described Barbieri as 'virtuosissimo mio maestro in canto figurato e suono dell'organo'. His principal extant work, *Il primo libro de motetti* (Venice, 1620), for five to eight voices and continuo, comprises 21 pieces that show his skill in counterpoint. Some have a narrow vocal range and use a strict polyphonic style, while others, for double choir, have colourful and lively antiphonal scoring. Essential words are often stressed by homophonic declamatory passages or by vigorous, well-measured polyphonic climaxes. Barbieri contributed a concerto for two voices and continuo to Banchieri's *Terzo libro di nuovi pensieri ecclesiastici* (RISM 1613[5]). There is an eight-voice *Dixit Dominus* by him (in *I-Bc*), and a four-voice 'Amen' (also in *Bc*) ascribed to 'Barbieri' may also be by him.

JUDITH NAGLEY/SUSAN WEISS

Barbieri-Nini, Marianna (*b* Florence, 18 Feb 1818; *d* Florence, 27 Nov 1887). Italian soprano. After study with Luigi Barbieri, Pasta and Vaccai, in 1840 she made a disastrous first appearance at La Scala in Donizetti's *Belisario*. Shortly afterwards she broke her contract with the impresario Merelli and joined Lanari's troupe in Florence. Here she made a second, and this time triumphant, début in Donizetti's *Lucrezia Borgia*. For the next 15 years she sang with great success throughout Italy and in Barcelona, Madrid and Paris. She was a highly dramatic singer with a powerful voice, particularly effective in the title roles of Donizetti's *Anna Bolena* and Rossini's *Semiramide*. She appeared in the first performances of three Verdi operas, singing Lucrezia in *I due Foscari* (1844, Rome), Lady Macbeth (1847, Florence), and Gulnara in *Il corsaro* (1848, Trieste). She retired in 1856.

ELIZABETH FORBES

Barbingant [Barbinguant, Berbigant] (*fl c*1445–60). French composer. Until 1960, he was widely confused with the later composer Jacobus BARBIREAU (see Fox), partly because there is no known documentation for anybody named Barbingant; he may also have been confused in his own time with Bedyngham, whose gently sweet style his work reflects. He must have been active in central France, to judge from the sources of his music and from the musicians who drew on his work. He was twice cited by Tinctoris and was named among groups of distinguished

composers by both Eloy d'Amerval and Guillaume Crétin (1497). If *Au travail suis* is by him, as seems likely, he may have been an important influence on Ockeghem, who drew on it in two masses and in his *Ma maistresse*; the song was also paraphrased by Compère. The contrary ascription for *L'omme banny* seems to resolve in favour of Barbingant (rather than Fedé), partly because it was cited as his by Tinctoris, Gaffurius and Giovanni del Lago; it appears in eight surviving sources and was much paraphrased. Strohm has suggested that *Der Pfauenschwanz* (which is found in six sources, all east European, two ascribed 'Berbigant') may have initiated the genre of German abstract pieces with similar titles; it was used for masses by Martini and Obrecht. Both Barbingant's masses show a sovereign control of large-scale form; that on *Terriblement suis* is perhaps the earliest known example of full parody, considerably expanding the techniques of Bedyngham's Mass *Dueil angoisseux*.

WORKS

Edition: *Jacobi Barbireau: Opera omnia*, ed. B. Meier, CMM, vii/1–2 (1954–7) [M i–ii]

MASSES

Missa sine nomine, 3vv, attrib. in Hamm on the basis of Tinctoris's comment and of style, ed. in L.E. Gottlieb, *The Cyclic Masses of Trent Codex 89* (diss., U. of California, Berkeley, 1958)

Missa 'Terriblement', 3vv (on anon. virelai Terriblement suis fortunée, conceivably also by Barbingant; see Thibault and Fallows), M i

SECULAR

Au travail suis que peu de gens croiroient, rondeau, 3vv (also attrib. Ockeghem), M ii

Der Pfauenschwanz, 4vv, M ii

Esperant que mon bien vendra, rondeau, 3vv, M ii

L'omme banny de sa plaisance, rondeau, 3vv (also attrib. Fedé; text possibly by Meschinot), M ii

DAVID FALLOWS

Barbion, Eustachius (*d* Kortrijk, before 9 July 1556). South Netherlandish composer and choirmaster. He became *maître de chapelle* at the Onze Lieve Vrouwkerk in Kortrijk (Notre Dame, Courtrai) on 12 April 1543, succeeding Pieter Maessens. Barbion took charge of a musical establishment consisting of a singing school, an organist and a choir of six men and four (later six) choirboys, including for a time his own sons Peter and Wilhelm. Jacobus Vaet studied with Barbion from 1543 to 1546; he paid tribute to his teacher in his parody motet based on Barbion's setting of *Justus germanibit*.

Barbion's surviving compositions include 14 motets and three chansons, which appear in partbooks printed between 1550 and 1570 in Germany and the Low Countries, and in such manuscripts as Codex D of the famous Leiden Choirbooks (*c*1565). The provenance of these sources suggests that Barbion's reputation was confined essentially to northern Europe. His music shows his versatility and skill as a contrapuntist, combining both strict and free imitation within rich, homogeneous textures for five and six voices in the grand northern manner; the multi-voice motets generally reflect the active and sometimes dense imitative polyphony that is often found in compositions of the post-Josquin generation. The two compositions for four voices, however, betray a French influence: *Vous avez grace* forces a lightly imitative fabric into the concise formal structure of the Parisian chanson. *Gallis hostibus*, one of a few pieces with Latin text to be included in early editions of Phalèse's *Septiesme livre des chansons*, is a short, homorhythmic composition. A state motet, it may celebrate the heroic fall of Adrien de Croy, a prominent courtier of Emperor Charles V in the war against the forces of Henri II during the 1550s.

WORKS

13 motets, 4–6vv, 1553^{11}, 1553^{13}, 1555^{4}, 1556^{6}, 1557^{3}, 1558^{4}, 1559^{1}, *A-Wn* 15613, 19189, *D-MÜp* 1525, 2968, *CZ-HKm* 29, 1441 *Sl* Mus.fol.I 2, *NL-L* (olim D); 1 ed. in SCMot, xv (1995), 2 ed. in SCMot, xviii (1997)

State motet, 4vv, 1562^{3}

3 chansons, 4–5vv, 1550^{13}, 1556^{17}, *GB-Lbl* Add.34071; 1 ed. in SCC, i (1992), 2 ed. in SCC, xxix (1994)

Je prens en gré, a 6, 1589^{17} (kbd intabulation by Jakob Paix; vocal model lost)

LAWRENCE F. BERNSTEIN

Barbireau [Barbirianus], **Jacobus** (*b* 1455, *d* Antwerp, 7 Aug 1491). South Netherlandish composer. His parents, Johannes Barbireau and Johanna van Saintpol, were both apparently citizens of Antwerp. He must have attended university (probably in the early to mid-1470s), since he is mentioned with the title of Master of Arts in the earliest document to refer to him, dated 1482. He later sought to study with Rudolph Agricola, the famous humanist and musician who had served as organist at the court of Duke Ercole d'Este at Ferrara in 1475. Three letters to Barbireau from Agricola have survived, the third of which, written at Heidelberg, reveals that the addressee was active as a composer by 1484: 'Please send me something of your composition to sing, something composed with care, that you would like to have performed to praise'. Yet Barbireau's musical reputation does not appear to have been widespread at the time, since Agricola continues: 'We have singers here, too, and I often mention your name to them'.

In the end the young composer was unable to study with Agricola, possibly because by 1484 he had succeeded Antoine de Vigne as choirmaster at the church of Our Lady, Antwerp. He was to keep this position until his death seven years later. Records from the church mention

Barbireau's name only in connection with routine duties and payments. There is evidence, however, that he was held in considerable esteem by Maximilian I, King of the Romans, who rewarded him in January 1488 for having housed, maintained and instructed the son of one of his equerries for two years, and had a latter of recommendation written in January 1490 for his visit to the Hungarian court at Buda. During this visit Barbireau was spoken of by his host Queen Beatrix as *musicus prestantissimus* and *familiaris* of Maximilian. The composer's death inspired the humanist Judocus Beyssel to write three epitaphs, in which he is described as *modulator notabilissimus*. Beyssel expressed a sense of tragedy over the death of so gifted a 'youth'; it may well be, however, that Barbireau had never anticipated a long life, perhaps because of poor health, since the earliest surviving document to mention him records financial provisions for daily readings and prayers to be said over his grave – an arrangement established at an age, 27, that was unusual even by the standards of the late 15th century. The composer left a daughter, Jacomyne Barbireau, who survived him by at least 20 years.

Barbireau's oeuvre is small, yet its quality is outstanding. His sacred musical style recalls that of Heinrich Isaac in particular: the material is handled with impressive assurance, and Barbireau shows a degree of contrapuntal polish and melodic-harmonic resourcefulness that puts him firmly on a par with such composers as Isaac and Obrecht. These qualities are evident in the fine Kyrie *Paschale* (of which the top part freely paraphrases the plainchant melody, with occasional imitations in the lower parts), and particularly in the *Missa 'Virgo parens Christi'* (based on a responsory for the Blessed Virgin), which fully exploits the opportunities for textural variety and sonorous luxuriance offered by its five-part scoring. *Divisi* passages at textual key points suggest that the minimum number of singers required for this mass was 10, distributed from top to bottom as follows: 2–2–1–3–2. The writing here is varied, and rich in alternating textural combinations, motivic filigree around slow-moving parts, imitations, chordal passages and texturally differentiated restatements of two-voice units. Yet these devices are handled with discretion in an effortless flow of counterpoint, in which regular cadences on the final C establish a constant focus of tonal reference.

The four-part *Missa 'Faulx perverse'* shows the same characteristics, save that the lucid and serene quality of *Missa 'Virgo parens Christi'* has given way to a much more darkly resonant atmosphere, not only on account of the low scoring (the bass regularly goes down to *D*), but also because the lower parts are more closely spaced, frequently combining to form thirds and triads. Apart from these differences, however, the mass shows the same assurance, resourcefulness and polish of the other works. The model for the mass has not been identified, but patterns of melodic and motivic recurrence suggest that it may have been treated in loose parody fashion. The four-part motet *Osculetur me*, though scored not quite as low as *Missa 'Faulx perverse'*, shares with that mass the persistent exploration of darker sonorities, and seems close to the world of Ockeghem in this respect and in its Phrygian modality. True to the tradition of *Song of Songs* settings, Barbireau adds light dramatic touches here and there to underline the emotional intensity of the text (general rests, chordal passages, motifs based on the rhythmic scansion of words and phrases), yet these do not diminish the overall lyrical quality of the setting.

Three songs by Barbireau are extant, and it seems significant that all provided cantus firmi for masses by Isaac and Obrecht. In *Gracioulx et biaulx* and *Scoen lief* he developed a penchant for extended sequence in all parts that is not pursued to similar lengths in his sacred music.

WORKS

Edition: *J. Barbireau: Opera omnia*, ed. B. Meier, CMM, vii/1–2 (1954–7) [complete edn]

Missa 'Faulx perverse', 4vv
Missa 'Virgo parens Christi' [Missa de venerabili sacramento], 5vv (c.f. responsory to the BVM)
Kyrie Paschale, 4vv (c.f. Gregorian Kyrie Paschale)
Osculetur me, 4vv
Een vroylic wesen, 3vv (text: incipit only)
Gracuuly et biaulx, 3vv (text: incipit only)
Scon lief, 3vv (text: incipit only)

ROB C. WEGMAN

Barbirianus. *See* BARBIREAU, JACOBUS.

Barbirolli, Evelyn. *See* ROTHWELL, EVELYN.

Barbirolli, Sir **John** [Giovanni Battista] (*b* London, 2 Dec 1899; *d* London, 29 July 1970). English conductor and cellist. He was the son and grandson of Italian musicians settled in London, and his mother was French. As a youth he won scholarships to Trinity College of Music, then to the RAM. In 1916 he became the youngest member of the Queen's Hall Orchestra, and he gave his first solo recital, at the Aeolian Hall, in 1917. The next two years were spent in the army, where he had his first experience of conducting, with a voluntary orchestra. After 1919 he returned to orchestral playing in London, and twice appeared as soloist with the Bournemouth Municipal Orchestra. In 1924 he joined the Music Society (later International) and Kutcher string quartets, and formed a string orchestra, which he often conducted. He was invited to conduct the British National Opera Company on tour and later (1928) in London. From 1929 to 1933 Barbirolli was guest conductor for the Covent Garden international and English seasons. He conducted opera at Sadler's Wells in 1934, and returned to Covent Garden for the coronation season of 1937.

Meanwhile Barbirolli was also active in the concert hall. In 1927 he deputized for Beecham at an LSO concert. Guest appearances with the Scottish Orchestra in 1931

John Barbirolli

led to the permanent conductorship for three seasons. During this period he also took charge of the Northern PO in Leeds, conducted other provincial orchestras including the Hallé and was invited abroad. His growing reputation brought him the offer of ten weeks as guest conductor of the Philharmonic-Symphony Orchestra of New York in the 1936–7 season. Initial success was followed by his appointment for three years as permanent conductor, in succession to Toscanini. The contract was renewed for two years to 1941–2, the orchestra's centenary season, when the conducting was shared with eminent colleagues including Toscanini. In 1942 he made a courageous wartime crossing to Britain for concerts with the LSO, BBC SO and LPO, before resuming work in the USA, and in 1943 he returned to rebuild the Hallé Orchestra. He stayed with the Hallé until 1958 when he became conductor-in-chief with a less onerous schedule. In 1968 he was made conductor laureate for life. From 1961 to 1967 he was also principal conductor of the Houston (Texas) SO and in 1961 he began an association with the Berlin PO, whose guest conductor he was until his death. These last years, crammed with work in spite of deteriorating health, included tours with the Philharmonia (Latin America, 1963), BBC SO (USSR, 1967) and Hallé (Latin America and West Indies, 1968), and numerous guest appearances at home and abroad.

Barbirolli's musical tastes were conventional with a leaning towards the late Romantics. He had little sympathy with contemporary music beyond certain works of Britten, of whose Violin Concerto and *Sinfonia da requiem* he gave the first performances, in New York. He had a passion for Elgar's music, and was a notable interpreter of Delius and of Vaughan Williams, who dedicated his Eighth Symphony to Barbirolli; he became increasingly attached to Mahler and Bruckner. As a technician he understood the orchestra from the inside. As an interpreter he could persuade audiences to share his enthusiasms – sometimes with a loving exhibition of minutely prepared detail that singled out trees at the expense of the wood. The measure of success with which he met the challenge of New York may be disputed, but to survive there for five consecutive seasons, with Toscanini remaining in the city with the NBC SO, and to be invited several times to return as guest conductor, does not look like failure. His subsequent acceptance by an orchestra of equal standing, the Berlin PO, must have healed any lingering wounds. The musical love of Barbirolli's life, however, was the Hallé Orchestra, which he restored to high excellence; his single-minded devotion to it became a legend.

Up to 1937 Barbirolli had seemed set to become the leading British opera conductor after Beecham, but Beecham became enraged when his junior by 20 years got the job in New York, and did much to undermine Barbirolli's subsequent career. Barbirolli's sole revenge was to keep Beecham away from the postwar Hallé; but he only appeared at Covent Garden, as a guest conductor, for three seasons between 1951 and 1954. In his last years, when he recorded *Madama Butterfly* and *Otello*, and conducted *Aida* in 1969 at the Rome Opera, he appeared to be picking up the threads of his frustrated operatic career. His recording career, on the other hand, extended from the pre-electric days of 1911 to the month of his death and included famous readings of Elgar's symphonies, *The Dream of Gerontius* and the Cello Concerto (with Jacqueline du Pré). His orchestral arrangements include a Suite for Strings from Purcell, an Elizabethan Suite from works of virginal composers, and oboe concertos from Corelli and Pergolesi. Barbirolli was made a Companion of Honour in 1969, was knighted in 1949, and received the Gold Medal of the RPS in 1950 and the Freedom of the City of Manchester in 1958. He was twice married, in 1932 to Marjorie Parry, the singer, and in 1939 to Evelyn Rothwell, the oboist.

RONALD CRICHTON/JOSÉ BOWEN

Barbitonsoris (*fl* late 14th century). Italian ?composer. One three-voice Sanctus, with a partly isorhythmic tenor, is transmitted with this ascription in the Paduan fragment *GB-Ob* Can.pat.lat.229 ('PadA', f.37*v*; ed. in PMFC, xii, 1976, p.88). The word may refer to the Greek instrument shaped like a lyre, called a 'barbitos'. That the work comes from northern Italy seems to be confirmed by the additional label 'ambrosius' written next to the second voice.

GIANLUCA D'AGOSTINO

Barbitos (late Gk. *barbiton*). Greek instrument of the LYRE family (a CHORDOPHONE). In Greek literature and vase painting it is generally associated with the Eastern Greek poets (including Terpander, Sappho, Alcaeus and Anacreon) of the Archaic period (7th and 6th centuries BCE), and with drinking parties. The name of the instrument, probably of non-Greek derivation, occurs only once in the fragments of these early poets (in Alcaeus, ed. E.-M. Voigt, *Sappho et Alcaeus: Fragmenta*, 1971, frag.70.4, in

the dialect form *barmos*), but it is frequently mentioned by later Greek writers, who attribute the instrument's 'invention' variously to Terpander or Anacreon. The arrival of Anacreon in Athens as a court poet in the late 6th century coincides with the sudden appearance of the barbitos in Athenian vase paintings, many of which show him as a player. As the chief string instrument used to accompany Dionysiac revelry, it is only occasionally depicted in the hands of Muses or of women entertaining themselves at home.

The barbitos is usually portrayed as having a tortoise-shell soundbox, long curved arms (probably made of wood) joined together by a crossbar at the top, and five to seven strings supported by a bridge and sounded with a plectrum attached to the instrument by a cord. The strings are attached at the crossbar by means of tuning devices called *kollopes* (pegs). The arms, which diverge as they leave the soundbox, curve towards each other near the top of the instrument, forming a distinctive shape. Rare profile views indicate that the arms curved forwards as well as outwards. The longer string length as compared to the schoolboy's tortoise-shell lyre suggests a relatively lower pitch.

The barbitos is generally shown held against the body of the player, who is often standing; a sling around the left wrist helps to support the instrument, which is tipped out at an angle of roughly 45 degrees from the vertical (see illustration). The left-hand fingers are probably used both to pluck and to dampen the strings. The right hand strums the strings with the plectrum.

Barbitos player: detail from a skyphos attributed to the Brygos Painter, Attic Red-figure style, c480 BCE *(Musée du Louvre, Paris)*

After its heyday in Attic vase painting of the late 6th and early 5th centuries, the barbitos was less and less frequently depicted, and was almost never shown after the 5th century. Aristotle condemned it as an instrument inappropriate for education (*Politics*, 1341 a–b), but it continued to be mentioned in Greek literature, especially in drinking songs. In later times the barbitos as a literary symbol remained firmly associated with Lesbos, the homeland of Terpander, Sappho and Alcaeus (see Horace, *Odes*, 1.i.34).

JANE McINTOSH SNYDER

Barbizet, Pierre (*b* Arica, Chile, 20 Sept 1922; *d* Marseilles, 18 Jan 1990). French pianist. After early training in Santiago he studied at the Paris Conservatoire, where he won a *premier prix* in 1944 in the class of Armand Ferté. He won first prize in the 1948 international competition at Scheveningen and fifth prize in the 1949 Marguerite Long-Jacques Thibaud Competition. He was director of the Marseilles Conservatoire from 1963 to 1990 and also taught for a time at the Paris Conservatoire; among his students were Hélène Grimaud and Bernard d'Ascoli. He performed frequently as a soloist and chamber musician, especially with the violinist Christian Ferras and the flautist Jean-Pierre Rampal. His recordings with Ferras include notable accounts of the complete sonatas of Beethoven and Brahms, as well as major French works. As a soloist, Barbizet made distinguished recordings of the complete piano works of Chabrier and several sonatas of Beethoven. (C. Timbrell: *French Pianism*, White Plains, NY, and London, 1992, 2/1999)

CHARLES TIMBRELL

Barblan, Guglielmo (*b* Siena, 27 May 1906; *d* Milan, 24 March 1978). Italian musicologist of Swiss origin. He studied law, then the cello with Forino and Becker at Rome Conservatory (diploma 1929) and composition at Bolzano Conservatory (diploma 1932); he also attended lectures on musicology by Liuzzi in Rome and by Sandberger in Munich. While still a student he was music critic of various Rome newspapers (1926–32) and showed particular interest in contemporary musical life (Casella, Pizzetti, jazz, futurism). Subsequently he was music critic of *La provincia di Bolzano* (1932–50), concurrently (until 1949) holding an appointment as professor of cello and music history at the Bolzano Conservatory, and was active as a concert cellist. At the Milan Conservatory he was head librarian (1949) and professor of music history (1965); at the university (where he took the *libera docenza* in 1959) he became professor of music history in 1961. He maintained his involvement in journalism with frequent contributions to *Sicilia del popolo*, *Rassegna dorica* and *Alto adige*, and as foreign correspondent for the *Basler Nachrichten* (1958–62); he was editor of *Verdiana* (1950–51) and of the Milan Conservatory *Annuario* (from 1962), to which he contributed several articles on the library.

Barblan's distinguished career was matched by his catholic interests and thorough research. He was first attracted to the 17th and 18th centuries; his discussion of F.A. Bonporti's life and works, initially published in *Rassegna musicale*, was later enlarged into a book. He next extended his studies to include 19th-century opera and then the Renaissance, his practical musicianship leading him to make editions of the music. His research in the Milan archives and analyses of Milanese music resulted in what many consider his most important works; they were published as independent chapters in *Storia di Milano*, covering several centuries and various musical genres. The discussion of 16th-century musical life at the Sforza court and elsewhere in Milan is based on archival documentation; a complete bibliography, naming instrumentalists and singers and providing analyses of the music and indications of performing practice, is included (vol.ix). A broad but detailed account of chamber music is given for the 17th century, which saw the rise of the violin and its repertory (vol.xvi). Barblan also discussed the Milanese symphonists of the next century, such as Sammartini, and their music (vol.xvi). His survey of opera and other forms of musical theatre discusses works, composers and styles from the 17th century (vol.xii) and continues throughout history to conclude with an assessment of 20th-century musical life in Milan (vol.xvi); these chapters not only describe the city's musical life but are also basic to a study of Italian music in general.

Barblan also contributed numerous articles to music dictionaries (*MGG1* and *Grove5*) and wrote extensively for Italian radio, notably the series 'La cantata dal Barocco all'Arcadia' and 'Bach e il Clavicembalo ben temperato'. In recognition of his singular role in Italian musicology he was elected president of the Società Italiana di Musicologia (1964–8), a member of the Accademia di S Cecilia (1964) and vice-president of the Accademia Musicale Chigiana (1965).

CAROLYN GIANTURCO/TERESA M. GIALDRONI

Barblan, Otto (*b* S-chanf, 22 March 1860; *d* Geneva, 19 Dec 1943). Swiss organist and composer. From 1878 to 1885 he studied the organ, the piano and composition at Stuttgart Conservatory. In 1885 he went to Chur as a music teacher, and in 1887 became organist of St Peter's Cathedral in Geneva, where he stayed until 1942; from 1892 he also taught the organ and composition. As conductor of the Société de Chant Sacré (1892–1938) he introduced to Geneva important works by Bach, Beethoven, Handel, Franck and many other composers. Together with Ernest Ansermet, Barblan had a decisive influence on the musical life of Geneva. He composed in a late Romantic neo-Baroque style, with particular success in his works for organ and choir for patriotic occasions, notably the *Chaconne über B–A–C–H* (1901), *Fantasie* (1907) and *Toccata* (1911) for organ, and *Calvenfeier* (1899) for choir. In 1925 he was made an honorary member of the Swiss Musicians Association, and in 1927 was awarded honorary citizenship of Geneva and an honorary doctorate by Geneva University. He published two articles of reminiscences in *Bündner Monatsblatt* (1929).

JÜRG STENZL

Barbosa-Lima, Carlos (*b* São Paulo, 17 Dec 1944). Brazilian guitarist and arranger. He began studying the guitar at the age of seven. At nine he began having lessons with Isaias Savio, one of the foremost teachers in South America, who predicted Barbosa-Lima's success. His concert début was in São Paulo in 1957, immediately followed by his début in Rio de Janeiro. At this time, aged 13, he embarked on his first series of recordings. From 1958 he performed regularly on Brazilian television and continued to give concerts throughout Brazil. In 1960 he gave a series of concerts in Montevideo – a major centre for the guitar in South America. His growing international success led many noted composers, among them Guido Santórsola, Francisco Mignone and Alberto Ginastera, to dedicate works to him. In 1967 he made his first US concert tour. On the strength of the tour's success he won a full scholarship from the Spanish and Brazilian governments to participate in Segovia's masterclasses in Santiago de Compostela in 1968, where he received high praise from Segovia. His London début followed in 1971. Barbosa-Lima's numerous guitar arrangements of works by composers as diverse as Scarlatti, Debussy, Gershwin and Scott Joplin are widely known for their fidelity to the original work. A number of his arrangements feature among his recordings. He has also written articles on guitarists and guitar music.

RONALD C. PURCELL

Barbosa Machado, Diogo (*b* Lisbon, 31 March 1682; *d* Lisbon, 9 Aug 1772). Portuguese bibliographer. He matriculated in 1708 as a student of canon law at Coimbra University and on 2 July 1724 he was ordained a priest. On 4 November 1728 he became *abad* of the church of S Adrião at Cever in the diocese of Lamego. His life work was a four-volume bibliography of Portuguese authors, *Bibliotheca lusitana, historica, critica, e cronologica* (Lisbon, 1741–59/*R*), which is especially valuable to the music historian because he included 127 composers and theorists. Insofar as he could find them, he listed not only their published works but also their manuscripts, noting in which library they were located. Since he had access to the royal music library before its destruction in the Lisbon earthquake of 1755, he listed numerous works now lost. In vol.iv, pp.593–6, he indexed musicians under 'Musica', thus making it simple for later writers to plagiarize his musical entries. Foreign reference works still copy Vasconcellos's *Os musicos portuguezes* (Oporto, 1870) without recognizing Barbosa Machado's work as the source of everything that he wrote on biographies. Barbosa Machado omitted Ayres Fernandes, Luis Moram, Pedro de Cristo, Pedro Esperança and several others connected with the priory of Santa Cruz at Coimbra. His most substantial error was listing Francisco Guerrero as a native of Beja, a mistake into which he was trapped by a pseudonymously issued forgery of 1734.

Barbosa Machado donated his superb library to King José I. João VI took the bulk of it to Brazil, where it formed the nucleus of the national library; it includes 13 important volumes of villancicos sung at Lisbon between 1640 and 1722. In 1825 Dibdin rightly classed Barbosa Machado's four volumes as 'a work beyond all competition and beyond all praise ... the great Oracle', a judgment still valid.

ROBERT STEVENSON

Barboteu, Georges (*b* Algiers, 1 April 1924). French horn player. He studied with his father in Algeria and with Jean Devémy at the Paris Conservatoire. In 1948 he joined the Orchestre National, and in 1951 won first prize in the international competition in Geneva. He was principal horn for the Concerts Lamoureux and in 1969 became principal of the Orchestre de Paris. Barboteu was the leading French player of his generation, setting a new standard of technical accomplishment and steering the country's school of horn playing away from the continuous vibrato that had dogged it for decades. In this he was influenced by his teacher Devémy, who saw a minimal vibrato as a permissable result of the temperament and

sensitivity of the player, but did not deliberately teach it, in contrast to the school headed by Lucien Thévet. Barboteu himself was appointed to the Conservatoire as successor to Devémy in 1969. His recordings include Schumann's *Conzertstück*, which established his international reputation, and the Mozart concertos. He has composed many studies for his instrument and written chamber works, some for the wind quintet Ars Nova which he founded in 1964.

OLIVER BROCKWAY

Barbour, J(ames) Murray (*b* Chambersburg, PA, 31 March 1897; *d* Homestead, PA, 4 Jan 1970). American acoustician, musicologist and composer. He taught himself the piano and the organ and studied at Dickinson College, Pennsylvania (1914–18); after graduating he worked as organist and mathematics teacher at the Haverford School in Pennsylvania (1919–21, 1922–6) while continuing his studies at Dickinson College (MA 1920) and Temple University (MusB 1924). He subsequently taught music theory as assistant professor at Wells College, New York (1926–9), leaving with a fellowship to the universities of Cologne and Berlin. After studies at Cornell University under Kinkeldey (1931–2) he gained the doctorate in 1932 with a dissertation on the history of equal temperament from Ramis de Pareia to Rameau. He taught at Ithaca College, New York (1932–9), while working for the MusD of the University of Toronto (1936). The rest of his career (1939–64) was spent teaching at Michigan State College (later University), as professor from 1954. He was president of the American Musicological Society in 1957–8, and Temple University awarded him an honorary doctorate in 1965.

His book *Tuning and Temperament: a Historical Survey* is widely accepted as the most authoritative study of the history and theory of temperaments, to which he applied his talents as mathematician, historian and musician. His scholarly articles appeared in mathematical as well as musical journals and were marked by precision, clarity and conciseness. With Fritz A. Kuttner he issued three gramophone records concerning the history of tuning systems. His compositions include a Requiem, the symphonic poem *Childe Rowland*, solo and choral songs, works for the organ and piano and some chamber music.

JON NEWSOM

Barbu, Filaret (*b* Lugoj, 16 April 1903; *d* Timişoara, 31 May 1984). Romanian composer. He started his musical education in his native town with Ioan Vidu, a composer and conductor of works of a folkloristic character. He went on to attend the Vienna Conservatory, where he studied composition with Edmund Eysler (1929–39). As a conductor, he worked with choirs singing music from the Banat region, a part of south-west Romania particularly rich in folk songs and dances. He founded (in 1927) and directed the *Revista Corurilor si Fanfarelor Române* ('The Romanian Choir and Fanfare Magazine'). He served in the Ministry of Arts in Bucharest during the turbulent period from 1947 to 1949. He spent his last years in the town of Timişoara.

Barbu composed choral, orchestral and chamber music, but it was with his operettas that he enjoyed his greatest success. He adapted the conventions of the genre to include Romanian folk music, using plots which are usually of a strongly nationalist character.

WORKS
(*selective list*)

Stage: Armonii bănăţene [Harmonies from Banat] (operetta, 3, I. Titel), Lugoj, 14 Dec 1933; Ana Lugojana [Anna from Lugoj] (operetta, 3, V. Timuş, P. Andreescu and A. Şahinian), Bucharest, Teatrul de Operetă, 7 Nov 1951; Plutaşul de pe Bistriţa [The Boatman on the Bistrita] (operetta, 3, T. Ianuc and I. Dacian), Bucharest, Teatrul de Operetă, 21 Nov 1958; Târgul de fete [The Maidens' Fair] (operetta, 3, T. Iancu), Bucharest, Teatrul de Operetă, 21 Aug 1964
Choral: Omul [Man] (orat, C.M. Lerca), 1942; Liturghia [Liturgy], mixed chorus
Orch and chbr works

OCTAVIAN COSMA

Barca, Alessandro (*b* Bergamo, 26 Nov 1741; *d* Bergamo, 13 June 1814). Italian theorist. Having entered the religious order of the Somaschi fathers, in 1761 he was invited to teach philosophy and mathematics in the college of Santa Croce in Padua. There he came into contact with the composer and theorist F.A. Vallotti, to whom he later became technical adviser on the mathematical aspect of harmonic theory; for example, he assisted in the calculations for Vallotti's system of temperament. From 1771 to 1812 he was professor of canon law at the University of Padua; he was also active as a chemist and as a theoretician of architecture. Barca's *Nuova teoria di musica*, a work in six sections (of which only four were published), aimed to explain the harmonic identity between a chord and its inversions; this identity (already established before Rameau by F.A. Calegari) was at the heart of the rules of composition in the Paduan school, which was known as the 'scuola dei rivolti' (because its composers were the first to use certain inverted dissonant chords). Barca made a graduated list of harmonic intervals in order of consonance, according to a mathematical criterion similar in some ways to that put forward by Leonhard Euler in 1739. Much more satisfactory is his explanation of the origin of musical scales, where he concludes that the ascending major scale is the most 'natural', followed by the descending minor scale (50 years later Helmholtz, who did not know Barca's work, confirmed this assertion).

Barca also applied his theory of consonances to the calculation of tempered systems, arriving at the regular temperament which reduced each 5th by 5/29 (roughly $\frac{1}{6}$) of the syntonic comma. He was expert in practical music, and in a *Rapporto sullo stato della musica nel Regno d'Italia* of 1810 (repr. in Alessandri) he pointed to weaknesses of Italian music of the period, wishing to 'stem the tide of German music which was already ruining Italian taste, and threatening ever greater damage'.

PATRIZIO BARBIERI

Barcarolle (Fr.; It. *barcarola*). Title given to pieces that imitate or suggest the songs (*barcarole*) sung by Venetian gondoliers as they propel their boats through the water. These songs were already widely known in the 18th century: in *The Present State of Music in France and Italy* (1771), Burney reported that they were 'so celebrated that every musical collector of taste in Europe is well furnished with them'. A basic feature of the barcarolle is the time signature, 6/8, with a marked lilting rhythm depicting the movement of the boat.

The barcarolle has been much used in Romantic opera, where it has a sentimental, even melancholy atmosphere: the most famous example is that by Offenbach in Act 2 of *Les contes d'Hoffmann*. Schubert frequently used the barcarolle lilt in his songs: though neither given the name nor associated with Venice, *Auf dem Wasser zu singen* (D774) and *Des Fischers Liebesglück* (D933) are perfect examples. Schubert also set Mayrhofer's *Der Gondelfahrer*, as a solo song and as a male-voice quartet (D808–9), and both are typical barcarolles of great lyrical beauty.

The most famous example for piano solo is Chopin's superb Barcarolle in F♯ op.60 (1845–6); it is in 12/8 instead of the customary 6/8. Further examples in Chopin are the early *Souvenir de Paganini* (1829; a barcarolle in A based on the well-known theme *Le carneval de Venise*) and the Variations in D for piano duet, based on the same theme. There are three pieces entitled *Venetianisches Gondellied* among Mendelssohn's *Lieder ohne Worte*: op.19 no.6 in G minor, op.30 no.6 in F♯ minor and op.62 no.5 in A minor (he actually composed the first in Venice); he also wrote an isolated *Gondellied* in A in 1837. The most important series of barcarolles, however, are the 13 that Fauré composed between about 1880 and 1921; he also wrote a song called *Barcarolle* (op.7 no.3, 1873). Anton Rubinstein, Balakirev, S.M. Lyapunov, Glazunov, Vítezslav Novák and MacDowell are others who wrote barcarolles for piano.

MAURICE J.E. BROWN/KENNETH L. HAMILTON

Barce (Benito), Ramón (*b* Madrid, 16 March 1928). Spanish composer and critic. He studied in Madrid at the conservatory and at the university, where he received the doctorate (1956). Although he followed courses under Messiaen and Ligeti, he is fundamentally a self-taught composer. He was a founder member of the Grupo Nueva Música (1958) and of 'Zaj' (1964–6), a musical theatre group. In 1967 he launched the *Sonda* magazine and the associated series of new music concerts. He was also music critic of the Madrid newspaper *Ya* (1971–8) and deputy director of *Ritmo* (1982–93). He has translated into Spanish numerous books, including works by Reger, Schoenberg, Schenker and Piston. He has been awarded various distinctions, such as the National Prize for Music (1973), the City of Madrid Prize for Musical Creation (1992) and the Gold Medal of Merit in Fine Arts (1996).

His earliest compositions, from the end of the 1950s, dispense with the neo-populist elements fashionable in Spain at that time and show a strong Expressionist leaning. In the early 1960s structural organization and flexible tempo come to the fore. It was during this experimental period that he invented the system of levels, which subsequently shaped his musical production. This involved the construction of chromatic scales in which the higher and lower 5ths (the dominant and subdominant of the traditional system) are suppressed. By avoiding hierarchical functions the harmonies can oscillate between atonal and pseudo-tonal sounds in the same way that tonal music can be tonal to varying degrees within the same work. Barce first used the system in the *Nueve pequeños preludios* (1965). It occurred subsequently in *Períodos en nivel Re* (1967) and received its most systematic exposition in the 48 Preludes for piano (1973–83).

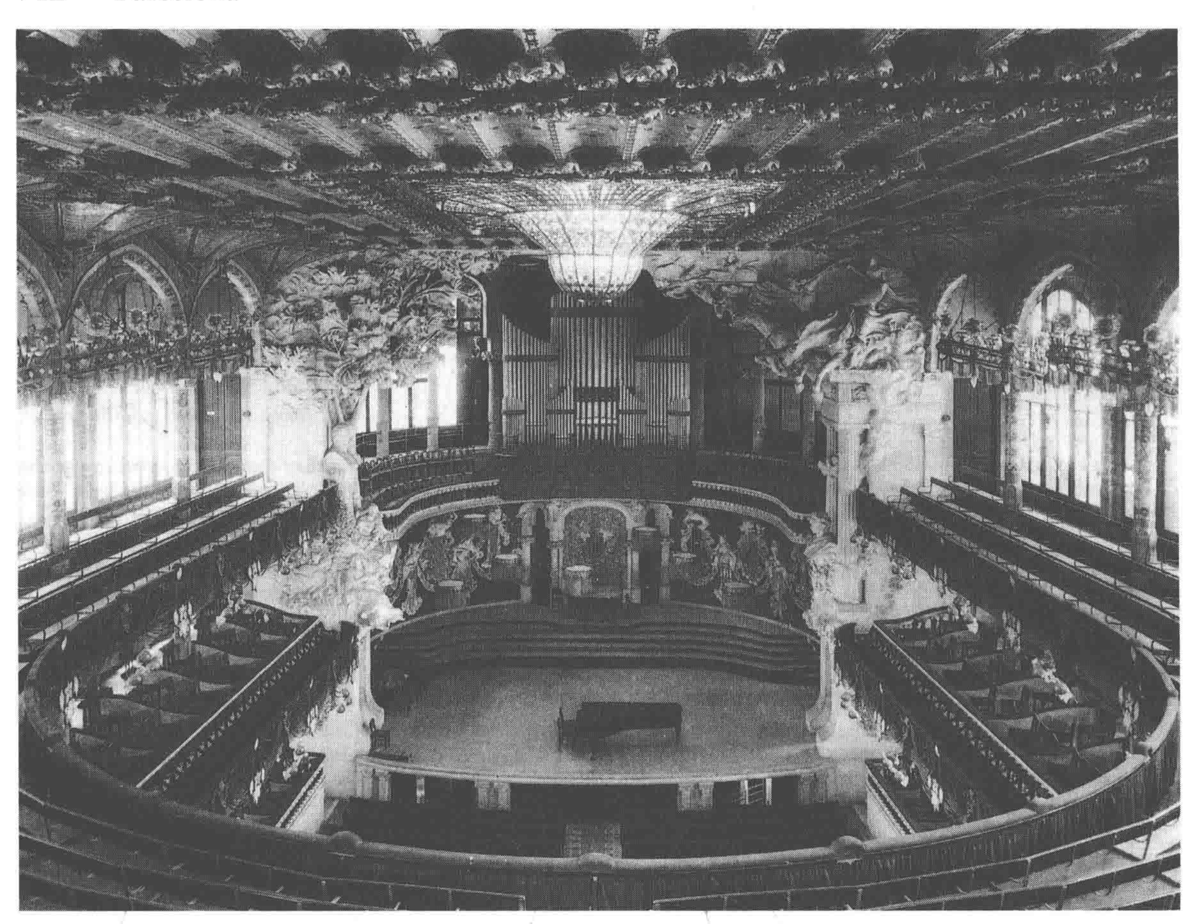
TOMÁS MARCO/ANGEL MEDINA



Barcelona. Capital city of Catalonia, Spain. In the 4th century one of its bishops, St Pacian, condemned the citizens' custom of celebrating the New Year with masquerades, music and dance. In 540 the first ecumenical Council of Barcelona, one of whose canons was concerned with regulating the Laudes chant, took place. The earliest known Barcelona composer is St Quiricus (bishop ? 656–66), who wrote a hymn to St Eulalia and possibly another to St Cugat, *Barchinone laete Cucufate vernans* (*E-Tc* 35). The rite and chants used in Catalonia at that time were those of the Visigothic Church, based in Toledo. After a short occupation by the Moors, Barcelona became the capital of the Marca Hispánica and transferred its allegiance to the Roman rite. By the mid-12th century the city had become the commercial centre of the Kingdom of Aragón. From the 10th century to the 13th Barcelona's musical life centred on its cathedral, whose first organ was built about 1259. An early 14th century treatise (*Bc* 23.1) shows that polyphony was well known in the area, as were the latest innovations in mensural notation. The transfer of the papacy to Avignon in 1309 made it easy for foreign musicians to enter the Kingdom of Aragón, at whose court, based in Barcelona, the most famous Franco-Flemish woodwind players were heard. The royal chapel employed composers of the stature of Steve de Sort and Gacian Reyneau, who contributed to the renewal of the kingdom's musical life. The transfer of the royal residence to Naples in 1433, in the reign of Alfonso V, interrupted this process.

Renaissance composers in Barcelona, some of them active in the cathedral, included the organist Pere Alberch i Ferrament alias Vila and the choirmasters Guillermo de Podio, Pedro Juan Aldomar and Juan Ferrer. In the second half of the 16th century, when the basse danse *Barcelonne* (*B-Br* 9085) was composed, the cathedral had 14 choristers. The principal music publisher of the period was Humbert Gotard.

Distinguished 17th-century composers working at the cathedral included Juan Pujol, Marcián Albareda, Luis Vicente Gargallo and the noted theorist Francisco Valls. José Pujol and José Durán, who introduced the Italian style to Catalan religious music, succeeded Valls as *maestros de capilla*. In the 18th century the principal organist was Carlos Baguer; José Elías was organist at the church of SS Justo y Pastor. The first opera performances, organized for the court, were in 1708–9 and included Caldara's *Il più bel nome*. At the end of the 1720s zarzuela companies began arriving from Madrid. In 1750 the first Italian opera company was established in the city, based at the Teatro de la S Cruz (Teatre de la S Creu); its repertory was chiefly Neapolitan or Venetian and occasionally Viennese. Works by such Catalans as D.M.B. Terradellas, Josep Durán, Fernando Sor and Baguer were also heard; French opera was unpopular. Later, Rossini met with particular success.

The first Sociedad Filarmónica Barcelonesa began its activities between 1844 and 1854, and promoted a recital by Liszt in the Salón de la Lonja in 1845. It was succeeded from 1866 by the Sociedad de Conciertos de Barcelona, established by Joan Casamitjana, and later by the Sociedad Catalana de Conciertos, founded by Antoni Nicolau in 1892, and the Sociedad Filarmónica, founded in 1897. The Orfeó Català, founded by Lluis Millet in 1891, was successor to the popular movement promoted by the choirs of Anselmo Clavé; the Palau de la Música, still the city's main concert hall, was built between 1905 and 1908 at Millet's initiative (see illustration). The Gran Teatro del Liceo (Gran Teatre del Liceu) opened in April 1847 with Donizetti's *Anna Bolena*, and from then on was the centre of Barcelona's operatic activities. *Lohengrin*, performed in 1882 in the Teatro de la S Cruz, was the first Wagner opera to be heard in Barcelona; an Asociación Wagneriana was formed in 1901. The Liceo Filarmoñico Dramático Barcelonés de S.M. Doña Isabel II (later the Conservatorio Superior del Liceo) began its work in 1838, and the Escuela Municipal de Música in 1886; these are still the main centres of musical education.

Among Barcelona composers born at the end of the 19th century, Amadeo Vives is pre-eminent; notable among those with nationalistic tendencies were Frederic Mompou and Eduardo Toldrá, founder in 1912 of the Cuarteto Renacimiento (Quartet Renaixement). In 1944 Toldrá also founded the Orquesta Municipal de Barcelona; this succeeded the Orquesta Pablo Casals, founded in 1919 and active until the Spanish Civil War (1936–9).

Interior of the Palau de la Música, Barcelona, designed by Lluís Domènech i Montaner, opened 1908; the proscenium arch represents the Ride of the Valkyries

The most influential composer and teacher of this generation was Cristòfor Taltabull. The 'Generación del 27', a group of composers born around 1900, formed the Grupo de los Ocho in 1930; its principal representative was Roberto Gerhard, Schoenberg's only Spanish follower. The group disintegrated with the Civil War and traces of its aims are found only in one of Gerhard's disciples, Joaquim Homs. After Spain's post-Civil War isolation, a group of reforming composers, the 'Generación del 51', emerged; notable members are Josep Mestres-Quadreny, Xavier Benguerel, Juan Guinjoán and Josep Soler.

Important 20th-century performers born or trained in Barcelona include the singers Victoria de los Angeles, Montserrat Caballé, Francisco Viñas, Giacomo Aragall and José Carreras, the pianist Alicia de Larrocha and the viol player Jordi Savall, founder and director of Hespèrion XX and the Capella Reial de Catalunya (1987), groups specializing in early music. An early music festival was founded in 1977.

The Instituto Español de Musicología was established in 1943 by Higinio Anglès, who was also director of the music department of the Biblioteca de Catalunya, founded by Felipe Pedrell, which holds the largest collection of music in Barcelona, including manuscripts of works by Catalan composers of the 20th century.

MARICARMEN GÓMEZ

Barcelona Mass. A cycle of the ordinary of the Mass belonging to the Avignon school found in the manuscript *E-Bc* M971 (ff.1*r*–8*r*) that almost certainly belonged to

the chapel of King Martin I of Aragon (1396–1410). It is made up of five fragments, written, with the exception of the four-part Agnus Dei, for three parts.

The compositional techniques vary from movement to movement. The Kyrie is written in simultaneous style and has no concordances. The Gloria is in discant style and has certain similarities with the melody of a Gloria by Depansis in a contemporary source (*F-APT* 16*bis*, no.12): either one melody provided a model for the other, or both are by the same composer (Stäblein-Harder). There are two other versions of this Gloria (*E-Boc* 2, no.1 and *F-APT* 16*bis*, no.34) which have different countertenors, and another (*F-Sm* 222, no.82) which is lost.

The Credo, in contrast to the Gloria, is in discant style and is less ornamented. Judging from the large number of known concordances (*E-Sa* 109, no.4; *F-APT* 16*bis*, no.46; *F-CA*, no.6; *F-Pn* 23190, no.103 (index); *F-TLm* 94, no.1; *I-CF* 98, no.2; *I-IV*, no.60; *NL-Lu*, 2515, no.3; *US-R* 44, no.3) it is the most famous liturgical fragment of the Ars Nova. Its inclusion in the index of one of these manuscripts (*F-Pn* 23190) suggests that it must have been composed before 1376. The version in the Barcelona manuscript contains notable errors, and the most reliable source is the Apt Codex.

The Sanctus is a motet for three voices with troped text. This fragment has no known concordances, although the Sanctus in the Apt Codex (*F-APT* 16*bis*, no.15) uses the same troped texts. The Agnus Dei is difficult to classify, despite the fact that its basic style is simultaneous. The outer voices are texted, while the inner voices are not. The contra I offers a complementary counterpoint to the quadruplum and tenor, which implies that it was sung. The only known concordance of this composition appears in a wall painting in Notre Dame, Kernascléden, Brittany. Unlike other known 14th-century cycles of the Ordinary of the Mass the Barcelona Mass does not include an Ite missa est or a Benedictus.

The Agnus Dei and the Kyrie are, in a way, related. They are the only fragments of the work written in imperfect time and minor prolation; the other three fragments are in imperfect time and major prolation. They use similar rhythmic motifs, although these are more complex in the Agnus Dei than in the Kyrie. In both movements the highest voice begins with a similar descending motif. The Gloria and Sanctus offer a contrast to the first and the last fragments of the Mass, in terms of their style and mensuration and of their text, which in both cases is troped. Unlike the Kyrie and, partly, the Sanctus, both fragments are related to the Avignon repertory by virtue of their concordances. The Credo is written in the 4th mode, while the others are mainly in the 1st mode. It is also included in the TOULOUSE MASS, where it is integrated into the mass as a whole, whereas in the Barcelona Mass it acts as an element of contrast. It is the only one of the five fragments to mention what may be the name of the composer, Sortes or Sortis. This might be the organist Steve de Sort, who was in the service of the royal chapel of Aragon between 1394 and 1407 (but *see* SORTES). In the Ivrea Codex this composition appears with the subtitle 'de rege'. In general terms, there is less internal cohesion in the Barcelona Mass than in other 14th-century cycles of the Ordinary of the Mass. The mass is edited in PMFC, i (1956), pp.13–64; in CMM, xxix (1962), nos.19, 25, 47, 56, 72; and in M.C. Gómez: *El manuscrito M971 de la Biblioteca de Catalunya (Misa de Barcelona)* (Barcelona, 1989).

MARICARMEN GÓMEZ

Barcewicz, Stanisław (*b* Warsaw, 16 April 1858; *d* Warsaw, 1 Sept 1929). Polish violinist, conductor and teacher. He was a pupil of Apolinary Kątski at the Warsaw Music Institute (*c*1871) and then studied the violin at the Moscow Conservatory with Ferdinand Laub and Jan Hřímalý; on completing his studies in 1876 he was awarded a gold medal. From 1877 he played frequently in Poland and also in England, France, Germany, Denmark, Austria, Sweden, Norway and Russia. He taught the violin and the viola at the Warsaw Music Institute (1886–1918), where he also directed the chamber music class and conducted the student orchestra; he was a member of the governing Pedagogical Council (1888–1901) and later was appointed director (1910–18). He was leader of the Warsaw Opera House orchestra, and from 1886 was conductor there. In 1892 he established his own string quartet. Barcewicz was one of the finest Polish violinists. He won great recognition for his beautiful, deep, full tone, excellent technique and individuality of interpretation. He had a large repertory, comprising chiefly the works of Classical and Romantic composers.

ELŻBIETA DZIĘBOWSKA

Bard. Among the Celts, a composer of praise poetry (and, on occasion, its counterpart of dispraise or satire). The word is almost certainly of Indo-European origin but has no obvious cognates outside the group of Celtic languages: from a common Celtic *bardos* are derived the Gaelic, Manx and Irish *bard*, Welsh *bardd*, Cornish *barth* and Breton *barz*. The basic meaning appears to be 'praise singer', even if the professional and social status of such figures varied from age to age and from culture to culture. In Scots Gaelic 'bard' became the generic term for poet. (The development of 'bard' in English to indicate a poet of lofty imagination, inspired by mysterious powers, is largely a product of Romanticism.)

For an extended use of the term to refer to epic singers of non-Celtic peoples *see* AOIDOS; EPICS; MONGOL MUSIC, §§1(iii–iv), 4(ii), 6(v); and CENTRAL ASIA, §2.

1. Antiquity. 2. Medieval and post-medieval Wales and Cornwall. 3. Medieval and post-medieval Ireland and Scotland. 4. Music and performing practice.

1. Antiquity. Knowledge of the functions of the bards of ancient Gaul derives from passages in Greek and Roman authors. Some of their most valuable evidence depends on material, now lost, by Posidonius of Apamea (*c*135–*c*51 BCE). Strabo's version may be taken as representative: 'The bards [*bardoi*] are singers and poets, the vates [*ouateis*] interpreters of sacrifice and natural philosophers, while the druids [*druïdai*] in addition to the science of nature study moral philosophy' (*Geography*, iv.4.4). The distinction between these castes may derive from Posidonius, and the idea of a caste system agrees with later Celtic evidence (see below, §§2–3); there is no reason to doubt that the bards were poets whose function included the singing of panegyrics. Tierney has shown, however, that Posidonius's ascription to these groups of philosophical studies cannot be taken at its face value. The ancient authorities – several of them apparently dependent on Posidonius – include, besides Strabo quoted above, Diodorus Siculus (v.31), who mentioned the bards' use of 'instruments similar to lyres', Athenaeus (246c–d), Lucan (*Civil War*, i.442–9) and Caesar (*Gallic War*, vi.13).

Some centuries before the Christian era, the Celts had become dominant in the British Isles: the Goidelic Celts in Ireland, who later colonized Scotland and the Isle of Man, and the Brythonic Celts in England and Wales, who colonized Brittany during the 5th and 6th centuries CE. No contemporary records survive, but the bards of the British Isles before the introduction of Christianity may have been essentially similar to those of the European Continent, and, at the rise of Christianity, may have preserved some of the lore of the druids.

The greater part of what is now England lost some of its Celtic character at the Roman occupation (43–410 CE), although this character persisted in Cornwall until modern times and in Strathclyde (i.e. parts of north-eastern England and southern Scotland) until the 6th century. The bards of antiquity may have used the crwth, a relative of the lyre, said by Venantius Fortunatus (*c*530/40–*c*600) to be played in Britain (F. Leo, ed.: *Venanti Honori Clementiani Fortunati presbyteri italici opera poetica*, MGH, *Auctorum antiquissimorum*, iv/1, 1881/*R*, 64).

2. Medieval and post-medieval Wales and Cornwall. Throughout the British Isles local kings, princes and chieftains maintained bards, bestowing gifts upon them for their services. The bards played the harp and sang elegies and eulogies on famous men, composed proverbs and recited sagas. Monasteries also sometimes maintained bards as historians and genealogists, as at Aberconway and Strata Florida in Wales.

The high esteem in which the class was held is evident in the early legal codes of both Ireland and Wales. The Laws of Hywel Dda (Howel the Good), surviving in Welsh manuscripts from the 12th century but representing in essence a 10th-century codification of customs rather more ancient, distinguish two classes of bard: the *bardd teulu*, who was a permanent official of the king's household, and the *pencerdd* ('chief of song'), or head of the bardic fraternity in the district (this term still survives; for details of original sources, see Gwynn Jones, 1913–14). These classes of resident and itinerant bards, also found in Ireland and Scotland, are reminiscent of classes found generally among Indo-European ethnic groups, for example, in Anglo-Saxon England, although they cannot be precisely equated with the Scop and gleeman respectively. These latter, like the Scandinavian *skald* and other poet-musicians of early nations, have sometimes been termed 'bards' in English literature.

During the 12th and 13th centuries in Wales bards no longer came to be appointed to the king's household, and their position changed greatly after the ending of native rule. They increased in number, and just as in France some of the nobility became troubadours and trouvères, so some Welsh princes became bards. (The poetic forms of the troubadours and trouvères, moreover, influenced those of 14th-century Welsh bards.)

The bards were highly organized into various grades and were required to serve a long apprenticeship and to acquire much skill and learning before they were allowed to serve professionally. This is revealed by a Welsh bardic statute, originating in its present form in the 15th century but representing the progressive customs of three centuries or more (for the earliest surviving version, see Parry, 1929). The Laws of Hywel Dda reveal that the bardic instrument was the harp; to this the statute mentioned above adds the Crwth.

The bards had always encouraged their peoples in the face of hardship, but under the growing influence of the English monarchs their incitements to liberty came to be regarded as incitements to rebellion. In consequence, numerous laws were enacted to put them down. The alleged massacre of Welsh bards by Edward I (whose conquest of Wales virtually brought native rule to an end in 1282) is only a fable; but later laws represented the bards as degenerate (e.g. a statute of Henry IV dated 1402), and a royal proclamation known as the Commission of the Caerwys Eisteddfod, issued by Elizabeth I, complained of 'vagraunt and idle persons naming theim selfes mynstrelles Rithmers and Barthes' who were seditious and went into competition with the skilled bards (see J.G. Evans: *Report on Manuscripts in the Welsh Language*, i/1: *The Welsh Manuscripts of Lord Mostyn, at Mostyn Hall, co. Flint*, HMC, no.48, 1898, pp.291–2). In Cornwall, 'bard' came to mean 'mimic' and 'buffoon'; and in other Celtic areas the loan-word 'bard' in English writings often carried a pejorative meaning. Nevertheless, in all the Celtic countries the household bard continued in function – and often in name – until quite recent times: harpists were still active in some large houses up to the 19th century.

The poet-musician of early times had, however, virtually vanished. Although poetry and music long remained undivided, a partial separation between them occurred at an early period (varying from country to country) and even in the Middle Ages musical and poetical bards were to some extent recognized as separate classes. Latterly, the term 'bard', especially in compound words, occasionally denoted a musician as distinct from a poet, as in the Welsh and Cornish *bardd* (*barth*) *hirgorn*, or trumpet major, found as early as the 18th century. More usually, however, the term has meant a poet alone, not only in the Celtic areas but also in England.

Today the term 'bard' in Wales means the victor at an eisteddfod, whether in poetry or music. Although the bardic rites and customs of the modern Welsh eisteddfod and of the Cornish *gorseth*, established in 1928 with the

cultural revival, cannot claim historical continuity with those of the medieval bards, an antiquarian precedent for these customs is not lacking.

Examples of bardic poetry survive, often in critical editions; but the question of bardic music is problematical (see §4 below). The ROBERT AP HUW Manuscript (*GB-Lbl* Add.14905), which was claimed even in the 20th century to contain 'bardic' harp music from about 1100, is an early 17th-century document, part of which appears to be copied from a manuscript of William Penllyn (*fl* 1550–70). The origins of the music can be traced back to named musicians of the 15th century and earlier; the compositional principles are based on the 24 measures of *cerdd dant* ('the craft of the string'), ostensibly formulated in about 1100 according to the document known as the *Cadwedigaeth Cerdd Dannau* ('The Conservation of Cerdd Dant').

See also WALES, §II.

3. MEDIEVAL AND POST-MEDIEVAL IRELAND AND SCOTLAND. In medieval Gaelic society in Ireland and Scotland, professional men of learning were organized in a caste system, under various descriptions: *draoi* (the Gaelic equivalent of 'druid'), *fili*, later *file* (poet-seer), *breitheamh* ('brehon', or lawgiver) and *seanchaidh* (historian-antiquarian). These terms appear to denote various offices, or perhaps duties, of the highest orders in the professional hierarchy.

The *bard* occupied a lower position. Until the Norman Conquest, the *filidh* (plural of *fili*) specialized in a form of poetry called *seanchas* that drew on the high learning, historical and mythological, of the Gaels; and the *filidh* appear to have maintained some vestiges of pagan religion (the word *fili* derives from a root 'to see'). But the *bard*, according to 10th-century Irish juristic tradition, had an honour price only half that of a *fili*; and, according to another medieval juristic tradition, a *bard* might claim nothing on the grounds of his status as a man of learning but should rest satisfied with whatever his native wit might win him.

Both *filidh* and *baird* (plural of *bard*) were divided into classes by the jurists. The two main bardic classes, *sóerbaird* (free, privileged bards) and *dóerbaird* (base bards), were each subdivided into eight further grades. It would seem likely that a general distinction was observed between bards of good family, or of special genius, and others less respected, but the precision of the grades may have been little more than theoretical.

The original function of the bard was to compose eulogy, his craft – *bairdne* (bardic verse) – contrasting with the *filidecht* (*seanchas* poetry) of the *fili*. With the social changes after the Norman invasion of Ireland, however, patronage for the *filidh* disappeared, since there was no longer an audience for the ancient high learning; but bardic praise-poetry, with its obverse of dispraise, continued to exist where Gaelic kings or petty rulers succeeded in saving some part of their ancient lordships from the general ruin. Before this time (the late 12th century), *filidh* had occasionally composed panegyric, but now this seems to have become their primary function.

From about 1200 to 1650, these composers used a highly elaborate and subtle metric system and a standard language (classical Gaelic), perhaps somewhat conservative in pronunciation but very progressive in form. Poets were taught in schools: much didactic material survives – discussions of grammatical and metrical usage – to show that the academic discipline was severe; it is said, but on uncertain evidence, that the period of training was seven years. Much of the poetry survives, particularly from Ireland but also from Scotland (classical Gaelic was common to the two countries); it consists not only of panegyric but also of religious, love and Ossianic verse (*see* OSSIAN). It is known in English as 'bardic' verse, although its composers called themselves *filidh* not *baird*: they knew that the word *bard* had connotations of low rank. To the present day, indeed, the Irish word for 'poet' is not *bard* but *file* (plural *filí*).

The *bard* was mentioned in the context of this poetry in Ireland and Scotland in the 17th century, but in a subordinate role. He might be a kind of literary retainer in the household of a *file*, he might be assigned to recite the poem, or he might also be placed in charge of the musical accompaniment: his exact functions probably varied from place to place. The Irish *Clanricarde Memoirs* (quoted in Bergin, 1913, pp.158–9) relate, in a probably reliable account:

> The Action and Pronunciation of the Poem ... was perform'd with a great deal of Ceremony in a Consort of Vocal and Instrumental Musick. The Poet himself said nothing, but directed and took care that every body else did his Part right. The Bards having first had the Composition from him, got it well by Heart, and now pronounc'd it orderly, keeping even Pace with a Harp, touch'd upon that Occasion; no other Instrument being allowed for the said Purpose than this alone.

This highly literate tradition of classical Gaelic 'bardic poetry', cultivated by the *filí*, ceased in Ireland in the 17th century; there are fewer survivals in Scotland despite its persistence in that country to the mid-18th century.

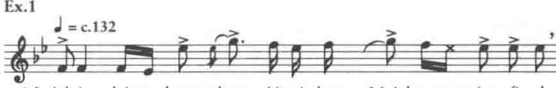
With the social changes that followed the introduction of the feudal system to Scotland, during which the court language changed from Gaelic to Norman-French and later to Scots, the classical tradition began to disappear, but the status of the panegyrist *bard* improved, though doubtless not in an identical manner in every place. The

Irish bard and harper: woodcut from John Derricke's 'Image of Irelande' (London, 1581)

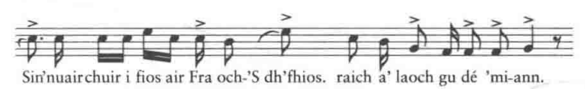
Scots Gaelic term for a poet is *bard* to the present day; and by the 17th century, Scottish bardic poetry was dominated not by the strict metres of classical Gaelic but by vernacular Scots Gaelic. Unlike their classical counterparts, the vernacular poets were mostly illiterate until the 18th century, although some earlier bards who recited for poets may have been partially literate. Literacy was unusual, however, until the 19th century, for vernacular Gaelic verse developed in a predominantly oral tradition. Some of these vernacular bards had patrons, some did not; but Gaelic makers of verse have always enjoyed both honour and a kind of diplomatic immunity. From the earliest times the poet (*file* or *bard*) held the power to redress grievances in society and, in popular belief to the present day, to wound or even kill by means of *aer* (later *aoir*), usually translated 'satire'.

The essential rhetorical structure of the poetry derives from panegyric, although its subject matter is very varied. As a result of the 20th-century revival of Scots Gaelic literature, contemporary literary poets may be distinguished from the semi-literate or (now rarely) non-literate 'bards' of the Gaelic-speaking areas of the Highlands and Islands of Scotland. The latter continue to bring traditional attitudes to bear upon topical events at local or national level, with praise, rebuke, humour etc.; they also compose more personal poetry such as love poetry or elegy, and there is a continuing output of religious verse. Like the vast bulk of traditional Gaelic poetry, these compositions are all designed for singing or chanting, and the melodies are drawn from the still considerable mass of orally transmitted traditional song.

4. Music and performing practice. It is impossible to tell with certainty how much or how little of bardic music survives. By the 18th century, when antiquarians in Britain and Ireland became aware of the social function of 'ancient' music (i.e. 'Celtic' music), it was already too late to record in reliable form an authentic bardic style of singing, chanting or reciting poetry to the accompaniment of a harp. It is important, furthermore, to separate the concept of 'bard' from that of 'instrumental musician', for they were distinct in the Middle Ages. The bard would often have with him a harper and a person (*datgeiniaid*) to sing or declaim his songs, but no description of how the songs were performed survives. In Ireland, a parallel class, namely the *recairi*, sang or recited the praises of their leaders, again to the accompaniment provided by a harper. The main part of the verse may have been chanted in a monotone, with cadential melodic inflections as in psalmody, and supported by harp chords; such a method of performance is described in Mayo as late as the 18th century.



The earliest competitive festival in Wales, that held under the patronage of Lord Rhys ap Gruffudd at Cardigan at Christmas 1176, instituted two contests: between the bards and poets, and among harpers, crowthers and pipers. But by the time of the Carmarthen Eisteddfod of 1451, music and poetry were coming into looser association. Later, after 1600, with the decline of patronage, the functions became confused or had merged, although the term lived on: Edward Jones (1752–1824), for example, harper and author of *Musical and Poetical Relicks of the Welsh Bards* (1784), came to be known as 'Bardd y Brenin' (King's Bard), and John Parry of Denbigh (1776–1851), who published Welsh harp music and popularized the term 'penillion singing' (improvised song with harp accompaniment) in about 1830, was known as 'Bardd Alaw' (Master of Song).



The nine or so Welsh composers represented in the Robert ap Huw harp manuscript (*c*1613), have been dated between approximately 1340 and 1485, and among the compositions are some that suggest accompaniment for sung poems (*caniad*; *see* Robert ap Huw). By the 18th century, however, blind John Parry (*c*1710–82), the Welsh harper, was already being influenced by the Italian Baroque style, as was his counterpart in Ireland, Turlough Carolan (1670–1738), famously described by Goldsmith as 'the last Irish bard'. Carolan composed hundreds of songs in honour of his Irish patrons, singing them to the accompaniment of his harp. By 1792 Edward Bunting was attempting to note down the tunes played at the famous Belfast Harp Festival of that year, and these later formed the basis for his three-volume *The Ancient Music of Ireland* (1796, 1809, 1840). In Scotland the Rev. Patrick Macdonald can be found complaining, in his *Collection of Highland Vocal Airs* (1784), of the foreign influence on clàrsach performance. Carolan's contemporary there, Roderick Morison (*c*1656–1713/14), known as 'An Clarsair Dall' (The Blind Harper), has similarly been termed 'Gaelic Scotland's last minstrel'. Born in Lewis, he completed his musical training in Ireland. Like Carolan, he was itinerant from time to time and dependent on the gentry for his livelihood. Combining the skills of poet, musician and performer, he composed a number of songs to his patrons the MacLeods: for example, his *Féill nan crann* ('Harp-Key Fair'), the words and music of which survive, reflects a satirical, self-mocking strain.

Another noted Highland satirist, Iain Lom (*c*1625–*c*1707) created a famous song, still sung, on the Battle of Inverlochy (1645) in which the MacDonalds overcame the Campbells. The female poet, Sileas na Ceapaich (*c*1660–*c*1729), who possibly used trance-like states induced by starvation as a source for inspiration, left a notable lament for the harper Lachlann Dall, who died in the 1720s. Possibly the last remnants of the bardic profession (in the original sense of that term) to have survived were the MacMhuirich family, hereditary bards to the MacDonalds of Clanranald: the last practising MacMhuirich classical bard was Domhnall (*fl* 1710). A forbear, Niall Mór (*c*1550 – after 1613) may well be the composer of a satire on the bagpipes, which had begun to rival the harp as a basis for extended composition. But although both writing and singing were creative activities among such bards as the MacMhuirichs, there is little evidence of a musical notation. Joseph Walker's *Historical Memoirs of the Irish Bards* (1786, 2/1818) includes airs by Carolan and an essay by William Beauford that purports to prove that a system of musical notation was used in Ireland in the 11th and 12th centuries. In 1980 another scholar put forward the theory of a secret notation contained in the early Irish linear script *ogam*.

Current knowledge of bardic practice in its original environment is largely circumstantial or inadequate to a full description of performing style. The Fenian lays of Ireland and Scotland were composed by bards in the medieval syllabic metres known as *dán*, with a set number of syllables to the line (*see* Ossian). Evidence in the 20th century for the singing style of heroic ballads in modern stressed metres includes a tendency, among the few vernacular singers recorded in South Uist, to regularize the tempo, a fact that may suggest a break with the

Ex.1

traditional stress patterns of Gaelic. Certainly, the few examples of heroic lays from the Hebrides and Ireland may, however, also be suggestive of the range and limits of an older style: the melodic shape of an essentially word-orientated style of sung declamation usually falls within the octave, although one notable example (the melody of *Laoidh Fhraoich*) covers the span of a 10th (ex.1).

The term 'bard' has now come, in any case, to mean simply 'poet'. It can have a local connotation in the Highlands and is used in such phrases as *bard baile* ('township poet'), that is, a poet-composer in the Gaelic vernacular idiom. Some of these latterday 'bards' in the Hebrides look to the great songmakers of the 18th century as their ideal if not their actual models for composition: masters such as Alexander MacDonald (*c*1695–*c*1770), a fervent Jacobite who composed his poems to Lowland and English airs, his unschooled friend John MacCodrum (1710–96), family bard to Sir James MacDonald of Sleat, or the untutored Duncan Ban MacIntyre (1724–1812), who, though politically a Hanoverian, forged elaborate songs like *In Praise of Ben Doran*, a composition based on the musical structure of *ceol mor* (i.e. air and variations). In 1789 MacIntyre competed unsuccessfully with Donald Shaw for the post of 'Gaelic Bard' to the Highland and Agricultural Society. More of MacIntyre's songs survive in oral tradition than those of his contemporaries. His reputation, like that of Mary MacLeod (*c*1615–*c*1707), the similarly unschooled Rob Donn Mackay (1714–78), and William Ross (1762–?1791), has carried over, firmly enhanced, into the 20th century and bears testimony to the strength of Gaelic oral tradition.

Bardaisan [Bardesanes] (*b* Edessa [now Urfa], 11 July 154; *d* Edessa, 222). Syrian hymnographer, astrologer and philosopher. Born into a pagan priestly family, he was educated by a pagan priest but baptized as a Christian, and in 179 he was ordained deacon and priest. Later denounced as a heretic and excommunicated (*c*216), he fled to Armenia and there taught a kind of astrological fatalism. Bardaisan has been erroneously regarded as a leader of the oriental school of gnosticism founded by Valentinus. His theology, which in fact combined Christian doctrine with astrological and philosophical speculation, is known from the works of later Christian writers such as Eusebius and Ephrem Syrus, who strongly denounced it, and from Bardaisan's own *Dialogue with Antonius concerning Destiny* (or *Book of the Laws of the Lands*), which is the oldest surviving document in Syriac.

Bardaisan wrote many hymns (*madrāshe*) in Syriac, which his disciples translated into Greek. They included 150 psalms in pentasyllabic metre, reportedly modelled on those of David, through which he popularized his heretical doctrines (Bardaisan's son Harmonius is said to have written the tunes). The stanzas of the *madrāshe*, probably sung by soloists, were followed by a fixed choral response; they were constructed on isosyllabic principles, the patterns ranging from the very simple (e.g. five four-syllable lines to each stanza) to the highly complex and diffuse. There is, however, no reason to suppose that in Bardaisan's time isosyllabic poetry was an altogether novel phenomenon. His *madrāshe* were very successful and continued to be sung in Edessa probably until the first half of the 5th century; they earned him the title 'Father of Syriac Poetry'. By way of retribution, Ephrem composed other (orthodox) *madrāshe* based on the same metre and with equivalent verse structure. None of Bardaisan's hymns survives, except for some excerpts cited by Ephrem, although there is a hymn that may be his in the 3rd-century apocryphal *Acts of Thomas* ascribed to circles under Bardaisan's influence. His historical works on India and Armenia are also lost.

DIMITRI CONOMOS

Bardanashvili, Ioseb (*b* Batumi, 23 Nov 1948). Georgian composer. He studied composition with A. Shaverzashvili at the Tbilisi State Conservatory (1968–76) and taught at the College of Batumi Music (1973–95). In 1987 he was awarded the Z. Paliashvili State Prize and in 1995 he emigrated to Israel.

Bardanashvili came to notice in the 1970s when, in his first serious experiments in composition dating from his student years, he set himself complex creative tasks and constantly endeavoured to find uncommon ways of solving them. His creative thinking was formed by a synthesis of national traditions – Georgian and Jewish – and contemporary methods such as dodecaphony, in addition to aleatory and sonoristic techniques, all applied in a non-dogmatic manner.

He seeks to reveal the complex, multi-faceted aspects of the human soul, and the rich spectrum of its emotional world; the varied literary sources of his inspiration include, in particular, Jewish medieval poetry and the work of Marcus Aurelius and Michelangelo. His Symphony (1980) marks an important stage in his artistic career: the dramatic integrity of this three-movement work is achieved by unity in its contemplative material which grows out of the brief sounding of a semitone, an interval generically associated with ancient Jewish melody and which is heard at times in a sharply individualized form (mainly in the wordless voice part), later to dissolve into polylinear, aleatory and sonoristic structures. Depth of thought, vivid emotional response, a fine sense of timbre and clear constructional thinking are all displayed in this work.

Attracted to rock music, Bardanashvili composed one of the first Georgian rock operas in collaboration with R. Sturua and the band '75'; during the 1980s and 90s he has shown an interest in theatrical genres.

WORKS
(*selective list*)

Stage: Balada kalze [Ballad about a Woman] (ballet, 1, Bardanashvili, after Ye. Yevtushenko: *Ballada o sterve* [Ballad about a Harridan]), 1972; Al'ternativa [The Alternative] (rock op, 2, R. Sturua, after N. Ergemlidze, R. Bardzimashvili), 1976; Mokhetiale varskvlavebi [Comets] (op, 2, J. Ajiashvili, after Sh. Aleichem: *Roman v pis'makh* [A Novel in Letters]), 1982; Mokhetiale suli [A Wandering Soul] (ballet, 2, scenario Bardanashvili, G. Aleksidze), 1991–2

KETEVAN BOLASHVILI

Bardd y Brenin (Welsh: 'The King's Bard'). Title adopted by EDWARD JONES (ii).

Bardella, Il. *See* NALDI, ANTONIO.

Bardi, Giovanni de', Count of Vernio (*b* Florence, 5 Feb 1534; *d* Sept 1612). Italian literary critic, poet, playwright and composer. As host to the CAMERATA and patron of Vincenzo Galilei and Giulio Caccini he gave the main impetus to the movement that led to the first experiments in lyrical and dramatic monody.

1. LIFE. Bardi evidently received a good literary education, since he knew both Greek and Latin. His youth, however, is notable mostly for military exploits. In 1553 he served in the war against Siena under Grand Duke Cosimo I of Tuscany and in 1565 under the command of Chiappino Vitelli in the defence of Malta against the Ottoman Empire. He was one of the captains who commanded the infantry sent by Duke Cosimo to help the Emperor Maximilian II defeat the Turks in Hungary. In 1562 he married Lucrezia Salviati, daughter of Piero Salviati. He enjoyed the favour of Grand Duke Francesco I, who depended on him particularly for the organization of court festivities. But when Francesco's brother became grand duke as Ferdinando I in 1587, Bardi, who had endorsed Francesco's marriage to Bianca Capello (of whom Ferdinando disapproved), was replaced in this role by Cavalieri. He nevertheless remained active at court until he was invited to Rome by Pope Clement VIII to become *maestro di camera* and lieutenant-general of the pontifical guard in 1592. He also maintained cordial links with the court of Duke Alfonso II d'Este in Ferrara, where he was entertained lavishly on several visits in 1583, 1584 and 1590. Bardi's pontifical appointment was renewed by Leo XI, but it was terminated in 1605 by Pope Paul V.

2. WORKS. Bardi began to patronize musicians quite early: in about 1563 he sent Vincenzo Galilei, then a lutenist probably in his employ, to study with Zarlino in Venice. Giulio Caccini also enjoyed his sponsorship at an early age. There is evidence that by 1573 noblemen and musicians were coming to his house to make music and probably to talk about it. According to Bardi's son Pietro, his house was always full of the most celebrated men of Florence, and the youth of the city gathered there to be instructed in poetry, music, astrology and other sciences. Caccini later referred to this group as Bardi's Camerata.

A turning-point in the thinking of this circle was marked by the letters to Galilei and Bardi from Girolamo Mei, who had studied every known source about Greek music and whom Galilei had approached in 1572 for help in solving numerous problems in Greek theory. The letters, besides informing them about Greek music, raised questions about the efficacy of modern polyphonic music that radically changed the aesthetic philosophy of the Bardi group. About 1578 Bardi, stirred by Mei's ideas, addressed to Caccini a discourse on ancient music and singing that probably summed up the group's thinking. The first part of the discourse is a compendium of what he had learnt about Greek music from Mei and Galilei; it explains the 27 tunings, the species of octave and the *tonoi*. With this system and its rich variety he compared the modern modal system of essentially only two species of octave and no variety of pitch. He was critical of imitative contrapuntal music, not only because it juxtaposed several melodies at once but because it disregarded the rhythms of the texts. He wanted all the parts to sing homorhythmically and counselled Caccini to declaim the words as clearly as he could, never altering the natural length of syllables or including excessive *passaggi*. He urged composers to imitate the Greek poet-singers and limit the range of their melodies to the area of the voice most suitable to an affection and to stay as much as possible around the *mese*.

Galilei dedicated his *Dialogo della musica antica et della moderna* (Florence, 1581) to Bardi and cast him in the role of preceptor in the conversations that are developed in it between him and Piero Strozzi. These imaginary conversations were a vehicle, as Galilei explained later, for instructing the members of Bardi's circle in the theory of music, particularly concerning tuning systems and the Greek *tonoi*, which had been misunderstood by Gaffurius and Glarean. The *Dialogo* went well beyond Bardi's views in its condemnation of polyphony and in the advocacy of monody on the model of the Greeks.

Only a few compositions by Bardi survive: four printed madrigals (one incomplete) and the first soprano part of another in manuscript, though other compositions are mentioned in letters and documents. An oration proposing membership in the Accademia degli Alterati in 1574 testifies that by then he had proved himself in music 'with artful compositions to such a degree that he surpassed many who practise it as their particular profession'. Bardi's characteristic method is one he described in a letter to Duke Alfonso II d'Este: 'keeping the line intact' and 'attending to the expression of the words and the conceit' while limiting text repetition to the minimum. *Miseri habitator del ciec'averno*, in the fourth of the 1589 *intermedi*, is a distinct attempt to build a piece around the Greek *mese* in a blend of the ancient diatonic and chromatic Dorian, as well as to exploit cross-relations for expressive purposes.

More than as a composer Bardi made his mark in Florence as a creator of *intermedi* and other court entertainments. In February 1573 he presented a costly and elaborate work, *Mascherata del Piacere e del Pentimento*, with a text by Antonio degli Albizzi. He also had a share in the *intermedi* for the wedding of Vincenzo Gonzaga and Eleonora de' Medici in 1584 as the composer of a madrigal (which is lost) to a text by Giovanni Battista Strozzi the younger, *Mentre gli acuti dardi*. He was the author of *L'amico fido*, the central play, and the composer of the fifth *intermedio* for the marriage of Virginia, daughter of Cosimo de' Medici, and Cesare d'Este in 1586. He directed and apparently conceived the allegorical theme around the powers of music for the *intermedi* in honour of the marriage of Grand Duke Ferdinando and Christine of Lorraine in May 1589 and even planned the protocol for the ceremony and processions. He also wrote the poetry for the opening song, by Harmony, in the first *intermedio* and for the madrigal *E noi con questa bella nostra diva Anfitrite* in the fifth. A prose comedy in five acts, *L'Idropico*, written for an unknown occasion, also survives. After his return to Florence from Rome he resumed his activities at court: in 1608 he made arrangements for singers and musicians to perform for the

entertainments prepared for the wedding of Prince Cosimo de' Medici.

Bardi participated in several academies and their literary debates. In 1574 he was admitted to the Alterati as 'Il Puro', with the motto 'Alterato, io raffino'. He delivered a lecture, *In difesa dell'Ariosto*, in that academy on 24 February 1583, and his *Parere in difesa dell'Ariosto*, which he read at the Alterati on 7 February 1585, prompted Francesco Patrizi to enter the quarrel concerning Ariosto and Tasso. Tasso personally answered Bardi in a *Discorso* (Ferrara, 1595). Bardi was also a member of the Accademia della Crusca; he was admitted on 12 March 1585 and soon became one of its councillors and, on 13 September 1588, the archconsul.

Bardi had at least four sons: Filippo, who became Bishop of Cortona; Cosimo, who became nunzio to Pope Urban VIII and Archbishop of Florence; Alfonso; and Pietro, who addressed a letter to Giovanni Battista Doni in 1634 concerning his father's Camerata and who was four times archconsul of the Accademia della Crusca. In a letter to the Duke of Modena of 24 February 1601 Bardi mentioned a son Fra Anolfo who had then been a friar for 18 years. Another son may have been the Giovanni Bardi who wrote *Eorum quae vehuntur in aquis experimenta* (Rome, 1614), a commentary on Galileo's discourse on floating bodies (Florence, 1612) usually attributed to the Bardi who is the subject of this article; in it the author claimed to have been a pupil of Galileo.

CLAUDE V. PALISCA

Bárdos, Kornél (*b* Felsőmindszent, 1 Nov 1921; *d* Budapest, 8 Nov 1993). Hungarian musicologist. Having attended the Zirc Cistercian Theological College (1940–45) he studied at Budapest University (1945–9), where he took the doctorate with a dissertation on Hungarian literature (1948), and at the Liszt Academy of Music with Kodály, Szabolcsi, Bartha and Lajos Bárdos (1946–50). After teaching at the Miskolc State Music School (1951–5) he was professor at the Budapest State Music School (1955–79). In 1979 he became a research fellow at the Institute of Musicology of the Hungarian Academy of Sciences. In 1967 he took the *kandidátus* degree in musicology with a dissertation on Passion singing in Hungary, which he subsequently enlarged (1975) with the results of new research in Transylvania. His main area of research was Hungarian music of the 15th century to the 18th, especially Protestant vernacular settings; he wrote extensively on the 17th- and 18th-century musical life of Transdanubian cities and residences.

VERA LAMPERT

Bárdos, Lajos (*b* Budapest, 1 Oct 1899; *d* Budapest, 18 Nov 1986). Hungarian composer, musicologist and conductor. Together with Kodály, he laid the foundations of 20th-century Hungarian choral music-making. He studied the violin and the viola as a boy. After a year (1918–19) at the technical university he entered the Budapest Academy of Music, where he studied composition with Siklós and then Kodály (1921–5). In 1925 he was engaged as choral conductor and music teacher in a secondary school and a teacher-training college; from 1928 to 1967 he was a professor at the academy, where he reformed the syllabus, emphasizing the training of choral conductors, the teaching of church music history and instruction in music theory and prosody. In 1931 he co-founded the publishing company Magyar Kórus, and served as editor of the music periodical of that name from then until 1950, when it was banned. From 1934 he organized the Enekio Ifúsag ('Singing Youth') movement for the music education of the young.

Through his work as a conductor Bárdos raised the standards of Hungarian choral singing to an international level within a few decades. He directed the Cecilia (1926–41), the Palestrina Kórus (1929–33), the Budapesti Kórus (1941–7) and the choir of St Mátyás, Budapest (1942–62), as well as encouraging the development of choral activity in remote areas. His repertory was pioneering: he included choral music from before Palestrina, especially that of Josquin, and promoted new music (he introduced, for example, Stravinsky's *Symphony of Psalms* into Hungary). On his tours abroad his purposefulness, vitality and interpretative powers won him considerable acclaim. His compositions, too, were directed towards cultivating Hungarian choral life: they draw on Renaissance polyphony and Hungarian folk music, following in the tradition of Bartók and Kodály. His works, which are models of choral writing, deal sensitively with Hungarian prosody and radiate an inner harmony and vigour.

Bárdos's work as a musicologist began to develop in the 1950s. He had a gift for systematization, which he applied to major studies of Gregorian melody, modal and Romantic harmony, and the analysis of works by Liszt, Bartók and Kodály. Underlying his multifarious activities lay the programme initiated by Bartók and Kodály for the regeneration of Hungarian musical life. In recognition of his work he received the Erkel Prize (1953), the Kossuth Prize (1955), the Bartók-Pásztory Prize (1984) and the titles Merited, and Eminent Artist of the Hungarian People's Republic (1954 and 1970, respectively). He was awarded the Order of the Banner with Laurels in 1984 and the doctorate in musicology in 1985.

MELINDA BERLÁSZ

Bareia [bareiai diplai]. Sign used in pairs in Byzantine EKPHONETIC NOTATION.

Barenboim, Daniel (*b* Buenos Aires, 15 Nov 1942). Israeli pianist and conductor. He was first taught by his parents and made his début as a pianist in Buenos Aires when he was seven. In 1951 the family moved to Europe where he played at the Salzburg Mozarteum, and thence to Israel. Back in Salzburg in 1954, he met Edwin Fischer and Furtwängler, both major influences on his future career. Studies at the Accademia di S Cecilia in Rome and with Boulanger completed his education.

Barenboim made his British début as a soloist in 1955 and his American début two years later, and first conducted, in Israel, in 1962. From 1964 he worked for some years with the English Chamber Orchestra as conductor and pianist, recording with them symphonies by Mozart and Haydn, and a series of Mozart piano concertos. Meanwhile he began an international career as a conductor. He directed the South Bank Summer Festival in London (1968–70) in company with a group of musicians that included Zukerman, Perlman and Jacqueline Du Pré, whom he had married in 1967. At this period he played much chamber music and accompanied Janet Baker and Dietrich Fischer-Dieskau (with whom he made many illuminating recordings of Schubert and Wolf). He was chief conductor of the Orchestre de Paris from 1975 to 1989, was appointed music director of the Chicago SO (succeeding Solti) in 1991 and has become a regular guest conductor with the Berlin PO. While concentrating on the central Classical and Romantic repertory, he has also been a firm advocate of new music, giving premières of works by Berio, Boulez, Carter, Goehr and Henze, among others.

Barenboim's experience as an opera conductor began at the Edinburgh Festival in 1973 with *Don Giovanni*, a performance subsequently recorded, followed by *Le nozze di Figaro* there in 1975. In 1978 he undertook *Samson et Dalila* at the Orange Festival, also recording the work. In 1981 he was invited to the Bayeuth Festival for *Tristan und Isolde*, followed by *Parsifal* in 1987. He conducted Harry Kupfer's new staging of the *Ring* in 1988 and continued to conduct at Bayreuth throughout the 1990s. His acclaimed *Ring* there has been recorded live, while studio recordings of *Tristan* and *Parsifal* have been widely praised for their nobility and masterly control of pacing. After his engagement to become music director of the new Opéra Bastille in Paris proved abortive for political reasons, he was appointed director of the Berlin Staatsoper in 1993. In that post he has conducted a wide repertory, most notably of German works, of which his *Wozzeck*, *Elektra* (both recorded), *Doktor Faust* and *Die Zauberflöte* have been particularly admired. He conducted the première of Carter's *What Next* in 1999, and of Birtwistle's *The Last Supper* in 2000.

His interpretations of both opera and the orchestral repertory lay emphasis on freedom of expression, allowing for many changes in tempo and a careful disclosure of detail. His conducting of Mozart, eschewing period instruments, is warm and vital, if slightly Romantic by late 20th-century standards. He is a searching, intensely dramatic interpreter of Bruckner, whose later symphonies he has recorded. Barenboim's recordings, as a pianist, of the Mozart and Beethoven concertos (the latter with Klemperer) and the complete Beethoven sonatas, all made when he was young, are distinguished by their flexibility, spontaneity and quick sensitivity, as are more recent discs of the Mozart concertos and the keyboard works of Chopin, Schumann and Brahms. His autobiography, *A Life in Music*, was published in London in 1991. (A. Blyth: 'Daniel Barenboim', *Opera* , xlv (1994), 905–10)

ALAN BLYTH

Barenboym, Lev Aronovich (*b* Odessa, 18/31 Jan 1906; *d* Leningrad, 25 June 1985). Russian musicologist, pianist and teacher. He studied the piano with G.M. Biber and composition with V.A. Zolotaryov at the Odessa Conservatory (1920–25) and mathematics at Odessa University (1922–5). He later completed his musical studies with F. Blumenfel'd at the Moscow Conservatory (1925–30). He taught in a music school in Odessa (1923–5), and worked at the Moscow Central School of Music from 1930 and in the Moscow Music Department of the Commissariat for Public Education (1930–31). Concurrently he was deputy chairman of the piano and methodology section of the State Institute for Musical Sciences in Moscow. From 1931 to 1939 he taught at the Moscow Conservatory, where he ran a class for the piano and the methodology of piano teaching. He was appointed senior scientific officer at the Science Research Institute for Music attached to the Moscow Conservatory in 1933 and was a senior lecturer at the Moscow Institute for Raising the Professional Skills of Teachers (1934–9). In 1940 he gained the *Kandidat* degree with a dissertation entitled *Vospitaniye muzïkanta-ispolnitelya v svete problem, postavlennïkh sistemoy K.S. Stanislavskogo* (The education of the musician-performer in the light of the problems posed by the Stanislavsky system).

During World War II, Barenboym was evacuated to Tashkent with the Leningrad Conservatory (1941), where he worked as head of the education section. After returning to Leningrad in 1944, he continued teaching at the conservatory as senior lecturer and was instrumental in forming a department for the history and theory of piano playing and teaching, of which he was head from 1949 to 1973. He gained the doctorate in 1956 with a dissertation on the life, work and public duties of Anton Rubinstein, and in 1958 was appointed professor at the Leningrad Conservatory.

Barenboym was a major figure in Russian musical culture, a fine musician with a keen and sensitive ear and an erudite scholar. He was one of the founders of the trend in Russian musicology that was devoted to the history and theory of performing. A prolific writer, he worked productively in the area of general musical education and training, piano teaching and methodology, and as a critic of performance practice. His book on piano methodology (1937) and the anthology on the history of

Russian piano music (1949) are important works on these subjects. For decades he regularly published analytical articles and creative portraits of performers in the journal *Sovetskaya muzïka* (many of these are included in collections of Barenboym's articles). He also co-edited a collection of piano pieces for beginners (1969–70), which embodies his teaching principles and has become part of the standard training repertory for children. In addition, with B.S. Dimentman, Barenboym initiated the publication by the Soviet section of the ISME of the series Muzïkal'noye vospitaniye v XX veke (Music education in the 20th century). He also advocated the introduction of the creative methods of Orff and Kodály into Russian music education.

ADA BENEDIKTOVNA SCHNITTKE

Bärenreiter. German firm of music publishers. It was founded in 1924 in Augsburg by Karl Vötterle, a bookshop assistant, then only 21 years old. Vötterle named the firm after the star Alkor ('Bärenreiter' or 'Reiterlein') in the constellation of the Great Bear. The firm's beginnings are closely associated with the musical youth movement then current in Germany. Vötterle's interest in folksong and his collaboration with the folksong researcher and singer Walther Hensel (an alias for Dr Julius Janiczek, 1887–1956), whose *Finkensteiner Blätter* was the firm's first publication, formed the basis of much of Bärenreiter's early work. The first years were characterized by the rapid growth of the *Singbewegung*, organized into the Finkensteiner Bund and developed by Vötterle; the movement was intended to revive musical interest and provide musical education for amateurs. The publication of folksong editions, beginning with the *Finkensteiner Blätter*, and later larger anthologies such as the *Bruder Singer*, characterized the early policy of the young firm. There also appeared song settings by composers such as Dowland, Hans Leo Hassler and Lechner. The firm's first music periodical was *Singgemeinde*, edited by Konrad Ameln. Already at that time Bärenreiter sought an involvement in the revival movement in German musicology, which during the 1920s was closely linked to the youth movement. An annotated edition of J.N. Forkel's 1802 biography, *Ueber Johann Sebastian Bachs Leben, Kunst und Kunstwerke* (1924), was one of the firm's first musicological publications.

An important step forward was made when Wilibald Gurlitt entrusted the firm with the publication of the report on the first Freiburg organ conference in 1926. As a result of this publication and of the association of Christhard Mahrenholz with the firm, Bärenreiter quickly grew to become the leading publisher of the *Orgelbewegung* and a specialist publisher of organ music and research material in the form of books by Klotz, Mahrenholz and others. In 1926, as its first purely musicological enterprise, Bärenreiter took over the publication of the series produced by the Königsberg and Tübingen musical institutes, followed later by those of Erlangen, Greifswald, Heidelberg, Jena and Münster. In 1927 the firm moved to Kassel; at that time its output comprised about 200 publications covering many aspects of music and music literature. The following five years brought further rapid growth and an extension in its publishing activity; in 1929 Vötterle founded the periodical *Musik und Kirche*. The rediscovery by the choirs of the musical youth movement of the works of Heinrich Schütz, with the corresponding new editions published by Bärenreiter, the discussions in *Musik und Kirche*, and the subsequent founding of the active Neue Schütz-Gesellschaft in 1930 by Vötterle, Ludwig, Mahrenholz and H.J. Moser, gave a decisive impetus to the revival of Protestant church music.

In the Nazi period Bärenreiter's development was interrupted as Vötterle and his colleagues were not allowed to follow their original ideals. The Finkensteiner Bund was dissolved in 1933, and in its place Vötterle, together with Richard Baum, founded the Arbeitskreis für Hausmusik. In 1935 the firm was threatened with complete closure when Vötterle was excluded from the Reichspressekammer. As a result all religious printing had to be suspended: it was continued by the Johannes Stauda publishing firm under the direction of Paul Gümbel. Stauda became the publishers of the Evangelische Michaelsbruderschaft, which aimed at a church revival; to the Reichspressekammer church music did not count as religious printing and was therefore able to make relatively undisturbed progress in spite of the anti-Christian

tendencies of the time. In 1932 Bärenreiter began to publish works by Hugo Distler, beginning with his op.5. Distler's church music opened up for Bärenreiter the new category of modern church music, which it particularly cultivated in the following years.

In the spheres of secular choral music, songbooks, domestic music and chamber music, the firm's output also increased, with many publications in the period 1933–44. The practical revival of early music led to the reintroduction of early instruments, and Bärenreiter encouraged such developments with literature on the instruments and their technique, sometimes actually making instruments (notably recorders). It also began publishing orchestral and wind music, and an opera section was initiated with some works by early composers, predominantly Handel. Facsimile reprints and works of original research of all kinds appeared. Bärenreiter participated in Reichsdenkmäler, with the series Einstimmige Werke and Mittelalter, and in Landschaftsdenkmäler, devoted to various constituent states of Germany. Complete editions of the works of Gluck, Monteverdi, Pergolesi, Schein, Spohr and Walter, and selected editions of Telemann and Handel were prepared and begun, mostly in collaboration with the Staatliche Institut für Deutsche Musikforschung.

In March 1945 the firm's buildings, all of its departments and nearly all of its stock were destroyed by fire. Vötterle and most of his closer colleagues survived the war, and gradually the firm was reorganized. In 1946 the Arbeitskreis für Hausmusik organized its first postwar Werkwoche. This organization was renamed Arbeitskreis für Haus- und Jugendmusik in 1952 and in 1969 became the Internationaler Arbeitskreis für Musik, which is now responsible for over 70 annual courses of musical instruction and the Kasseler Musiktage (to 1974). Also in 1946 Vötterle opened the Bärenreiter second-hand bookshop which specialized in music and musicology. In 1947 he took part in the founding of the Gesellschaft für Musikforschung, whose works were published by the firm in the periodical *Die Musikforschung* and in the book series Musikwissenschaftliche Arbeiten. In the same year the periodical *Musik und Kirche* restarted (with volume xviii), together with the independent *Der Kirchenchor* and the new *Musica*, covering all aspects of music. In 1948 appeared *Die neue Schau*, a cultural family periodical, and *Hausmusik*. In June 1949 the first fascicle of the encyclopedia *Die Musik in Geschichte und Gegenwart (MGG)* appeared, edited by Friedrich Blume, having been in preparation since 1942. In 1968 the alphabetical sequence was completed, in 14 volumes, and supplementary fascicles (in two volumes) subsequently appeared up to 1979, followed by an index (1986). A second revised edition, edited by Ludwig Finscher, was begun in 1994.

During the early 1950s the firm began to publish a number of important complete or collected editions, music series and a considerable amount of important musicological literature, notably *Acta musicologica* and *Fontes artis musicae*, both from 1954 on. Their postwar publications have included volumes of RISM (series A and C), the series Documenta Musicologica and Catalogus Musicus, complete and collected editions of numerous composers (often in conjunction with various music institutions) including Johann Walter (i), Telemann, Gluck, Bach, Gade, Lechner, Handel, Mozart, Rhau, Berlioz, Berwald, Lassus, Schein, Schubert, Schütz and Janáček. Important series of musical editions include volumes of Das Erbe Deutscher Musik (1936–), Schweizerische Musikdenkmäler (1955) and Monumenta Monodica Medii Aevi (1956). The firm has also published collections of letters, iconography, yearbooks, congress reports, treatises on instrumental technique and manufacture, as well as works by contemporary composers, including Heinrich Kaminski, Ernst Krenek, Karl Marx, Siegfried Reda, Ernst Pepping and Johannes Driessler. To these may be added members of the younger generation of composers who have been influenced by the Second Viennese School and the avant garde, such as Jean Barraqué, Günter Bialas, Klaus and N.A. Huber, Erhard Karkoschka, Rudolf Kelterborn, Giselher Klebe, George Lopez, Dieter Mack, Matthias Pintscher, Charlotte Seither, Ulrich Streuz, Dimitris Terzakis, Manfred Trojahn, Gerhard Wimberger, Heinz Winbeck and many others. In 1950 the new Protestant hymnbook appeared, after years in preparation, and a new series of early domestic and chamber music, Hortus Musicus, was started. The Nagels Musik-Archiv series was taken over from the Nagel firm and continued in 1952, followed by Chor-Archiv (1953), Flötenmusik (1956), miniature scores (1959), Violoncello (1960), Musica Sacra Nova (1964), Das 19. Jahrhundert (1969), Concerto Vocale (1971), Urtext editions, study scores and a new series of Hausmusik (1986). More recently, pedagogical works have also become an important part of the firm's output.

Today Bärenreiter, following large-scale postwar expansion, is international in organization and repute. It now owns not only Nagel but also, since 1950, the Hinnenthal. The Alkor-Edition was founded in Kassel in 1955, as an offshoot of the Bruckner publishing firm in Wiesbaden; it is now mainly concerned with theatre music publishing, especially opera. Bärenreiter was also the first great German publishing house to produce its own gramophone records (Musicaphon, 1959). Independent affiliates have been set up in Basle (1944), London (1957, independent since 1963; removed to Hitchin, 1977), New York (1957) and Prague (1990).

RICHARD BAUM, DIETRICH BERKE

Barera [Barrera], **Rodiano** [Ahrodiano] (*b* Cremona, mid 16th century; *d* Cremona, 25 Sept 1623). Italian composer, active in Cremona. His first known employment was as *maestro di cappella* in the collegiate church of S Agata, Cremona. In 1592 he became *maestro di cappella* at Cremona Cathedral, and four years later his duties at the cathedral were extended with his appointment as '*maestro di cappella* for the Saturday devotions' or *laudi*. He remained in these posts until 1622.

Barera's madrigals are characterized by traditional 16th-century procedures, with limited use of innovatory techniques. Particular emphasis is laid on clarity of the text. Settings are syllabic and largely homorhythmic and

there is frequent use of antiphonal dialogue between groups of voices. Barera's church music perhaps reflects his specific duties at Cremona cathedral. His *Laudes in honorem B. V. Mariae* were probably conceived for use during the Saturday devotions. The psalms are intended for the principal feasts of the liturgical year; they, too, are essentially syllabic and homorhythmic.

WORKS

SERENA DAL BELIN PERUFFO

Barere [Barer], **Simon** (*b* Odessa, 20 Aug/1 Sept 1896; *d* New York, 2 April 1951). American pianist of Ukrainian birth. The 11th of 13 children, he received his early musical instruction at the hands of two of his elder brothers and later under the supervision of a neighbour. By the age of 11, after the death of his father, he was able to help support his family by playing for silent films, night-clubs and restaurants.

At 16 he played for Glazunov in St Petersburg and was accepted at the conservatory there, studying first with Anna Yesipova and later with Blumenfeld. Barere graduated in 1919 and was awarded the Rubinstein Prize. The remarkable development of his natural gifts during this period was to lead Glazunov to observe that 'Barere is Franz Liszt in one hand and Anton Rubinstein in the other'. Barere's progress was all the more remarkable in that his personal circumstances (he still supported his family by playing in restaurants) permitted him relatively little time for practice.

After graduation he combined the career of a travelling virtuoso with that of professor of piano at the Kiev Conservatory. The political climate at the time prevented him from touring outside the Soviet Union, and it was not until 1928, when he was sent as a cultural ambassador to the Baltic republics and Scandinavia, that he was able to move to Riga. Four years later he moved with his young son and his wife, fellow St Petersburg student Helen Vlashek whom he had married in 1920, to Berlin. After initial successes the growing persecution of the Jewish community forced him to flee from there to Sweden. Following his successful British début at the Aeolian Hall, London, in 1934, Barere signed a recording contract with HMV, for whom he recorded many of the works with which his name was to become closely associated: Liszt's *Réminiscences de Don Juan* and *Rhapsodie espagnole*, Balakirev's *Islamey*, Blumenfeld's *Etude for the Left Hand* and other virtuoso items by Glazunov, Skryabin, Liszt and Godowsky. As well as demonstrating Barere's astonishing virtuosity, these recordings also testify to his extraordinary delicacy and the consistent tonal beauty of his playing throughout a wide dynamic range. Equally, his playing of works by Chopin evidences breathtaking technical command together with rare poetic nobility.

After an acclaimed American début in November 1936, Barere and his family moved to the USA, which was to remain his base. Tours of Australia, New Zealand and South America, as well as his successes in the USA, served to consolidate his reputation as one of the foremost artists of the day. He died suddenly as a result of a cerebral haemorrhage during his first performance of the Grieg Piano Concerto in a concert at Carnegie Hall.

CHARLES HOPKINS

Baretti, Giuseppe (Marc'Antonio) (*b* Turin, 25 April 1719; *d* Marylebone, London, 5 May 1789). Italian man of letters. His *Fetonte sulle rive del Po* was set by G.A. Giai (1750, Turin). In January 1751 he left Italy, where he had a considerable literary reputation, for an appointment at the Italian Opera in London. Shortly after his arrival he wrote two facetious pamphlets relating to a dispute between the actors and the lessee of the Opera. He adapted selected odes of Horace as a sort of Masonic oratorio. Seeking a composer able to avoid the vocal clichés and long ritornellos of Italian opera and 'to temper alternately the solemnity of church music with the brilliancy of the theatrical', Baretti chose Philidor, with whom he discussed 'every syllable ... with respect to the best way of expressing musically the meaning of Horace'. *Carmen saeculare* was performed in London in 1779 and in Paris the year after. Baretti wrote in his copy of Johnson's *Letters* that it 'brought me a hundred and fifty pounds in three nights, and three times as much to Philidor. ... It would have benefited us both (if Philidor had not proved a scoundrel) greatly more than those sums'.

IAIN FENLON

Bar form (Ger. *Barform*). A term denoting in musicology the three-part form *AAB*. The sections are called first *Stollen* (*pes*; *A*), second *Stollen* (*pes*; *A*), together forming the *Aufgesang* (*frons*), and *Abgesang* (cauda; *B*). German terms are normally retained because the concept of bar form was first introduced into musical terminology through Lorenz's investigations into the form of Wagner's works. It is based on an incorrect use of the word 'Bar' in *Die Meistersinger von Nürnberg*. In Act 3 scene ii Walther von Stolzing sings the first stanza of his Prize Song, which has *AAB* form. Hans Sachs then sings: 'Das nenn' ich mir einen Abgesang! Seht, wie der ganze Bar gelang! ... Jetzt richtet mir noch einen zweiten Bar'. *Bar* here means 'a tripartite stanza'. In this Wagner was not in full accord with the terminology of the German Meistersinger of the 15th to 18th centuries from whom the word comes.

In the work of the Meistersinger, a *Bar* is not a single stanza – that was called *Liet* or (from the 16th century) *Gesätz* – but the whole song. The most important formal characteristics of a *Bar* in the Meistersinger tradition were: (1) it always had an uneven number of stanzas, at least three; (2) the stanzas had to be written according to a previously determined model, one of the *Töne* (*see* TON (i)) allowed by the Meistersinger guilds. The *Töne* of the Meistersinger were always constructed, both musically and metrically, according to the *AAB* scheme or some version of this scheme (see below: *see also* MEISTERGESANG for Hans Folz's *Veilchenweise*). The concepts *Stollen*, *Aufgesang* and *Abgesang* also come from the terminology of the Meistersinger.

The word 'Bar' is probably a shortened form of *Barat*, a word taken from the language of fencing and denoting a skilful thrust. The Meistersinger used the word to designate a particularly artful song. The short form *Bar* (in the sense of *Meisterlied*) was perhaps intended to distinguish the artistry of the Meistersinger from the artless songs of those who were not Meistersinger. The modern concept of bar form is therefore, etymologically considered, an error; but it can scarcely be erased from musicological terminology. Literary historians have not adopted the concept: they normally designate the *AAB* form with the (equally questionable) term 'canzona form' (*Kanzonenform*).

AAB form can exist in various ways. The most important possibilities are as follows: (1) *AA/B*, (2) *ABAB/CB*, (3) *AA/BA*, (4) *AA/BB/A*, (5) *AA/BB/C*, (6) *AA/BB*. These forms are taken from medieval German song, but are also more generally applicable. The following designations may be suggested: (1) *Kanzone* (canzona), (2) *Rundkanzone* (rounded canzona), (3) *Kanzone* with non-repeated bridge and a third *Stollen* (bridge – *Steg* – being the term used by Meistersinger for the section joining the *Aufgesang* either to the repeated *Stollen* at the end of the *Abgesang*, which is in turn called third *Stollen*, or to a new final section), (4) *Kanzone* with repeated bridge and third *Stollen*, (5) *Kanzone* with repeated bridge, (6) *Kanzone* with repeated *Abgesang*.

It can be shown that, in medieval song, forms (2) to (6) are unquestionably variants of the basic *AAB* form. This statement contradicts the (unconvincing) attempt by Gennrich to derive forms (1) and (2) from the hymn, but forms (3) to (6) from the sequence, the lai and the *Leich*. Gennrich thereby arrived at the terms: (1) *Kanzone*, (2) *Rundkanzone* (as above), (3) *reduzierter Strophenlai* (reduced stanzaic lai), (5) *Lai-Ende*, (6) *Lai-Ausschnitt* (lai section). He gave no name to (4). Other names suggested include: for (3) *Reprisenbarform* (bar form with reprise; Gudewill) and da capo form without *Schwellenrepetition* (non-repeated bridge; Pickerodt-Uthleb); for (4) da capo form with *Schwellenrepetition* (repeated bridge; Pickerodt-Uthleb); for (5) *potenzierte Barform* (the *Abgesang* is itself built in bar form; Gudewill); for (6) *Repetitionsform* (repeating form; Pickerodt-Uthleb).

The *AAB* form – one of the most common of all musical form genres – can be documented from the time of the classical Greek ode with its *strophe*, *antistrophe* and *epode*. In the early Middle Ages it can be found in the Gregorian chant repertories and later in many hymns. In a more expanded form it became particularly important in the songs of the Provençal troubadours, the northern French trouvères and the German Minnesinger, *Sangspruchdichter* and Meistersinger. In Germany it was moreover of paramount importance in the Tenorlied of the 16th century and for the Protestant Kirchenlied. In the more recent history of German song it receded in importance in relation to other form schemes, but saw a significant revival in the songs of Schubert, Schumann and Brahms. The importance of bar form for Wagner has been shown exhaustively by Lorenz.

HORST BRUNNER

Bargas, Urbán de. *See* VARGAS, URBÁN DE.

Barges [Bargues], **Antonino** [Antonio] (*b* Barges; *fl* 1547–65). Netherlandish composer, active in Italy. In 1550 he was *maestro di cappella* of the Ca' Grande, Venice. About 1555 he moved to Treviso, where he took holy orders and lived at the convent of S Francesco. From 1562 to March 1565 he served as choirmaster at Treviso Cathedral. He was a close friend of Willaert, whom he described as 'the sole inventor of true and good music, who was not only a most diligent teacher but the very best father to me'. He was a witness to Willaert's last will and testament in 1562.

Although said on the title-page to consist mainly of villottas, Barges's publication of 1550 in fact contains only six of them. Two in Paduan dialect are specifically described as *villotte alla padoana*. The remaining four, *La manza mia*, *Facciate alla finestra*, *La canzon della gallina* and *Tanto fui tardo*, all have dance-like passages in triple metre or patter declamation of nonsense syllables. The collection also includes 12 *canzoni villanesche* and four four-part madrigals by Andrea Patricio. In his dedication, to the poet Girolamo Fenarolo, Barges asked him to 'sing these little canzonettas now and then' with colleagues in Domenico Venier's literary academy in Venice. Fenarolo had addressed a sonnet to Barges in 1546, expressing gratitude for a gift of some of the composer's villottas and alluding to his *Canzon della gallina* with its imitation of a cackling hen.

All Barges's *villanesche* are settings of single stanzas in madrigalesque textures: systematic points of imitation built from motives of the borrowed tune and paired voices are hallmarks of his style. When a borrowed tune is quoted literally, it often migrates between the cantus and tenor. Barges's three ricercars are based on plainchant tenors laid out uniformly in semibreves with no rests. The counterpoint is not imitative and bears no relation to the chant.

DONNA G. CARDAMONE

Bargiel, Woldemar (*b* Berlin, 3 Oct 1828; *d* Berlin, 23 Feb 1897). German composer and conductor. He was the son of Adolph Bargiel, a Berlin music teacher, and his wife Mariane (née Tromlitz) Wieck, who had divorced Friedrich Wieck in 1824 and was the mother of Clara Wieck (Schumann). He learnt the piano, violin and harmony from his father, and was a chorister and solo alto of what was later the cathedral choir. From 1846 to 1850 he studied, on the advice of his brother-in-law Schumann, at the Leipzig Conservatory, where his teachers included Moscheles and Plaidy (piano), David and Joachim (violin), Hauptmann, Richter, Rietz and Gade (theory and composition). Returning to Berlin he developed a reputation as a teacher and composer, and in 1859 became teacher of theory at the Cologne Conservatory. He was Kapellmeister and director of the institute of the Maatschappij tot Bevordering der Toonkunst at Rotterdam from 1865 to 1874, when Joachim appointed him teacher of composition at the Berlin Hochschule für Musik. In 1875 he became a senator, and in 1876 professor, of the Akademie der Künste, retaining both positions until his death.

As a composer Bargiel was rather an admirer, but not an epigone or imitator, of Schumann. His works were much performed during his lifetime. His pupils included Ernst Rudorff, Paul Juon, Leo Blech, Leopold Godowsky, Peter Raabe and Johannes Wolf. He served, partly in collaboration with Brahms, on the editorial boards of the first Schumann and Chopin editions, and his eight-volume edition of Bach's chorales *Johann Sebastian Bach's vierstimmige Kirchengesänge* (Berlin, 1891–3) was used well into the 20th century.

WORKS

almost all published, c1850–80

EDWARD DANNREUTHER/ELISABETH SCHMIEDEL

Bargielski, Zbigniew (*b* Łomiża, 21 Jan 1937). Polish composer. He studied the piano in Lublin and composition with Szeligowski at the Warsaw Conservatory (1958–62), with Szabelski at the Katowice Conservatory (1963–4) and with Boulanger in Paris (1966–7).

He served for several years as secretary of the Polish Composers' Union. In 1977 he moved to Austria, and was appointed to teach at the music school at Bruck an der Mur. His awards include the Austrian State Prize for Composition (1986) and the UNESCO Prize (1995).

Bargielski's works of the 1960s show the influence of Polish contemporaries such as Lutosławaki and Górecki in their treatment of orchestral sound-masses. Around 1970 he developed his own method of articulating specific pitch centres within a given section of music. These 'focal structures' (*Zentrumsstrukturen*) – which he regards as a means of guiding the listener's perception – can also be created out of intervals, chords or instrumental timbres. He has made a notable contribution to the accordion repertory. (*GroveO*, A. Thomas; *LZMÖ*)

MIECZYZŁAWA HANUSZEWSKA/R

Bargnani, Ottavio (*b* Brescia, ?*c*1570; *d* Mantua, after 1627). Italian composer and organist. According to a

notice in Canale's *Canzoni da sonare a quattro ... libro primo* (1600), he was the pupil of Canale, an organist at Brescia. The reference in Canale's publication indicates that Bargnani's first book of instrumental canzoni (now lost) predated the Canale volume, although Bargnani had quoted some of Canale's themes 'to honour in this way the writings of his master'. Bargnani was still in Brescia in 1599 when he signed the dedication to his book of canzonets, arias and madrigals for three and four voices. In this earliest surviving publication, he included two compositions by Luca Marenzio, probably simply in tribute to the great Brescian composer, although it is possible that he met Marenzio when the latter passed through northern Italy on his return from Poland to Rome in 1597 or 1598. Bargnani served as organist at Salò Cathedral, in Treviso (1605–7), and later in the S Barbara chapel in Mantua (1607–27). On 1 May 1611 he dedicated to Duke Vincenzo Gonzaga his second book of instrumental canzoni, on the title-page of which he referred to himself as organist to the duke. He contributed two motets, *Domine ne in furore* and *Domine dominus noster*, to a collection published in 1618 containing works by composers in the duke's service (RISM 1618[4]). On 26 March 1627 he obtained from the duke a pension of 60 scudi.

STEVEN LEDBETTER

Bargues, Antonino. *See* BARGES, ANTONINO.

Bargy, Roy F(rederick) (*b* Newaygo, MI, 31 July 1894; *d* Vista, CA, 16 Jan 1974). American composer and pianist. He began to study piano at the age of five in Toledo, Ohio. By the time he was 17 he had discarded his ambitions to become a concert pianist, having become fascinated with ragtime pianists in Toledo's red-light district, including the famous exponent of eastern ragtime Luckey Roberts. After playing professionally in cinemas and organizing a dance band, he was engaged in 1919 by the ragtime composer Charley Straight to edit, play, arrange and compose for Imperial Player Rolls. Bargy's association with Straight led to his acquaintance with the agent Edgar Benson, who assembled a band directed by Bargy to record for Victor. Bargy later joined Isham Jones's orchestra for two years and, in 1928, began a 12-year association with Paul Whiteman's band, for which he is best remembered today. Later he served as conductor and arranger for Larry Ross's radio show, and from 1943 he was music director for Jimmy Durante, a position he held until his retirement 20 years later.

Bargy is noted for his contribution to the ragtime-based style of novelty piano. Like the work of his contemporary Zez Confrey, his compositions may be viewed as advanced rags: he routinely employed 10ths in the bass (a feature more readily associated with early jazz than ragtime), but favoured right-hand patterns found in ragtime of the 1910s, recalling at times the work of Straight and the classic ragtime composer James Scott. Although Bargy's works are not as ambitious or imaginative as Confrey's, they represent a charming recasting of the language of midwestern ragtime in the more vivacious mode of the late 1910s and the 1920s.

DAVID THOMAS ROBERTS

Bari. Main city of the Apulia region in southern Italy. The first records of musical activity there date from the 11th and 12th centuries, when the Cathedral of S Nicola founded its schola cantorum, still active in training choristers and providing music at the services. There are also records of dramatic performances of the Easter sequence during High Mass; *laude* and *sacre rappresentazioni* were performed during the 14th and 15th centuries, following Neapolitan practice and probably imported as a result of the Aragonese domination of the area. The schola cantorum had its finest period between the late 15th century and the early 17th. Music flourished under Isabella of Aragon, who ruled Bari from 1501; she had been brought up at the courts of Aragon and Milan, where music had a prominent place, and she encouraged local musicians, probably also inviting others from Milan and Naples. She was succeeded by her daughter Bona, who ruled until 1557 and offered the city similarly favourable conditions for musical development.

Among prominent *maestri di cappella* at S Nicola were G.G. de Antiquis (*c*1574), Stefano Felis (1585), Giovanni de Marinis (1593) and Giuseppe Colaianni (1603). Antiquis published two volumes of *Villanelle alla napolitana* (Venice, 1574) which contain, besides 13 of his own villanellas, works by 16 other composers employed in Bari, including Felis, Colaianni, Marinis, Simon de Baldis, G.F. Capuano, G.P. Gallo, Pomponio Nenna, C.M. de Pizzolis and Cola Nardo de Monte; the collection testifies to the vitality of the local madrigal school.

At the beginning of the 17th century Bari came under Spanish rule within the jurisdiction of a Neapolitan viceroy; this was detrimental to the musical life of Apulia, and most of the composers born there transferred their activity to the Naples Conservatory, including Giacomo Insanguine, Tommaso Traetta, Niccolò Piccinni, Giacomo Tritto, Giuseppe Millico and Francesco Rossi. Among Apulia's many distinguished performers Caffarelli and Farinelli were prominent; famous 19th-century composers from the region included Saverio Mercadante and Mauro Giuliani.

Although many musicians left Bari, either by choice or from necessity, the city remained musically active, as indicated by the large number of theatres established there from the 17th century onwards; their history, however, is

poorly documented. The privately run Teatro del Torrione di S Scolastica became active in the 17th century, performing 'comedies in music and in recitative style'. The Teatro del Sedile (references to which date back to the 15th century) presented opera from the beginning of the 19th century, but was declared unsafe and closed in 1835. A new, larger theatre was planned to replace it; until this was officially inaugurated as the Teatro Comunale Piccinni with a performance of Donizetti's *Poliuto* in 1854, operas were performed in a circus tent, known because of its shape as the Teatro della Zuppiera ('soup tureen theatre'). With Italian unification and the ascendancy of the Teatro S Carlo in Naples, the role of the Teatro Comunale Piccinni diminished; the repertory was traditional and the performers mediocre. Popular demand for a new and larger theatre led to the construction of the Politeama Petruzzelli (cap. 4000), the fourth largest theatre in the country, which was inaugurated in 1903 with Meyerbeer's *Les Huguenots*. After the death of its first impresario, Antonio Quaranta, in 1928, the quality of performances dropped. From the late 1970s, however, the theatre saw some courageous new ventures, especially in dance. In 1986 it gave Piccinni's *Iphigénie en Tauride* and revived the original 1835 version of Bellini's *I puritani*. The following year the company performed a memorable *Aida* in Egypt, at the foot of the pyramids. On 27 October 1991 a fire completely destroyed the Politeama Petruzzelli.

Bari's leading musical associations are the Accademia Polifonica Barese (founded 1926), the Antica e Nuova Musica ensemble, the Fondazione Piccinni and the Conservatorio di Musica Niccolò Piccinni (founded 1925).

Barié, Augustin (Charles) (*b* Paris, 15 Nov 1883; *d* Antony, nr Paris, 22 Aug 1915). French organist and composer. Blind from birth, he studied with Marty at the Institut National des Jeunes Aveugles, with Vierne, and then with Guilmant at the Paris Conservatoire, gaining a *premier prix* in 1906. He became organist at St Germain-des-Prés in Paris and professor of organ at the Institut National des Jeunes Aveugles. He began a brilliant career, and was noted for his virtuosity and talent for free improvisation, but he died of a cerebral haemorrhage at the age of 31. His works, mostly for organ, include a symphony and *Trois pièces*; they show the influence of Guilmant in their counterpoint, and of Vierne in their harmonic refinement.

Barili, Alfredo (*b* Florence, 2 Aug 1854; *d* Atlanta, GA, 17 Nov 1935). American pianist, conductor and teacher. He was born into one of the leading musical families in 19th-century America, which included Adelina Patti, and made his début as a pianist on 7 April 1865 in New York. His family soon moved to Philadelphia, where he studied the piano with Carl Wolfsohn before embarking for the Cologne Conservatory in 1872. Barili settled in Atlanta in 1880 and became the city's first professional musician, introducing many standard works, including Beethoven sonatas and later Gounod's *Messe solennelle de Sainte Cécile*. In 1883 he planned the first Atlanta Music Festival, which included a chorus of 300 accompanied by Carl Sentz's orchestra from Philadelphia. During that one weekend Barili introduced symphonies by Schubert (no.8), Haydn and Beethoven, as well as a number of Mendelssohn and Verdi overtures. That same year he conducted the chorus for Theodore Thomas and his orchestra. Barili developed a reputation as one of the finest teachers in the South, and many of his pupils achieved successful musical careers. His pioneering work in Atlanta laid the foundation for many of the city's musical institutions.

N. LEE ORR

Baring-Gould, Sabine (*b* Exeter, 28 Jan 1834; *d* Lewtrenchard, Devon, 2 Jan 1924). English clergyman, folksong collector, novelist and writer. He was educated at Cambridge (MA, 1856), ordained in 1864, and on his father's death in 1872 he inherited the family estates at Lewtrenchard, where he became rector in 1881 and served as a Justice of the Peace. He travelled extensively and wrote voluminously on theological and general topics; he was also a pioneer in the collection of English folksong. Between 1888 and 1891 he published 110 examples, transcribed from performances by singers in Devon and Cornwall, as *Songs and Ballads of the West*. The collection was made jointly with the Rev. H.F. Sheppard, sub-dean of the Savoy Chapel, with whom Baring-Gould also collaborated to produce *A Garland of Country Song* (1895) and *English Minstrelsie* (1895–6). Their first joint publications in the field preceded by several years the folksong collections of W.A. Barrett, Frank Kidson, John Stokoe and J.A. Fuller Maitland, and were themselves preceded only by John and Lucy Broadwood's *Sussex Songs* (1843, 1888). Cecil Sharp's revision of *Songs and Ballads of the West* (1905) reflects the influence of Baring-Gould's early work on Sharp's own choice of location. Baring-Gould was the author of the words of many well-known hymns of which the most celebrated is *Onward, Christian Soldiers*, first published in the *Church Times* in 1865 and later popularized by Sullivan's tune. Understandably less well known is the collection in which he deliberately imitated the idiom of Sankey and Moody, *Church Songs* (1884), also produced jointly with H.F. Sheppard.

BERNARR RAINBOW

Bariolage (Fr.: 'odd mixture of colours'). A 19th-century term used in bowed instruments to describe several slightly unorthodox ways of mixing open strings with stopped notes for special effect. This may merely be a matter of using open strings in passages otherwise played in upper positions. In *L'art du violon* (1834) Baillot (who explains the name of the device by saying that it seems 'disordered or bizarre') cites Haydn's fingering indications in the trio of his G major Quartet op.64 no.4 (ex.1). The

Ex.1 Haydn: Quartet in G op.64 no.4, 2nd movt

term is most frequently applied to the special effect in which the same note is played alternately on two strings – one stopped and one open – resulting in the juxtaposition of contrasting tone-colours (a kind of *Klangfarbenmelodie*). *Bariolage* may be produced either by slurred bowing or by individual bowstrokes. Well-known examples occur in the prelude of Bach's Partita in E for solo violin (ex.2).

Ex.2 Bach: Partita in E, Preludio

The device is similar to ONDULÉ or *ondeggiando* (though this does not necessarily involve the use of open strings). See BOW, §II, 2(viii).

DAVID D. BOYDEN/PETER WALLS

Bariolla [Bariola, Barioli, Bariolus], **Ottavio** (*fl* Milan, 1573–96). Italian organist and composer. The archives of Milan Cathedral for 25 June 1573 indicate that the authorities directed 'Octavius Bariolus, organist of the new organ of the aforementioned major church . . . to enter into the first position or accept the second position'. From at least 1588 he was organist at S Maria presso S Celso, Milan. However, it seems unlikely that he continued his activities there beyond 1594; in the following year the chapel organist was Giovanni Paolo Cima. Antegnati ranked Bariolla among the best players and composers of the time and Borsieri praised him particularly for his ensemble canzonas.

Bariolla published at least two collections of instrumental music, *Ricercate per suonar l'organo* and *Capricci overo canzoni a quattro*, both of which survive virtually intact in a 17th-century tablature. Two other pieces appear in collections of the time. The 12 ricercares in four parts make full use of imitation and other conventional contrapuntal devices; melodic inversion, trills, turns and syncopation occur frequently. The *Capricci* appeared originally in four partbooks; only the two treble parts now survive. In construction they resemble the ricercares and other *canzone alla francese* of the time, but in contrast to the ricercares they employ sprightly, brief subjects in short note values. They exhibit most conventional contrapuntal devices and demonstrate Bariolla's mastery of polyphony.

CLYDE WILLIAM YOUNG

Baripsaltes [barisonans, baritonans]. *See* BARITONE (i).

Bariton. *See* BARYTON (i).

Baritone (i) (from Gk. *barytonos*: 'deep-sounding'; Fr. *baryton*; Ger. *Bariton*; It. *baritono*). A male voice, usually written for within the compass *A* to *f'*, which may be extended at either end.

1. Early history. 2. 19th century. 3. 20th century.

1. EARLY HISTORY. The term 'baritonans' was first used in Western music towards the end of the 15th century, principally in French sacred polyphony, where it may signify a voice lower in pitch than the *bassus*. In several five-voice masses of Pierre de La Rue and Nicolas Champion, for example, the voice one from lowest is designated 'bassus' with the 'baritonans' lying lower. Gaffurius (*Practica musice*, 1496) uses the term instead of 'bassus' for the lowest of the four regular voices ('cantus', 'contratenor acutus', 'tenor' and 'baritonans'). In John Dowland's translation (1609) of Ornithoparcus's *Musicae activae micrologus* (1517), the definition 'the *Bassus* (or rather *Basis*) is the lowest part of each Song' is qualified with the statement 'Or it is an Harmony to be sung with a deep voice which is called *Baritonus*'. A partbook in Lodovico Viadana's *Salmi per cantare e concertare* (1612) is marked 'baritono'.

In 17th-century Italy, the term 'baritono' takes up its modern position between the tenor and bass parts. According to Praetorius (*Syntagma musicum*, iii, 1618, p.133), 'by this term the Italians mean the tenor or quintum . . . when the F clef is written on the third line. In one of the earliest references to a solo baritone, Monteverdi, looking for a good bass for his *La finta pazza Licori* (1627, Mantua: lost), gave qualified approval to Don Iacomo Papalino, who, he said, sang with feeling, had a fairly competent *trillo* and *gorgia*, but 'is a baritone and not a bass' (letter to Alessandro Striggio, 1627).

The French counterpart to 'baritono' is BASSE-TAILLE, the lowest of three tenor ranges. Brossard (*Dictionaire de musique*, 1703) defined 'baritono' as 'what we call the *basse-taille* or *concordant*', ranges he distinguished by their lower extension, the *basse-taille* to *B* and the

concordant to G. Rousseau (*Dictionnaire*, 1768) placed the *basse-taille* between the tenor and bass and equated the term with both 'baryton' and 'concordant' (he limited the latter to sacred music). Although a separate constituent of the five-part chorus in sacred music, the *basse-taille* had no specific line in the four-part opera chorus; singers in this range joined either with the *tailles* or the basses. Rousseau, however, equated the 'concordant' with the 'part that in Italy is called tenor', not with the bass, but allowed that 'basse-taille' was sometimes used to identify the true bass. Confusion as to whether the baritone is closer to the tenor or the bass has persisted. Walther (*Musicalisches Lexicon*, 1732) split the difference, writing that a baritone 'must have the high range of the tenor as well as some depth in the bass'.

The term did not enter normal operatic parlance until the 19th century, although many 18th-century roles call for what is now considered a baritone. These include the 'bass' parts written by Handel for G.M. Boschi. Lully wrote several important roles, such as Cadmus, Alcides (*Alceste*) and Aegeus (*Thésée*) in the baritone clef (the F clef on the middle line or the C on the top line), but their ranges do not go beyond *G* to *e′* although some have a high tessitura. Rameau's operas include several such roles, extending from *F* or *G* to *f′* or *f♯′*, such as Teucer and Ismenor in *Dardanus* and Jupiter in *Castor et Pollux*. The most notable *basse-taille* of Rameau's day was Claude Chassé, who was admired more for his acting than his singing but was sufficiently versatile to take the *haute-taille* role of Medusa in a revival of Lully's *Persée* in 1738. Gluck's only notable baritone roles are Agamemnon (*Iphigénie en Aulide*) and Orestes (*Iphigénie en Tauride*).

Mozart's leading roles for baritone and bass-baritone derive from the *basso buffo* tradition, in which no clear distinction is drawn between bass and baritone. The first Count Almaviva (*Le nozze di Figaro*), Stefano Mandini, described as a 'primo buffo mezzo carattere', had a voice that would now be considered a baritone. He specialized in *opera buffa* and had earlier played Almaviva in Paisiello's *Il barbiere di Siviglia*. Mozart's first Figaro was the comic bass Francesco Benucci. Luigi Bassi created the title role at the Prague première of *Don Giovanni* (1787); he had sung the Count in *Figaro* shortly before. His range was described in 1800 as lying between tenor and bass. A *basso buffo*, Francesco Albertarelli, sang Don Giovanni at the Vienna première.

2. 19TH CENTURY. Baritone roles arrived late in opera chiefly because so much emphasis had previously been laid on florid singing, for which the lower male voice was not well suited. The baritone was slow to be accepted for principal roles. Castil-Blaze (*De l'opéra en France*, i, 1820, pp.280ff) explained that 'the Italians dearly love high voices, the French seem to prefer the middle range, and the Germans deep voices'. He found it extraordinary that in *Le nozze di Figaro* and *Don Giovanni* there should be four important roles for 'basses' and that the principal male should be a 'bass' (like others of the time, he did not distinguish between bass and baritone). That Mozart's prominent roles for basses and baritones were found daringly innovatory in England is indicated by Mount Edgcumbe's remark, 'They take the lead in operas with as much propriety as if the double bass were to do so in the orchestra' (*Musical Reminiscences*, 1824).

The acceptance of the baritone voice widened the range of male character types beyond those traditionally associated with the castrato or the tenor (the hero and the lover) and the bass (the king, the soldier, the high priest, the aged man). The baritone came to be used for new manifestations of virility: the wooer in competition with the lover (Don Carlo, *Ernani*), the trusty friend (Posa, *Don Carlos*), the brother figure (Valentin, *Faust*), the less-than-sage father figure (Germont, *La traviata*), the swashbuckler (Escamillo, *Carmen*), the lascivious villain (Scarpia, *Tosca*), the mature young man (Wolfram, *Tannhäuser*) or the youthful older man (the Flying Dutchman).

Leading Italian baritones of this period include Antonio Tamburini, who created several Donizetti and Bellini roles; Giorgio Ronconi, who sang for Donizetti but scored his greatest triumphs in early Verdi operas; and Felice Varesi, Verdi's first Macbeth, Rigoletto and Germont. Verdi's finest baritone however was the French singer Victor Maurel, a noted interpreter of Posa and Amonasro and creator of Iago and Falstaff as well as Leoncavallo's Tonio (*Pagliacci*). Another outstanding French baritone was Jean-Baptiste Faure, who created Posa, Thomas's Hamlet and several Meyerbeer roles; his successor Jean Lassalle was also admired for the beauty of his timbre. High baritone roles, calling on the head voice, were a French speciality: their leading exponent was Jean-Blaise Martin whose long career at the Opéra-Comique gave rise to the voice-type known as the 'baryton Martin'. In Germany, the heavier 'Heldenbariton' voice, a counterpart to the Verdi baritone, developed, especially with the operas of Wagner, typified by Anton Mitterwurzer, the first Wolfram and Kurwenal. But the principal development was that of the 'Hoher Bass', the voice-type of Wotan and Hans Sachs (and typified by Franz Betz); this is a bass-baritone rather than a baritone proper.

The burgeoning song and oratorio repertory of the 19th century particularly suited the more lyric type of baritone. Johann Michael Vogl, who began his career in opera performing such roles as Orestes and Count Almaviva and creating Pizarro in the 1814 version of *Fidelio*, is best remembered as the singer Schubert most admired in the performance of his songs. Julius Stockhausen, who gave the first public performance of *Die schöne Müllerin*, was one of the first lieder singers to carry the German song repertory abroad; he made his career as a concert artist in such works as Haydn's *Creation*, Beethoven's Ninth Symphony and Mendelssohn's *Elijah*, and Brahms wrote the baritone part in the *German Requiem* for him. Early recordings have captured the voices of a number of concert baritones, including Charles Santley, highly praised by Eduard Hanslick and George Bernard Shaw for his refined singing; George Henschel, who sang in Bach's *St Matthew Passion* under Brahms's direction; and Plunket Greene, who made his début in *Messiah* and for whom Stanford wrote the *Songs of the Fleet*.

Operetta became a strong repertory for light baritones. The comic baritone part, replete with patter song, dates back at least to Mozart and Rossini's characterizations of Figaro; it also became a staple of Gilbert and Sullivan. George Grossmith created the principal comedy baritone roles, including the Major-General (*The Pirates of Penzance*), Koko (*The Mikado*) and the Lord Chancellor (*Iolanthe*); his successor, Henry Lytton, also created roles in musical comedies, such as *The Rose of Persia* (1899). In Paris, the Théâtre des Variétés company included a

number of baritones. Eugène Grenier and Henri Couder sang in the premières of Offenbach's *La belle Hélène* (1864), *Barbe-bleue* (1866) and *La Grande-Duchesse de Gérolstein* (1867). At the Opéra-Comique, the lyric baritone Alexandre Taskin sang from 1878 to 1894, creating the three villains of *Les contes d'Hoffman* (1881) and also Lescaut in Massenet's *Manon* (1884).

3. 20TH CENTURY. The early 20th century witnessed an outpouring of new baritone roles in French, Italian and German opera. At the Opéra-Comique in 1902, the two baritones in the première of *Pelléas et Mélisande* were of dissimilar types, Jean Périer (Pelleas) a typical 'baryton Martin' with a comparatively light, high-lying voice, the Belgian Hector Dufranne (Golaud), heavier though still lyrical. In the same year, the baritone Giuseppe De Luca created Michonnet (*Adriana Lecouvreur*) at the Teatro Lirico in Milan; he also sang Sharpless (*Madama Butterfly*, 1904). His repertory ranged from Figaro (Mozart and Rossini) to Rigoletto. Among his contemporaries were Mario Sammarco, a vital singer and actor who created Gérard (*Andrea Chénier*, 1896) and whose roles included Sachs, and Titta Ruffo, a powerful, high baritone, often compared with Caruso, who sang a wide range of other parts including Italian, French and Russian repertory. Strauss's baritone roles began with Kunrad (*Feuersnot*), sung at the Dresden première by Karl Scheidemantel, who also created Faninal in *Der Rosenkavalier* (1911) and sang Amfortas (*Parsifal*) and Hans Sachs at Bayreuth. Karl Perron, the bass-baritone who created John the Baptist (*Salome*, 1905), Orestes (*Elektra*, 1909) and Baron Ochs (*Der Rosenkavalier*), sang Amfortas and Wotan at Bayreuth as well as King Mark and Daland, more usually bass roles. Anton van Rooy, Stockhausen's most famous student, sang in the American première of *Parsifal* (1903) and took all Wagner's leading bass-baritone roles at Bayreuth; he was also a fine lieder singer. The title role of *Wozzeck* was created by Leo Schützendorf, a bass-baritone whose roles also included Ochs, Boris Godunov, Beckmesser, Faninal and Gounod's Mephistopheles; he was one of four brothers, all professional basses or baritones.

Mid-20th-century Wagner baritones include Friedrich Schorr and Rudolf Bockelmann, both especially admired in their performances of Wotan and Sachs between the wars. Hans Hotter, in a career lasting over 60 years, began as a high baritone and progressed through bass-baritone to bass; he created the Comandant in Strauss's *Friedenstag* (1938) and Olivier in *Capriccio* (1942) and during the 1950s became the leading Wagner bass-baritone, unrivalled as Wotan, Kurwenal, Amfortas, Sachs and the Dutchman, and was also a fine singer of lieder. Paul Schöffler began his career, like Hotter, as a lyric baritone before progressing to heavier bass-baritone roles.

An outstanding Verdi baritone was Mariano Stabile, chosen by Toscanini to sing Falstaff at La Scala (1921–2); he also sang the role at Covent Garden, as well as Iago, Rigoletto and Scarpia, and appeared at Glyndebourne. His mantle descended in certain respects on Tito Gobbi, a magnificent comic actor as well as a powerful tragedian. The first Italian Wozzeck, Gobbi had over 100 roles in his repertory, but excelled in Verdi and Puccini; his Posa, Iago, Macbeth, Boccanegra and Falstaff were notable for their dramatic effectiveness, while as Scarpia, opposite Callas's Tosca, he was unrivalled. Noted Verdi interpreters include three distinguished Americans, Lawrence Tibbett, Leonard Warren and Robert Merrill. Tibbett, a powerful actor, also created roles in several American operas; Warren, larger and more lustrous in voice, concentrated on Verdi, singing Rigoletto, Iago, Amonasro, Luna, Macbeth and Boccanegra; and Merrill, a lyric baritone, was outstanding as Germont (*La traviata*) with a secure technique that enabled him also to sing Rossini, Donizetti and Bellini.

Geraint Evans, the Welsh baritone who often sang Figaro and Leporello to Gobbi's Count and Don Giovanni, became an excellent Falstaff, a role he first sang at Glyndebourne; he created Mr Flint (*Billy Budd*, 1951) and Mountjoy (*Gloriana*, 1953) and also sang Britten's Balstrode, Bottom and Claggart, though his finest 20th-century role was Wozzeck. His natural successor, in the 1990s, was Bryn Terfel, a rich-toned Welsh baritone outstanding in both *buffo* and heroic roles.

Sherril Milnes, the American baritone who succeeded to the Verdi roles once sung by his compatriots Tibbett, Warren and Merrill, was also successful in such French roles as Thomas's Hamlet, Alphonse XI (*La favorite*) and Saint-Saëns's Henry VIII.

In the 1970s and 80s Piero Cappuccilli was regarded as the leading Italian Verdi baritone; other Italians eminent in the Verdi and Donizetti repertories have included Giuseppe Taddei and Renato Bruson. In Britain, Thomas Allen became the most versatile baritone of his generation, especially noted for his Mozart roles (above all Don Giovanni), his accomplishment in Verdi and French music, his sombre Onegin and his stirring Billy Budd. The opening up of central eastern Europe and the former USSR revealed a formidable number of talented Verdi baritones, including Vladimir Chernov.

French operatic roles have been stylishly sung by the Australian John Brownlee, especially Golaud in *Pelléas et Mélisande*, and, more recently, by Russian-born Sergey Leiferkus, whose roles include Escamillo and Zurga (*Les pêcheurs de perles*). An outstanding French lyric baritone was Gérard Souzay, whose French operatic roles ranged from Lully to Poulenc and Ravel; his signature role was Golaud. Souzay's mellifluous voice and subtle musicianship made him also a great singer of French song and German lieder. Other lyric baritones who have excelled in the song repertory include Pierre Bernac, Souzay's teacher, who formed a duo with Poulenc and gave first performances of many of Poulenc's songs.

Important lieder singers from early in the century include the German baritones Heinrich Schlusnus, also well known as a Verdi interpreter, Gerhard Hüsch (admired in such roles as Papageno, Wolfram and Falke) and Herbert Janssen, also a noted Wagnerian.

Two great lieder singers active after World War II were the German baritones Hermann Prey and Dietrich Fischer-Dieskau. Prey, admired in Mozart, sang in a wide range of opera, including works by Verdi, Strauss and Wagner. Fischer-Dieskau, regarded as the most subtle, refined and expressive lieder singer of his era, sang similar operatic roles, but also made the creation of new roles a speciality: Mittenhofer in Henze's *Elegy for Young Lovers* (1961) and the title role of Reimann's *Lear* (1978) were both composed for him. Younger German and Austrian lieder singers include Olaf Bär, Matthias Goerne, Wolfgang Holzman and Stephan Genz.

The warm, relaxed sound of the lyric baritone has continued to make it the most sought-after voice in

operetta, musical comedy and popular music. Nelson Eddy, along with soprano Jeanette McDonald, starred in a long series of filmed operetta, including *Rose-Marie*, *Naughty Marietta* and *The Chocolate Soldier*. Two of the great baritones of musical comedy were Alfred Drake (*Kismet*, *Kiss me Kate* and *Oklahoma*) and Robert Goulet (notable as Lancelot in *Camelot*). In popular music and ballads, baritones dominate the field: such singers as Frank Sinatra, Bing Crosby, Nat 'King' Cole, John Raitt and Harry Belafonte indicate the richness of this tradition.

Baritone (ii) [Baritone horn] (Ger. *Tenorhorn*; It. *flicorno tenore*, *tenore*). A valved brass instrument in B♭, pitched as the trombone, in Britain having a narrower bore than the similarly pitched EUPHONIUM. Two are used in British brass bands to fill the harmony rather than as solo instruments. The usual compass sounds from *E* to *b♭'*, and its music is written in the treble clef a 9th higher. The instrument is the final version of Sax's 'saxhorn baryton', known in France as 'baryton en si♭', the euphonium being 'basse en si♭'. In American band music, no consistent musical distinction is made between two B♭ instruments of contrasted bore and timbre, and 'baritone' is the normal term for the valved instrument of this pitch, save insofar as makers offer a variety of bore widths to the customer's choice, and sometimes designate the models of largest bore 'euphonium'. In Germany two B♭ band instruments are distinguished in bore and function as in France and Britain, but have been evolved independently; 'Bariton' describes the large-bore form and 'Tenorhorn' the narrower.

Bark, Jan (Helge Guttorm) (*b* Härnösand, 19 April 1934). Swedish composer. He studied at the Borgarskolan and at the Musikhögskolan in Stockholm. For 15 years he played jazz trombone, and during the 1960s he was a music teacher and for nine years an instructor of film

Modern baritone in B♭ by Boosey & Hawkes (Besson model), London

editors and cameramen for Swedish broadcasting. Influenced by Varèse and K. Dewey, and more pronouncedly by worldwide folk cultures, his compositions often feature music theatre. In 1963 he co-founded Kulturkvartetten, a group of four trombonists who perform their own theatrical compositions. From the 1960s he has been largely active in collaborative events; a later interest was in films and videotapes attempting to register cultural undercurrents in social change.

ROLF HAGLUND

Barkauskas, Vytautas (*b* Kaunas, 25 March 1931). Lithuanian composer. He studied the piano at the J. Tallat-Kelpša Music College in Vilnius (1949–53), at the same time studying mathematics at the Pedagogic Institute in that city. He then studied with Račiunas at the Lithuanian State Conservatory, graduating in 1959. In 1961, after a brief period as a teacher at the Čiurlionis Art School, Barkauskas began to teach theory at the Lithuanian Music Academy (he was appointed a lecturer in the department of music theory in 1974, and professor of composition in 1989). In 1972 he was awarded the Lithuanian State Prize, and in 1981 he won the title of Honoured Artist of Lithuania. In 1997 he was awarded the State Stipend of Lithuania.

Barkauskas is one of the most productive of modern Lithuanian composers in the field of instrumental music. In his early work (1954–64) he strove to achieve free atonality. The beginning of his second creative period (1964–81) is marked by his interest in the theories of such musicians as Schaeffer and Krenek. In technique, Barkauskas took his guidelines principally from Lutosławski, Penderecki and Ligeti. During the decade from 1965 to 1975, he was one of the most consistent exponents of modern techniques of composition in Lithuania, but at the same time he avoided using them in an orthodox, undiluted manner, instead interpreting them in his own way and seeking natural interactions. This approach is already evident in the composer's first modern works, for instance *Poezija* ('Poetry', 1964, employing a free interpretation of 12-tone technique) and *Intymi kompozicija* ('Intimate Composition', 1968, an interpretation of serialism in terms of aleatory sound). The end of this period in his career is marked by the Viola Concerto (1981), in which the semantic process of confrontations and monologues leads from the clash of soloist and orchestra to a quiet, cathartic culmination. His third creative period, beginning in 1981, which may be described with some qualifications as post avant-garde, is distinguished by more conventional and pluralistic tendencies, a more intuitive method of composition, the search for natural sonic beauty, and by a certain inner intensity, often expressed within traditional genres and forms. In his work of the 1990s his tonal language was simplified, melody and tone colour are more prominent, and a latent tonality is perceptible. Narrative drama is alien to Barkauskas's compositions, which are more inclined to pursue a concertante course.

WORKS
(*selective list*)

Stage: Legenda apie meilę [The Legend of Love] (op, V. Mikštaitė, after N. Hikmet), 1975
Vocal: Präludium und Fuge, chorus, 1970; La vostra nominanza è color d'erba (after D. Alighieri: *La divina commedia*), mirage-poem, chbr chorus, str qnt, 1970, rev. 1977; Atviri langai [Open Windows] (P. GRAŽINA DAUNORAVIČIENĖ

Barker, Charles Spackman (*b* Bath, 10 Oct 1804; *d* Maidstone, 26 Nov 1879). English inventor and organ builder. He was the eldest son of Joseph Barker and nephew of Thomas Barker ('Barker of Bath'), both of whom were artists. Originally an apothecary's assistant in Bath, he worked briefly with an unnamed organ builder in London before returning to Bath about 1830 and setting up on his own account. After seeing a hydraulic press, he became interested in pneumatic actions, an elementary form of which had been used by Joseph Booth in 1827 at Attercliffe near Sheffield. In 1833 he was in correspondence with Matthew Camidge, the organist of York Minster, concerning his experimental apparatus, which at this stage seems to have consisted of a piston working in a small cylinder. He also offered it for use in the large organ at Birmingham Town Hall; it was not adopted (except possibly to operate the Carillon) but the organ builder William Hill assisted Barker to refine his device.

In 1835 David Hamilton used pneumatic action in his organ in St John's Episcopal Church, Edinburgh. Barker meanwhile was in correspondence with Cavaillé-Coll, who invited him to Paris with a view to applying his own pneumatic lever in the construction of the St Denis organ. A French patent was taken out in 1839 and the success of the St Denis organ was followed by the application of

Barker's lever to other large Cavaillé-Coll instruments. After working for a time with Cavaillé-Coll, Barker became manager (*contre-maître*) of Daublaine–Callinet; this firm passed in 1845 to Ducroquet, for whom Barker supervised the building of the prize-winning instrument for the Great Exhibition (1851) and a new organ for St Eustache (1854) following the destruction by fire, accidently started by Barker himself, of the organ reconstructed by Daublaine–Callinet (1844).

Barker exhibited on his own account at the Paris Exposition (1855). Shortly after this the Ducroquet firm was acquired by Merklin, and in 1860 Barker went into partnership with Charles Verschneider (*d* 1865). About this time he became interested in the experiments with electric action performed by Albert Peschard (1836–1903) of Caen. In 1866 Barker completed the first successful electric action at Salon using the system patented by Peschard in 1864. Barker took out his own English patent in 1868 and granted Bryceson a sole concession to use it.

At the outbreak of the Franco-Prussian War in 1870, Barker emigrated to Dublin. There, he was comissioned to build a new organ for the Roman Catholic Cathedral, Marlborough Street, but despite the assistance of the American organ builder, Hilborne Roosevelt, it was not a success, and Barker died in 1879 in reduced circumstances.

GUY OLDHAM, NICHOLAS THISTLETHWAITE

Barkhudarian, Sarkis [Sergey Vasilyevich] (*b* Tbilisi, Georgia, 26 Aug/8 Sept 1887; *d* Tbilisi, 29 Oct 1972). Georgian composer and teacher. He began his music studies with the pianist Karakhovna in 1898; he then studied the piano with Stakhovsky and Truskovsky, and theory and solfège with Paliashvili at the Tbilisi Music Institute (1900–07). He won by competition a place at the Berlin Hochschule für Musik (1907–9) and later studied with Kalafati, Steinberg and Vītols at the St Petersburg Conservatory (1910–15). Subsequently, as a teacher at the conservatories of Tbilisi (1923–54) and Yerevan (1934–37, professor 1941), he instructed many of the leading composers of Armenia and Georgia including Aleksandr Arutyunian and Muradeli. He also appeared as a pianist in Moscow, Leningrad and Caucasian republics. His honours included the titles People's Artist of the Armenian SSR, Honoured Artist of the Georgian SSR, and the Order of Lenin.

DETLEF GOJOWY

Barkin [née Radoff], **Elaine** (*b* Bronx, NY, 15 Dec 1932). American composer, writer and performer. After gaining the BA (1954) from Queens College, CUNY, she studied composition with Fine, Shapero and Arthur Berger at Brandeis University (MFA 1956, PhD 1971) and with Blacher at the Berlin Hochschule für Musik (1956–7). She taught at various colleges and universities before joining the composition and theory faculty at UCLA (1974), where she remained until 1994. For three decades she was a major contributor and adviser to *Perspectives of New Music*; she has also written extensively on 20th-century music for other journals. In her compositions as well as her writings and presentations she has given attention to women and gender issues.

In about 1978 Barkin turned from using 12-note and serial techniques to explore compositional processes involving collaboration, interactive performance and improvisation. In notes written about her 1989 piece for basset-horn and tape, ... *out of the air* ... , she outlined her aesthetic: 'to foster the potentials of collaborative participation; to enable possibilities for the performer, ranging from the most traditional to the most far-out liberated; to relinquish authority albeit not responsibility; and to minimize my role as proprietary instruction-giver ...'. Her search for non-competitive and non-hierarchical socio-musical environments has led to her interest in Javanese and Balinese gamelan. She has been involved with gamelan as a player and composer since 1987 and during four study trips to Bali compiled interviews, led improvisation workshops and produced audio and video tapes about new music in Bali.

Barkin's 'texts' – whether for print medium, live performance or tape collage – often blur the distinction between text and music or between essay and poetry. Some works also merge theoretical commentary with the creative process in the form of poetic-graphic explications of music by other composers. Her compositions invoke extensive verbal and gestural interplay, and later works integrate timbral and conceptual influences from gamelan.

J. MICHELE EDWARDS

Barlaam [Bernard] (*d* 1350). Monk and Bishop of Gerace. Barlaam was his religious name. He was educated in Byzantine monasteries of southern Italy, and visited Constantinople in the 1330s. In 1339 the eastern emperor made him envoy to Pope Benedict XII at Avignon. He taught Greek to Petrarch, and under Petrarch's influence became a convert to Latin Catholicism in 1342. He wrote commentaries on three chapters of Ptolemy's *Harmonics*; these chapters deal with the relation between the simple numbers of the Greek Perfect System and the heavenly spheres, how musical consonances and the movement of the planets are to be found through number, and how the qualities of the spheres agree with those of musical sounds.

ANDREW HUGHES

Barley, Willlam (*b* ?1565; *d* 1614). English music publisher. His position in the history of music printing in Elizabethan London is a contentious one. In 1596 he produced *The Pathway to Musicke* and *A New Booke of Tabliture*, the latter thought to be the book that John Dowland complained of in his *The First Booke of Songes or Ayres* (1597), declaring that the versions of his lute pieces were 'falce and unperfect'. Barley was acquainted with Thomas Morley, and, when Morley acquired a music printing monopoly in 1598, six volumes appeared bearing the imprint 'imprinted at London, in Little St. Helen's by William Barley, the assigne of Thomas Morley'. An examination of these six works, however, makes it clear that they cannot all have been printed by the same man or on the same press. The most significant of this group are Antony Holborne's *Pavans, Galliards, Almains*, the first appearance in print in England of music for instruments rather than voices, and Thomas Morley's *The First Booke of Consort Lessons*, the first appearance in print in England of music for a prescribed instrumentation. Morley's *The First Booke of Ayres* was published with Barley's imprint in 1600, but after that Barley evidently abandoned music publishing for some years. In 1606, however, he laid claim to the same music printing monopoly, which had a further 13 years to run. On Morley's death in 1602 the monopoly had fallen into disuse, but Barley managed to convince the Company of Stationers that, as Morley's business associate, he still possessed certain rights under its terms. Accordingly, Barley was made free of the Company on 25 June 1606, and on that day the Company's court settled an action which Barley had brought against Thomas East concerning copyrights to music books East had registered with the Company. The settlement included the stipulation that East should pay to Barley 20 shillings for each edition of a music book he printed, together with six free copies of the finished volume. In addition, East and other music printers often styled themselves 'the assigne of William Barley' until Barley's death in 1614. A similar dispute with Thomas Adams was settled later.

William Barley's interest in music printing was clearly a pecuniary one. There is no evidence that he was actually a printer who had served the necessary apprenticeship. He owed his membership of the Stationers' Company to a special set of circumstances, and the six volumes published in 1599 show every sign of having been farmed out to different presses. Further, in his *New Booke of Tabliture*, he declared 'I am myself a publisher and seller of books', and it was in this capacity that he kept his shop in Gracechurch Street, London. The exact circumstances of the disposal of his business are not clear, but there is some evidence that his music copyrights were acquired by Thomas Snodham and his partners.

MIRIAM MILLER/JEREMY L. SMITH

Bar-line. In Western notation a vertical line drawn through the staff to mark off a metrical unit. *See* BAR.

Barlow, Fred (*b* Mulhouse, 2 Oct 1881; *d* Boulogne, 3 Jan 1951). French composer of English and Alsatian origin. He spent his youth in Switzerland and, though attracted to music from his earliest childhood, gained a diploma in engineering at the Zürich Polytechnic. He soon abandoned this career, however, and in 1908 moved to Paris to complete his musical studies. There he became a pupil of Jean Huré and then of his cousin Koechlin. In 1911 his Violin Sonata and his Cello Sonata were played at the Société Musicale Indépendante, the former by Enescu. He met Les Six, was an acquaintance of Satie and won Ravel's admiration for his *Ave Maria* (1914). An encounter with the actor Pierre Bertin led to the composition of the musical comedy *Sylvie* (1919–21), a sensitive, poetic treatment of juvenile love. A further result of their collaboration was the ballet *La grande Jatte* (1936–8), set in the popular Parisian resort of La Jatte in the 1880s; the score is a masterpiece of delicacy and gaiety suggestive of Chabrier, for whom Barlow felt a special respect. His other notable stage work was *Mam'zelle Prudhomme*, an opérette in the best Messager tradition. Barlow was a conscientious artist, a craftsman who strove to be sincere to himself and to his expressive aims: a recapturing of

childhood innocence, and a painful effort towards an ideal beyond human capacity. The fact that he became a Quaker in 1926 had some influence on his music. His work, particularly the instrumental chamber music, is notable both for distinction of thought and formal perfection.

MICHEL POUPET/JEREMY DRAKE

Barlow, Klarenz [Clarence] (*b* Calcutta, 27 Dec 1945). German composer and theorist of Indian birth. He completed a degree in natural sciences at Calcutta University (1965) and a piano diploma at Trinity College of Music, London (1965). From 1966 to 1968 he taught music theory and directed a madrigal choir and youth orchestra in Calcutta. He went on to study composition and electronic music at the Cologne Musikhochschule (1968–73) and in 1986 founded the Initiative Musik und Informatik Köln (GIMIK). He has taught computer music at the Darmstadt summer courses (1982–94), the Cologne Musikhochschule (from 1984), and the Royal Conservatory, The Hague (from 1994), where he also served as artistic director of the Institute of Sonology (1990–94). His awards include the Kranichstein prize of the Darmstadt summer course (1980) and the Förderpreis of the city of Cologne (1981).

Although Barlow rarely uses digital sounds in his compositions (most works are written for traditional instruments), the computer plays a central role in generating the structures of his works. His comprehensive theory of tonality and metrics, later developed as the basis of computer programmes for the 'real-time' control of musical parameters, was first tested in the piano work *Çoğluotobüsişletmesi* (1975–9). He has also explored the spectral analysis and instrumental re-synthesis of human speech. A playful treatment of musical traditions and a satirical posture towards the postwar avant garde are also characteristic of Barlow's style.

PETER NIKLAS WILSON

Barlow, Samuel L(atham) M(itchell) (*b* New York, 1 June 1892; *d* Wyndmoor, PA, 19 Sept 1982). American composer and administrator. He studied at Harvard University (BA 1914), then in New York with Percy Goetschius and Franklin Robinson, in Paris with Philipp, and in Rome with Respighi (orchestration, 1923). Before World War I, and for two decades thereafter, he was active in New York civic and professional groups formed to promote music, and in liberal political action groups. He was the first chairman of the New York Community Chorus, chairman of the Independent Citizens Committee for the Arts, Sciences, and Professions, governor of the ACA, chairman of the American Committee for the Arts, director of the China Aid Council, and vice-president of the American Committee for Spanish Freedom. In addition, he taught in various settlement schools and was a frequent contributor to *Modern Music*.

Barlow's opera *Mon ami Pierrot*, to a libretto by Sacha Guitry on the life of Lully and purporting to show the origin of the French children's song 'Au clair de la lune', was the first by an American to be performed at the Opéra-Comique in Paris (11 January 1935); his 'symphonic concerto for magic lantern', *Babar* (after Brunoff's picture books), uses slide projections. Despite such novelties, Barlow's style was relatively conservative: he admitted that 'tunes which wouldn't shock Papa Brahms keep sticking their necks out'.

WORKS
(selective list)

Stage: Ballo sardo, ballet, 1928; Mon ami Pierrot (op, S. Guitry), 1934; Amanda, op, 1936; Amphitryon 38 (incid music, J. Giraudoux), 12 orch pieces, 1937

Orch: Vocalise, 1926; Alba, sym. poem, orch/chbr orch, 1927; Circus Ov., 1930; Pf Conc., 1931; Biedermeier Waltzes, 1935; Babar, sym. conc., slide projection, 1936; Leda, 1939; Sousa ad Parnassum, 1939

Chbr and solo inst.: Ballad, Scherzo, str qt, 1933; Spanish Quarter, pf suite, 1933; Conversation with Tchekhov, pf trio, 1940; Jardin de Le Nôtre, pf suite
Vocal: choruses and songs, incl. 3 Songs from the Chinese, T, 7 insts, 1924

Principal publishers: Choudens, Joubert, G. Schirmer

H. WILEY HITCHCOCK

Barlow, Wayne (Brewster) (*b* Elyria, OH, 6 Sept 1912; *d* Rochester, NY, 17 Dec 1996). American composer and teacher. He studied composition with Edward Royce, Bernard Rogers, and Howard Hanson at the Eastman School (1930–37), where he received the MMus and the PhD degrees, and with Schoenberg at the University of Southern California (1935). In 1937 he joined the faculty of the Eastman School, eventually becoming chairman of the composition department, director of the electronic music studio (1968), and dean of graduate studies (1973); in 1978 he was named professor emeritus. He received two Fulbright scholarships (1955–6, 1964–5) and numerous commissions, and travelled widely as lecturer, guest composer and conductor of his own works. He also served as organist and choirmaster at two churches in Rochester, St Thomas Episcopal (1946–76) and Christ Episcopal (1976–8). He was a prolific composer in an eclectic, tonal, free 12-note style.

WORKS

Dramatic: 3 Moods for Dancing (ballet), 1940
Orch: De Profundis, prelude, 1934; False Faces, ballet suite, 1935; Sinfonietta, C, 1936; The Winter's Passed, rhapsody, ob, str/pf, 1938; Lyrical Piece, cl, str/pf, 1943; Nocturne, chbr orch, 1946; Rondo-Ov., 1947; Sinfonietta, C, 1950; Lento and Allegro, 1955; Night Song, 1957; Intrada, Fugue and Postlude, brass ens, 1959; Rota, chbr orch, 1959; Images, hp, orch, 1961; Sinfonia da Camera, chbr orch, 1962; Vistas, 1963; Conc., sax, band, 1970; Hampton Beach, ov., 1971; Soundscapes, orch, tape, 1972; Divertissement, fl, chbr orch, 1980; Frontiers, band, 1982

Barmen. Town in Germany. It was united with Elberfeld in 1929 to form WUPPERTAL.

Barmherzige Brüder. *See* HOSPITALLERS OF ST JOHN OF GOD.

Bärmig, Johann Gotthilf (*b* Werdau, 13 May 1815; *d* Werdau, 26 Oct 1899). German builder of organs and mechanical organs, and also of physharmonikas and harmoniums. He learnt organ building from Urban Kreutzbach in Borna and afterwards worked as an assistant in Salzburg where he is also said to have first become involved with the physharmonika. In about 1846 he opened a workshop in Werdau, which he ran (possibly at first with Ramming) until 1887 when Emil Müller succeeded him. Bärmig's work extended over the whole of Saxony and east Thuringia. He was awarded a silver medal for the three physharmonikas he displayed at the Leipzig Art and Industry Exhibition in 1854. Favouring classical 18th-century measurements, he built about 50 first-rate one- and two-manual mechanical organs with slider-chests and, usually, chamber bellows, but occasionally concertina bellows. His Great organs have a faultless upper-partial structure, and the large instruments (especially those in Schöneck, Kittlitz and Klingenthal) show a good balance between the two manuals. Terz $1\frac{3}{5}'$ and Quint $2\frac{2}{3}'$ or Cornet are standard features of the specification; the rich texture of the mixtures is especially attractive. The Pedal, which in Schöneck and Kittlitz includes a 32′ stop, is often enriched by a soft Posaune bass. Solid workmanship and a clear full tone distinguish Bärmig's work, which recalls the splendour of old Saxon organ building. Among his oldest surviving instruments are the organ in the village church at Königswalde bei Werdau (1852) and a beautifully-toned pedal-harmonium in the old school at Gottesgrün bei Greiz. Under the control of Emil Müller, Bärmig's firm developed into the largest harmonium factory in Europe.

Barnabei. *See* BERNABEI family.

Barnard [née Pye], **Charlotte Alington** [Claribel] (*b* Louth, Lincs., 23 Dec 1830; *d* Dover, 30 Jan 1869). English ballad composer. She published two volumes of verse and some 100 songs, using the pseudonym 'Claribel'. Forced by her father to break off a long engagement to another, she married Rev. Charles Cary Barnard in 1854; thus her success with such 'jilt songs' as *Won't you tell me why, Robin?* (1861) and *Oh Mother! Take the wheel away* (1865), was ironic. In 1857, moving to London, she studied with the pianist W.H. Holmes and leading singers such as Charlotte Sainton-Dolby, for whom *Janet's Choice* (1859), her first success, was written. Its verse and refrain form contrasted with the more usual strophic settings of

that time. Writing her own words allowed formal flexibility. The most commercially successful composer in Boosey's ballad catalogue, she was the first to enjoy a royalty arrangement. Her melodic dexterity is evident in *Five O'Clock in the Morning* (1862), together with an expanding harmonic vocabulary in *Mountain Mabel* (1864), and a growing attention to form in *Come back to Erin* (1866). In 1868, losing £30,000 through her father's fraudulent dealings and bankruptcy, she left for the Continent, but died shortly after returning. Admiration for her songs in North America, especially her waltz song *Take back the heart* (words by Mrs Gifford), equalled British esteem, and her work was well represented in vocal collections long after her death.

DEREK B. SCOTT

Barnard, John (*b* ?1591; *fl* *c*1641). English music editor and composer. He may well have been the John Barnard who was a lay clerk at Canterbury Cathedral between 1618 and 1622, and whose age at the time of his marriage in 1619 was given as 'about 28'. Barnard, who was a minor canon of St Paul's Cathedral, London, in the early 17th century, was the compiler of *The First Book of Selected Church Musick* (London, 1641/*R*). This anthology of church music by 19 leading composers of the late 16th and early 17th centuries was the only printed collection of English liturgical music to appear between Day's *Certaine notes* (London, 1565) and the Civil War. It comprised ten partbooks – Medius, Primus and Secundus Contratenor, Tenor and Bassus, for each side of the choir, Decani and Cantoris. Only 38 partbooks are now extant, of which 33 are imperfect. No printed organbook exists, and it seems most unlikely that one was ever published, though it may be that the 'Batten' Organbook would have served as a source for one. A much larger collection of English liturgical music which Barnard assembled in manuscript between about 1625 and 1638 has also survived (*GB-Lcm* 1045–51); it consisted originally of ten partbooks. The manuscripts clearly served as printer's copy for some of the pieces which later appeared in Barnard's 1641 publication. The collection contains 174 compositions, of which 50 are otherwise unknown. The settings are by 45 identifiable composers, six of whom (including Barnard himself) are not represented in any other pre-Restoration liturgical source. There are also six anonymous pieces. Barnard's two known compositions (settings of the Preces and of the Responses) are included in this collection. A catch by a 'Mr Barnard' is included in Hilton's *Catch that Catch Can*, published by Playford in 1663. The contents of Barnard's printed collection are listed in *Grove 1–4*.

JOHN MOREHEN

Barnby, Sir **Joseph** (*b* York, 12 Aug 1838; *d* London, 28 Jan 1896). English conductor and composer. He was the son of Thomas Barnby, an organist, and became a chorister at York Minster at the age of seven. In 1854 he went to London and entered the RAM. After holding positions as organist at various London and York churches, he received his first important appointment in 1863 as organist of St Andrew's, Wells Street, under its prominent Tractarian rector Benjamin Webb. Responding perhaps to pressure from their affluent and fashionable congregation, Webb and Barnby developed a type of music far removed from the austerity desired by the early Tractarians. A large, paid, surpliced choir adorned the chancel, and performed 'fully choral' services. The music for these services from 1866 onwards included adaptations of Roman Catholic masses and motets, principally those of Gounod, with the words translated by Webb and the music adapted by Barnby. At the performance of Gounod's *Messe solennelle* on 30 November 1866, a harp was for the first time introduced into an Anglican service. These lavish choral services, which were really in the nature of sacred concerts, were continued by Barnby on a still more ambitious scale when he moved to St Anne's, Soho, in 1871. The services at this church soon gained the popular nickname of 'The Sunday Opera'. From 1873 onwards Barnby conducted an annual performance of Bach's *St John Passion* with orchestra in the church.

Meanwhile Barnby had been extremely active elsewhere in the cause of choral music. He had been musical adviser to Novello & Co. since 1861, and in 1867 the company established 'Mr Joseph Barnby's Choir' to perform then little-known works published by Novello, including Handel's *Jephtha*, Beethoven's *Missa solemnis* and Bach's *St Matthew Passion*; Barnby repeated this work at Westminster Abbey on 6 April 1871 with a combined choir from the abbey and other leading churches. This, the first church performance of the work in England, launched it as a profound influence on Victorian society. Barnby was an indefatigable conductor of oratorios and church music for the rest of his life, and was a popular director of provincial festivals. At the end of 1872 he amalgamated his choir with the Royal Albert Hall Choral Society (also under Novello's patronage) and continued to conduct it until his death; in 1888 it became the Royal Choral Society. He performed Dvořák's *Stabat mater* on 10 March 1883, and on 10 November 1884 gave the first performance in England of *Parsifal*. His conducting was accurate and forceful, and he raised choral standards by insisting on greater efforts from the singers; he was progressive in his choice of music, though his interpretations of Handel and Bach were apt to be dull and ponderous.

In 1875 he was appointed precentor of Eton College. Instead of treating this position as largely concerned with the chapel services, he embarked on a programme of choral performances and concerts for the benefit of the boys, becoming Eton's first real director of music. He raised the school's Musical Society to a high standard of precision by means of a quasi-military drill. He also directed a Sunday Evening Musical Society in which masters, boys and chapel choristers sang through the major choral repertory. In 1886 he resigned his position at St Anne's, and in 1892 that at Eton; in the latter year he was knighted, and was also appointed principal of the

Guildhall School of Music. He continued to serve in this position until his death four years later.

As a composer Barnby was very active, writing almost entirely choral and vocal music, in which he was clearly the heir of Gounod. He wrote a large number of cathedral services, anthems, chants and hymn tunes, and one oratorio, *Rebekah* (1870). The services and anthems were popular for many years, especially at St Paul's Cathedral, but they were later singled out by such writers as Walker and Fellowes as particularly deplorable examples of Victorian sentimentality, and are now virtually obsolete. They represented an opposite type of high churchmanship to that of the 'Gregorian' school, in that they adapted for the church whatever methods had recently been found effective in theatre or concert music. Barnby's chants and hymn tunes are still heard: 'Cloisters' in particular, sung to Pusey's hymn *Lord of our life*, has an easy emotionalism and a melodic sweep that has ensured it a long-lived popularity. His tune 'For all the saints' long maintained its hold even against one of the greatest modern hymn tunes, Vaughan Williams's 'Sine nomine'. To many generations of Etonians his music to two of the three school songs has seemed to embody much of their Victorian legacy; while many an amateur choral society has revelled in the blue harmonies of his Tennyson setting *Sweet and Low*. Barnby also edited four hymnbooks, the most important being *The Hymnary* (1872).

NICHOLAS TEMPERLEY

Barn dance. (1) Known in the USA in association with celebrations to mark the building of a new barn and derived from the schottische, it became popular in England around the late 1880s originally in conjunction with the tune *Dancing in the Barn* and later with the *Pas de quatre* by Meyer Lutz, and by the 1920s had become a progressive dance. By the 1960s the term had been adopted as a general description of social country dancing which, by this stage, also included elements of the 'old time' dance repertory.

(2) Originally an American rural meeting for dancing, held in a barn or similar large building. After 1920 the term designated variety radio programmes of folk-like entertainment; the first programme so described was broadcast on radio station WBAP in Fort Worth, Texas (1923), though many southern radio stations had presented programmes of country music in previous years. By 1949 some 650 radio stations were broadcasting live performances of country music, the most famous of which were the 'National Barn Dance' (on WLS, Chicago, 1924–70) and the 'Grand Ole Opry' (on WSM, Nashville, 1925–). By the mid-1950s most of these shows had disappeared, although a few, most notably the 'Grand Ole Opry', benefited from the growth of country music as an industry in Nashville.

Barnekow, Christian (*b* Saint Sauveur, Hautes-Pyrénées, 28 July 1837; *d* Frederiksberg, 20 March 1913). Danish composer. He studied with Niels Ravnkilde and Edvard Helsted in Copenhagen and became a skilful pianist and organist. A man of independent means, he had time to contribute to the administration of several Danish musical institutions. He was president of the Society for the Publication of Danish Music from 1871, a committee member of that society from 1880, later chairman of the Music Society, a member of the committee of the Ancker Foundation and founder of a series of subscription concerts in Copenhagen from 1861. He was nominated titular professor in the University of Copenhagen (1891).

Barnekow's compositions are in the romantic style of J.P.E. Hartmann and Gade and include cantatas and choral and solo songs, chamber music and piano works. Many of his hymns are regularly used in the Danish church. As an authority on sacred choral singing, he edited tunes for the Danish hymnbook (1878), which was augmented by a supplement (1892) and several later editions. He also edited collections of spiritual songs by J.A.P. Schulz, F.L.A. Kunzen and Hartmann, and a selection of pieces by Buxtehude, who was almost unknown at that time. Barnekow was an enthusiastic collector of paintings, books and music, and his collections of original editions of Danish music and books now belong to the Musikhistorisk Museum in Copenhagen.

SIGURD BERG/GORM BUSK

Barnes, John (Robert) (*b* Windsor, 11 Oct 1928; *d* Edinburgh, 9 March 1998). English organologist, instrument maker and restorer. He studied physics at the

University of London and began his career with an English firm making sound-recording tape. In 1962 he began to make and restore early keyboard instruments as a full time occupation. His early work included restorations for the Victoria and Albert Museum and the museum of the Royal College of Music, London, as well as building new historically-based instruments. In 1968 he became curator of the Russell Collection of Early Keyboard Instruments at the University of Edinburgh, a position he held until his retirement in 1983.

Through his early work Barnes formulated a number of theories about the stringing and pitch of Italian keyboard instruments; he also wrote an important article about the alterations found in some Italian harpsichords and several important articles about instrument restoration. His restorations were carried out with high technical skill, a solid scientific approach and a respect for the original instruments, resulting in working methods which have set the standard for later restorers. Although his output of instruments was limited, he influenced many modern makers through his work at the Russell Collection, the publication of drawings and a book on traditional spinet construction, and by his association in the mid-1970s with the US firm of instrument kit manufacturers Zuckermann, and with the Early Music Shop, Bradford, in the 1990s. After his retirement from the Russell Collection he continued to build and restore instruments, and to publish research on early keyboard instruments and clavichords in particular. His small collection of instruments includes a number of important harpsichords, a spinet and a clavichord as well as pianos of the English, French and Viennese schools.

G. GRANT O'BRIEN/DARRYL MARTIN

Barnet, Charlie [Daly, Charles] (*b* New York, 26 Oct 1913; *d* San Diego, 4 Sept 1991). American jazz bandleader and saxophonist. He was born into a wealthy family, but rebelled in his teens to become a musician. Although he was never a major jazz improviser, he led a popular dance band during the swing period which was also admired for its jazz playing. Barnet was one of the first white bandleaders to employ black musicians, usually as solo stars, among them Roy Eldridge, Charlie Shavers, Benny Carter and Frankie Newton (who joined the band as early as 1937). Barnet was especially influenced by the Duke Ellington Orchestra, and played many arrangements which frankly imitated Ellington's. In 1939 his hit recording for Bluebird of Billy May's arrangement of *Cherokee* made him one of the most popular swing bandleaders. However, with the decline of the big bands in the late 1940s he was forced to disband his orchestra, which thereafter regrouped only for special occasions. Although at various times he dabbled in music publishing and the restaurant business, Barnet continued to play occasionally into the 1970s.

JAMES LINCOLN COLLIER

Barnett, Alice (Ray) (*b* Lewiston, IL, 26 May 1886; *d* San Diego, 28 Aug 1975). American composer, teacher and patron. She studied with Rudolf Ganz and Felix Borowski at the Chicago Musical College (BM 1906) and with Heniot Levy and Adolf Weidig at the American Conservatory, Chicago; she also studied composition in Chicago with Wilhelm Middleschulte and in Berlin with Hugo Kaun (1909–10). From 1917 to 1926 she taught music at the San Diego High School. A respected and influential leader of musical life in San Diego, she helped to found the San Diego Opera Guild and the San Diego Civic SO (of which she was chairwoman for 14 years). Barnett wrote some 60 art songs, 49 of which were published by G. Schirmer and Summy between 1906 and 1932. They display a lyrical gift, sure tonal sense and, despite her German training, strong French harmonic influence. They are often exotic and colourful, especially *Chanson of the Bells of Oseney* (1924) and the Browning cycle *In a Gondola* (1920), which is also dramatic; others of her songs are *Panels from a Chinese Screen* (1924), *Harbor Lights* (1927) and *Nirvana* (1932). She also wrote instrumental music, including a piano trio (1920) and *Effective Violin Solos* (1924). Although Barnett stopped composing in the late 1930s, she maintained her musical activities in San Diego. Her manuscripts and papers are at the San Diego Historical Society.

ADRIENNE FRIED BLOCK

Barnett, Carol E(dith Anderson) (*b* Dubuque, IA, 23 May 1949). American composer. As a child she studied the piano, the violin and the flute, and performed in various choral and instrumental ensembles. At the University of Minnesota (BA 1972, MA 1976) she studied composition with Dominick Argento and Paul Fetler, the piano with Bernhard Weiser and the flute with Emil Niosi. In 1992 she became composer-in-residence for the Dale Warland Singers. Her works have also been performed by the Minnesota Orchestra and the St Paul Chamber Orchestra.

Barnett's harmonic idiom is flexibly chromatic and freely dissonant within a context that includes references to tonality. She tends to work with small, striking musical ideas, repeating them within various textures and timbres that shift effortlessly from one to the next, as in her *Overture to a Greek Drama* (1994). Her choral cycle *An Elizabethan Garland* (1994) features deftly managed textures that range from imitation and dialogue among the voices to streams of closely positioned chords over a deep bass. Her lyricism is wide-ranging, creating a singing quality in even disjunct melodic lines.

WORKS
(*selective list*)

Vocal (SATB, unless otherwise stated): 5 poemas de Becquer (G.A. Bécquer), 1979; Requiem (liturgical texts), SSA, 1981; Voices (N. Cox), S, gui, 1983; Epigrams, Epitaphs (M. Prior, J. Gay, S. KARIN PENDLE

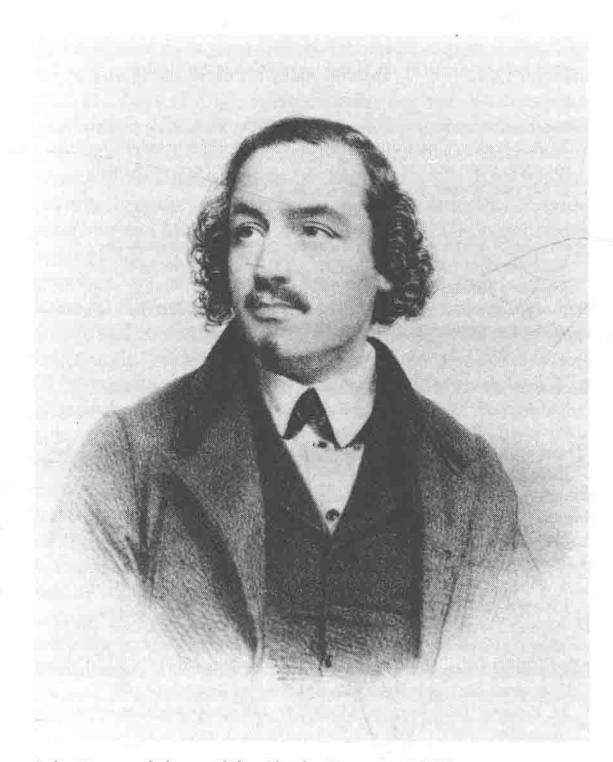
Barnett, Clara Kathleen. *See* ROGERS, CLARA KATHLEEN.



Barnett, John (*b* Bedford, 1/15 July 1802; *d* Leckhampton, 16 April 1890). English composer. E.F. Rimbault (Obituary, *MT*, xxxi, 1890, p.285) is alone in giving his date of birth as 1 July 1802. Barnett's father, Bernhard Beer, was a Prussian diamond merchant of Jewish extraction who is said to have been a cousin of Meyerbeer; on settling in England he changed his surname to Barnett. His mother, a Hungarian, died while he was a child. As a small boy John 'sang like a bird'; in later childhood his fine alto voice attracted much attention. At the age of 11 he was articled to S.J. Arnold, proprietor of the Lyceum Theatre, London, making his first stage appearance in *The Shipwreck* on 22 July 1813, and he continued to sing on the stage until 1818. He studied the piano with Ries, Pérez and Kalkbrenner, and composition with William Horsley and C.E. Horn.

Before 1818 Barnett had already begun his long and immensely prolific career as a composer. His early works include piano sonatas, songs, masses, a sacred cantata, and a grand scena, *The Groves of Pomona*, sung by Braham. Some of these early works were well received by critics, and Barnett was urged to cultivate the higher branches of his art. Between 1826 and 1833, however, much of his energy was spent in providing incidental music for farces, melodramas and burlesques. Though some of these were highly successful, particularly *The Pet of the Petticoats* (1832), and others contained songs that soon became popular favourites, for instance 'Rise, gentle moon' in *Charles XII* (1828), the music in general was not of a high standard. Meanwhile Barnett had opened a music shop in Regent Street (1828) with the dramatist W.T. Moncrieff (1794–1857). In 1832 Lucia Vestris appointed him musical director at the Olympic Theatre.

Barnett's serious interest in music was soon given an unusual opportunity: on 14 July 1834 Arnold reopened the Lyceum Theatre as the English Opera House and began to produce full-length English operas of a kind that had become almost obsolete, the only recent representatives being Bishop's *Aladdin* (1826), Weber's *Oberon* (1826) and Ries's *The Sorceress* (1831). Loder's *Nourjahad* was the first (21 July 1834); Barnett's *The Mountain Sylph* which followed (25 August) went even further than Loder's work in the use of continuous music, with a minimum of spoken dialogue. It was thus one of the first true English operas since Arne's *Artaxerxes* (1762), a work for which Barnett had unbounded admiration. Barnett had written some of the music for a play at the Victoria Theatre, but he now 'heightened' it into a 'romantic grand opera'. He dedicated the published vocal score to Arnold 'for the spirit, zeal, and enthusiasm which he has shewn in the production of Native Operas, and in cherishing native talent'. However, Arnold's primary effort was towards the establishment of serious opera in the English language; he did not feel that either plot or music need be drawn from English traditions. The story of *The Mountain Sylph* was accordingly taken from French sources, and the music was a good deal less 'English' than most of Bishop's. But its success proved that audiences were now prepared to listen to dramatic music with an English text. It had an initial run of about 100 nights, and held its own on the stage for the rest of the century.

Barnett unfortunately quarrelled with Arnold, and publicly accused him of breaking a financial agreement. He had already been at odds with Alfred Bunn, another leading figure in the world of the theatre; later he was to add Mapleson to his mounting list of theatrical adversaries. His next two serious operas, *Fair Rosamond* and *Farinelli*, were produced at Drury Lane. Neither was through-composed, and both show a tendency to return to the older conception of English opera as a mere string of independent songs and ballads – some of which, however, are of good quality. In 1838 he joined with the dramatist Morris Barnett (unrelated to him) in an effort to set up a permanent English Opera House at St James's Theatre, but it closed after a week. From about this time Barnett's letters to the press were increasingly bitter. He accused theatre managers, concert promoters and the committee of the Philharmonic Society of conspiring to defeat the cause of English music. After one more attempt to establish English opera, this time at the Prince's Theatre (1840), he abandoned the London stage. In 1841 he went to live in Cheltenham, where he became a highly successful singing teacher; soon afterwards he published two books about learning to sing.

He lived nearly 50 years longer but never again attempted to produce an opera, to the disappointment of many admirers. In about 1870 he bought a substantial country house, Cotteswold, Leckhampton, near Cheltenham. He had become an advanced 'free-thinker', supporting evolution and homeopathy, and an inveterate controversialist, constantly writing trenchant letters of protest to *The Times* to put down some musical upstart. In the course of a prolonged attack on the methods of Mainzer and Hullah he produced the astonishing theory that 'singing cannot be taught in classes'. He also engaged in a great battle with Leigh Hunt in the pages of *The Tatler* over the merits of English opera, when he claimed among other things that some of Bishop's music was worthy of Mozart. He continued to compose songs, but many of them remained in manuscript; 'it is much to be regretted', wrote Rimbault in 1876, 'that he has withheld his later works from the public'. His position was an eminent one, but was based largely on one work, *The Mountain Sylph*. Macfarren wrote of this opera that 'its production opened a new period for music in this country, from which is to be dated the establishment of an English dramatic school, which, if not yet accomplished, has made many notable advances'. Barnett's failure to follow up this one great success must be attributed in great part to an irascible disposition verging on paranoia.

John Barnett: lithograph by Charles Baugniet, 1845

The importance of *The Mountain Sylph* does not lie in the mere fact of its being largely through-composed; the recitatives are, indeed, quite conventional. What makes it a real opera is the cumulative dramatic effect of the successive musical scenes. The story (to be satirized later in *Iolanthe*) is of a love affair between a mortal, Donald, and a sylph, Aeolia; despite difficulties and stratagems, the pair are eventually united by a special act of the Sylphid Queen. The characters have little human reality and no subtlety, yet Barnett's richly scored music succeeds in creating strong emotion and dramatic tension. Inevitably Weber was his chief inspiration: the fairy choruses recall *Oberon* as much as the invocation scene suggests *Der Freischütz*. But Barnett was the only English composer at the time who could master this new and difficult idiom. He abandoned most traditional forms: there are few strophic songs or rondos, and no binary or sonata form arias; he created forms according to the demands of the various scenes, though he usually concluded each scene with a conventional cabaletta or stretta. There is rather too much dependence on the diminished 7th and other chromatic chords, but the themes used to evoke the supernatural, many of which recur as motifs at various points in the opera, are distinctly original in style (ex.1).

In amorous scenes, such as 'Oh no! 'twas no deceptive spell' and 'Art thou a form?', the disarming warmth and passion of Barnett's music can still move the listener, despite the absurdity of the verses and all the scorn and satire that has been lavished upon sentimental melodrama.

Of the vast quantity of Barnett's songs, many are 'potboilers' (his own term for them), but a proportion have distinction and would bear revival: most of these were originally associated with a dramatic production. His sacred music is sometimes grotesque, but his instrumental music, though it never had wide currency, is not to be despised. A string quartet in C, unashamedly Mozartian in general style, is full of interest and invention and shows a surprising flair for vigorous and witty counterpoint. The other major influence on his musical style is Spohr, as is seen, for instance, in his oratorio *The Omnipresence of the Deity* (1829), a work that clearly foreshadowed Pierson's *Jerusalem*.

Barnett was married on 9 May 1837 at St George's, Hanover Square, to Eliza Emily Lindley (1814–99), youngest daughter of the cellist Robert Lindley. Among their children were two daughters who became well-known singers, Rosamond (Mrs Robert Francillon) and Clara (Mrs Henry Rogers) (1844–1931). Many of Barnett's autographs were acquired by the Boston (Massachusetts) Public Library from Clara Rogers in 1921. A son, Domenico (1846–1911), taught the piano at Cheltenham Ladies' College until his death. One of Barnett's brothers, Joseph (*d* 1898), was a singing teacher and the father of John Francis Barnett; the other, Zaraeh, was a dramatic writer and provided librettos for some of his operas. There seems to be no connection with James George Barnett (1823–85), a London-born composer and conductor active in Hartford and New Haven, Connecticut, whose papers (including many manuscript compositions) are in *US-NH* 58.

NICHOLAS TEMPERLEY, NIGEL BURTON

Barnett, John Francis (*b* London, 16 Oct 1837; *d* London, 24 Nov 1916). English composer and pianist. His father was Joseph Alfred Barnett (*d* 29 April 1898), a professor of music, his uncle the composer John Barnett. Barnett began to study the piano at the age of six with his mother, took lessons from Wylde at 11 and at 13 gained the King's Scholarship at the RAM. In 1853 he made a very successful début with Mendelssohn's D minor Piano Concerto under Spohr at the New Philharmonic Society, and after studying with Hauptmann, Rietz and Moscheles at Leipzig he performed at the Gewandhaus in 1860. On his return to London he played at both the Philharmonic and New Philharmonic Societies with great success. In later years he was better known as a piano teacher. He became a Fellow of the RAM and taught at The National Training School for Music, the RCM and GSM. In 1871 he conducted at the Novello Albert Hall Concerts, and subsequently made occasional appearances as a conductor.

As a composer Barnett first achieved prominence with his Symphony in A (1864), written for the Musical Society of London. It was however as a popular composer of

cantatas and oratorios that he achieved some resounding successes, from *The Ancient Mariner* (1867) and *Paradise and the Peri* (1870), both written for the Birmingham Festival, to *The Eve of St Agnes* (1913), produced by the London Choral Society. Although some of the later choral works were considered to be 'modern' and 'Wagnerian', mainly because of Barnett's use of leitmotifs, a critic wrote in the *Musical Times* (1891) that 'The composer's sympathies were always with the clear, refined and gracious art of Mendelssohn, and there they remain'. Barnett devoted much of his time to teaching, but continued to compose and found time to produce several large-scale orchestral works, such as the *Ouverture Symphonique*, the Piano Concerto in D minor and *The Lay of the Last Minstrel*, which won some critical acclaim. Like many of his English contemporaries, however, he never realized where his strength as a composer lay. His talents were essentially those of a miniaturist, for he lacked the originality and consistency of musical thought necessary for success in larger forms. The conservatism of his musical language, which depended principally on the legacy of Mozart and Mendelssohn, is shown by a comparison of his oratorio *The Raising of Lazarus* (1873) with the more vigorous contemporary style of such works as Stanford's *God is our Hope and Strength* (1877) and Parry's *Prometheus Unbound* (1880). Many of Barnett's smaller, descriptive piano pieces, which had a great vogue in 19th-century drawing-rooms (where they provided relief for young ladies from the works of Czerny and Hummel), achieve a simple charm.

In 1883 Barnett completed Schubert's Symphony in E major from autograph sketches in the possession of Sir George Grove (now in *GB-Lcm*). It was performed at the Crystal Palace in the same year.

WORKS
(*selective list*)

printed works published in London, unless otherwise stated

VOCAL

The Ancient Mariner (cant., S.T. Coleridge), Birmingham Festival, 1867 (1867)
Paradise and the Peri (cant., T. Moore), Birmingham Festival, 1870 (1870)

JENNIFER SPENCER/JEREMY DIBBLE

Barns, Ethel (*b* 1874; *d* Maidenhead, 31 Dec 1948). English violinist and composer. At the RAM (1887–95) she studied the violin with Prosper Sainton and Emile Sauret, the piano with Frederick Westlake and harmony with Prout. Her first published composition, a Romance for violin and piano, appeared in 1891, and she was soon performing her own works at various concerts in London. In 1899 she married the singer Charles Phillips, with whom she had established the successful Barns-Phillips Chamber Concerts at Bechstein Hall. The series provided an important platform for her own violin music, which began to be taken up by others: Joachim added her Sonata no.2, Sauret her *Fantasie* and Elman her *L'escarpolette* to their repertories. In 1907 she was the soloist in her own *Concertstück* for violin and orchestra at the Promenade Concerts. A highly regarded violinist, Barns served on the first council of the Society of Women Musicians (founded 1911), and accompanied Adelina Patti on her later tours.

Most of Barns's music was written for the violin, ranging from her many short, inventive pieces for violin and piano through the often complex but always violinistic sonatas to her two large-scale works for violin and orchestra. Of the two surviving sonatas, the second (1904) is a richly lyrical work in contrast with the sparser fourth (1910). Her songs can be disappointingly bland but her piano pieces are often dramatic and always well-constructed. (*FullerPG*)

WORKS
(*selective list*)

Orch: Concertstück, op.19, vn, orch, arr. vn, pf (1908); Conc., d, vn, orch
Chbr (for vn, pf, unless otherwise stated): Romance (1891); Polonaise (1893); Mazurka (1894); Valse caprice (1894); Tarantella (1895); Sonata no.1, d, perf. 1900; Sonata no.2, A, op.9 (1904); Chanson gracieuse (1904); Pf Trio, f, 1904; Sonata no.3, perf. 1906; Chant élégiaque (1907); Danse caracteristique (1907); L'escarpolette (Swing Song) (1907); Hindoo Lament (Chanson indienne) (1907); Légende (1907); Moto perpetuo (1907); Suite, op.21, perf. 1908; Adagio appassionato (1909); Andante for the 4th String (1909); Canzonetta (1909); Danse nègre (Scherzo) (1909); Humoresque (1909); Idylle pastorale (1909); Lullaby (1909); Petite valse (1909); Serenade (1909); 8 Pieces (1910); Sonata no.4, g, op.24, perf. 1910; Andante espressivo (1911); Andante grazioso (1911); Fantasie, op.26, 2 vn, pf, 1911; Petite pastorale (1911); Bagatelle (1912); Berceuse (1912); Nachtgesang (Notturno) (1912); 2 Compositions (1913); Crépuscule (Twilight) (1913); Idylle, vc, pf (1913); Aubade (1917); Carina (1917);

Pierette (1917); Sonata no.5, 1927; La Chasse (1928); Poème (1928); A Vision (1928); Pf Trio no.2

Pf: 4 Sketches (1899); 2 Dances (1907); Nocturne, perf. 1908; Prelude (1908); Scherzo, perf. 1908; Toccata, perf. 1908; Valse gracieuse (1908); Humoreske (1910); Scenes villageoises (1911); An Impression (1912); Cri du coeur (1916); Monkey Land (Scherzo) (1916); Landscapes (1919); Petite caprice (*c* 1919); Valse Slave (*c*1919)

24 songs, 16 pubd (1892–1918)

MSS in *GB-Lbl*

SOPHIE FULLER

Barnum, P(hineas) T(aylor) (*b* Bethel, CT, 5 July 1810; *d* Bridgeport, CT, 7 April 1891). American impresario. After an early success exhibiting Joyce Heth (advertised as George Washington's 160-year-old nurse), Barnum purchased a moribund collection of curiosities, and by relentless promotion made Barnum's Museum one of New York's central attractions. By 1850 his management of such novelties as the celebrated midget Tom Thumb had established him as America's leading showman, and the lecture hall at the Museum became an early venue for 'family' minstrelsy and variety. In 1844 Barnum capitalized on the enthusiasm for Tyrolean acts by introducing the often parodied 'Swiss Bell Ringers' (who actually came from England). He sponsored the Irish soprano Catherine Hayes on a tour of California (1852), and as president of the New York Crystal Palace he played an important role in Jullien's 'Grand Musical Congress' (1854).

Barnum's greatest triumph, however, was a tour by Jenny Lind (1850–51); under his management she gave 95 concerts in 19 cities, attracting unprecedented receipts of $712,161·34. Barnum travelled with the troupe and, with inspired publicity and an eye for sensation, promoted Lind much like an exhibit; though Lind eventually broke with him, they remained on good terms. This was the first major tour in the USA to be managed by a non-performer, and it marked the rise of a separate class of agents and promoters. Barnum's methods influenced popular entertainers as well as impresarios such as Max Maretzek and the Strakosch brothers; his impact on America's music industry was lasting and profound.

WILLIAM BROOKS

Barodekar, Hirabai (*b* Miraj, 1905; *d* 1979). Indian singer. She was the daughter of Abdul Karim Khan of the Kirana *gharānā* and studied with her father's cousin, Abdul Wahid Khan. Her first important opportunity as a vocalist came when Vishnu Digambar Paluskar invited her to sing in public in 1923. After the Maharashtrian revival of theatre broke the ban on women appearing on the professional stage in that region, Barodekar performed in plays with mixed casts. When live theatre waned in the face of the new film industry, she joined artists who were introducing art music to the non-court world in North India. In 1949 she performed in Africa, and in 1953 travelled to China under government auspices. In 1965 she received the President's Award for Hindustani Vocal Music from the Sangeet Natak Akademi, then in 1970 she was awarded the Padma Bhushan by the Government of India. She taught at the Sangeet Research Academy in Calcutta where she trained students in the style of the Kirana *gharānā*.

Barodekar specialized in *vilambit khayāl*, but also sang *tarānā*, *ṭhumrī*, *bhajan* and Marathi songs (*pad*). Typical of the Kirana style, she did not accelerate the speed of the *tāla* counts as the improvisation proceeded; rather, the impression of acceleration was achieved through increasing rhythmic density. Her slow improvisations were punctuated with vocal pauses that permitted brief solos by the *tablā* player; in her fast *khayāls*the role of the drummer was also highlighted.

BONNIE C. WADE

Baroffio, Bonifacio Giacomo (*b* Novara, 5 Dec 1940). Italian musicologist and liturgist. He studied the violin with Ricciardi (1948–59) and musicology, first in Cologne with Gustav Fellerer, Heinrich Hüschen and Marius Schneider, and later in Erlangen with Bruno Stäblein (1959–63). He obtained the doctorate in 1964 from Cologne University with a dissertation on Offertories in the Ambrosian liturgy. He was a Benedictine monk until 1996 and was Abbot at the Noci Abbey, Bari. He has taught theology in seminaries in Genoa (1976–7) and Novara (1979–80), history of liturgy and codicology at the Institute of Pastoral Liturgy in Padua (1973–81) and Gregorian chant and liturgical codicology at the Pontifical Institute of Sacred Music in Rome (1982–95), where he also became dean in 1988. He teaches the history of liturgy at the School of Musical Palaeography and Philology, University of Pavia, and liturgical codicology at the University of Cassino. His main fields of research are Gregorian chant, palaeography and musical semiology, liturgy and codicology.

TERESA M. GIALDRONI

Baron, Ernst Gottlieb [Theofil] (*b* Breslau, 17 Feb 1696; *d* Berlin, 12 April 1760). German lutenist, composer and writer on music. Neither Baron's life nor his works have as yet been fully explored by scholars. His father Michael was a maker of gold lace and expected his son to follow in his footsteps. The younger Baron showed an inclination towards music in his youth, however, and later made it his profession. He first studied the lute from about 1710 with a Bohemian named Kohott (not to be confused with the later Karl von Kahaut). In Breslau he attended the Elisabeth Gymnasium, and from there went in 1715 to Leipzig, where he studied philosophy and law at the university for four years.

Much of the period from 1719 to 1728 was spent in travels from one small court to another. He first visited Halle for a short period, then in quick succession Cöthen, Schleiz, Saalfeld and Rudolstadt. He arrived in Jena in 1720 and remained for two years. Thereafter he travelled to Kassel, Fulda, Würzburg, Nuremberg and Regensburg, returning in 1727 to Nuremberg where his *Historisch-theoretische und practische Untersuchung des Instruments der Lauten*, the work for which he is principally remembered, was published the same year. In 1728 he replaced the lutenist Meusel, who had recently died, at Gotha and held the post for four years. With the death of the Duke of Gotha he moved on to Eisenach. In 1737, after visits to Merseburg, Cöthen and Zerbst, Baron joined the musical ensemble of Crown Prince Frederick of Prussia. He was immediately granted permission to go to Dresden to purchase a theorbo, and there met the highly esteemed lutenists S.L. Weiss and Hofer. When Frederick became king in 1740, Baron continued to serve as theorbist in the much expanded royal musical establishment. He remained at this post until his death.

Baron's *Untersuchung* is a valuable though not always reliable source of information about lutenists and lute playing in the late Baroque era, when the instrument was still widely cultivated in solo and ensemble performance in Germany. The work is divided into two main parts. The first deals with the history of the lute, and contains important references to contemporary players. The second is devoted to the practice of the instrument. Baron's other writings, as yet incompletely studied, supplement the *Untersuchung*, and explore several other subjects.

The few accessible examples of Baron's compositions suggest that he cultivated a characteristic late Baroque idiom in his suites, but moved in the direction of the *galant* style in his concertos. The latter are in fact trio sonatas in texture, cast in the three-movement form of the concerto.

EDWARD R. REILLY

Baroness, The. *See* LINDELHEIM, JOANNA MARIA.

Baroni. Italian family of singers and instrumentalists.

(1) **Adriana** [Adreana] **Baroni.** *See* BASILE family, (§3).

(2) **Leonora** [Eleanora, Lionora] **Baroni** (*b* Mantua, Dec 1611; *d* Rome, 6 April 1670). Singer and instrumentalist, daughter of (1) Adriana Baroni; she was sometimes known as 'L'Adrianella' or 'L'Adrianetta'. She spent her childhood at the Gonzaga court at Mantua, where her mother was a leading singer, and was named after the late Duchess of Mantua. She presumably began her musical training with her mother. Gifted with a splendid voice, she specialized as a singer, soon achieved great fame and put even her mother in the shade. She was admired not only for the beauty, artistry and style of her singing but also for her refined manners. She was able to speak several languages and wrote verse as well as music. No compositions attributed to her are known, but the French viol player André Maugars, who knew her in Rome, stated unequivocally that she composed. When still very young she accompanied her mother on her musical journeys, together with her sister (3) Caterina Baroni. At the age of only 16 she received her first enthusiastic acclaim in the aristocratic circles of Naples, where the family resided from 1624 to 1633. In spring 1630, again with her mother, she appeared at Genoa and immediately afterwards at Florence. She was everywhere the object of admiration and gallantries, as is proved by the numerous poems addressed to her by prominent poets such as Fulvio Testi and Francesco Bracciolini, and by influential nobles such as Cardinals Annibale Bentivoglio and Giulio Rospigliosi, and Prince Camillo Colonna, protector of the Accademia degli Umoristi; these were published as *Applausi poetici alle glorie della Signora Leonora Baroni* (ed. F. Ronconi, Bracciano, 1639, 2/1641).

After her family had moved to Rome in 1633, Leonora was declared superior to all other Italian chamber singers of the age. She enjoyed one success after another in the musical entertainments held at her home, accompanying herself on theorbo or viol (both of which she played perfectly according to Maugars) or performing alongside her mother (playing the *lira*) and sister (playing the harp). Milton heard and admired her and in 1639 paid homage to her in three Latin epigrams (*Ad Leonoram Romae canentem*). Her voice, Maugars noted, was 'of a high compass', and 'she mellows it or swells it easily'. On her countenance, he added:

> Her [vocal] leaps and her sighs are not at all lascivious, her glances have nothing of lewdness and her gestures have the correctness of a proper young lady. Sometimes, in passing from one note to another, she lets the intervals of the enharmonic and chromatic genera sound with such skill and charm that no one remains unmoved by this beautiful and difficult type of singing.

The only female member of the Accademia degli Umoristi, she frequently attended salons at the Palazzo Barberini, where she was always enthusiastically received in the circle around Cardinal Antonio Barberini. It was there that she met Cardinal Francesco Barberini's secretary, Giulio Cesare Castellani, whom she married on 27 May 1640.

In February 1644, through the mediation of Cardinal Mazarin (who had known her in Rome and was to a great extent indebted to her for the advantageous favour of Cardinal Antonio Barberini), Leonora Baroni was offered by the Queen Regent of France, Anne of Austria, a favourable contract inviting her and her husband to the French court. This she accepted. At first she was not admired in Paris, perhaps because the Italian style of singing did not appeal to French taste. That she nevertheless achieved a measure of success was largely due to the queen regent's benevolent protection. Even so, her stay in Paris was clouded by envy and professional jealousy. She therefore departed for Italy on 10 April 1645, taking with her several precious jewels bestowed on her by the queen regent, who also granted her a large pension for life. She might later have returned to France had not the state of her health prevented it.

In Rome she resumed her active life in the aristocratic society that frequented the salons held at her home. There, even after her husband's death on 4 January 1662, she continued to perform, accompanying herself on the lute or theorbo. She maintained her notable artistic reputation, particularly after the election of Pope Clement IX, who as Cardinal Giulio Rospigliosi had once dedicated one of his best sonnets to her; she enjoyed to the end of her life the patronage and affectionate friendship of the Rospigliosi family. She was buried with her husband in S Maria della Scala.

(3) **Caterina Baroni** (*b* Naples, 1619; *d* ?Rome, *c*1670). Singer, harpist and poet, daughter of (1) Adriana Baroni. She lived in Mantua until 1624, in Naples from 1624 to 1633 and thereafter in Rome, where her family enjoyed the protection of Cardinal Antonio Barberini. Caterina became a singer and harpist and often appeared with her mother and sister (2) Leonora when musical entertainments were held in their house. Maugars heard them in 1639 and reported that their 'three fine voices and three different instruments so took my senses by surprise . . . I forgot my mortality and thought I was already among the angels'. Similarly captivated, Della Valle professed the impossiblity of judging one sister musically superior to the other.

In 1640 her mother retired to Naples and Caterina entered the convent of S Lucia in Selci, although the next year she continued to receive a monthly allowance from Cardinal Barberini. It is thought she probably took the name of Sister Costanza as a tribute to Barberini's mother, who was called Costanza. S Lucia was considered a focal point for intellectual life in Rome, and the music-making of its nuns among the finest in the convents. In 1641 Caterina Baroni was bequeathed three harps by Orazio Michi. She was still at S Lucia in February 1662, when she signed a receipt for a bronze crucifix, a gift from her recently deceased brother-in-law. Of her poetry, only a sonnet in memory of Niccolo Fabri Peresio (*I-Rvat* Barberini lat.1996) is known.

ARGIA BERTINI/SUSAN PARISI

Baroni, Antonio. *See* BORONI, ANTONIO.

Baroque. A term used generally to designate a period or style of European music covering roughly the years between 1600 and 1750.

1. Etymology and early usage. 2. Chronological limits. 3. Critique of the concept. 4. Technical features of Baroque music.

1. ETYMOLOGY AND EARLY USAGE. Although used in art and music criticism as far back as the mid-18th century, the term 'Baroque' has only relatively recently been adopted for a historical period. It is derived from the French *baroque*, which comes from the Portuguese *barroco*, meaning a pearl of irregular or bulbous shape. It is often found in texts having to do with the manufacture of jewellery from the 16th century onwards, in Spanish (*berrueco, barrueco*), French (*barroque, barrocque, baroque*) and later Italian (*baroco, barocco*).

It has been generally assumed that the word was first applied to the fine arts in reference to architecture. Charles de Brosses in *Lettres familières écrites d'Italie en 1739 et 1740* (Paris, c1755; ed. R. Colomb, Paris, 1855) criticized the architect of a Roman palace for transferring to a large scale the style of baroque ornamentation that better suited small objects like gold cases or dinnerware. But it has been shown that these 'letters' were not drafted until about 1755, long after de Brosses' return to Paris. The earliest application to the fine arts appears to have been, rather, in reference to music. This occurs in a satirical letter prompted by the première of Rameau's *Hippolyte et Aricie* in Paris in October 1733, printed in the *Mercure de France* in May 1734 ('Lettre de M*** à Mlle*** sur l'origine de la musique', pp.868–70). The anonymous author covertly implied that what was new in the opera was 'du barocque' and complained that the music lacked coherent melody, was unsparing in dissonances, constantly changed key and metre, and speedily ran through every compositional device. Rameau was also the target of a poem by J.B. Rousseau (in a letter to Louis Racine, 17 November 1739, in *Lettres sur differents sujets de la littérature*, Geneva, 1750) that called him and his kind 'distillers of baroque chords' (*distillateurs d'accords baroques*).

Noel Antoine Pluche was the most illuminating of the early users of the term. He not only attached it to a category or style of music but he implied an etymology. In *Spectacle de la nature* (vii, Paris, 1746) he maintained that the comparison of French and Italian music no longer divided critics; that the issue now was between the partisans of *musique chantante* (songful or tuneful music) and *musique barroque* (translated as 'rough' in the English version, *Spectacle de la nature: or Nature Display'd*, London, 1748):

> One takes its melody from the natural sounds of our throat and from the accents of the human voice, which speaks to concern others with what touches us, always without grimace, always without effort, almost without art. We shall call this songful music [*la musique chantante*]. The other aims to surprise by the boldness of its sounds and passes for song while pulsating with speed and noise [*veut surprendre par la hardiesse des sons & passer pour chanter en mesurant des vitesses & du bruit*]; we call it Baroque music [*la musique Barroque*].

Pluche had earlier contrasted the concerts directed by Jean-Pierre Guignon (1702–74), who amused and surprised with the admirable lightness and agility of his playing and of the ensembles he directed, and Jean-Baptiste Anet, who did not approve of Guignon's pretence at overcoming all difficulties, of his tendency to 'wrest laboriously from the bottom of the sea some baroque pearls, when diamonds can be found on the surface of the earth' (p.103). To Anet, achieving surprise by brilliant vivacity was a small accomplishment; greatness in art was to please the multitude by sweet and varied emotions. He preferred an instrumental sound 'that was connected, sustained, velvety, passionate, and conforming to the accents of the human voice' (p.104). Pluche's favourite composer was Mondonville, who excelled in both the singing and the Baroque genres. Essentially, however, Baroque music was to Pluche pure instrumental music which, lacking a text, had no significance, not even that which it might acquire through imitating the human voice. For Pluche, as for de Brosses, *baroque* had a pejorative connotation.

Although Guignon was a composer in his own right, Pluche probably thought of him rather as the most famous interpreter of Italian concertos, such as those of Vivaldi and Albinoni, at the Concert Spirituel in the 1720s. Marpurg also contrasted his playing with Anet's: 'Guignon and Battiste were two fine violinists; the first played in the Italian taste, the second in the French taste' (*Historisch-kritische Beyträge zur Aufnahme der Musik*, i, Berlin, 1754, p.238). The brilliant and bold virtuosity that Pluche associated with Guignon probably reflected the music of Vivaldi's 'high Baroque' period and similar works unknown in Paris before the first years of the Concert Spirituel (which began in 1725). Pluche's use of the term 'barroque', while not entirely inconsistent with its present usage, thus had much narrower scope.

Other 18th-century writers tended to call upon the word 'baroque' to evoke impressions of strangeness and distortion. De Brosses, who applied the term to the pseudo-Gothic ornamentation of the Palazzo Doria Pamphili in Rome, was amazed that Italian recitative 'could be at one time so baroque and so monotonous' (*Lettres*, ed. R. Colomb, 4/1885, ii, 330). J.-J. Rousseau ventured a definition in his *Dictionnaire de musique* (Paris, 1768): 'A baroque music is that in which the harmony is confused, charged with modulations and dissonances, the melody is harsh and little natural, the intonation difficult, and the movement constrained'; he thought the term came from the *baroco* of logicians. Rousseau's definition was paraphrased by, among others, Castil-Blaze (*Dictionnaire de musique moderne*, Paris, 1821), Heinrich Koch (*Musikalisches Lexikon*, Frankfurt, 1802), Gustav Schilling (*Encyclopädie der gesammten musikalischen Wissenschaften*, i, Stuttgart, 1835) and

Hermann Mendel (*Musikalisches Conversations-Lexikon*, Berlin, 1870).

Rousseau's etymology, now largely discredited, was vigorously supported by Benedetto Croce (1929) and later René Wellek (1946). *Baroco* was indeed a word coined by medieval logicians along with *Celarent*, *Baralipton*, *Darapti*, *Felapto* etc. as mnemonic aids to recall the various types of syllogism; the fourth mode of the second figure was called *baroco*. The vowel 'a' indicated the universal affirmative character of the major premise, and the two vowels 'o' indicated that the minor premises and conclusion were negative, as in 'Every *A* is *B*; some *C* are not *B*; hence some *C* are not *A*'. *Baroco*, however, was not used in Italy as an art-critical term; when Italians eventually wrote about Baroque qualities in art, the French word was borrowed, and it became *barocco*.

Baroque in the sense of bizarre, irregular and extravagant continued to occur sporadically in criticism of art and music in the rest of the 18th century and most of the 19th without acquiring a more generalized stylistic significance. It was Jacob Burckhardt who gave the post-Michelangelo style this name in his *Der Cicerone* (Leipzig, 2/1839), where he dedicated a substantial chapter to the *Barockstyl*. Whereas for Burckhardt it marked the decadent phase of the high Renaissance, Heinrich Wölfflin (*Renaissance und Barock*, 1888) treated the style and its development in a positive way and suggested the term might also be applied to literature (Tasso) and music (Palestrina). Cornelius Gurlitt's *Geschichte des Barokstiles in Italien* (Stuttgart, 1887) also accepted the style as a legitimate expression of its time. Wölfflin later expanded the concept of Baroque to include a number of principles that could be applied to any period, though his examples were mainly 17th century (see below; *Kunstgeschichtliche Grundbegriffe*, Munich, 1915).

Meanwhile the concept of Baroque was not immediately adopted by writers on music history. Ambros (1882) mentioned the rampant *barrocco* of painting and architecture in the 17th century (*Geschichte der Musik*, iv, rev. 3/1909, p.286) but not as a musical category. Riemann avoided the term, calling the period 'Generalbass-Zeitalter' (*Handbuch der Musikgeschichte*, ii, 1912), and Guido Adler referred to it simply as the 'Third Style Period' (*Handbuch der Musikgeschichte*, 1924).

Curt Sachs was the first to apply Wölfflin's theory of the Baroque systematically to music. He took the five characteristics that Wölfflin had isolated in the visual arts and explained how each fitted musical developments in this period: (i) the suppression of line in favour of the painterly (*malerisch*) was paralleled by the overwhelming of melody by ornamentation and variation; (ii) the penchant of Baroque painters for placing figures in both foreground and recessed positions as opposed to the single plane of the Renaissance was compared by Sachs to the depth achieved by placing a soprano against a bass and its harmony; and (iii) the drift from the closed form of the

1. *Baroque stage design by Domenico and Gasparo Mauro for the moonlit garden scene (Act 1 scene vii) in Steffani's opera 'Servio Tullio', Opernhaus am Salvatorplatz, Munich, 1686: engraving*

Renaissance to the open form of Baroque art was analogous to the replacement of the rhythmics dominated by arsis and thesis by the natural declamation of speech. Similarly, the tendencies of Baroque art (iv) to replace multiplicity by unity and (v) to obscure rather than make clear were shown to operate also in music.

Sachs's belief in the synchronism of the arts and his rather strained transplantation of Wölfflin's categories were almost immediately challenged. Andrea Della Corte (1933), a follower of Croce, argued that the term 'Baroque' could not transcend its meaning of extravagant, and thus only certain aspects of 17th-century music could be characterized by it – the 'marvellous' monumental polychoral style of Benevoli, which 'Barochized' Renaissance polyphony, the tortuous turns of the late madrigal, or the over-schematization of opera after 1650. Moreover, Della Corte pointed out, Wölfflin's poles for the Renaissance and Baroque could be turned round completely and the concept of linear applied with no strain to monody and that of closed form to the da capo aria.

Robert Haas (1928) saw merits in Wölfflin's principles but doubted whether all five points could be applied to music; he was also less concerned with paralleling the chronology of the visual arts. Whereas art historians pushed the beginnings of the Baroque back to the middle or even the beginning of the 16th century, Haas could not justify a date earlier than 1594, the year Palestrina and Lassus died. He did recognize, however, a certain spiritual unity in the period, and defended it on sociological, intellectual and cultural as well as musical grounds.

It was Lang (1941) and Bukofzer (1940, 1947) who gave the term 'Baroque' currency in English. Lang did not discuss the concept or the word in themselves but elaborated with a wealth of detail the forces at work culturally, intellectually and socially that led to the 'fading' of the Renaissance and rise of the Baroque style in art and music. Bukofzer used the terms 'Renaissance' and 'Baroque' 'as convenient labels for periods which apply equally well to music history and other fields of civilization' (1947, p.2). He recognized the dangers of transposing the terminology of art history to music: 'The concepts of Wölfflin, the linear, closed form, etc., are abstractions distilled from the live development of art, indeed very useful abstractions, but so general in nature that they can be applied to all periods indiscriminately, although they were originally found in the comparison of renaissance and baroque'. For Bukofzer the value of the term lay in the observation that it 'essentially denotes the inner stylistic unity of the period. By technical analysis rather than comparative abstractions it is possible to show that the development of baroque music runs parallel with that of baroque art, but there are undercurrents that do not conform to the "spirit of the time"'.

Independently of Bukofzer, Clercx (1948) arrived at an autonomously musical analysis of the Baroque in music. She too doubted that theories based on the plastic arts and literature could necessarily be adapted to music, 'which has its own laws and its independent development. A study of the Baroque in music, bringing with it new facts, could be of such a nature as to modify the conception that has generally been held of the phenomenon' (p.39). Through a careful analysis of the characteristics of melody, harmony, rhythm and genres of the repertory of the period from the middle of the 16th century, she developed the aesthetic principles on which the variety of works of the period could be said to have been founded. By 'esthétique' Clercx meant not the body of aesthetic philosophy generated by the period itself but the principles that could be induced from an analysis of its products and then be referred back to that period.

Scholars in France and Britain were long reluctant to accept the term 'Baroque' or concepts associated with it. Dufourcq (1961) pointed out that the concept of Baroque as common in German musicology did not fit the development of music and culture in France, where Classicism occupied the first half of the 17th century. Chailley (1958) rejected the term as failing to correspond to any reality. In Britain, Capell (*Grove5*) found no justification beyond mere convenience for calling such a variety of styles as those of Peri and Bach by the same term. The *Histoire de la musique* of the *Encyclopédie de la Pléiade* (Paris, 1960) called the period 'L'ère du style concertant'.

The idea of a Baroque style gained some acceptance in France, however, as shown by the studious attention given to it by V.L. Tapié (1957) and Rémy Stricker (1968). In Britain the term appeared in a book title, *The Baroque Concerto* (London, 1961) by Arthur Hutchings, although the concept hardly figures in the text, which merely accepts the notion of a Baroque style and period.

2. Chronological limits. There has been appreciable disagreement concerning the starting date of the period, less about the terminal date. Wölfflin recognized in art history an early phase from 1570, a high phase from 1680, and a late phase extending from about 1700 until the rise of the 'Sturm und Drang'. Haas divided his book into three parts, each covering about half a century, and framing the achievement of the main components of the Baroque style: the conquest over the musical Renaissance (the monodic and concertato style); the melodic structuring of the musical Baroque (the cantata and bel canto style); and the musical high Baroque (the formation of the 'proud' contrapuntal style, *kontrapunktischer Prunkstil*).

Bukofzer distinguished three major periods, though he acknowledged that they did not coincide in different countries: 1580–1630, early Baroque; 1630–80, middle Baroque; 1680–1730, late Baroque. Clercx pushed the beginning of the period back to the middle of the 16th century, where she located a phase of 'primitive Baroque'. The second period, 'full Baroque' (*plein baroque*), occupied the entire 17th century. Finally after the style was achieved there was a 'tardy Baroque' (*baroque tardif*), which extended from 1700 to about 1740 or 1765.

3. Critique of the concept. It is evident that the earliest usages of 'Baroque' in the arts, though suggestive, cannot be a guide to its meaning as a historical category. Nor should the fact that it originally had negative connotations deter us from assigning to it a positive meaning. For, if its pejorative taint stands against it, the critical vocabulary would have to be impoverished by banning also terms such as 'Gothic', 'impressionism', 'mannerism' and 'galant'. But unless the period designated 'Baroque' can be shown to have some stylistic or spiritual unity, the term is ineligible even as a convenient label. The question, therefore, is whether within a sizable period between the Renaissance and the middle of the 18th century a quality or qualities can be identified that strongly dominated musical style.

2. Design by Filippo Juvarra for Act 3 scene xvii of 'Giunio Bruto', the opera (Act 1 by C.F. Cesarini, Act 2 by A. Caldara, Act 3 by A. Scarlatti) intended for performance in Vienna in 1711, but cancelled: watercolour from the presentation copy of the score made for Joseph I (A-Wn Cod.16.682, f.138)

Various traits have been suggested: dynamism, open form, degree of ornamentation, sharp contrast, co-existence of diverse styles, individualism, affective representation and numerous others. Most of these qualities, while they may contrast with the Renaissance, do not hold for any extended period. Although the style of Gesualdo is dynamic and open-formed, that of Alessandro Scarlatti is not. While Caccini's music is ornamented, Corelli's fundamentally is not (although it sometimes invited ornamentation); besides, the style of the 1740s or 1770s was also ornamented. The sharp contrasts observed in the late sacred concertos of Gabrieli are less striking or at least appear normal in an opera of Cesti. Diverse styles have co-existed in many periods, if perhaps less in the Renaissance. Individualism became even more pronounced in the later 18th century than it was in the 17th. These qualities have served mainly to distinguish from the Renaissance the style that immediately succeeded it. They are less useful to delimit the Baroque or to distinguish it from subsequent styles.

Only one of the general characteristics mentioned survives an analysis of 17th- and 18th-century music and musical thought: the attitude towards affective expression. From the 1540s to at least the 1720s composers in a preponderant share of their music strove for the expression of affective states, whether or not inspired by a text. It is this striving that led to the extravagances that were first deplored as 'Baroque'. Irregularity, amplification,

strangeness and grotesqueness, qualities inherent in the word, were often the very products of the search for expression. Anyone who did not understand the motivation behind these manners (like a Frenchman listening to Italian recitative or Vivaldi's violin concertos) could well have found a work embodying them bizarre.

The movement to express the affections was based on the recognition of the existence of distinguishable states of mind or feeling, such as sorrow, admiration, gladness, fear, anger, hope, joy or calm. These were thought to be accompanied by physical conditions that reached a certain stability in the person seized by the passion. This preoccupation with the passions was stimulated by several factors: the revival in the 16th century of the rhetorical treatises of Aristotle, Quintilian and Cicero, which not only described the passions but urged the orator's obligation to stir them; by the renewed reading of the *Poetics* of Aristotle, which emphasized the arousal of pity and fear and the imitation of human actions and passions; and by the general atmosphere of tolerance of the passions, which earlier had been seen as weaknesses of the flesh, and appreciation for the innate value of deep feeling.

Although the urge for expression of the affections persisted throughout the period under consideration, the means by which it was achieved were continually changing. Poets first set the example by paying more attention to emotional expression, and musicians adopted the moving of the passions as their principal objective. This is already evident in the school of Willaert; his own *Musica nova*, compiled in the early 1540s though published in 1559, may be considered the watershed that parts the Renaissance from the beginning of a new stylistic era, the Baroque, if one so wishes to call it. Side by side with works that are exemplary of Renaissance classicism are a few pieces, like *Aspro core*, that point in new directions. Several pupils of Willaert, particularly Cipriano de Rore and Nicola Vicentino, became the fountainheads of the new idiom. Monteverdi gave to the new style a name, *seconda pratica*. Certain more recent critics have called the 16th-century phase 'mannerism', but that term is better reserved for the rhetorical style of for example Marenzio in the madrigal and Lassus in the motet, a style often more concerned with illusionistic images than with affective expression.

Better understanding of physiology, particularly the circulation of the blood and the action of the nerves, spelt the downfall of the affections in the 18th century. At the same time musical artists became disillusioned with the mechanization that the process of affective expression underwent in Italian opera. A new conception of the emotions as fleeting, constantly shifting and conflicting reactions of the mind and body to internal, external and imaginary stimuli, as exemplified by the association psychology of David Hume and David Hartley, took the place of the *Affektenlehre* (*see* RHETORIC AND MUSIC, §I, 4). The shift is reflected in the practice of Italian composers from about 1730 and can also be documented in the attitudes of critics. Daniel Webb (*Observations in the Correspondence between Poetry and Music*, London, 1769, p.47) observed that the arousal of feelings by music is 'not, as some have imagined, the results of any fixed or permanent condition of the nerves and spirits, but springs from a succession of impressions, and is greatly augmented by sudden or gradual transitions from one kind of strain of vibrations to another'. The music of the 1730s and 1740s by Pergolesi, Hasse and Jommelli, for example, no longer relied on the static passions of the preceding decades but exploited the possibilities of dynamic flux and transition of sentiment. The advent of the sentimental style, which Pluche heralded as the 'musique chantante', marked the end of the period under consideration.

Thus the two centuries between roughly 1540 and 1730 can legitimately be considered an artistic era united by a common ideal, and, if one must find a word for it, 'Baroque' is defensible as a designation. Adoption of the term should not obscure the fact that there is no unity of either idiom or creative directions in this period. Not only do Renaissance practices (and in that sense the Renaissance) continue through much of the 16th century, but the ideals that can be embraced in the concept of Baroque reigned in parts of Europe as late as 1750, while elsewhere a counter-Baroque reaction had set in.

Whether the chronological limits and spirit of the Baroque in music coincide with those in other arts – painting, sculpture, architecture, theatre, literature, dance – can best be determined not by searching for analogies or parallels but by investigating the motivation for certain artistic directions. Perhaps even more important is to recognize the forces that led these arts in common directions. To define these for all the arts is beyond the scope of this article; but some of the forces that shaped Baroque music may be outlined.

The most important stimulus for a new style in the 16th century was HUMANISM. The new knowledge and aspirations that emanated from the revival of ancient learning affected music in numerous ways. The poetry of Petrarch, itself inspired by that of antiquity, became the model for modern poetry and prompted an intense search for new expressive means for setting it to music. The overthrow of the Boethian theory through the fresh insights offered by Ptolemy and Aristoxenus opened up the recognition of chromatic resources and the possibilities of tonal organization outside the modes. Ancient memories of a music that powerfully affected the feelings and morals of men inspired composers to seek similar effects through polyphonic and, later, monodic music, which was thought to correspond more closely to the ancient. Greek tragedy, which by the interpretation of Aristotle's *Poetics* and other recently studied texts could be shown to have been sung throughout, became a model for a style of music that could be sung on the stage for not just certain lyrical moments, as in Renaissance theatre, but for the entire drama.

Experimental science, closely linked with humanism in that it began as a testing of the doctrines found in ancient texts, was another important source of new trends. Discovery of the true cause and nature of sound, pitch and pitch relations liberated musical thought from the numerology that had preserved certain myths (such as the sanctity of the number six as the determinant of consonance). This paved the way for equal temperament and intermodulation among a wide circle of keys. The scientific movement also stimulated Rameau to develop a theory that replaced the purely pragmatic chordal systems of thoroughbass figuring.

The influence of the counter-Reformation on the direction music took in the late 16th century has probably been overestimated. But it surely hastened the secularization of church styles through the introduction of motets for solo or few voices and vernacular oratorios that were

essentially in the style of the theatre. These styles eventually spread to the Protestant churches of Germany, England and France.

The patronage of music as an instrument of diplomacy intensified during the second half of the 16th century, particularly among the cardinals in Rome and in the Italian principalities of the Medici, Este and Gonzaga families. Meanwhile in mercantile centres such as Venice, Naples, Hamburg and London, opera theatres that depended upon subscribers or leasers of boxes catered for a new middle class. Taste shifted at these centres from the mythological plots favoured at the princely courts to more realistic or historical subjects. Eventually commercial pressure led to the introduction of comic episodes and eventually comic intermezzos, leading to a counter-Baroque idiom that soon spread to instrumental and sacred genres. The growth of the bourgeois class also led to the establishment of musical academies, such as the Accademia Filarmonica of Verona, or in Germany of cadres of musicians hired by town councils to function both in the church and in the secular community and even in the university through a collegium musicum.

Insofar as these and similar underlying conditions for music-making were part of the intellectual and social substratum of artistic activity in general, music shares with the other arts a common source for stylistic change and continuity. It is not surprising, then, that the music of this period reveals certain superficial features that parallel those of artistic products in other media. The similarity of appearances should not, however, be attributed to a 'spirit of the time' – a Baroque *Zeitgeist* – but rather to the common underlying conditions that sometimes express themselves in uncanny resemblances.

A music historian can contribute more to the understanding of the Baroque as a cultural phenomenon by describing faithfully, as Bukofzer and Clercx have done, the technical features of the music of the period than by pursuing abstractions such as linear versus painterly and picturesque, or closed versus open forms.

4. Technical features of Baroque music. The thoroughbass, which began as a shorthand to indicate the harmony implied by two outer voices, soon became a constructive device, a means of achieving continuity while leaving the upper voice or voices free to express a text or soar in instrumental fantasies. To define the scope of the Baroque period on the basis of the persistence of the thoroughbass has been challenged on the grounds that the basso continuo persists well into the 1770s, by which time a new style had crystallized. This is not a serious objection, however, because by 1722, when Rameau published his *Traité de l'harmonie*, it was evident that a more complex set of considerations ruled the practice of composers than the counterpoint of the outer parts and its chordal filling. A system of relations between triads in a given key and between those and certain supporting triads from outside the key was implicit in the music being written towards the end of the Baroque period. The thoroughbass after the 1740s was an accompanimental convention, and ceased to have much effect on orchestral or choral texture; indeed, it became a sorely inadequate means of notating the accompaniment to solo voices or instruments.

The wish to prolong the rather manneristic and fleeting expressions of particular passions for longer spans than could be achieved through the recitative or even the arioso passages of the early monodies led to the adoption of the strophic variation and of various extended harmonic patterns, such as the aria della romanesca, Ruggiero, ballo del gran duca, the descending tetrachord and similar ostinatos. These permitted both the prolongation of a reigning affection and the constant renewal of melodic invention and ornamentation. That practice too faded out about the 1740s, to be replaced by variations on closed forms, such as minuets, operatic arias and the like, which find their beginnings but not their ultimate flowering in the *doubles* of Baroque dance suites.

A consequence of the thoroughbass practice was to throw the high-pitched voices into relief: and this produced a texture that persisted from the first decade of the 17th century to the 1740s. One or a pair of treble voices elaborated their lines, often through canonic and imitative or other motivic interplay, over a bass that determined or defined the harmonic motion, while other parts or chordal instruments occupied a subordinate filler role. Such a texture may involve non-treble voices, and several such ensembles may be found to proceed simultaneously with more or less interaction.

A specialization of functions resulted from this texture, some instruments fulfilling a function of harmonic 'stuffing' or ripieno, others a solo role. This division of labour, and not the polychoral medium, was the true source of the vocal and instrumental concerto. The 16th-century polychoral idiom and its amplification in the 17th century, which Della Corte identified as a genuine Baroque strain in Italian music, was actually a late survival of the *coro spezzato* technique popular in the Veneto from about 1520. Its true significance for the Baroque is that the polychoral texture served as a model for the earliest attempts at writing church music for few solo voices. The division of ripieno and solo functions together with the antiphonal contrasts inspired by polychoral music produced new combinations of solo and tutti vocal and instrumental ensembles. These combinations result in what is sometimes called the 'concertato style' but is really a concertato medium that lent itself to a variety of styles.

Patterns of stylistic decorum emerged, were consolidated and eventually dissolved during this period. Marco Scacchi recognized that, whereas in the earlier music one style and practice dominated, in his age there were three styles, church, chamber and theatre, and two practices, the ancient and modern, later called strict and free (*Breve discorso sopra la musica moderna*, Warsaw, 1649). Particular styles and practices were thought fitting for particular recreational, entertainment or devotional functions. Stylistic decorum did not prevent the borrowing of styles, however, as when the theatre style was introduced into the chamber or church. But when these styles were borrowed, they were subjected to a process of abstraction and conventionalization that purified them of offensive or distracting connotations, as when recitative or aria was admitted into the church, or dances into a chamber sonata. These distinctions tended to dissolve towards the end of the period, and by the mid-18th century a common style emerged that passed freely from genre to genre and from one social usage to another.

The rhythmic practices of Baroque music reflected the conventions of stylistic decorum. The principal schemes of rhythmic organization were founded on the dance and on speech. To these must be added the *alla breve* of the *stile antico*, continued from an earlier age for the sake of

religious propriety. While the rhythm of speech ruled the recitative and arioso, the rhythm of dance governed the aria and chorus. Even keyboard genres and violin sonatas were permeated by this dichotomy. The different dances and their metres became the models for characteristic music that evoked certain affections through association and through mysterious affinities that were perceived between feelings and movement.

Most Baroque composers navigated the uncharted waters of pre-tonality. Some, to be sure, continued to be guided by the church modes, but Vincenzo Galilei was probably more observant than prophetic when he celebrated their demise in 1589 (*Il primo libro della prattica del contrapunto intorno all'uso delle consonanze*, ed. F. Rempp, Cologne, 1980). The dissolution of the modal system was in fact well under way by the 1530s. The return to a key pitch within a discrete piece replaced the unity of mode, and excursions into closely related keys replaced the admissible cadences of modal polyphony. On the other hand, the constraints that tonal writing began to acquire in the middle of the 18th century did not yet hamper composers in the period. The continuous modulation of the recitatives, the innocence with which keys fluctuated in an opera or mass, the inconsistency of modulatory schemes in the concertos: these are evidences of a free exploration of the resources that the new tunings offered.

200 years are a long time in the quickly paced culture of the West. Even the very general characteristics proposed above for the Baroque had to be couched in developmental terms. It is useful, therefore, to divide the period into more homogeneous sub-periods, with the understanding that no border formalities were invoked in passing from one to the other.

The late 16th and early 17th centuries were times of exploration of new resources, such as chromaticism, dissonance, tonality, monody, recitative, and new vocal and instrumental combinations. No consistent approach to composition emerged until about 1640, by which time the new resources were tamed, and a fairly homogeneous style arose in Italy that was to spread everywhere in Europe in the next generation. The period between 1640 and 1690 was a relatively stable one in which genres such as the trio sonata and da capo aria enjoyed a sureness, yet freshness, that has led some to call this a classical phase. From 1690 to 1730 genres such as the aria, concerto and sonata reached an almost overripe elaborateness, and the once spontaneous expression of the affections became formalized, at its worst mechanized. A reaction became inevitable. A new style began to manifest itself in the comic intermezzos to the *opera seria*, more natural in its melody, more varied in its rhythms, simpler yet more moving in its harmonies and, most important, truer to the flow of human sensibilities.

Generalizations of this kind are charged with oversimplifications and admit of abundant exceptions. But there is enough truth to them to make an observer from the vantage point of the 21st century comfortable with the proposition that the period from the late 16th century to 1730 knew some continuity and homogeneity, and that the period might for practical purposes be summed up in a word, 'Baroque'.

CLAUDE V. PALISCA

Baroxyton. A bass brass instrument invented by VÁCLAV FRANTIŠEK ČERVENÝ.

Bärpfeife (?Ger., ?Dut.). *See under* ORGAN STOP.

Barra [Barat], **Hotinet** [Hottinet, Houtinet, Hutinet, Jehan, Jean] (*b* ?Montigny-le-Roi; *fl* 1510–23). French composer and singer. Under the name of 'Jehan Barat' he was an haut-contre at the Ste Chapelle, Paris, in 1510–12. As 'Jean Barat dit Hottinet' he was *maître de chapelle* of Langres Cathedral from 1512 to at least July 1514, and as 'Hanotin Barra' he returned to the Ste Chapelle in October 1523. In musical sources he is always 'Hotinet' or 'Hotinet Barra'. Although some of his music is preserved in Italian sources, there is no reason to suppose he travelled to Italy. He must not be confused with Johannes Lomont [Zanin Lumon], called 'Ottinet', a singer from the diocese of Cambrai and member of the ducal chapel in Milan from 1473 until his death in 1493, who applied unsuccessfully for a transfer to the ducal chapel of Ferrara in 1479 and was provost of St Géry, Cambrai, from 1480 to 1489–91, residing there briefly in 1482.

Like many of his French contemporaries, Barra favoured a style built predominantly on short, frequently imitative duets, often overlapped to produce a full-voiced texture. He used fewer melismas and less homophony than Mouton and Févin, his obvious models, but he maintained the clear structural articulation typical of their work. The most widely disseminated composition ascribed to Barra, *Nuptiae factae sunt*, also appears with an ascription to Elimot, a composer known otherwise by a single motet (*Ascendens Christus in altum*, 4vv, *I-Bc* Q20); neither the sources nor stylistic considerations seem to provide adequate grounds for resolving the conflict. Two of Barra's motets published by Attaingnant form part of a Parisian cycle of 'O' antiphon settings (see Wright for the distinctive chant melody employed); *O radix Jesse* in particular is distinguished by its reliance on cantus-firmus construction. The rather widely distributed mass *'Ecce panis angelorum'* paraphrases the plainsong of part of the Corpus Christi sequence *Lauda Sion* in its tenor. Imitation moves motifs of the chant into the other voices, and other chant melodies are quoted from time to time, notably 'Bone pastor' (another section of *Lauda Sion*) and 'O salutaris hostia' (a eucharistic strophe of the hymn *Verbum supernum*).

JOSHUA RIFKIN/RICHARD SHERR

Barrachina, Clemente (*b* Teruel, *c*1650; *d* Albarracín, 1727). Spanish composer. He was a choirboy at Teruel Cathedral in 1664 and later studied theology and music in Madrid. In 1675 he succeeded Ortells as *maestro de capilla* of Albarracín Cathedral, where he remained for over 50 years. He composed a large number of polychoral works in five to eight parts for the cathedral services, as well as villancicos (now lost) each year for Christmas and Corpus Christi. The surviving works (all in the archives of Albarracín Cathedral) are mostly for two choirs, contrasting a contrapuntal texture for the first choir (typically in two parts) and a more homophonic style for the fuller second choir. They show an able command of structure and sonority.

WORKS

Edition: *Clemente Barrachina: Opera omnia*, ed. J.M. Muneta (Teruel, 1992–5) [M i–ii]

with instruments unless otherwise stated

Vespers music: Beatus vir, 6vv; Crédidi, 6vv; Deus in adjutorium, 6vv; Dixit Dominus, 6vv; Dixit Dominus, 8vv; Laetatus sum, 7vv; Lauda Jerusalem, 6vv; Laudate Dominum, 6vv; Laudate Dominum, 7vv; Mag, 6vv; Mag, 8vv: all ed. in M i

JESUS M. MUNETA MARTÍNEZ

Barradas [Pérez-Barradas], **(María del) Carmen** (*b* Montevideo, 18 March 1888; *d* Montevideo, 12 May 1963). Uruguayan composer and pianist. She began composing in her childhood and studied with Antonio Franck. Later she entered the Conservatorio Musical La Lira to study with Aurora, Vicente Pablo and Martín López. In 1914 she settled in Spain and began to develop a new and revolutionary system of musical notation, based on graphic designs similar to those that came into use 50 years later, shocking Spanish and French musicians and critics. Using that system she composed *Fabricación* (1922), a piano work that reproduced the sound of a factory working full blast. This work, *Aserradero*, along with *Taller mecánico*, which she performed in Madrid and Barcelona, established her as a pioneer of modern

music, giving her immediate success in Spain and France, where music and art critics, such as André Clavier in Paris and Adolfo Salazar and Eugenio d'Ors in Madrid, praised her works. All her scores have covers featuring the drawings of her brother, the painter Rafael Barradas. In about 1928 she returned to Montevideo, where she began teaching choral singing at the Instituto Normal and continued her career as a composer. She gave her last piano recital in Montevideo in 1934.

WORKS

Chbr: Pf Trio
Vocal: Children songs (several series); Eterno romance (triptych; homage to A. Storni)
Pf: Aserradero; En el molino; Mar Tragédia Misterio, triptych; Procesión; Taller mecánico; Ensayos (cycle), 1919; Fabricación, 1922; Oración a Santos Vega, 1933; Estudios tonales, 1940

SUSANA SALGADO

Barrae, Leonardo. *See* BARRÉ, LEONARDO.

Barraine, Elsa (Jacqueline) (*b* Paris, 13 Feb 1910). French composer. She studied composition at the Paris Conservatoire with Dukas, who instilled in her a strong sense of colour and a classical spirit. She took *premiers prix* in harmony in 1925 and in fugue and accompaniment in 1927. In 1929 she received the Prix de Rome for her sacred trilogy *La vierge guerrière*. She then worked at French Radio, first as a pianist, sound recordist and as head of singing (1936–40) then after the war as a sound mixer. From 1944 to 1947 she was musical director of the recording firm Chant du Monde. In 1953 she became professor of sight-reading and analysis at the Conservatoire, a post she held until 1974.

Barraine's compositions exhibit rigorous technique alongside naturalness and finesse. The work which made her name as a composer, the symphonic variations *Harald Harfagard* (1930), after Heinrich Heine, was the first of many to draw on a literary inspiration: notable later examples include the Eluard settings *Avis* and *L'homme sur terre*. Her works, while disciplined in form, are characterized by expressive intensity as well as a passionate feeling for the human condition and a sensitivity to the social and political disruptions of our time. Her music is essentially tonal, with the exception of the serial *Musique rituelle* (1966–7), inspired by the Tibetan Book of the Dead. Barraine may be considered one of the outstanding French composers of the mid-20th century.

WORKS
(*selective list*)

Dramatic: Le mur (ballet, R. de Jouvenal), 1947; Pattes blanches (film score, dir. J. Grémillon), 1948; Printemps de la liberté (incid music, J. Grémillon), 1948; La chanson du mal-aimé (ballet, after G. Apollinaire), 1950; Claudine à l'école (ballet, Colette), 1950; Le sabotier du Val de Loire (film score, dir. J. Demy), 1956
Orch: Harald Harfagard, sym. variations after H. Heine, 1930; Sym. [no.1], 1931; Pogromes, 1933; Sym. [no.2], 1938; Suite astrologique, small orch, 1945; Variations sur 'Le fleuve rouge', 1945; Hommage à Prokofiev, hpd, orch, 1953; 3 ridicules, 1955; Les jongleurs, 1959; Les tziganes, 1959

Principal publishers: Costallat, Durand, Salabert, Schott

FRANÇOISE ANDRIEUX/JAMES R. BRISCOE

Barraqué, Jean (Henri Alphonse) (*b* Puteaux, Seine, 17 Jan 1928; *d* Paris, 17 Aug 1973). French composer. His family moved to Paris when he was a small child, but the place that mattered most to him was the Breton coast, where he was taken on visits by his nanny, to stay with her family in Trelevern. In 1940 he entered the Notre Dame choir school, and there underwent a total conversion to music when he heard a recording of Schubert's 'Unfinished' Symphony in a teacher's study. His education continued at the Lycée Condorcet (1943–7), with Langlais (around 1947) and in Messiaen's class (1948–51).

Though he was composing abundantly during this period, he salvaged nothing before three songs of 1950, to words from the Song of Songs, Baudelaire and Rimbaud, out of which *Séquence* emerged in 1955. His intellectual development during the interim – the period also of his Piano Sonata – was powerfully influenced by his relationship with Michel Foucault: *Séquence*, with its texts now from Nietzsche, and the Sonata both embrace a lyrical violence and accept the responsiblity of greatness. No longer guaranteed either by metaphysical or linguistic certainties, for Barraqúe the musical work had to be a Promethean act of creation from out of the void. Like Boulez, he accepted the inevitability of serialism, but more on philosophical grounds (as a symptom of the abeyance of authority) than as a necessity of musical history, and he departed far from Boulez in his music's dynamism: his published works, numbering only six, are all substantial, continuous and urgent. (The only minor work he produced after 1950 is a study in *musique concrète,* which came out of the time he spent, between 1951 and 1954, in the Groupe de Recherche de Musique Concrète.) In this insistence on forward movement, Beethoven was not merely his model but his ideal, and his high view of the artist's vocation was of a piece with that ideal.

His realization of a Beethovenian dialectic was based on various polarities, in particular between perceptions of notes as either autonomous sounds or elements within the unfolding of a serial form, between freedom and fixity in the registral placing of notes, between pulsed and pulseless rhythm, and between sound and silence. The Piano Sonata exerts itself across all these axes, and across another, which the composer describes in the sonata's preface: the opposition between a 'free style' of motifs and chords in easy flow and a 'strict style' of intensive, quasi-automatic process acknowledging the 'total' serialism of the time. Elements of compulsion are spurs to protest, but protest is compromised by having to be voiced in the same language, based on the same series. Barraqué found this a limitation. In *Séquence* he tried to moderate what he called 'serial tonality' by using two series – separately in the first two songs, together in the last – and in later works he developed a technique of 'proliferating series', similar to Messiaen's practice of rhythmic interversion, but with a quite different intention, to make possible a music of continuous change. However, the musical chains in the Sonata provide it with the means to

an artistic success in speaking with the vehemence of despair. The 40-minute work is in two large sections, the first generally fast and the second generally slow, seeming to undermine all that had been promised.

While writing the Sonata and *Séquence*, and for several years thereafter, Barraqué earned a living from educational broadcasts, lectures, programme notes and classes; then from 1961 to 1970 he held a research post at the Centre National des Recherches Scientifiques to do work on Debussy, though he continued to give private classes in analysis and composition. *Séquence* received its first performance at a Domaine Musical concert in 1956, and the recording was released on disc in 1958 with Yvonne Loriod's account of the Sonata. This LP, backed by André Hodeir's acclamation of the composer in his 1961 book, assured Barraqué an international reputation, and his works, starting with *Séquence* in 1963, began to be published by Aldo Bruzzichelli, a Florentine businessman.

By this time Barraqué had embarked on a massive project. At Foucault's instigation he read Hermann Broch's novel *The Death of Virgil* in 1955; almost at once he began making plans to devote the rest of his life to a vast system of musical settings and commentaries. Of these, *Le temps restitué* was drafted in 1956–7 and *... au-delà du hasard* completed in 1959 for a Domaine Musical concert early the next year. But copious problems – alcoholism, desperation, a car accident in 1964 – got in the way of composition, and *La mort de Virgile* had to wait until 1966 before receiving its third instalment, *Chant après chant*, which was also its last. In 1968 Barraqué completed two old enterprises, *Le temps restitué* and a concerto he had planned for Hubert Rostaing, the principal clarinettist in the first performance of *... au-delà du hasard*. In both cases there was the prompt of an immediate performance, at the Royan Festival in the case of *Le temps restitué* and by the BBC in that of the Concerto. Other parts of *La mort de Virgile* were begun or restarted, but nothing much else was accomplished.

However, the Broch cycle was surely meant to be incomplete and to speak of incompletion. Barraqué based all his endeavours on the second part of the novel, which treats Virgil's night of anguish and hopelessness in the face of what he sees as the failure of his epic; the music is magniloquent, furious and constantly mobile, responding at once to the poetic subject, to the wild Breton sea that Barraqué loved, and to his sense of himself as a descendant not only of Beethoven but of Debussy. In each of the three finished sections of *La mort de Virgile* there is a soprano soloist, but she seems to be speaking directly to the poet rather than of or for him, as if Barraqué had made his works to enter into dialogue with himself as creator. Typical, too, is the cascading of alternative voices, whether from choruses, from solo piano (a main player in all four works in which it appears, though Barraqué himself was not a performer), or from groupings of instruments. Such doubt about the expressive centre is a feature also of the Concerto, in which the clarinet takes some time to arrive (and the secondary vibraphone soloist even longer), and in which the orchestration may be aligned with or against the division of the ensemble into six trios.

Jean Barraqué, 1960

Barraqué's final years saw some public successes. He was present at two recordings of the Sonata, by Claude Helffer (1969, for Valois) and Roger Woodward (1972, for EMI), and at one each of *Séquence* and *Chant après chant* (both 1969, again for Valois). He also made a rare appearance to speak at the Royan Festival, just four months before his death. He was buried at Trelevern. His music, after some years of neglect, began to excite conspicuous attention again in the late 1990s, when the complete published works appeared on the CPO label.

WORKS

Séquence (F. Nietzsche, trans. H. Albert), S, vn, vc, hp, pf, cel + glock, xyl + vib, 3 perc, 1950–55
Piano Sonata, 1950–52

PAUL GRIFFITHS

Barrat, Jean. *See* BARRA, JEHAN DE.

Barraud, Henry (*b* Bordeaux, 23 April 1900; *d* Paris, 28 Dec 1997). French composer. He began to compose at the age of 16 when he was studying harmony and counterpoint in Bordeaux, but his parents intended him for the wine trade, and he trained for this in London. However, he decided on a musical career, and entered the Paris Conservatoire in 1926 to study composition with Dukas, fugue with Caussade and, on the advice of Schmitt, composition and orchestration with Louis Aubert. He was soon expelled from the Conservatoire for having written a string quartet (now lost) that was considered outrageously innovatory. With Rivier he founded the Triton concerts in 1933, and in the same year Monteux conducted a symphonic finale, following this in 1934 with his *Poème*. He helped to organize Resistance broadcasting in occupied France; after the war he was made head of music for Radiodiffusion Française, becoming director of the Programme National in 1948. Besides raising French standards of orchestral playing and choral singing, he gained for French radio a reputation for welcoming music of all types, particularly new music. He continued to compose, but much of his finest work was done after his retirement in 1965.

Barraud combined a reserved demeanour and a critical spirit with deep and imaginative religious conviction and a great sensitivity to people as also to the arts. This dualism is to be found in his music. In some works, felicities of scoring and elegant solutions of formal problems follow too smoothly, adding up to an effect that can seem academic. At the other extreme there are pieces like the *Mystère des Saints Innocents*, the *Te Deum*, the *Trois études* and *Une saison en enfer* (for Barraud, as for Claudel, Rimbaud had a place alongside the Bible and the saints), works that make an immediate and profoundly moving impression. Between these poles there are pieces – such as the concertos for piano and for flute – which delight by continual grace and invention. Barraud was always a seeker, but he refused to employ avant-garde methods for reasons of effect or fashion. His lucid and illuminating book, *Pour comprendre les musiques d'aujourd'hui*, indicates the eagerness and critical alertness with which he followed new developments. In the 1960s he stopped composing for about two years in order 'to weigh the new contributions of the young generation, and see what in them could help me to enrich my own musical language without ceasing to remain faithful to myself'. After this period of reflection, his music took an altogether more adventurous path. His later works such as the *Variations à treize* use a more advanced style, breaking free of the traditional rhythmic and tonal constraints of much of his earlier music, and employ a vast array of percussion including prominent roles for tuned instruments.

WORKS
(*selective list*)

DRAMATIC

La farce de maître Pathelin (op, 1, G. Cohen, after medieval drama), 1938; Petits métiers (film score), 1942, arr. as sym. suite, 1942; La kermesse (ballet), 1, 1943; L'astrologue dans le puits (ballet, 1), 1948; Rimbaud (radio score), 1950; Numance (op, 2, S. de Madariaga, after Cervantes), 1950–52, ov. and interludes arr. as Symphonie de Numance, 1950; Lavinia (comic op, 3, F. Marceau), 1959; La fée aux miettes (radio score, after C. Nodier), 1968; Le roi Gordogane (chbr op, 3, R. Ivsic), 1974; Tête d'or (tragédie lyrique, 2, after P. Claudel), 1980

ORCHESTRAL

Finale of a Symphony, 1932; Poème, 1933; Conc. da camera, 1934; 4 préludes, str, 1935–7; Suite pour une comédie de Musset, str, 1937; Pf Conc., 1939; Offrande à une ombre, 1942; Images pour un poète maudit, after A. Rimbaud, 1954; Sym., str, 1955–6; Sym. no.3, 1957; Rapsodie cartésienne, 1959; Fl Conc., 1962; Rapsodie dionysienne, 1962; Divertimento, 1962; Sym. concertante, tpt, orch, 1966; 3 études, 1967; Une saison en enfer, after Rimbaud, 1968–9; Conc., str, 1971; Ouverture pour un opéra interdit, 1971

VOCAL

3 poèmes (P. Reverdy), 1v, pf, 1933; 2 choeurs, 2vv, pf/orch, 1933; 3 chansons de Gramedoch (V. Hugo: *Cromwell*), 1v, orch, 1935; Le feu (Old Testament), chorus, orch, 1937; 3 lettres de Mme de Sévigné, 1v, pf, 1938, orchd 1944; 4 poèmes de Lanza del Vasto, 1v, pf, 1942; Le testament de François Villon, 1v, chorus, hpd, 1945; Le mystère des Saints Innocents (C. Péguy), solo vv, chorus, orch, 1946–7; 8 chantefables pour les enfants sages (R. Desnos), 1v, pf, 1947; Cantate pour l'avènement du prince de Monaco, chorus, 1950; TeD, chorus, 16 winds, 1955; Pange lingua, S, Bar, chorus, orch, 1964; La divine comédie (Dante), 5 solo vv, orch, 1972; Enfance à Combourg (cant. after F.R. de Chateaubriand), children's chorus, 1976

CHAMBER AND SOLO INSTRUMENTAL

Histoires pour enfants, pf, 1933; Premiers pas, pf, 1933; Trio, ob, cl, bn, 1935; Str Trio, 1936, rev. 1943; Str Qt, 1940; Sonatine, vn, pf, 1941; 10 impromptus, pf, 1941; Musiques pour petites mains, pf, 1949; Concertino, pf, fl, cl, bn, hn, 1954; Variations à 13, 1969; Sax Qt, 1972

JONATHAN GRIFFIN/RICHARD LANGHAM SMITH

Barre (i) (Fr.). *See* BASS-BAR.

Barre (ii) (Fr.). The stopping of several or all the strings of a fretted string instrument at the same point, by the fingers (*see* BARRÉ) or artificially (*see* CAPO TASTO).

Barré [jeu barré] (Fr.: 'barred', 'stopped'; Ger. *Quergriff*; It. *capo tasto*; Sp. *cejuela*). In the playing of certain fretted plucked string instruments, particularly the lute, guitar and banjo, the term used to describe the technique of stopping all or several of the strings at the same point by holding a finger across them. Although the form of the word is adjectival the term is also used in writings in English as a noun; some English-speaking writers use 'bar' or 'barring', but the French forms *barré* or *jeu barré* are more frequently found. (In the music of the late 17th-century viol masters – particularly that of Marin Marais – the term *doigt couché* is used; *see* FINGERING, §II, 1.) The earliest references to the *barré* seem to date from the second half of the 17th century; Francisco Guerau's introduction to his *Poema harmónico* (1694), for example, advises the player to become accustomed to using the 'cejuela … putting the index finger of the left hand over more or less all the strings, depending on your requirements, which is very necessary in order to play certain passages'.

The essential characteristic of the *barré* is that it is executed with the flat of the finger, whereas the tips of the fingers are used for other fingering. The *barré* is usually executed with the forefinger, but other fingers are also used, particularly by jazz guitarists for the *half-barré* (that is, the stopping of two or more, but not all the strings). The purpose of the *barré* technique is to permit the fingering configurations used on the open strings to be transposed to any position on the fingerboard, the forefinger acting as a moveable nut. The fret at which the *barré* is applied may be indicated in written music: '2[e] barré' is a short form of '2[e] position barré', and similarly 'C II' stands for 'cejuela 2'; both indicate a *barré* at the second fret. If, for ease of execution, the player wishes to use open-string fingering for an entire piece, the strings may be artificially stopped with a CAPO TASTO (by setting the *capo tasto* across the first fret, the player can finger a piece in C♯ as if it were in C).

Barrè, Antonio (*b* Langres; *fl* Rome, 1551–72). French printer. He was a singer in the Cappella Giulia intermittently from March 1552 until at least the end of 1554, and was also active as a composer: in 1552 his *Madrigali a quattro voci* were printed in Rome by Valerio and Luigi Dorico.

In 1555 he began to print music, publishing a series of collections entitled 'delle muse', Vicentino's *L'antica musica ridotta alla moderna pratica* (1555; in 1551 Barrè had been a witness at the famous debate between Vicentino and Lusitano in Rome) and a few volumes devoted to single composers. His first publication, *Il primo libro delle muse a cinque* (1555), set a high standard, with canzone settings by Barrè himself, Berchem, Vincenzo Ruffo and Arcadelt, including Arcadelt's superb setting of Petrarch's *Chiare, fresch'e dolci acque.* Barrè's *Primo libro delle muse a quattro voci* (1555) includes his own setting of four stanzas from Ariosto's *Orlando furioso*, in a suitably declamatory and homophonic style. He coined the term 'madrigali ariosi' to describe the pieces in this collection as well as in the second and third books for four voices. It is believed to refer to madrigals in which the upper-voice melody is based on a pattern used by popular singers of stanzas from *Orlando furioso* but it may refer to melodies over bass patterns. The collection was reprinted several times (by Gardano, Rampazetto and Vincenti & Amadino), contributing to the popularity of 'delle muse' collections among Venetian printers; parts of the series remained in print for up to 30 years. The *Secondo libro delle muse a tre voci: canzoni moresche di diversi*(1555) contains the first known examples of *moresche* as partsongs. The *Primo libro … a tre voci* has not survived except as Scotto's *Primo libro delle muse a tre* of 1562, which contains five pieces by Barrè and other works by composers better known in Rome than in Venice.

After 1558 Barrè began printing, or at least publishing, with Blado's music type (e.g., madrigals by Menta, 1560, and by Lasso, 1563), or with Dorico's, as in Brassart's *Primo libro delli soi madrigali a quattro* (1564). A contract of 1564 shows Barrè and Valerio Dorico to have been partners in the publication of Eliseo Ghibel's (or Gibellino's) *De festis introitus missarum* (1565), of which they promised to deliver 30 copies to Ghibel's agent (see Masetti Zannini, 226). This suggests that similar partnerships with Dorico or Blado, or, in Venice, with Scotto or Rampazetto, were behind Barrè's other editions of the 1560s. In 1563 Rampazetto printed *Liber primus musarum cum quattuor vocibus sacrarum cantionum que vulgo mottetta vocantur*, naming Barrè as editor and compiler. Perhaps Barrè had lost his shop and had commissioned other publishers to print his books. Temporary partnerships for one or more books were common in Rome, but most are documented too sketchily to allow confirmation of the exact role of each partner. Barrè also printed a few non-musical books which appear to have been special commissions with Barrè serving only as printer. These include a collection of poems, *Rime … in vita e in morte dell'Ill. Sig. Livia Columna* (1555) and Paolo Giovio's *Dialogo dell'imprese militari et amorose* (1555/*R*), the first work on *imprese*. No publications by him are known from later than 1565, but documents place him in Rome as late as 1572.

Barrè's music books, some 20 in number (including six or seven presumably commissioned from others), are mostly in oblong quarto format, although two are in upright quarto and a few others are in folio. One of these, the Vincentino treatise, contains the first use of the printed natural sign. These well-executed publications, including first editions of important music by Arcadelt, Palestrina and, notably, Lassus, demonstrate Barrè's taste and initiative as well as his skill. His printer's mark was, appropriately, Apollo surrounded by a chorus of the muses; he also used a device with Orpheus playing a *lira da braccio*. This mark was not used by him after the probable loss of his own music font in 1558.

THOMAS W. BRIDGES/MAUREEN BUJA

Barré [Barrae, Barri, Barret], **Leonardo** (*b* diocese of Limoges; *fl* Rome, 1537–after 1555). French composer and singer active in Italy. On 13 July 1537 'Leonardus Barre Lemovicensis dioec.' was made a singer of the papal chapel. He remained there until 1555, when, together with Palestrina, he was expelled for being married. He then became *maestro di cappella* of S Lorenzo in Damaso, Rome. Barré was probably unrelated to Antonio Barrè, but he may have been the father of 'Alexandro Bare, sopranus, putto', who served in the Cappella Giulia in 1560 and 1561 and possibly from 1564 to May 1566. His nine surviving madrigals and six published motets appeared in various collections from 1539 to 1544. In a collection of 1540 for five voices he is described as a disciple of Willaert and two of his madrigals, *Oime'l bel viso* and *Lachrime meste*, were attributed to Willaert in the latter's posthumous *Madrigali a quatro voci* (Venice, 1563). If Barré was a pupil of Willaert, it must have been between 1527, when Willaert moved to Venice, and 1537, when Barré joined the Cappella Sistina.

Barré's style is not remarkably different from that of his contemporaries, but his texture is somewhat distinctive in its relative lack of contrast. Clearly defined points of imitation are infrequent, as are passages in chordal style, with uniform declamation in all voices. More often, imitation is masked by the continuous accompaniment of other voices or by the use of paired entries. Word-painting, although not frequent and not very bold, nonetheless enhances the music by providing needed contrast and colour.

Barré's music contains many concealed parallel 5ths and octaves, and too often the rhythmic motion is provided by the voices exchanging tones of the same chord. Nonetheless, his music moves forward smoothly and has many passages of great charm, some enhanced by decorative melismas.

THOMAS W. BRIDGES

Barrelhouse. A style of piano playing that originated among black American blues musicians in the early 20th century. It was first practised in the makeshift saloons of lumber camps in the South and is related to BOOGIE-WOOGIE, which it may have preceded as a blues piano style (*see* BLUES, §4). Barrelhouse was played in regular 4/4 metre, whereas boogie developed as fast music largely of eight beats to the bar. Ragtime bass figures or the heavy left-hand vamp known as 'stomping' were often employed with occasional walking bass variations. Characteristic early recordings are *Barrel House Man* (1927, Para.) by the Texas pianist Will Ezell, *The Dirty Dozen* by Speckled Red (Rufus Perryman) (1929, Bruns.) and *Soon This Morning* by Charlie Spand (1929, Para.); Perryman and Spand worked in Detroit after leaving the South. *Diggin' My Potatoes* (1939, Bb), by Washboard Sam with Joshua Altheimer on piano, and *Shack Bully Stomp* (1938, Decca), by Peetie Wheatstraw, are examples of the persistence of the style. Many barrelhouse themes became standards, and were played by blues pianists after other styles had superseded the form. The term barrelhouse was also used to mean rough or crude, as in *'Mooch' Richardson's Low Down Barrel House Blues* (1928, OK), and several blues singers, among them Nolan Welch, Buck McFarland and Bukka White, were known by this nickname.

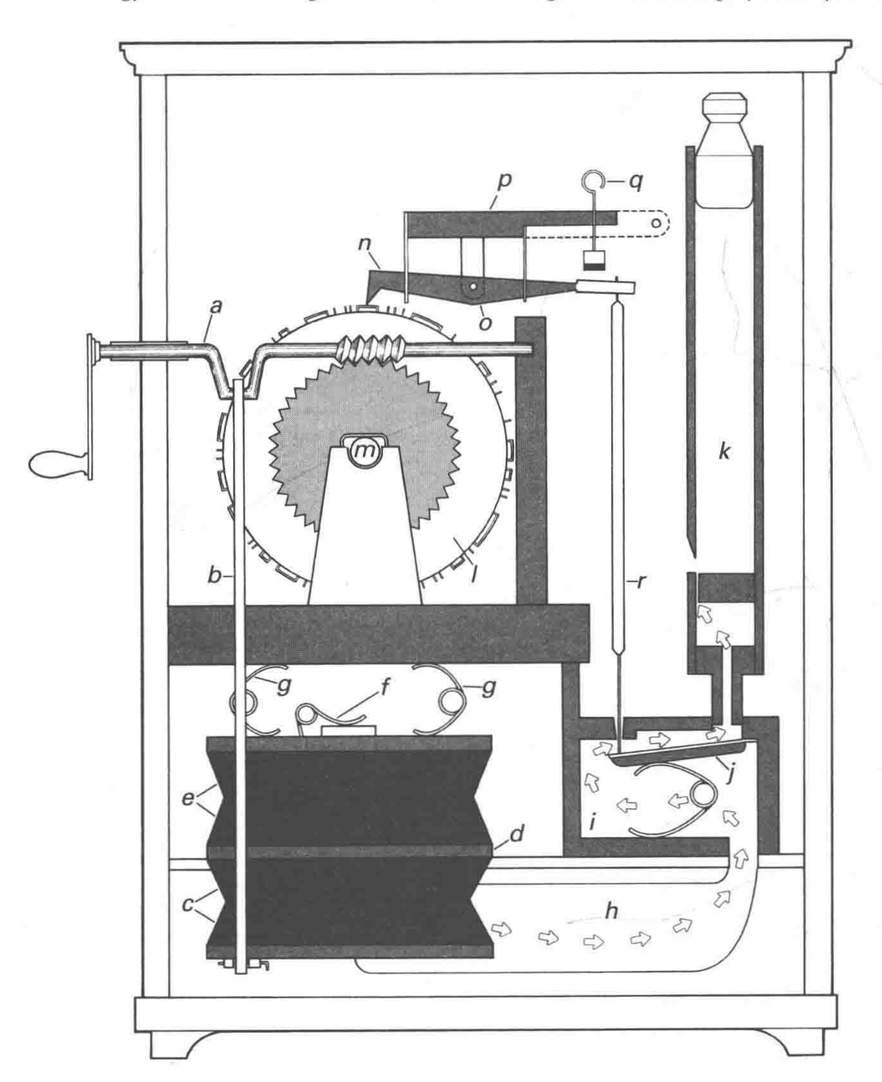
PAUL OLIVER

Barrel organ [hand organ, cylinder organ, box organ, street organ, grinder organ, Low Countries organ] (Fr. *orgue à manivelle*, *orgue de Barbarie*; Ger. *Drehorgel*, *Leierkasten*, *Walzenorgel*; It. *organetto a manovella*, *organo tedesco*). A mechanical instrument in which the musical programme is represented by projections on the surface of a slowly rotating barrel or cylinder.



In its common form, the barrel organ comprises a small pipe-organ offering 14 notes or more in a non-chromatic scale and represented on between one and four stops or registers controlled by drawstops. To save pipes and space as well as expense, tunes were frequently pinned in only two or three keys, G and D being usual. The music is provided by a pinned wooden barrel arranged horizontally within the organ case and rotated by a worm gear on a cross-shaft extending outside the case and terminating in a crankhandle. This cross-shaft also carries one or (more usually) two offset bearings like a crankshaft and to these are attached reciprocators which pass to the lower part of the organ where a simple air bellows and reservoir is provided. Turning the crankhandle thus fulfils two purposes: it pumps wind into the organ chest and it turns the barrel. As the barrel is rotated, its circumference

passes beneath a simple frame containing pivoted metal levers or 'keys'. These keys engage with the barrel pins and are lifted by them. The lifting motion causes the rear end of the key to be depressed, pushing down a slender wooden sticker which enters the wind-chest and controls the pallet to allow wind from the bellows reservoir to enter a particular pipe and produce a sound. In all respects, other than the replacement of a manual keyboard by the mechanical keyframe and the barrel, the barrel organ mechanism is merely a simplification of the conventional pipe organ. Besides pipework, some instruments also included percussion in the form of a drum with two beaters, and a triangle. Rarely, an abbreviated octave of bells would also be added. The mechanism is one of simplicity and extreme effectiveness. That some instruments are still in playing order after 150 or 200 years, with little or no repair work or restoration, is evidence of the practical design and durability of the basic organ component assemblies. The mechanism of the barrel organ is illustrated in fig.1; for the cylinder mechanism itself, *see* MECHANICAL INSTRUMENT, fig.1.

There can be few musical instruments whose nature and construction have given rise to so much confusion in terminology as the barrel organ. The term barrel organ has often been used indiscriminately to describe what is in fact a BARREL PIANO or the small street organ whose music programme is represented on perforated card or paper (*see* ORGANETTE and PLAYER ORGAN). While it is certainly true that small barrel organs were very popular on the streets in the late 18th and early 19th centuries (makers such as Bruder in Germany, White & Langshaw in London and Gavioli in Paris made some extremely fine portable street organs), they were in general replaced by the barrel piano in the mid-19th century.

Although descriptions of automatic and hand-operated water organs go back to the 3rd century BC (*see* HYDRAULIS; ORGAN, §IV, 1; and WATER ORGAN), the first description of an automatic organ using a pinned cylinder appears in the 9th-century Arabic text by the *Banū Mūsā* of Baghdad, which discusses in detail an improvement to the hydraulic flutes originally described by Archimedes (*d c*212 BCE) and Apollonius of Perga (3rd century BCE). These early sources are discussed by Farmer (1931); *see also* MECHANICAL INSTRUMENT, §2.

The oldest surviving barrel organ in playing condition is that built into the wall of the fortress of Hohensalzburg, built by an unknown maker in 1502, restored many times and still played daily. It is currently being restored again

1. Mechanism of the barrel organ

to play its original musical programme. The barrel organ had been perfected by 1597 when the Levant Company, with the approval of Queen Elizabeth I, ordered an elaborate mechanical organ to be sent as a gift to Sultan Mehmed III of Turkey, and Thomas Dallam was entrusted with making and assembling it as well as delivering and erecting it (1599–1600) in the sultan's palace. Dallam's remarkable diary, reproduced by Mayes, gives full details of the organ.

In 1615 Salomon de Caus described and illustrated an instrument in which the barrel was divided into musical bars and each bar into eight beats for the quavers. The whole drum was pierced with holes at the intersecting points so that the pins could be moved and reset to produce another tune. De Caus did not claim to have invented the instrument, only the adaptation of hydraulic power to rotate the drum. He admitted that he had derived inspiration from the writings of Vitruvius (1st century CE) and Hero of Alexandria (1st century CE). The organ was bellows-blown.

Robert Fludd (*Ultriusque cosmi*, 1617–24) depicted very inaccurately a barrel organ activated by hydraulic air compression. Similar drawings and descriptions were given at this period by others including Kircher (1650) and Caspar Schott (1664). In his *Gabinetto armonico* (1722) Filippo Bonanni depicted an 'organo portile': a small barrel organ shown resting on the player's left hip, supported by a sling over the right shoulder; the player turns the handle with his right hand.

In 1752 Leonhard Euler (1707–83) and a Berlin mechanic, Hohlfeld, produced a device, called the Melograph, for recording keyboard performances so that they could be converted into pinned barrels. Similar experiments were made by several other makers (e.g. JOHN JOSEPH MERLIN), but without much success until the invention of the REPRODUCING PIANO at the beginning of the 10th century.

Details of the construction of the barrel organ in the 18th century were given by MARIE DOMINIQUE JOSEPH ENGRAMELLE and by FRANÇOIS BÉDOS DE CELLES. The former's account is of special importance as it describes the method of arranging the music while the latter giving great detail regarding pinning the barrels to give a particular tune.

Instruments were made for both secular and church use and frequently used the same style case; these are referred to as 'church and chamber' barrel organs. Normally each barrel might contain eight or ten tunes, so with four barrels the repertory could be quite large. Secular instruments were often provided with barrels of jigs and reels for dancing and popular airs from the operas and national songs, while for Sundays there would be a barrel of hymn tunes. Such instruments might be 70 cm wide and 180 cm high. The smallest chamber barrel organ was the *serinette* or bird organ (*see* BIRD INSTRUMENTS, §1), typically measuring some 34 cm wide by 20 cm deep and standing 18 cm high.

While English and French instruments of this type are invariably hand-turned and fully automatic, clockwork-driven instruments were also made, especially in Austria, powered with descending weights. The heavy weight, sometimes in excess of 60 kg, would be wound up to the top of the case using an internal hand-winch. When set to play, the thrust of the descending weight would be regulated by the clockwork mechanism which also turned the barrel and pumped the bellows. Clockwork barrel organs of a very high quality, both weight-and spring-driven, were also made in southern Germany, Black Forest and Bohemian makers being among the best in the world. Some of these very large instruments were fully chromatic. From them the barrel organ developed in three directions: the miniature barrel organ as used in the MUSICAL CLOCK, the large automatic ORCHESTRION, and the FAIRGROUND ORGAN.

The barrel organ has enjoyed a particularly rich history in England. It has been said that the barrel organ was first introduced into an English church about 1700, that one was installed in that year in the church of King Charles the Martyr, Peak Forest, Derbyshire, and that the instrument was still there in 1870. It has also been asserted that early in the 18th century a certain Wright of London built a barrel organ for All Saints, Fulham. Unfortunately, none of these stories can be corroborated. Instruments were certainly in use around the middle of the 18th century as replacements for church bands or, where churches had ordinary organs for incompetent organists. The peak period of the church barrel organ may be regarded as *c*1760–1840; during that time hundreds were made by over 130 makers, principally in London. Among the earliest makers were John Tax of St Martin's Lane (known to have been active in 1753) and E. Rostrand of Orange Court, Leicester Fields, who made 'all sorts of Chamber-Organs to play with fingers or barrels'. A small chamber barrel organ of his has four stops and two barrels of eight tunes. It is dated 1764 and is still in working order. During the height of the barrel organ's popularity, virtually every organ builder also made mechanical instruments. Such was the skill of these makers and their barrel-pinners that Burney, commenting on the general use of barrel organs, added that, 'the recent improvements of some English Artists have rendered the barrel capable of an effect equal to the fingers of the first-rate performers'.

Chamber barrel organs were often enclosed in very handsome cases which reflect the high standard of cabinet making of the period. Church barrel organs, too, were set in elegant cases but varied greatly in size. Some were placed in a gallery or loft as at Brightling, East Sussex; Hampton Gay, Oxfordshire; Woodrising, Norfolk; Raithby, Lincolnshire; Avington, Hampshire; Sutton, Bedfordshire; and Muchelney, Somerset. Others, usually of small dimensions, stood on the floor of the church. The music played is itself of great interest because an analysis of both the church and secular repertory reveals the popularity of certain tunes. The titles of some 1300 such tunes have been listed by Langwill and Boston.

In the early 19th century several important developments took place. The first was the design of a 'revolver' system to make barrel-changing simpler. Three or more barrels were mounted between circular hoops in a pivoted frame, and the whole mechanism could be unlocked and rotated in a matter of seconds to bring a fresh barrel into play. A large barrel organ with a revolver mechanism for four barrels was built for Northallerton Church by Bishop in 1819. Forster & Andrews of Hull advertised a barrel organ with 'three barrels in a frame' in 1845, and in the following year offered to install improved instruments with three, four or five barrels.

The larger instruments for use in church were also provided with separate mechanisms for blowing and for

2. *Barrel organ, built c1800, played by Sidney Armstrong in the parish church of King Charles the Martyr, Shelland, Suffolk*

turning the barrel. The bellows were operated either by a blowing lever or by a foot pedal so the player could continue to blow while holding the barrel on a particular note or chord. This improvement allowed 'pointing' for psalm-singing.

For those churches already equipped with an ordinary organ, yet desirous of the benefits of the mechanical player, the 'dumb organist' was introduced in about 1800 to enable a barrel mechanism to be applied to a normal manual organ. It consisted of an oblong box which was fitted on top of the organ keyboard and which contained virtually all of the programme parts of a normal barrel organ save the pipes and bellows. The keyframe stickers projected from the bottom of the box and rested on the keyboard keys so that as the operator turned the crank handle, the stickers moved up and down to play the organ. A number of dumb organists survive.

By the end of the 18th century, barrel mechanisms attached to or built into organs were so common that contemporary records reveal quite specific terminology. Instruments are described variously as 'finger organs' (i.e. played with the fingers) or as 'barrel-and-finger organs'. In the latter the barrel-playing mechanism was built into ordinary organs; this offered the best of both worlds for both home and church. A number of these survive despite the ruthless age when so many such mechanisms were considered redundant and scrapped. The largest barrel-and-finger organ in the world was the APOLLONICON which could reproduce orchestral music: each work in its repertory was represented on a set of three very large wooden barrels.

As the 19th century entered its second half, the barrel organ began losing ground. An indication of the end of the barrel organ period may be gained from the last advertisement of Bates and Son who, in 1864, were selling off secular organs from £2 2s and church organs at £10.

LYNDESAY G. LANGWILL/ARTHUR W.J.G. ORD-HUME

Barrel piano [cylinder piano, self-acting piano, street piano, café piano; sometimes inaccurately called barrel organ or hurdy-gurdy]. A piano played automatically by a pinned barrel or cylinder. In the form made in London by William Rolfe (from 1829) and others, an ordinary piano was augmented by a pinned wooden cylinder placed inside the case under the keyboard. This barrel was provided with a mechanical keyframe and a series of linkages or stickers which extend behind the soundboard to the top of the piano and operate an additional set of hammers which strike the strings through a gap in the soundboard. The barrel is turned by a clockwork motor driven by a heavy weight which is wound up to the top of the case. (For an illustration *see* MECHANICAL INSTRUMENT, fig.4.)

About 1804 John Longman introduced a drawing-room barrel piano with no keyboard which was also weight-driven and included effects such as drum, triangle and buff stop. Around 1860 the Black Forest makers Imhof & Mukle introduced spring-driven clockwork barrel pianos, also for drawing-room use and without

Barrel piano in a London street, c1905

manual keyboard. In other types of barrel piano, the mechanism is operated by turning a hand crank. The domestic automatic piano dispensed with the cumbersome barrel in favour, first, of Debain's *Antiphonel* studded wooden strip piano player, then the perforated roll of the piano player and later the PLAYER PIANO.

The keyboardless hand-turned barrel piano enjoyed one and a half centuries of popularity as a street instrument. The street barrel piano is thought to have emanated from Italy around 1800. By 1805 the Hicks family of Bristol was making small portable barrel pianos, sometimes inaccurately called 'portable dulcimers', which could be carried by itinerant musicians. Joseph Hicks excelled in making these, and George Hicks, who worked for a time in London, took the craft to New York. The large street piano mounted on a handcart was also developed in Italy, and migrant craftsmen took their skills all over Europe and North America. These open-air instruments underwent a variety of improvements; some models, known as 'mandolin' pianos, were made with mechanically driven repeating actions, while others included percussion in the form of drum, triangle and xylophone or wood-block. Some were augmented by a mechanism designed to show advertisements in a travelling picture display built into the vertical fall. Early in the 20th century an instrument with a coin-operated, spring-driven clockwork motor was introduced; these were widely used in public places, particularly public bars. In France and Belgium such instruments developed into large and decorative barrel-playing café pianos, often with elaborately carved cases embellished with mirrors. In the 1950s both Portugal and Spain produced a large number of small novelty barrel pianos on miniature handcarts for performing popular dance music and variety songs. An unusual barrel piano built in the form of a shallow living-room table, the Swedish *pianoharpa*, was invented in 1889 by I.F. Nilsson of Österkorsberga, near Lemnhult, patented and developed by the brothers Anders Gustaf and Jones Wilhelm Andersson of Näshult, near Vetlanda.

ARTHUR W.J.G. ORD-HUME

Barrera, Rodiano. *See* BARERA, RODIANO.

Barrera Gómez, Enrique (*b* Valladolid, 26 April 1844; *d* Valladolid, 3 July 1922). Spanish composer. He studied solfège and the piano in Valladolid, learning so rapidly that by the age of nine he was giving piano recitals. He also began to compose salon pieces – waltzes, polkas and mazurkas – and religious music. Some of these compositions are extant, dating from as early as 1854. In 1859 he moved to Madrid to attend the conservatory, where for eight years he studied the piano with José Miró and composition with Hilarión Eslava. At the same time, he made his living by playing the piano in cafés and salons and by giving lessons. Meanwhile he developed an interest in opera and attended performances at the Teatro Real.

On 22 January 1867 Barrera Gómez won by competition the post of choirmaster at Burgos Cathedral, which he held until his death, although in 1897 he was given dispensation from some of his duties because of ill-health. In 1869 the music publisher Antonio Romero announced a national opera competition, which Barrera won with *Atahualpa*, a Spanish opera based on an episode in the conquest of Peru. Another opera, *Saul*, was never staged. Most of his numerous works were written for Burgos Cathedral, and include masses, psalms and motets. (The autograph scores of many of them are extant there.) Of

those published, the best is a collection of organ sonatas. Barrera Gómez is one of the best Spanish composers of the second half of the 19th century. His melodies have great elegance and nobility of line. Notable also is the technical aspect of his compositions, the harmony, accompaniments and the richness of his orchestration.

JOSÉ LÓPEZ-CALO

Barrère, Georges (*b* Bordeaux, 31 Oct 1876; *d* New York, 14 June 1944). French flautist. Trained at the Paris Conservatoire, first with Altès under whom he made slow progress, then under Taffanel, Barrère was one of the most brilliant pupils to win a *premier prix*. His studies completed, he filled a number of important posts leading to the Opéra and Colonne orchestras. In 1895 he formed the Société Moderne des Instruments à Vent which replaced Taffanel's group, disbanded in 1893; during this period Barrère contributed a flute section to Widor's continuation of Berlioz's treatise on orchestration. In 1905 Damrosch invited Barrère to join the New York SO, with which he played, with only one break, for the rest of his life. As an exponent of the French style of flute playing, Barrère's influence was profound, and it is sad to realize that, in spite of his kindly and generous nature, his success led to the eclipse of Carl Wehner, Boehm's pupil and the doyen of flute teachers in New York. In the USA, as in France, Barrère founded small instrumental groups: in 1910 the Barrère Ensemble of Wind Instruments, and in 1915 the Little Symphony chamber orchestra. These activities continued until his death.

PHILIP BATE

Barret, Apollon(-Marie-Rose) (*b* Saint Brieuc, 15 Nov 1804; *d* Paris, 7/8 March 1879). French oboist and oboe designer. In 1823 Barret joined the class of Vogt at the Paris Conservatoire, and the following year was awarded the *premier prix*. His first appointment was with the orchestra of the Théâtre de l'Odéon; in 1827 he transferred to the Opéra-Comique. Two years later he was named first oboist at the Italian Opera in London, a position he held until 1874, concurrent with his activities as principal oboist in the Philharmonic Society and oboe teacher at the Royal Academy of Music.

Barret is known primarily for his improvements to the design of the oboe described in the second edition of his *Complete Method for the Oboe* (1862). His design prioritized simplifying the fingering and perfecting the intonation of trills throughout the range of the oboe. The means by which he achieved these results have had a lasting effect on the physical characteristics and mechanism of the modern French oboe, and in particular the key system still favoured by English players (notably the thumb plate). Despite remaining in England for much of his career, Barret maintained active contact with his homeland, and in particular with Triébert, the Parisian firm of oboe manufacturers who made instruments that incorporate his design features. The list of subscribers printed in the first edition of the *Method* (1850) also testifies to his international connections. As well as his pedagogic works, Barret composed a considerable array of virtuosic salon music for oboe.

WORKS
(*selective list*)

Ob, pf: Fantasie on La dernière rose d'été, from Flotow's Martha (1873); [3] Fantasies on Donizetti's Lucrezia Borgia (London, 1874); L'absense, romance sans paroles (London, 1874), arr. cornet, orch (London, 1874); Cantilène, romance sans paroles (London, 1874), arr. eng hn, pf (1882); Elégie à la mémoire de Charles Triébert (*c*1870); Mélange sur un motif d'Onslow (n.d.); Air languedocien varié (n.d.)

GEOFFREY BURGESS

Barrett, John (*b c*1676; *d* London, ?Dec 1719). English composer, organist and music master. From about 1686 to 1691 he was a chorister in the Chapel Royal under John Blow. He became organist of St Mary-at-Hill on 25 August 1693 and was appointed music master at Christ's Hospital on 28 September 1697. He held both these posts until his death. He contributed a poem in homage to Blow to *Amphion Anglicus* (London, 1700) and was elected to the Amicable Society of Blues in about 1704. It is possible that he married Mary Saunders on 9 March 1711 in St Mary-at-Hill.

Like many of his contemporaries, such as Jeremiah Clarke, John Eccles and Daniel Purcell, Barrett composed mainly for the theatre, and his many songs, mostly of the double-barrelled art song variety, are both tuneful and attractive, as are the several little keyboard pieces published in the first three books of *The Harpsicord Master* (1697–1702) and various other early 18th-century anthologies. The style is essentially Purcellian, but the use of motto openings in almost all the extended songs reveals an awareness of rather more up-to-date Italian vocal practice, and in one case (*Begone, begone, thou too propitious light*, n.d.) Barrett actually produces what must be one of the very first English recitative–aria–recitative–aria cantatas as such (though the term 'cantata' is not used). His incidental music for Shadwell's *The Lancashire Witches* was popular, and no fewer than 30 performances at Drury Lane between 1713 and 1729 are recorded; like that of several other plays to which he also contributed, however, it is no longer extant.

WORKS
all printed works published in London

INCIDENTAL MUSIC

The Pilgrim (J. Vanbrugh), ?1702 revival, act music in Harmonia Anglicana (1702), song (1702)

All for the Better, or The Infallible Cure (F. Manning), 1703, song (1703)

The Generous Conqueror, or The Timely Discovery (B. Higgons), 1702, act music in Harmonia Anglicana (1702)

Tunbridge Walks, or The Yeoman of Kent (T. Baker), 1703, act music in Harmonia Anglicana (1703)

The Albion Queens, or The Death of Mary, Queen of Scotland (J. Banks), 1704, act music in Harmonia Anglicana (1704)

The Tender Husband, or The Accomplish'd Fools (R. Steele), 1705, music lost, advertised in *The Post Man* (5–8 May 1705)

Hampstead Heath (T. Baker), 1706, music lost, advertised in *The Post Man* (20–22 Dec 1705)
The Fine Lady's Airs, or An Equipage of Lovers (T. Baker), 1708, act music, vns, obs (1709), song (1709)
The Fair Quaker of Deal, or The Humours of the Navy (C. Shadwell), 1710, music, vns, obs, lost, advertised in *The Tatler* (28–30 March 1710)
The City Ramble, or A Playhouse Wedding (E. Settle), 1711, song (1711)
The Wife's Relief, or The Husband's Cure (C. Johnson), 1712, music, vns, obs, lost, advertised in *The Post Man* (11–13 Dec 1711)
The Perplex'd Lovers (S. Centlivre), 1712, music, vns, obs, lost, advertised in *The Post Man* (19–21 Feb 1712)
The Lancashire Witches (T. Shadwell), 1713, music lost
The Wife of Bath (J. Gay), 1713, 3 songs (1713)
The Custom of the Manor (C. Johnson), 1715, 2 songs (1715)
Love's Last Shift, or The Fool in Fashion (C. Cibber), 1696, 7 pieces, *GB-Lcm*, 3 of which, *Cmc*; possibly the act music for The Relapse (Vanbrugh), 1697
Esquire Brainless, or Trick upon Trick, song (n.d.)

OTHER WORKS

O Sing unto the Lord, verse anthem, *GB-Ctc* (org pt only)
An Ode performed at the Anniversary Feast of the Gentlemen ... of Kent, London, Merchant Taylors Hall, 21 Nov 1700, lost
A Psalm of Thanksgiving to be Sung by the Children of Christ's-Hospital ... in Easter Week, 1698 [also (1704), (1706), 1709, 1712, 1713, 1716, 1718], Christ's Hospital Office
Numerous songs pubd singly and in 18th-century anthologies. Several tunes in D'Urfey's Wit and Mirth, or Pills to Purge Melancholy (1719), three of which were included in Gay's The Beggar's Opera, London, 1728
Sonata, tpt, ob, 2 vn, va, bc, *Lbl*; compressed version, as ov. to Tunbridge Walks, str (London, 1703)
2 voluntaries, org, *Ldc*, *Mp*, *J-Tn*
Pieces, hpd, *GB-Cfm*, *Lbl*, *Ob*, *Och*, several pubd in early 18th-century anthologies

CHRISTOPHER POWELL/H. DIACK JOHNSTONE

Barrett, Richard (*b* 7 Nov 1959, Swansea, South Wales). British composer. He only began to study music seriously after graduating in genetics and microbiology at UCL (1980). His principal composition teacher was Wiegold, with whom he studied privately, but under the influence of Xenakis, Hespos and Ferneyhough he became associated with the so-called New Complexity group of British composers, who broadly identified themselves with a radical European aesthetic. He became a member of the Composers' Forum at the Internationale Ferienkurse für Neue Musik, Darmstadt, in 1984, winning the Kranichsteiner Musikpreis there in 1986. He was awarded the Gaudeamus Prize in 1989. From 1989 to 1992, Barrett was composition tutor at Middlesex University, and in 1996 was appointed professor of electronic composition at the Institute of Sonology of the Hague Royal Conservatory. Between 1984 and 1993 he was co-director of Ensemble Exposé; he has also performed improvised music using live electronics, in particular with Paul Obermeyer, with whom he formed the duo Furt in 1987.

Most of Barrett's works are grouped into series with extra-musical connotations. These include the 11 scores collectively entitled *Fictions* – reflecting his long-standing preoccupation with the writings of Beckett, culminating in *Ruin* for six spatially disposed instrumental trios – and the four works of *After Matta*, inspired by the Mexican painter, Roberto Matta. Other compositions comprise several movements, which can also be performed independently: both *negatives* and *Opening of the Mouth* contain five. The latter was conceived as a performance environment in collaboration with the artist Crow; while the movement titles, which come from the work of Paul Celan, are indicative of Barrett's interest in a wide range of modern poetry. Barrett's creative methods are usually associated with a good deal of mathematical elaboration, often carried out with computer assistance. He has developed a program capable of developing pitch and other material, which is then subjected to a series of selection procedures; he does, however, retain ultimate responsibility for all creative decisions.

WORKS

DRAMATIC

Opening of the Mouth (P. Celan), 2 female vv, insts, tapes, live elecs, 1992–7; incl. knospend-gespaltener, air, CHARON, inward, Von Hinter dem Schmerz, abglanzbeladen/auseinandergeschrieben: see INSTRUMENTAL

JOHN WARNABY

Barrett, Thomas Augustine. *See* STUART, LESLIE.

Barrett, William Alexander (*b* London, 15 Oct 1834; *d* London, 17 Oct 1891). English church musician, writer and musical educationist. He was trained as a chorister at St Paul's Cathedral between 1846 and 1849, and worked first as a commercial artist and journalist; but in 1859 he became a professional lay clerk, and was appointed to the choir of St Paul's Cathedral in 1866. In the same year he was made music critic of the *Morning Post* and he subsequently became editor of the *Monthly Musical Record* (1877), *The Orchestra* (1881) and the *Musical Times* (1887). Barrett graduated BMus at Oxford in 1871 and was appointed assistant Inspector of Music in the same year, working first with Hullah, then with Stainer, until his death. He was joint editor with Stainer of the *Dictionary of Musical Terms* (1876); and also published *English Glee and Madrigal Writers* (1877), *English Church Composers* (1877), *Balfe: his Life and Work* (1882) and other works, including the collection *English Folksongs* (1890), one of the first products of the revival of interest in English folksong. Barrett's historical interests were supported by his own important collection of madrigals, glees and scarce musical literature. His son F.E.H.J. Barrett later became music editor of the *Morning Post*.

BERNARR RAINBOW

Barri, Leonardo. *See* BARRÉ, LEONARDO.

Barrientos, Maria (*b* Barcelona, 10 March 1884; *d* Ciboure, Basses-Pyrénées, 8 Aug 1946). Spanish soprano. After a short course of singing lessons at the Barcelona Conservatory, she made her début at the age of 14 at the Teatro Lirico in *La sonnambula*, followed by several other leading roles there and at the Teatro de Novidades. After further studies, she sang at Covent Garden (in *Il barbiere di Siviglia*, 1903), at La Scala (in Meyerbeer's *Dinorah* and in *Barbiere*, 1904–5), and at many leading theatres throughout the world. On 31 January 1916 she made her Metropolitan début in *Lucia di Lammermoor* and she appeared there regularly in the standard coloratura roles during the next four seasons. In later years Barrientos became an admired interpreter of French and Spanish songs, and made a valuable set of records, including Falla's *Siete canciones populares españolas* and *Soneto a Córdoba* with the composer at the piano. These complement many fascinating discs documenting her stage roles and displaying the charm of her airy *soprano leggero*.

DESMOND SHAWE-TAYLOR/R

Barriera [bariera, sbara]. A 16th- and early 17th-century dance found in lute and guitar tablatures. As described in Caroso's dance manuals *Il ballarino* (1581) and *Nobiltà di dame* (1600) and in Cesare Negri's dance treatise *Le gratie d'amore* (1602), it is representative of a battle. The music is based on the second part of Janequin's *La guerre*, which begins 'Fan frere le le lan fan'. This is a parody of a trumpet call, and it may be the trumpet call rather than Janequin's music that recurs so often in the barriera dance. A sbara was performed at the wedding of Francesco de' Medici and Bianca Cappello in 1579 and another at the wedding of Ferdinando de' Medici and Christine of Lorraine in 1589. The guitar tablatures of the early 17th century reduce Janequin's original music to the standard chord-strumming technique of the *rasgueado* style of guitar playing of the period, but, unusually, adding one melodic note.

ELAINE L. BEARER

Barrière, Etienne-Bernard-Joseph (*b* Valenciennes, 7 Oct 1748; *d* ?Paris, 1816 or 1818). French composer and violinist. He went to Paris at the age of 12 (according to Choron), where he studied composition with Philidor and the violin with André-Noël Pagin. At his début at the Concert Spirituel on 20 April 1767 in a concerto for violin, his playing was praised for 'la netteté, la justesse, la délicatesse et la sensibilité' (*Mercure de France*, May 1767). According to Hécart, he soon returned to Valenciennes where he taught the violin, composed more violin concertos, and had his opera *Le baille bienfaisant* (now lost) performed in 1775. The following year he went again to Paris and played at the Concert Spirituel. In 1778 he performed two of his own violin concertos. He is mentioned in the *Almanach musical* as '*Maître de violon*', and probably lived in Paris from 1776 to 1782. In 1778 he married Marie Geneviève Dombey. They had four children between 1779 and 1789, during which time they lived in Valenciennes and Paris. In 1801 he played a *symphonie concertante* with Lafont at a concert in the Salle Olympique, and also in 1801 (or 1802), according to Hécart, he was first violinist in Napoleon's chapel, a position which he did not hold long.

WORKS

MARY CYR

Barrière, Françoise (*b* Paris, 12 June 1944). French composer. She studied the piano at the Versailles Conservatoire and composition at the Paris Conservatoire; she also studied at the Service de la Recherche of the ORTF and at the Ecole Pratique des Hautes Etudes (ethnomusicology). She is committed to the development and dissemination of electroacoustic music, and to discussion of this music and its place in contemporary artistic creation. In 1970 she founded with Christian Clozier the Groupe de Musique Expérimentale de Bourges (GMEB), which is known for its creation of electroacoustic instruments for broadcasting or performance ('Gmebaphone'), and for beginners ('Gmebogosse'). Her works have been played widely and broadcast since 1970, when her *Ode à la terre marine* for tape was composed. Barrière writes for both electroacoustic and mixed media. Her music combines technological development, as for example the mixing techniques of *Aujourd-hui* (1975), which are placed at the service of the compositional process, with a deep humanity, evident in the personal reminiscences of *Musique pour le temps de Noël* and *Par temps calme et ensoleillé*. Of *Aujourd'hui* she wrote that she was inspired by the 'overwhelming solitude of the individual in our modern society'.

WORKS
(*selective list*)

for tape unless otherwise stated

Ode à la terre marine, 1970; Cordes-ci, cordes-ça, vn, hurdy-gurdy, tape, 1971; Variations hydrophilusiennes, 1971; Java Rosa, 1972; Au paradis des assassins, 1973; Ritratto di Giovane, pf, tape, 1972–3; Aujourd'hui, 1975; Chant à la mémoire des Aurignaciens, 1977; Musique pour le temps de Noël, sax, va, vc, perc, tape, 1979; Mémoires enfuies, 1980

Scènes des voyages d'Ulysse, 1981; Par temps calme et ensoleillé I, pf, tape, 1983; Par temps calme et ensoleillé II, vc, tape, 1985–9; Chant de consonnes, 1987; Le tombeau de Robespierre, 1989; L'envers des mots, 1990; Conversations enfantines, 1991; Nos petits monstres musiciens, child actor-musician, tape, 1992

PIERRE SABY

Barrière, Jean (*b* Bordeaux, 2 May 1707; *d* Paris, 6 June 1747). French composer and cellist. He probably lived in Bordeaux since at his death he was cited as a 'négociant de la ville de Bordeaux', and after his death a privilege was granted to a 'Sr Francois Barrière, prestre prébendier de l'église de Bordeaux, pour des Sonates et autres ouvrages de musique instrumentale du feu Jean Barrière'. In 1730 he lived in Paris as a *Musicien ordinaire de notre Académie Royale de Musique*. In 1733 he was granted a privilege for six years to publish 'plusieurs Sonates et autres ouvrages de musique instrumentale'. According to Fétis, he went to Rome in 1736 to study with the famous Italian cellist Francesco Alborea, called Francischello. He remained in Italy for three years, but probably did not study with Francischello, who was employed by the court in Vienna from 1726 until his death in 1739. Barrière returned to Paris in 1739 and continued composing for the cello: 'Le Sieur Barrière, de retour d'Italie à Paris, vient de faire graver son troisième livre de Sonates pour le Violoncelle' (*Mercure de France*, November 1739). In 1739 his privilege was renewed for 12 years, and during that time he published his last three books – one each for cello, *pardessus de viole* and harpsichord.

The cello sonatas include a variety of technical problems – passages in double 3rds, arpeggiated chords and multiple stops, and brilliant virtuoso passages extending into the upper range. Each sonata has four or five movements, beginning with a slow movement and ending with a quick one. Several Allegros are titled Allemanda and book 2 no.3 includes a Sarabanda and Minuetto after the Allemande. The final movement of book 2 no.6 is marked 'Giga'. Several sonatas include an 'aria' or simple songlike piece in 6/8 or 6/4 marked either 'amorosa' or 'gratioso'. In the variations on the aria of book 3 no.6 brilliant arpeggios run throughout the entire range (*C* to *a'*) while the aria melody is heard above (this sonata and possibly others may have been written for the cello piccolo). That the sonatas were meant to be accompanied by a second cello and a keyboard instrument is apparent from the Adagio of book 2 no.4, which includes an independent part for the second cello. Book 3 no.2 is for two cellos throughout with continuo (three cellos in all).

Books 3 and 4, published after Barrière's Italian journey, are technically more advanced and reflect his absorption of the Italian style. Many of the sonatas of book 3 include Italianate suite movements such as Giga and Corrente. These sonatas range from three to five movements, and several have transitional Adagios between movements. Some passages in his work suggest the use of the thumb of the left hand in the upper register (*e''* in book 5 no.6), a technique which he probably introduced in France.

The first five sonatas for the *pardessus de viole* (book 5) appear, rewritten with additional ornamentation, elaboration and idiomatic runs, as the first five sonatas in book 6 for the harpsichord. Following the six sonatas are five *pièces*, each named for a musician or acquaintance. Like Duphly and Rameau, Barrière entitled one of his pieces 'La Boucon' for Anne-Jeanne Boucon, who later married Mondonville.

Barrière, like Martin Berteau, was one of the finest cello virtuosos in France during the first half of the 18th century, and the first to write thoroughly idiomatic music for the cello. Although his playing was highly regarded, there are few extant specific descriptions of it. At a Concert Spirituel he played with 'grande précision' (8 September 1738, *Mercure de France*), and P.-L. d'Aquin wrote of him with highest praise: 'Le fameux Barrière, mort depuis peu, possedoit tout ce que l'on peut désirer ... il n'y avoit guère d'exécution comme la sienne'.

WORKS

MARY CYR

Barring (i). The drawing of vertical lines called 'bars' through a staff, system or score, in order to mark off metrical units by their horizontal spacing, and instrumental or vocal groupings by their vertical continuity or discontinuity; *see* BAR and NOTATION, §III, 4(iii). The term is commonly used for the scheme itself whereby such bars are drawn.

IAN HARWOOD

Barring (ii). The system of strips or bars of wood glued under the soundboard (or belly) of many string instruments, such as lute, guitar, violin, cello, harpsichord and piano. Since the number, position, size and method of fixing these bars affect the mode of vibration of the soundboard when excited by the strings, they are crucial to the tone of the instrument, more so, in fact than the materials and method of construction of the soundbox itself (*see* RIBS). The barring does also have a role in strengthening and supporting the belly under stress, but it is most importantly an essentially integral part of the resonating system.

Many modern string instruments are derived from forebears whose resonating surface was made of skin. To vibrate as responsively as skin, wood clearly has to be thin (little more than a millimetre on some lute bellies). Barring differentially loads the vibrating surface: to enhance tonal contrasts transverse bars on lutes are generally heavier towards the bass side of the soundboard, feathering away towards the treble. Soundboards of keyboard instruments are necessarily much heavier, and to optimize responses to low and high frequencies the wood of the board itself can be made thicker towards the bass strings, and thinner towards the treble.

The complexity of barring varies. Violins and cellos have a single BASS-BAR positioned parallel to the lowest string and close to the left foot of the bridge. Lutes characteristically have a number of transverse bars (*see* LUTE, §2). Guitars can have more complex arrays (*see* GUITAR, §1, and especially fig.1), often with radial barring ('fan-strutting') which distributes the energy localized at the bridge, as well as transverse bars. The latter, in order to avoid damping the vibration, may not be attached to the sides, a feature known also in lutes, where bars may be feathered away short of the edges of the belly. Approaches vary not only between different families of instruments, but also between different models of the same instrument, according to the function for which they are designed: thus flamenco guitars require different dynamics to those designed for the solo concert performance. Individual instruments may even be rebuilt with their barring modified to adjust tonal balance.

IAN MORRISON

Barring (iii). A left-hand technique used by players of many plucked instruments (and a few bowed instruments such as the viol) to facilitate the playing of chords (Fr. *jeu barré*). The first finger is laid flat across all the strings (whole *barré*), or some of them (half *barré*), behind a fret, leaving the other fingers free to stop the remaining notes of the chord (*see* BARRÉ). This technique increases the number of chords that can be played on plucked instruments, particularly those with more than four courses, such as the lute and the guitar.

IAN HARWOOD

Barrington, Daines (*b* London, 1727; *d* London, 14 March 1800). English lawyer and writer on music. The fourth son of John Shute, 1st Viscount Barrington, he was called to the Bar from the Inner Temple and held public offices between 1751 and 1785. His eldest sister, Sarah, married the amateur musician and music theorist Robert Price. Barrington's writings on music are remarkable for their observations on two relatively new topics: child music prodigies and animal communication. The former contains valuable firsthand accounts of five 'infant' musicians (Mozart, Charles and Samuel Wesley, William Crotch and Garret Wesley, 1st Earl of Mornington), and the latter includes an article on birdsong that was cited by Charles Darwin some hundred years later.

WRITINGS

'Account of a Very Remarkable Musician [W.A. Mozart]. In a Letter from the Honourable Daines Barrington, F.R.S. to Mathew Maty, M.D. Sec. R.S.', *Philosophical Transactions of the Royal Society*, lx (1770), 54–64
'Experiments and Observations on the Singing of Birds', *Philosophical Transactions of the Royal Society*, lxiii (1773), 249–58

JAMIE C. KASSLER

Barrios (Fernandez), Angel (*b* Granada, 4 Jan 1882; *d* Madrid, 17 Nov 1964). Spanish composer, guitarist and violinist. The son of a flamenco guitarist, he studied harmony, the violin and the guitar in Granada, giving most of his attention to the latter instrument. Later he studied in Madrid with del Campo and in Paris with Gédalge. In 1900 he founded the Trio Iberia (lute, bandurria, guitar), for which he wrote many arrangements and with which he toured Europe. Though productive in his youth, he wrote very little after the civil war.

WORKS
(*selective list*)

Dramatic: La culpa (op, 3, G. Martínez Sierra), Madrid, 1914 [collab. del Campo]; La romería (zar, 2, L.L. Dominguez), Madrid, 1917 [collab. del Campo]; El avapiés (op, 3, T. Borrás), Madrid, Real, 18 March 1919 [collab. del Campo]; Granada mía (sainete granadino, 2, A. López Monís), Madrid, 1919; La suerte (sainete lírico, 1, S. and J. Alvarez Quintero), Madrid, 1926; La Lola se va a los puertos (zar, 32, A. and M. Macado), Madrid, 1951 [also op,

2, G. and R. Fernández Shaw, after A. and M. Machado, perf Madrid, 1955]; incid music
Orch: Impresiones de Granada (Zambra en el Albaycín), sym. poem, 1917; Una copla en la fuente del Avellano, sym. poem, 1918; Danzas gitanas, 1923; Copla de soleá

CARLOS GÓMEZ AMAT

Barrios Mangoré, Agustín (Pío) [Barrios, Agustín Pío] (*b* San Juan Bautista de las Misiones, 5 May 1885; *d* San Salvador, 7 Aug 1944). Paraguayan guitarist and composer. In his youth in Asunción he studied the guitar with Gustavo Sosa Escalada and composition with Nicolo Pellegrini, and practised his compositional skills by transcribing works by Bach, Beethoven and Chopin. In 1910 he left Paraguay intending to give a week of concerts in Argentina, but such was his success that he was away for 14 years, playing in Brazil, Chile and Uruguay (where he studied with Antonio Giménez Manjón). He found a patron in the diplomat Tomás Salomini, who arranged recitals for him in Mexico and Cuba. His first real successes date from about 1919, when he played for the President of Brazil. In 1930 he adopted the pseudonym Mangoré (after a legendary Guaraní chieftain), and in 1934 he went to Europe with Salomini, living in Berlin and visiting Belgium and Spain. In 1936 he returned to Latin America, and taught at the conservatory in San Salvador from 1939 to 1944. Critics compared Barrios Mangoré with Segovia as an interpreter and with Paganini as a virtuoso. He was the first Latin-American guitarist of stature to be heard in Europe, and made numerous recordings between 1913 and 1929.

Although he lacked a formal musical education, Barrios Mangoré wrote guitar music of high quality that combined many of the characteristics of his predecessors, Sor and Tárrega. He reputedly composed about 300 works for solo guitar, of which over a third have been located either in manuscripts or from his recordings. These include *La catedral*, *Danza paraguaya*, *Un sueño en la floresta*, *Preludio*, op.5 no.1, *Julia Florida*, *Una limosna por el amor de dios*, *Mazurka apasionata*, *Vals*, op.8 nos.3 and 4, and Variations on a Theme of Tárrega, all of which have become part of the repertory.

PETER SENSIER/RICHARD D. STOVER

Barron, Bebe [née Charlotte Wind] (*b* Minneapolis, 16 June 1927). American composer. She and her husband Louis Barron were pioneers in the field of electro-acoustic music. She received the MA in political science from the University of Minnesota, where she studied composition with Cordero, and she also spent a year studying composition at the University of Mexico. In 1947 she moved to New York and, while working as a researcher for *Time-Life*, studied composition with Riegger and Cowell. Married that year, the Barrons began their experiments with taped electronic sounds; in 1948 in New York they established one of the earliest electro-acoustic music studios. It contained both disc and tape equipment with sine- and square-wave oscillators, mixers and filters, and four synchronous projectors used for the manipulation of sound on optical tracks. Their experiments led the Barrons to use and develop characteristics of individual circuits to create different types of sound events, each of which was considered a Gestalt, and they eventually constructed a large collection of cybernetic circuits for compositional use. When they collaborated on a composition, Louis designed and built the electronic circuits for sound generation while Bebe searched the taped material for its musical potential and proposed the application of particular processing and compositional techniques.

Their first fully realized work was *Heavenly Menagerie* (1951–2). During 1952 and 1953 their studio was used by Cage for the preparation of his first tape works. In 1956 they composed the music for *Forbidden Planet*, one of the first electronic scores written for a commercial film, and an influential work in the development of electronic music. In 1962 the Barrons moved to Los Angeles, where, although divorced in 1970, they continued to collaborate on compositional projects. Bebe became the first Secretary of the Society for Electro-Acoustic Music in the United States in 1985 and also served on the Board of Directors. In 1997 she was presented with an award from the Society for Electro-Acoustic Music in the United States for the Barrons' joint lifetime achievement in electro-acoustic music.

WORKS

all electro-acoustic, composed with Louis Barron

Dramatic: Legend (American Mime Theatre), 1955; Ballet (P. Feigay), 1958; incid music for 4 plays, 1957–62
Tape: Heavenly Menagerie, 1951–2; For an Electronic Nervous System, 1954; Music of Tomorrow, 1960; Spaceboy, 1971; Thc Circe Circuit, 1982; Elegy for a Dying Planet, 1982
Film scores: Bells of Atlantis (I. Hugo), 1952; Miramagic (W. Lewisohn), 1954; Forbidden Planet (F.M. Wilcox), 1956; Jazz of Lights (Hugo), 1956; Bridges (S. Clarke), 1959; Crystal Growing (Western Electric), 1959; The Computer Age (IBM), 1968; Spaceboy (R. Druks), 1973 [arr. of 1971 tape piece]; More than Human (A. Singer), 1974; Cannabis (Computer Graphics), 1975

BARRY SCHRADER

Barron, Louis (*b* Minneapolis, 23 April 1920; *d* Los Angeles, 1 Nov 1989). American composer. He and his wife Bebe wrote pioneering works in the field of electro-acoustic music. He studied the piano and wrote jazz criticism while a student at the University of Minnesota. He then worked for the Gallup organization as a social psychologist. Married in 1947, the Barrons established one of the earliest electro-acoustic music studios, in which Louis's knowledge of electronics allowed him to design and build so-called behavioural circuits, based on Norbert Wiener's science of cybernetics.

A fuller discussion of the Barrons' compositional techniques, with a list of their collaborative works and a bibliography, can be found under BEBE BARRON.

BARRY SCHRADER

Barrón, Ramón González. *See* GONZÁLEZ BARRÓN, RAMÓN.

Barroso, Ari (Evangelista) (*b* Ubá, 7 Nov 1903; *d* Rio de Janeiro, 9 Feb 1964). Brazilian composer and conductor. In 1920 he moved to Rio de Janeiro where he developed his career, first as a pianist in dance bands and cinemas, then as a composer of pieces for musical theatre, as a radio programmer and announcer, and later as a television programmer. He also composed the sound tracks for various films, especially Walt Disney's *The Three Caballeros* ('Você já foi à Bahia?'), for which he received a diploma from the Hollywood Academy of Cinematographic Sciences and Arts. In 1955, the Brazilian government bestowed upon him, together with Villa-Lobos, the National Order of Merit.

Barroso greatly contributed to the establishment of the classic urban samba in the 1930s. Among the over 160 sambas that he wrote, those of the 1930s and 40s have remained the most popular. Such pieces as *Faceira* (1931), *No tabuleiro da baiana* (1937), *Na Baixa do Sapateiro* (1938), *Morena boca de ouro* (1941), *Os quindins de Iaiá* (1941), among many others, won him prestige and reputation. None, however, had the national and international impact and recognition of his *Aquarela do Brasil*, recorded in the USA as *Brazil*. A 1939 'samba de exaltação', it exalted the beauty and patriotic values of the country in strongly nationalistic terms, and virtually became Brazil's popular 'national anthem'.

GERARD BÉHAGUE

Barroso Neto, Joaquim Antônio (*b* Rio de Janeiro, 30 Jan 1881; *d* Rio de Janeiro, 1 Sept 1941). Brazilian composer and pianist. He began his piano studies at an early age and later attended the then Instituto Nacional de Música, under Bevilacqua, Braga, Nascimento and Nepomuceno. He was appointed a professor of piano at the same institution in 1906, becoming in a few years one of Brazil's most celebrated piano teachers. For some time he was a member of the Barroso-Milano-Gomes Trio. In the early 1920s he took over the artistic directorship of the Sociedade de Cultura Musical. His consistent interest in choral music resulted in the foundation of the Côro Barroso Neto in 1936. Barroso Neto wrote only piano music, solo songs and choral works. His extensive piano output includes many pieces in a typical Romantic virtuoso style; and others, such as *Minha terra* and *Chôro*, with more national features. He also produced educational piano music, including *Estudos de agilidade*, *Coleção de estudos* and his editions of Clementi, Czerny and Cramer-Bülow. His best-known solo songs are *Canção da felicidade*, *Adeus*, *Olhos tristes* and *Felicidade*.

GERARD BÉHAGUE

Barrta, Josef. *See* BÁRTA, JOSEF.

Barrueco, Manuel (*b* Santiago de Cuba, 16 Dec 1952). American guitarist of Cuban birth. He studied at the Esteban Salas Conservatory in Santiago de Cuba and with Aaron Shearer at the Peabody Conservatory. He won first prize in the Concert Artists Guild Competition in 1974, and that year made his début at Carnegie Hall. In 1986 he gave the first American performance of Takemitsu's concerto *To the Edge of Dream* with the Tulse PO under Bernard Rubenstein. He was also soloist in the world première of Takemitsu's *Spectral Canticle*, a double concerto for guitar, violin and orchestra, with violinist Franz Peter Zimmerman at the Schleswig-Holstein Music Festival, Kiel, in 1995. Barrueco has made several recordings, notably of Albéniz and Granados, and has arranged works for the guitar including transcriptions of J.S. Bach's Three Violin Sonatas. He helped establish the guitar department at the Manhattan School of Music, and also teaches at the Peabody Conservatory.

THOMAS F. HECK

Barry, Gerald (*b* Clarecastle, Co. Clare, 28 April 1952). Irish composer. He graduated from University College, Dublin (BMus 1973) and went to Amsterdam on a Dutch scholarship to study with Piet Kee (organ) and Schat (composition). After returning to University College to complete the MA in 1975, he studied composition in Cologne with Stockhausen and Kagel and in Vienna with Cerha. He worked for a period as a pianist and organist in Cologne before being appointed in 1982 to a lectureship in music at University College, Cork. In 1986, election to Aosdána (the state-sponsored academy of creative artists) and increasing international recognition enabled him to devote himself to full-time composition. His music gained much critical acclaim in the late 1980s with major performances in London: the orchestral *Chevaux-de-frise* was commissioned for the Henry Wood Promenade Concerts in the Royal Albert Hall in 1988 and his opera *The Intelligence Park* was staged at the Almeida Festival in 1990. In 1995 a second opera, *The Triumph of Beauty and Deceit*, was broadcast on Channel 4 TV.

The influence of Kagel is evident in Barry's use of quotation techniques and his predilection for music theatre. Much of his quotation material is derived from sources from the 17th and 18th centuries, in particular Bach and Handel. Handel's sense of theatre and vocal line provides much of the inspiration for the three-act *The Intelligence Park*. Set in Dublin in 1753, it deals with an opera composer whose love for a castrato restores his creativity; it is, in essence, an opera within an opera. *The Triumph of Beauty and Deceit* for five male voices and chamber ensemble is a reworking of Handel's last oratorio, *The Triumph of Time and Truth*, and exemplifies well Barry's preoccupation with melody and linearity. The Baroque influence is also evident in the way in which instrumental colour is rendered subservient to line. Indeed, many of his pieces can be played by any instruments: the graphically entitled '_____' for chamber ensemble appears in extended form as *Au milieu* (1981) for piano solo, while "Ø" (1979) for two pianos was arranged for various different instruments as *Sur les pointes*.

Barry's pitch material is often derived by means of aleatory processes from such abstract sources as a chart showing the locations of John Jenkins's manuscripts (as in '_____'), the words of the BBC Radio 4 shipping forecast and dissonant harmonies formed by selective use of the passing notes in Bach chorales (as in *The Intelligence Park*), or, in the case of "Ø", by the addition and use of inessential contiguous pitches in the Irish melody *Bonny Kate*. Structurally, his pieces appear to start suddenly in mid-flow and end just as abruptly; elaboration of material is more important than any developmental progression and prolonged pauses can punctuate the course of the music unexpectedly. Episodic sections within pieces shift unpredictably and are accompanied by abrupt dynamic and tempo changes. The momentum generated by the relentless rhythmic energy and extreme virtuoso demands made on the performer results, perhaps, from the fact that he composes at the keyboard and improvizes constantly. Barry has withdrawn all his works before 1977; the first work that he acknowledges is the piece of music theatre *Things That Gain By Being Painted* (1977), a setting of *The Pillow Book* by the 10th-century Japanese lady-in-waiting Sei Shonagon.

WORKS
(*selective list*)

Stage: Things that gain by being painted (music theatre, Sei Shonagon: *The Pillow Book*), 1v, spkr, vc, pf, 1977; The Intelligence Park (op, 3, V. Deane), 1981–8; The Triumph of Beauty and Deceit (op, M. Oakes), 1991–2

GARETH COX

Barry, John [Prendergast, John Barry] (*b* York, 3 Nov 1933). English composer. He left school at 15 and gained early film experience as a projectionist in his father's cinemas in York. Through hearing film scores by established Hollywood composers such as Steiner, Korngold, Waxman, Newman and North, he determined upon a career as a film composer. He played the trumpet in a local band, and later in the army during his National Service (1952–5). He studied with Francis Jackson, organist of York Minster, and by correspondence with Joseph Schillinger and William Russo, gaining experience by arranging for several bands. In 1957 he formed John Barry and the Seven (later becoming the John Barry Seven, which toured until early 1966), and was musical director for Adam Faith on several hit songs, including *What do you want* (1959). The Seven's own *Hit and Miss* (1960) was taken up as the theme to the BBC's popular show 'Juke Box Jury'. During this period Barry wrote, performed and recorded pop music, making his first BBC television broadcast (on 'Six-Five Special') in 1957. He then worked in managerial capacities with various record companies, including EMI and the independent Ember International. Following his first jazz inflected rock and roll film score for *Beat Girl* (1959), featuring Adam Faith, he quickly became established, notably for his fusion of rock, pop and jazz in the numerous James Bond films, beginning with his arrangement of the Bond theme for *Dr No* (1962; score composed by Monty Norman) and concluding with his score for *The Living Daylights* (1987).

In between these overtly commercial films he frequently worked with the British director Bryan Forbes, contributing jazz numbers to *The L-Shaped Room* (1962), followed by collaborations on *Séance on a Wet Afternoon* (1964), *King Rat* (1965), *The Wrong Box* (1966), *The Whisperers* (1967) and *Deadfall* (1968), in which Barry himself appears conducting the LPO in a guitar concerto (Romance for guitar and orchestra), written to accompany a robbery sequence. Over many years he has built a song-writing partnership with the lyricist Don Black, with whom he collaborated on the musical *Billy*, after the novel *Billy Liar* by Keith Waterhouse. Its fantasy sequences gave full range to Barry's stylistic versatility and the show ran successfully at Drury Lane from May 1974 with Michael Crawford in the title role. When not orchestrating his own music, Barry has worked with several orchestrators including Bobby Richards, Al Woodbury and Greig McRitchie. He moved to America in 1975, first to Los Angeles and then New York (1980).

His stylistic versatility has enabled him to write for every genre of feature film – adventure, action, comedy, drama, romance and thriller – as well as for television. Although finding many commissions artistically rewarding, he has expressed candid views on some of his work, characterizing the James Bond scores as big-budget 'Mickey-Mouse' music that gives the public what it wants, and, despite being the recipient of two Academy Awards for *Born Free* (1966), admitting that he scored it as a satire on a sentimental Disney picture. Some commentators have identified stylistic fingerprints in whatever Barry writes, citing the recurrent use of typical instrumental textures (for example, xylophone with strings and high flute in his 'Bond' movies), even of individual instruments. His skill, however, equips him to assume specific classical and popular styles, as in his imitation of Duke Ellington for *The Cotton Club* (1984), or the traditional 'western' symphonic score for *Dances with Wolves* (1990). Barry has won five Academy Awards: *Born Free* (1966; Best Score and Best Song), *The Lion in Winter* (1968), *Out of Africa* (1985) and *Dances with Wolves* (1990).

DAVID KERSHAW

Barry, Margaret [Maggie] (*b* Cork City, Ireland, 1 June 1917; *d* County Down, N. Ireland, 1989). Irish singer and banjo player. Born into a family of musical semi-settled travellers, Barry left home to become a street singer when she was 15 years old. She began by busking the queues outside Cork's Coliseum cinema, then travelled throughout Ireland by bicycle and horse-drawn bow-top wagon, performing at markets, country fairs, football matches and house ceilidhs. After recording her at Dundalk Fair, Co. Louth, in 1951, the American folk music collector Alan Lomax (*see* LOMAX, (2)) introduced Barry to London where she performed on the BBC television programme *Song Hunter* and in Irish public houses. She formed a duo with Sligo fiddler Michael Gorman and played in small dance halls in Ireland and America with him, before returning to London during the 1960s in reduced circumstances. Following Gorman's death, she went home to Ireland and continued as a solo performer. Barry's powerful street-singing vocal style together with her sparse yet appropriate five-string banjo accompaniments captured the imaginations of folk revivalists and guaranteed her a place in the history of traditional Irish music.

DAVE ARTHUR

Barry, Phillips (*b* Boston, 1880; *d* Framingham, MA, 1937). American ballad scholar. He studied folklore, theology and classical and medieval literature at Harvard, and was probably self-taught in music. He founded the Folk-Song Society of the North-East and edited its *Bulletin* from 1930 until his death. His academic training combined with his later fieldwork allowed him to develop a broad yet penetrating view of ballad creation, and he was the first North American scholar to investigate folksong in terms of text, tune, performance and transmission. His idea of 'individual invention plus communal re-creation', which was similar to Cecil Sharp's theory, proposed that a folksong was creatively re-made within the community each time it was sung; this view replaced prevailing theories of a communal origin of the folksong by means of group improvisation. He collected mainly in New England and collaborated with scholars in Vermont and Maine. Through his efforts, research methods used in ballad studies changed from scholarship based on library sources, as in the work of Child and Kittredge, to the study of traditional performers and a more complete analysis of folksong as a genre. His essay 'The Part of the Folksinger' (1961) was particularly influential.

JAMES PORTER

Barsanti, Francesco (*b* Lucca, 1690; *d* London, late 1772). Italian composer. He studied scientific subjects at the University of Padua, and then devoted himself to music. In 1714 he went to London with Francesco Geminiani (also a native of Lucca); there he played the flute and oboe in the orchestra at the Italian opera, and published three sets of solo sonatas. According to Bonaccorsi, he was back in Lucca in 1735, taking part in festivities at S Croce; but that seems unlikely, as by the second half of 1735 he was resident in Edinburgh. He spent eight years in Scotland, where he married a Scots woman, was much patronized by the aristocracy and published his finest compositions, ten concerti grossi (1742) and nine overtures (*c*1743). He also brought out arrangements of 30 Scots songs with continuo in Edinburgh in 1742 (not 1719, as stated by Bonaccorsi and Praetorius).

In 1743 Barsanti returned to London. By this time he had lost his place in London musical society and was forced to take a job as an orchestral viola player. Six Latin motets (*c*1750) were rather wistfully dedicated to a member of the Scottish aristocratic Wemyss family 'in recompense for many obligations'. His daughter Jenny, trained in singing by Charles Burney, later achieved success as a London opera singer and actress.

Barsanti's compositions are accomplished and original. His op.1 recorder sonatas are among the finest in the instrument's repertory. The op.3 concerti grossi have a contrapuntal glitter not unlike those of J.S. Bach; the main movements are constructed in semi-improvised forms, from themes which are stated once and then broken down into smaller imitative units. His Scots-tune arrangements are far more than a foreigner's temporary flirtation with local music-making: Fiske noted Barsanti's sympathetic understanding of Scots-tune structures, and his willingness to end a setting on an 'unfinished' dominant chord if the tune demanded it. Italian virtuosity and Scottish sympathy join forces in the op.4 overtures; the main movement of no.9 introduces the jig *Babbity Bowster* as a fugal countersubject, while the finale of no.2 is a country-dance, suggesting the ringing open strings of Scots fiddling. Much of Barsanti's work still awaits revival.

DAVID JOHNSON

Barshay [Barshai], **Rudol′f (Borisovich)** (*b* Krasnodarsk, 1 Oct 1924). Russian viola player and conductor. He studied the violin with Lev Zeitlin and the viola with Borisovsky at the Moscow Conservatory, and began his career in 1946 as an ensemble and solo player, gaining a high reputation and founding the Philharmonic Quartet of Moscow (now the Borodin Quartet) in which he played the viola. He then played in the even more outstanding Tchaikovsky Quartet led by Yulian Sitkovetsky, and took part in some of Leonid Kogan's all-star chamber ensembles. He also studied conducting with Ilya Musin in Leningrad. In 1955 he formed and conducted the Moscow Chamber Orchestra, whose programmes of Classical and contemporary music for small orchestra marked a new development in concerts in the USSR. Under his direction the orchestra became an outstanding ensemble, and toured widely abroad, first appearing in Britain in 1962; their first records in the West were issued in the same year. Barshay's performances were much admired for the exemplary unity of attack and phrasing and the sweetness of tone in the ensemble, but less so for his exaggerated range of dynamics. An outstanding recorded Mozart symphony cycle, the first to observe all the repeats, was free of this fault. A Beethoven cycle was marginally less successful. In 1967 he began to conduct major orchestras in the USSR and in 1969 he conducted the première of Shostakovich's 14th Symphony with Galina Vishnevskaya, Mark Reshetin and the MCO. His numerous transcriptions for small orchestra, notably of Prokofiev's piano suite, *Visions fugitives*, and of Shostakovich's Eighth String Quartet, are highly esteemed. In 1976 Barshay left the USSR and emigrated to Israel, where he directed the Israel Chamber Orchestra until 1981 and the New Israel Orchestra from 1977 to 1979. He served as artistic adviser to the Bournemouth SO (1982–8) and

endured an unsuccessful tenure as music director of the Vancouver SO (1985–8), and from 1987–8 was principal guest conductor at the Orchestre Nationale de France. Barshay returned to Russia in 1993, after an absence of 17 years, to conduct Mahler's 9th Symphony with the Russian National Orchestra. He has also appeared as guest conductor with the Moscow Radio Orchestra and the St Petersburg PO.

I.M. YAMPOL′SKY/JOSÉ BOWEN

Barski, Aleksander. *See* BANDROWSKI-SAS, ALEKSANDER.

Barsova, Inna Alekseyevna (*b* Smolensk, 10 Sept 1927). Russian musicologist. She graduated from the Moscow State Conservatory in 1951, and completed her postgraduate studies in 1954, having studied with Igor′ Sposobin, Viktor Zuckermann and Vladimir Protopopov. She took the *Kandidat* degree in 1970 with a dissertation on the early symphonies of Mahler, and was awarded the doctorate in 1980 for her monograph *Simfonii Gustava Malera*. She joined the department of orchestration at the Conservatory (1954), rising to senior lecturer (1973) and professor (1981). She was also professor at the conservatories in Nizhniy Novgorod (1979–92) and Minsk (1993–6).

Barsova's main area of research is the music of Mahler, and she has made a comprehensive examination of the creative and epistolatory legacy of the composer. She has addressed Mahler's relationship to Russia, and has written on Mahler and Dostoyevsky, his concert tours to St Petersburg, and the reception history of his music in Russia. She has also studied 20th-century composers such as Skryabin, Hindemith and Kancheli, and written on the Russian avant garde (the music of Mosolov and Shostakovich in the 1920s). Other areas of study include 19th-century Austrian and German music and history, aesthetics and the theory of music and musical analysis. Her work on score notation has approached the subject as a phenomenon of written culture manifesting itself in the context of the spatial discoveries of the Renaissance, along with the upheavals in the natural sciences, mathematics, cartography, architecture and fine art. Her work is characterized by its culturological direction, and its reference to psychological and linguistic data (an attempt has been made to provide an etymological analysis of musical language).

ABRAHAM I. KLIMOVITSKY

Barsova [née Vladimirova], **Valeriya (Vladimirovna)** (*b* Astrakhan', 1/13 June 1892; *d* Sochi, 13 Dec 1967). Russian soprano. She studied with her sister, Mariya Vladimirova, then in Umberto Mazetti's class at the Moscow Conservatory. She made her début with the Zimin Private Opera, Moscow, in 1919, later becoming a soloist at the Bol'shoy (1920–48). She also sang at Stanislavsky's and Nemirovich-Danchenko's opera studios. To a light, silvery tone and an agile technique she added warmth and depth of feeling. She sang Glinka and Rimsky-Korsakov roles; Gilda, Violetta and Leonora (*Il trovatore*); Butterfly and Musetta, Lakmé and Manon. After 1929 she toured in Germany, Britain, Turkey, Poland, Yugoslavia and Bulgaria. (G. Polyanovsky: *V.V. Barsova*, Moscow, 1975)

I.M. YAMPOL'SKY

Barstow, Dame **Josephine (Clare)** (*b* Sheffield, 27 Sept 1940). English soprano. She studied in Birmingham and London, then sang with Opera for All. In 1967 she joined Sadler's Wells, singing the Second Lady, Cherubino, Gluck's Eurydice and Violetta, her début role with the WNO, for whom she sang Countess Almaviva, Fiordiligi, Mimì, Amelia (*Boccanegra*), Elisabeth de Valois, Lisa, Jenůfa, Ellen Orford and Tatyana. Having made her Covent Garden début in 1969 as a Niece (*Peter Grimes*), she created Denise in *The Knot Garden* (1970), Young Woman in *We Come to the River* (1976) and Gayle in *The Ice Break* (1977), also singing Mrs Ford, Santuzza, Odabella (*Attila*) and Lady Macbeth, which she recorded on video for Glyndebourne. She has appeared in Paris, Berlin, Munich, San Francisco, Chicago, Boston and at the Metropolitan, where she made her début in 1977 as Musetta. For Sadler's Wells, later the ENO, she created Marguerite in *The Story of Vasco* (1974); she sang Jeanne with them in *The Devils of Loudun* (1973) and Autonoe with the New Opera Company in *The Bassarids* (1974), both British stage premières. Her repertory at the ENO includes Natasha, Leonore, Salome, Octavian, the Marschallin, Arabella, Leonora (*La forza del destino*), Aida, Sieglinde, Emilia Marty, Katerina Izmaylova, Kostelnička, the Old Prioress (*Dialogues des Carmélites*) and Ellen Orford. Her roles for Opera North include Cherubini's Medea and a much-acclaimed Gloriana. In 1986 at Salzburg she created Benigna in Penderecki's *Schwarze Maske*, then sang Tosca and Amelia (*Ballo in maschera*), recording the latter role with Karajan. An unusually intense actress with a vibrant, flexible voice of highly individual timbre, capable of expressing the strongest emotions, she excels in portraying troubled and distraught characters. She was made a CBE in 1985 and DBE in 1996.

ALAN BLYTH

Bart [Begleiter], **Lionel** (*b* London, 1 Aug 1930; *d* Hammersmith, 3 April 1999). English composer, lyricist and librettist of Austrian-Jewish descent. He studied at St Martin's School of Art and then became a graphic artist and scene painter. In the mid-1950s, as a member of the skiffle group the Cavemen, he wrote songs for its lead singer Tommy Steele, and also for Cliff Richard and Billy Fury. His subsequent songs for films starring Steele and Richard produced several hit numbers including *Living Doll* and *Little White Bull*. He worked on musicals for Joan Littlewood's Theatre Workshop at Stratford East, from where *Fings Ain't Wot They Used t' Be*, with lyrics inspired by cast improvisations, transferred to become his first West End success. In *Oliver!* (1960) he combined a Jewish modality ('Who will buy?', 'You've got to pick a pocket or two' and 'Reviewing the Situation'), music hall ('Consider Yourself'), overt sentiment ('Where is love?', 'As long as he needs me') and comic word play ('That's your funeral') to produce one of the most successful of all British musicals. The spectacular *Blitz!* (1962) was based on his own experiences in London during World War II, again with Bart's use of contained working-class communities as his main dramatic source. *Twang!!* (1965), which burlesqued the legend of Robin Hood, has become a famous West End disaster, and marked the start of both a personal and artistic decline; his musical *La strada*, after the film by Fellini, survived one performance on Broadway in 1969. His connection with Stratford East continued when he contributed songs to *The Londoners* and *Costa Packet* (both 1972). A resurgence of interest in his work followed the success in 1989 of his award-winning song *Happy Endings*, written for an advertising campaign, and there were major London revivals of *Blitz!* (1990), *Maggie May* (1992) and *Oliver!* (1994). Self-taught, his harmony and word underlay were sometimes idiosyncratic, and he relied on assistants to transcribe his melodies and harmonic indications.

WORKS
(*selective list*)

unless otherwise stated, music and lyrics by Bart and dates for stage works those of first London performance

Musicals (book authors shown in parentheses): Wally Pone, King of the Underworld (after B. Johnson: *Volpone*), Unity Theatre, 18 July 1958; Fings Ain't Wot They Used t' Be (2, F. Norman), Stratford East, Theatre Royal, 17 Feb 1959; Lock Up Your Daughters (2, B. Miles after H. Fielding: *Rape upon Rape*),

Mermaid, 28 May 1959, music L. Johnson, film 1969; Oliver! (2, Bart after C. Dickens: *Oliver Twist*), New Theatre, orchd E. Rogers, 30 June 1960, film 1968 [incl. JOHN SNELSON

Bárta [Barrta, Bartha, Bartta], **Josef** (*b* Prague, *c*1746; *d* Vienna, 13 June 1787). Czech composer. Before 1772 Bárta was active as organist in two Prague monastic churches. Then he evidently moved to Vienna, where his first Singspiel *La diavolessa* was performed on 18 July 1772 at the court theatre. His last *dramma giocoso*, *Il mercato di Malmantile*, was performed there in 1784. Several years before Mozart's *Die Entführung aus dem Serail* and at the same time as Umlauf, Benda, Ordonez, Asplmayr and others, Bárta contributed his German comic operas to the project of the Viennese National-Singspiel project founded by Emperor Joseph II. The fact that arias from his Singspiele were arranged for instrumental chamber ensembles gives evidence of their popularity.

Of Bárta's instrumental music, the symphonies seem to be most important. An exact chronology cannot be established, but all of them seem to date from his years in Prague, and five are listed as manuscripts in the Breitkopf catalogues of 1774 and 1776–7. For the most part they consist of three movements, Allegro–Andante–Allegro; works in a minor key sometimes have a slow introduction. The first and last movements are generally in sonata form with contrasting theme groups, elaborate development sections and effective modulatory shifts. Slow movements are scored for strings only. The best of Bárta's symphonic output is marked by pregnant and pathetic themes characteristic of the expressive style of the *Sturm und Drang* period in Austria and Germany in the early 1770s.

WORKS

STAGE

all first performed in Vienna

La diavolessa (Spl, 3, C. Goldoni), Burgtheater, 18 July 1772; music and text lost

Da ist nicht gut zu rathen (comische Oper, 2, G. Stephanie), Burgtheater, 8 Aug 1778; inst, arrs., *CZ-Pnm*

Der adeliche Taglöhner (komisches Originalsingspiel, 3, J. Weidmann), Burgtheater, 28 March 1780; 1 scene and duet, *A-Wn*, 3 inst arrs., *CZ-Pnm*

Die donnernde Legion (Originaloratorium, 2, P. Weidmann), Vienna, ?Burgtheater, 1781; H. Federhofer's private collection, Mainz, lib (Vienna, 1781)

MILAN POŠTOLKA

Bárta, Lubor (*b* Lubná, nr Litomyšl, 8 Aug 1928; *d* Prague, 5 Nov 1972). Czech composer. After matriculating in Vysoké Mýto he studied musicology and aesthetics at Prague University (1946–8) and composition at the Prague Academy of Music (1948–52) under Řídký. He then worked as a choral accompanist until about 1956, and was organizing secretary of the Union of Czechoslovak Composers in Prague. Bárta's style developed through three distinct periods. Such works as the Piano Concerto (1959) show an initial indebtedness to Stravinsky and Bartók in their spontaneity, rhythmic vibrancy and use of folk melody, but Bárta later reacted against 20th-century developments, other than those in harmony. In a final phase he brought about a synthesis of his earlier attitudes.

MILAN KUNA

Bartalani, Orindio. *See* BARTOLINI, ORINDIO.

Bartali, Antonio. *See* BERTALI, ANTONIO.

Bartalus, István (*b* Bálványos-Váralja, 23 Nov 1821; *d* Budapest, 9 Feb 1899). Hungarian musicologist, teacher and composer. He studied theology and law, and the piano, horn, and music theory at the conservatory in

Kolozsvar, starting his musical career in 1846 as a piano teacher in provincial towns. In 1851 he settled in Pest as a teacher and concert pianist, and began to work as a musicologist and journalist (late 1850s); with Kornél Ábrányi and Mihály Mosonyi he was co-editor (1860–63) of the first Hungarian musical weekly, *Zenészeti lapok*. Subsequently he made two study trips to monasteries in Upper Austria and compiled a catalogue of their manuscripts and prints which related to Hungary. In 1869 he was appointed professor of music at the Pest teacher-training college. A member of the Kisfaludy Society of Literature and Science (1867) and a corresponding member of the Hungarian Academy of Sciences (1875), he edited the seven-volume *Magyar népdalok egyetemes gyűjteménye* (1873–96) commissioned by the Kisfaludy Society, the largest such publication of the 19th century. With Mátray, Bartalus was the founder of Hungarian musicology; he was one of the first writers to draw attention to the most significant documents of Hungarian music history, and his extensive collection of Hungarian folksongs, despite its errors and deficiencies, provided the basis for the work of Bartók and Kodály. Although the practical value of his publications has diminished in the light of modern research, his achievements as a pioneer are undisputed.

FERENC BÓNIS

Bartay, András (*b* Széplak, 7 April 1799; *d* Mainz, 4 Oct 1854). Hungarian composer, theatre director and collector of folksongs. He came from a Hungarian noble family and embarked on a career in the civil service; it was not until 1829 that he first appeared on the musical scene, when he and Lajos Menner founded and became directors of the first Pest singing school. Bartay was one of the first to publish Hungarian folksongs: in 1833–4 he published a two-volume collection *Eredeti nép-dalok klavir-kísérettel* ('Original folksongs with piano accompaniment'), and in 1834 he brought out one of the earliest Hungarian books on music theory, *Magyar Apollo*.

In 1837 his comic opera *Aurelia, oder Das Weib am Konradstein* had its première at the Pest Town Theatre, and in 1839 his comic opera *Csel* ('Ruse') was first performed at the Pest Hungarian Theatre as Ferenc Erkel's benefit performance (Erkel later composed variations on themes from this opera). Bartay was director of the National Theatre in 1843–5 and it was during this short period that the most popular Hungarian theatrical genre of the 19th century, the so-called 'folk play', including both folksongs and folkdances, began to flourish. Bartay devised a competition to set M. Vörösmarty's poem *Szózat* ('Appeal') to music in 1843, and F. Kölcsey's *Hymnus* ('Anthem') in 1844. The winning work for the latter, composed by Erkel, was subsequently accepted by the Hungarian people as the national anthem. The winner of the first competition was Erkel's librettist Béni Egressy, whose song, used as a second national anthem, was quoted by several composers including Liszt, Erkel, Mosonyi, Dohnányi, Kodály and Járdányi. In 1848 Bartay also composed a patriotic song *Nemzeti dal* ('National song') after S. Petőfi. After the collapse of the Hungarian struggle for independence, in 1849 Bartay emigrated, first to France and then to Germany.

Bartay's significance for the development of Hungarian music did not lie principally in his compositions. His works, which include three operas, two masses, sacred and secular oratorios, a melodrama, songs and piano pieces, show him as a cultivated creator, with good taste but little originality. He did, however, perceive the cultural demands and possibilities of his time and country, and was enterprising as a teacher and organizer, as a collector and publisher of folksongs, as a theatre director and as the author of books on music theory; the initiative which he took in all these fields helped form the basis for progressive musical life in Hungary.

FERENC BÓNIS

Bartay, Ede (*b* Pest, 6 Oct 1825; *d* Budapest, 31 Aug 1901). Hungarian musical administrator, composer and teacher. The fourth son of the composer and theatre director András Bartay, he read law and also studied the piano and music theory with his brother András (*b* ?1822; *d* St Petersburg, 1 July 1846). He worked in the independent Hungarian Ministry of Transport (1848–9) but was forced to earn a living as a piano teacher after the defeat of the Hungarian struggle for independence. About 1850 he completed his musical studies on his own, and a few years later he was a sought-after teacher and a popular composer of piano music. From the 1860s, Bartay played an increasingly important role in Hungarian musical life. He set up an organization to aid musicians living in Hungary (1863), and was its president until his death. As a qualified lawyer, he was responsible for drawing up and presenting to the Hungarian parliament a plan for the organization of the new state music academy (1872). He succeeded Gábor Mátray as director of the National Conservatory in Budapest (1876–1901), and was vice-president (1874–80) and later president (1880–91) of the Hungarian National Choral Society.

In order to uphold the traditions of earlier Hungarian instrumental music Bartay published collections of *verbunkos* and *csárdás* dances. More significant, however, than his own compositions are his editions of these types of dances, which are still important sources for research. Bartay also wrote a symphony, an overture and two symphonic poems for orchestra as well as other pieces for piano.

FERENC BÓNIS

Bartei, Girolamo (*b* Arezzo, *c*1565; *d* after 1617). Italian composer and organist. He joined the Augustinian order at an early age. On 22 September 1592 he was appointed *maestro di cappella* of Arezzo Cathedral but was dismissed on 23 May 1594. Reinstated on 5 June 1595, he was forced to resign, probably because of his frequent absences, on 24 January 1597. He was reappointed on 18 May 1598 but gave up the post for the last time barely a month later. He probably went to live in Florence, from where he addressed a letter on 23 September 1601. From 4 February 1604 to 4 January 1607 he was *maestro di cappella* of Volterra Cathedral. On 14 June 1608 he was summoned to Rome by the head of the Augustinian order and took up residence at the monastery of S Agostino, of which he became sub-prior. On the title-page of his 1608 book of masses he is described as 'capituli generalis Romae musices moderatoris', which Coradini (1923) interpreted as meaning that he was director of music at the general chapter held by the Augustinian order in Rome at Whitsuntide 1608. He next held a similar appointment at the church of S Agostino, Rome, and probably remained there until 1610. It is apparent from the dedication of his op.11 (1618), as well as from other documents, that in 1616 he was living in Orvieto at the monastery of S Agostino, where he was sub-prior, organist and a teacher. From 28 April 1617 until some time in 1618 he was at the Augustinian monastery of Marino, near Rome. Dedicating his op.12 (1618) to a citizen of Orvieto, he mentioned his 'absence from the place', presumably meaning that he was away from Orvieto at the time. Nothing is known of him after 1618.

Bartei is considered one of the best musicians of the Augustinian order. His large and varied output, extending to at least op.13, includes sacred, secular and instrumental works and ranges from the richest, most complex polyphony (as in the 1608 masses for double choir), in which he shows his contrapuntal skill, through simpler polyphonic forms (as in the 1609 print and op.11) to some examples of monody. One of these is *Ave gratia plena* in op.11, for soprano, tenor and continuo. This is a true dramatic dialogue (actually headed 'In dialogo'), a setting of the appearance of the angel to Mary in *Luke* i (of which there are also settings in G.F. Capello's op.1, 1610, and in RISM 1618[3]), which shows Bartei's readiness to adopt the new styles and techniques of the early 17th century. There is further evidence for this elsewhere in op.11 and in the 1609 volume, as well as in the two-part ricercares op.12, which break away from the strictly contrapuntal style typical of the form and are notable, as Torchi pointed out, for their freer and more flowing and sinuous movement.

Bartei's nephew Raffaele (*b* Arezzo, 29 June 1592; *d* ?Rome, in or shortly before 1618) became a treble at S Maria della Pieve, Arezzo, on 16 November 1602. He eventually joined his uncle in Rome and on 12 April 1609 was appointed a contralto at S Giovanni in Laterano. He had died by 1618, since a motet composed in his memory appeared in that year in the op.11 of his uncle, who had earlier included two motets by him (not four as stated in *MGG*) in his *Liber primus sacrarum modulationum.*

AGOSTINO ZIINO (with NOEL O'REGAN)

Bartei, Raffaele. Italian composer and singer, nephew of GIROLAMO BARTEI.

Bartelink, Bernard (Gerard Maria) (*b* Enschede, 24 Nov 1929). Dutch organist. He studied the organ with Albert de Klerk at the Church Music Institute in Urecht (1948–50), and the organ with Anthon van der Horst (1950–54) and composition with Léon Orthel (1952–55) at the Amsterdam Conservatory, where he gained the *prix d'excellence* (1954). In 1961 he won the International Improvisation Competition in Haarlem, and has since served on the jury of this and other competitions. He taught at the Church Music Institute in Haarlem (1965–77) and at the Amsterdam Conservatory (1973–89), and in 1971 was appointed organist of the Roman Catholic St Bavokathedraal, Haarlem. A noted interpreter of the German Baroque and French 19th- and 20th-century repertories and a skilled improviser, Bartelink has performed throughout Europe, toured the USA, Russia, Australia and New Zealand, and given the premières of contemporary works by Daan Manneke, Léon Orthel and Bjorne Sløgedal; he has also keenly promoted the music of Charles Tournemire. His own compositions include church, organ and chamber music, and a cycle of songs for low voice and organ, *De Zaligsprekingen*, commissioned by the city of Amsterdam.

GERT OOST

Barth. Danish family of musicians of German descent.

(1) Christian Samuel Barth (*b* Glauchau, Saxony, 11 Jan 1735; *d* Copenhagen, 8 July 1809). Oboist. He was educated at the Thomasschule in Leipzig under J.S. Bach. After serving in court orchestras in Rudolstadt (from 1753), Weimar (1762), Hanover (1768) and Kassel (1769), he was engaged in 1786 as first oboist of the royal orchestra in Copenhagen; Gerber encountered him in Kassel as late as 1785. At this time he was recognized as one of the greatest oboe virtuosos in Europe, particularly for his outstanding tone. He also composed, but because of the frequent misattribution of works among the Barth family the extent of his compositional activity is uncertain. It is likely that a *Potpourri concertant* for piano and oboe or flute (*DK-Kk*) and *Six écossaises* for piano (Copenhagen, n.d.) were by him. He retired in 1797.

(2) (Frederik) Philip (Carl August) Barth (*b* Kassel, 21 Oct 1774; *d* Copenhagen, 22 Dec 1804). Oboist and composer, son of (1) Christian Samuel Barth. Though not as eminent a player as his father and his brother (3) Christian Frederik, he was skilful enough to be admitted to the royal orchestra by 1793. Oboe concertos by him (now lost) were performed by his brother with great success in Berlin (1804–5). His other works include concertos for oboe, flute and two horns, a published flute concerto in E minor and two volumes of songs (1793). Barth was also a conductor of the royal Harmonie in Copenhagen (1794–7).

(3) Christian Frederik Barth (*b* Copenhagen, 24 Feb 1787; *d* Middelfart, Fyn, 17 July 1861). Oboist and composer, son of (1) Christian Samuel Barth. He was a pupil of his father, and at the age of 15, a year after his début as an oboist, he joined the royal orchestra in Copenhagen. In 1804 a scholarship enabled him to go to Berlin, where he gave concerts with great success. On his return to Copenhagen Barth, then 18 years old, was appointed principal oboist, and on frequent concert tours in Europe soon won international fame as one of the greatest artists on his instrument. In Denmark his oboe technique had lasting influence (his most important pupil was the court oboist Christian Schiemann), but in his own time he also won renown as a composer. Of his published works special mention may be made of the five oboe concertos, the *Rondeau suisse* for oboe and orchestra in E♭, the divertissement for oboe and string quartet, the sonata for oboe and piano, the *Grande sinfonie* for wind instruments, and the overture in E for orchestra. Barth retired from the royal orchestra in 1841 and was not involved with music for the last 20 years of his life. (*DBL* (S.A.E. Hagne); *GerberL*; *MGG1* (W. Hüttel); *SchillingE*)

BO MARSCHNER

Barth, Karl-Heinrich (*b* Pillau [now Baltiysk], nr Königsberg [now Kaliningrad], 12 July 1847; *d* Berlin, 23 Dec 1922). German pianist and teacher. Following early lessons from his father, a music teacher, Barth became a pupil of Ludwig Steinmann in Postdam. He remained with him for six years from 1856. Further teachers were von Bülow, Bronsart von Schellendorf and, for a short time, Tausig. He also took lessons in composition from Adolf Marx and Carl Weitzmann. In 1868 Barth was appointed a teacher at the Stern Conservatory in Berlin; he moved to the Hochschule für Musik in 1871, and was head of the piano department there from 1910 until his retirement in 1921. The Barth Trio, which he formed with Heinrich Karl de Ahna and Robert Hausmann, was highly esteemed. Barth's reputation as a thoughtful pianist with an especially wide repertory is reflected in his early advocacy of Brahms's music. A successful teacher, his pupils included Howard Brockway, Katherine Ruth Heyman, Wilhelm Kempff, Artur Rubinstein and Aline van Barentzen, the latter three of whom were particularly acclaimed as interpreters of Beethoven.

JAMES METHUEN-CAMPBELL

Barth, Richard (*b* Grosswanzleben, Saxony, 5 June 1850; *d* Magdeburg, 25 Dec 1923). German violinist, conductor and composer. He began his violin studies in 1856 with Franz Beck and continued with Joachim in Hanover (1863–7). A childhood accident forced him to bow left-handed. He had a series of appointments as leader of string quartets or orchestras in Münster at J.O. Grimm's

invitation (1867), Krefeld (1882) and Marburg, where he was also music director of the university (1887–94). At Marburg he joined the close circle of friends around Brahms, of whom he wrote a two-volume biography. He moved to Hamburg in 1895 as Vernuth's successor to direct the Philharmonic Concerts as well as the Singakademie and, from 1908, the Hamburg Conservatory. Until 1913 he toured frequently with the Hamburg Lehrergesangverein. He appeared at St James's Hall in London on 4 June 1896, playing Beethoven's Kreutzer Sonata and in Brahms's Piano Trio op.87. He was awarded an honorary doctorate from Marburg University in 1905.

GAYNOR G. JONES/CHRISTOPHER FIFIELD

Bartha, Dénes (Richard) (*b* Budapest, 2 Oct 1908; *d* Budapest, 7 Sept 1993). Hungarian musicologist. He studied musicology at the University of Berlin (1926–30) with Abert, Wolf, Blume, Schering, Sachs and Hornbostel. His postgraduate years were devoted to medieval and Renaissance topics; he took the doctorate at Berlin in 1930 with a dissertation on Benedictus Ducis and Appenzeller. From 1935 he turned to problems of Hungarian music and folksong. At the same time he worked as a librarian at the music division of the Hungarian National Museum in Budapest (1930–42), and from 1935 was lecturer (later professor) at the Franz Liszt Academy of Music and *Privatdozent* at the University of Budapest. With Szabolcsi he inaugurated a musicology section at the Academy in 1951, responsible for the training of a new generation of Hungarian musicologists. With Szabolcsi, too, he was co-editor of *Magyar zenetudományi tanulmányok* ('Musicological studies') (1953–61) and *Studia musicologica* (1961–). He held teaching appointments at several universities in the USA: Smith College (1964), Harvard (summers of 1964 and 1965), Cornell (1965–6) and Pittsburgh (1966–7) where, from 1969 to 1978, he was A.W. Mellon Professor.

In 1937 Bartha inaugurated a series of recordings of Hungarian folk music; he was also editor of an accompanying volume of transcriptions by Bartók and Kodály, *Magyar népzenei gramofonvételek* (1937). In 1956 he began work on Haydn sources in the Esterházy Archives; his study *Haydn als Opernkapellmeister* (1960) has achieved an international reputation. In his later work he concentrated on structural and source problems in the music of Haydn, Mozart and Beethoven. In recognition of his Haydn research he was awarded the Dent Medal in 1963. In 1969 he was awarded the Erkel National Prize by the Hungarian government.

MARVIN TARTAK

Bartha [Bartta], **Josef.** *See* BÁRTA, JOSEF.

Barthélemon, Cecilia Maria (*b* 1769/70; *d* after 1840). English composer and singer, daughter of François-Hippolyte and Maria Barthélemon. She went with her parents on their continental tour (1776–7) and sang before the King of Naples and Marie Antoinette. She repeated the scena which she had performed for them at her mother's benefit concert in London in March 1778 and continued to appear with her parents as a singer, often in duets with her mother, and later as a pianist. She does not appear to have had an independent performing career or to have composed after her marriage to Captain E.P. Henslowe (not W.H. Henslowe; see the memoir *Francis Barthélemon*, 1896). Haydn was a friend of the

Barthélemons and Cecilia treasured memories of his visits to them during his London years. She dedicated her keyboard sonata op.3 to Haydn and was a subscriber (listed as 'Mrs Ed. Henslow') to *The Creation*.

OLIVE BALDWIN, THELMA WILSON

Barthélemon, François-Hippolyte (*b* Bordeaux, 27 July 1741; *d* Christ Church, Surrey, 20 July 1808). French violinist and composer. He was the oldest of 16 children of the wig-maker Emmanuel Barthélemon and Françoise Laroche. Accounts of his career as a military officer may be apocryphal. He may have studied in Paris, where in 1755 he played the violin in the orchestra of the Comédie-Italienne and where about 1761 he had as patron the Countess of Genlis. He moved to London in 1764, at the instigation of Thomas Alexander Erskine, 6th Earl of Kelly (himself a skilled musical dilettante). One of Barthélemon's earliest appearances in London was on 5 June 1764 'at the Great Room in Spring Garden near St. James's Park' at a benefit concert for the eight-year-old Mozart and his sister. For the next four decades he was a leading figure in London's musical life, appearing as a composer, violin and viola d'amore soloist, and leader of the orchestra – at the King's Theatre, the London playhouses, Marylebone and Vauxhall Gardens, as well as for the Academy of Ancient Music, the New Musical Fund and the Society of French Emigrants. In 1766 he married the outstanding English singer Mary (Polly) Young (a relative of Thomas Arne), and they frequently performed together in plays, operas, oratorios and concerts. After 1778 they were sometimes joined by their daughter Cecilia Maria, a singer, pianist and composer.

Barthélemon's serious opera *Pelopida* was produced at the King's Theatre in 1766 with only moderate success, in spite of the support given to it by J.C. Bach and C.F. Abel. The following year, however, his burletta *Orpheus*, written for insertion into Garrick's farce *A Peep Behind the Curtain*, was warmly received, leading Barthélemon into a series of such works over the ensuing decades. In the same period he visited Paris more than once, appearing with acclaim at the Concert Spirituel on seven occasions between 1767 and 1769, producing an unsuccessful opera, *La fleuve Scamandre*, at the Comédie-Italienne, publishing his op.3, and issuing French editions of two sets of sonatas earlier published in London.

For the Shakespeare Jubilee of 1769 Barthélemon and Charles Dibdin collaborated in writing the music for a theatrical miscellany. This elaborate and costly pageant was a financial failure when mounted at Stratford-on-Avon, but it enjoyed great success when subsequently moved to London. During the winter of 1771–2 the Barthélemons were in Dublin for several months where they had a stage erected in the Rotunda, temporarily transforming it into a burletta theatre.

In the years 1776 and 1777 the couple travelled on the Continent, performing in France, Germany and Italy. They visited Bordeaux, where the ten-year-old *Pelopida* was given in French, one of five of Barthélemon's works that reached the stage of his native city. While in Florence Barthélemon was commissioned by the Grand Duke of Tuscany to compose the music for Semplici's oratorio *Jefte in Masfa*, which was performed then in Florence and Rome, and later in London. Excerpts from this work were published 20 years after Barthélemon's death by his daughter, Cecilia Maria Henslowe, along with an account of her father's life.

Perhaps as a result of his marriage, Barthélemon showed a predilection for English and 'ancient' music; he directed oratorio series at the Haymarket Theatre in 1774, 1779 and 1784 (the last in collaboration with Michael Arne). During the early 1780s he led the ballet orchestra at the King's Theatre, contributing several scores of his own. Increasingly, however, his interest turned to religious matters, and to the newly founded Swedenborg Society in particular. The most important musical fruit of his religious interests was the celebrated morning hymn *Awake my soul*. During Haydn's two visits to London in the 1790s, he and Barthélemon became good friends, and the two men corresponded after Haydn's return to Vienna. It may have been Barthélemon who suggested to Haydn the subject for *The Creation*. After the death of his wife, in 1799 Barthelémon remarried and the couple had two children, George and Angelica. The singer James Bartleman, however, was probably not a child of either of Barthélemon's marriages. Burdened by poor health, Barthélemon spent the final few years of his life in seclusion.

The acclaim which Barthélemon generally received may be judged from a characteristically enthusiastic report from London in the Parisian *Journal de musique*:

> On the 19th [May 1770] there was a concert of vocal and instrumental music in the hall of Marylebone Garden. Mr. *Barthélemon* performed a violin concerto of his composition. The exquisite taste, the pleasing sound, and the noble expression of this artist are generally known. One would say that his soul breathes and moves right under his fingers. The charming music that he composes adds further to the pleasure that one has at hearing him. Mr. *Barthélemon* is French: his talents should have been devoted to us, but we do not know how to engage for ourselves the great men whom we know how to produce.

He was clearly one of the best violinists of his time. Burney commented on Barthélemon's 'powerful hand and truly vocal adagio'. He was famed for his interpretations of Corelli's sonatas, and when he died Salomon is said to have exclaimed 'We have lost our Corelli! There is nobody left now to play those sublime solos'.

Barthélemon's compositions exhibit considerable charm, but lack originality or a clearly developed personal style. His songs are perhaps his best efforts. In the longer instrumental movements, despite their undeniable energy, there is a tendency towards incoherence of melodic structure and harmonic direction – a lack of control of the métier about which Grimm had complained as early as 1767. In 1770 Barthélemon was credited by the *Journal de musique* with having introduced to Paris the fashion of rondo finales for concertos. His style never evolved much beyond the mid-century style of which his colleague J.C. Bach was perhaps the most celebrated proponent.

The Judgment of Paris (burletta, 2, R. Schomberg), LLH, 24 Aug 1768; as Le jugement de Paris, Bordeaux, Théâtre de Bordeaux, 1768
Le fleuve Scamandre (comic op, J. Renout, after J. de La Fontaine), Paris, Comédie-Italienne, 22 Dec 1768
Shakespeare's Garland (pageant, Garrick), Stratford-on-Avon, 23 April 1769, collab. Dibdin, T.A. Arne, Aylward
The Magic Girdle (burletta, 2 pts, G.S. Carey, after J.B. Rousseau), LMG, 17 July 1770; as La ceinture enchantée, Bordeaux, Théâtre de Bordeaux, 1769
The Noble Pedlar, or The Fortune Hunter (burletta, 2 pts, Carey), LMG, 21 Aug 1770
Le vicende della sorte, or The Turns of Fortune (pasticcio, G. Petrosellini, after Goldoni), LKH, 6 Nov 1770; excerpts (London, 1770); incl. music by Piccinni, Sacchini, T. Giordani
The Portrait (burletta, 2 pts, ? G. Colman), Dublin, Rotunda, *c*1771 (Dublin, 1772)
A Pasticcio (pasticcio, T.A. Arne), LCG, 19 March 1773, lost, incl. music by Arne, J.C. Bach, Giordani
The Wedding Day (burletta, 2 pts, H. Fielding), LMG, 15 July 1773
La zingara, or The Gipsey (burletta, 2 pts), LMG, 25 Aug 1773
The Heroine of the Cave (incid music, H. Jones, S. Reddish, P. Hiffernan), LDL, 19 March 1774
The Election (musical interlude, 1, M.P. Andrews), LDL, 19 Oct 1774, selections, vs (London, 1774)
The Maid of the Oaks (masque within a comedy, 5, J. Burgoyne, after J.F. Marmontel: *Sylvian*), LDL, 5 Nov 1774, vs (London, *c*1775); masque in Act 5 incl. music orig. for fête champêtre, Epsom, The Oaks, 9 June 1774; as La fille des chênes, Bordeaux, Théâtre de Bordeaux, 1772
Tit for Tat ('entertainment', ? H. Woodward), Sadler's Wells, 14 Aug 1775, collab. H. Carey
Old City Manners (incid music, C. Lennox, after G. Chapman), LDL, 9 Nov 1775, song (London, 1775)
The Duenna, or The Double Elopement (ballad op, R.B. Sheridan), LCG, 21 Nov 1775 [music partly by Barthélemon], song (London, 1775)
Jefte in Masfa (orat, Abbate Semplici), Florence, Cocomero, aut. 1776, *Us-Wc*, *GB-Lbl*; London, Hanover Square Rooms, 3 May 1782, excerpts (London, 1827)
Belphegor, or The Wishes (comic op afterpiece, 2, Andrews, after J.F. Guichard and N. Castet: *Le bûcheron, ou Les trois souhaits*), LDL, 16 March 1778; vs (London, 1778)
Victory Ode to Admiral Keppel (dramatic cant, W. Tasker), LLH, 17 March 1779
A Sea Storm (dramatic cant.), LLH, 17 March 1779
Les petits riens (ballet, J.G. Noverre), LKH, 11 Dec 1781 [? music partly by Mozart, K299*b*]
The Amours of Alexander and Roxana (ballet, ? C. Lepicq), LKH, 10 April 1783
The Pastimes of Terpsycore (ballet, Dauberval), LKH, 6 Dec 1783
The Slaves of Conquering Bacchus (ballet, Dauberval), LKH, 17 Jan 1784
Le réveil de bonheur (ballet, Dauberval), LKH, 3 Feb 1784
Divertissement (ballet, Dauberval), LKH, 7 Feb 1784
Orpheo (ballet, Dauberval), LKH, 6 March 1784
Le tuteur trompé (ballet, Lepicq), LKH, 1 Jan 1785 [music partly by Barthélemon]
The Deserter (ballet, ?Lepicq), LKH, 11 Jan 1785 [music partly by Barthélemon]
Il convito degli dei (ballet, Lepicq), LKH, 5 Feb 1785
Le jugement de Paris (ballet, Lepicq), LKH, 12 Feb 1785
Le bonheur est d'aimer (ballet, Dauberval), Bordeaux, Grand, 28 Feb 1785
New Divertissement (ballet, Nivelon), LKH, 3 March 1785 [music partly by Barthélemon]
Macbeth (ballet, Lepicq, after W. Shakespeare), LKH, 17 March 1785 [music partly by Barthélemon]
Robin Gray (ballet, ?Lepicq), LKH, 14 April 1785
Psyché (ballet, Dauberval), Bordeaux, Grand, 15 Feb 1788 [music by *c*15 composers]
The Nativity, or The Birth of the Messiah (orat), per. advertised but postponed, 1803; pt 1, Hanover Square Rooms, 19 June 1807

Doubtful: Ezio (op, P. Metastasio), LKH, 13 Jan 1770, collab. T. Giordani, Sacchini, P. Guglielmi

OTHER WORKS

op.	
1	Six Sonatas, 2 vn/fl, bc (London, 1765)
2	Six sonates, vn, bc (London, *c*1765)
3	Six sinfonies, 2 ob/fl, 2 hn, str, bc (Paris, 1769)
3	Six Concertos, vn, str, bc (London, 1771)
4	Six Duetts, 2 vn (London, 1773)
4	Vn Conc. (Paris, 1775), lost
5	Six Lessons with a Favourite Rondo, hpd/pf, vn ad lib (London, 1773)
6	Six Overtures, 2 ob/fl, 2 hn, str, bc (London, 1773)
8	Six Duettos, 2 for 2 vn, 2 for vn, va, 2 for vn, vc (London, *c*1778)
9	Six Quartettos, str qt (London, *c*1783)
10	Six Solos, vn, bc (London, 1784)
11	Six Voluntaries or Easy Sonatas, org (London, 1787)
12	Six Quartetts, 4 for str qt, 1 for orch, 1 for ob, vn, va, vc (London, *c*1790)

Other inst: numerous single works and groups of works pubd, no op.; many other works in anthologies; additional works extant in MS, *D-Bsb*, *F-Ppincherle*, *GB-Lbl*
Other vocal: many songs, hymns, glees, ballads, canons etc., some pubd
Pedagogical: A New Tutor for the Harpsichord or Pianoforte (London, n.d.); A New Tutor for the Violin (London, n.d.); The Principles of Thorough Bass (London, n.d.); Tutor for the Harp in which are introduced Progressive Examples of Arpeggios and Sonatas with Favourite Airs and Scotch Songs (London, 1787)

NEAL ZASLAW/SIMON McVEIGH

Barthélemon, Mrs [Maria]. English soprano and composer. *See* YOUNG family, (8).

Barthélemy, Jean-Jacques (*b* Cassis, 20 Jan 1716; *d* Paris, 30 Jan 1795). French archaeologist and man of letters.

Having entered the Lazarists, Barthélemy conceived an early passion for Oriental antiquities. On leaving the seminary he decided not to take holy orders and returned to his family before settling in Paris in June 1744. Gros de Boze, curator of the Médailles du roi, took him on as an assistant in 1745. Barthélemy specialized in the study of medals and succeeded Gros de Boze in 1753. As a protégé of Choiseul-Stainville, whom he accompanied on a long tour of Italy, he was offered the privilege of the *Mercure de France*, which he reassigned to Marmontel. Barthélemy enjoyed the company of such lovers of antiquity and music as Caylus and Chabanon. As a writer who was regularly published in the *Journal des savants*, and the author of dissertations both scholarly and popular, he was elected to the Académie Française in 1789. His *Voyages du jeune anacharsis en Grèce vers le milieu du IVe siècle avant l'ère vulgaire*, an extensive introduction to Greek civilization, had considerable influence on his generation. His comments on Greek music were the subject of a separate publication: *Entretiens sur l'état de la musique grecque, vers le milieu du quatrième siècle, avant l'ère vulgaire* (Amsterdam and Paris, 1777). In this work Barthélemy defends a concept of music comprising melody, rhythm, poetry, dance, gesture, all the sciences and most of the arts. (P. Vendrix: *Aux origines d'une discipline historique: la musique et son histoire en France aux XVIIe et XVIIIe siècles*, Geneva, 1993)

PHILIPPE VENDRIX

Barthélemy, Maurice(-Ghislain-Louis) (*b* Gembloux, 9 April 1925). Belgian musicologist. He studied under Suzanne Clercx-Lejeune in Liège (1946–53), where in 1953 he took the doctorate in the history of art and archaeology; this included a dissertation on Campra. After a year's studies with Dufourcq in Paris (1953–4), he was attached to the Fonds National (Belge) de la Recherche Scientifique (1954–61), investigating Italian influences on late Baroque French music. He became artistic adviser to the fine arts department of the Liège city council (1959), assistant curator of museums (1967) and librarian of the conservatory (1970) and retired in 1990. He has specialized in the history of French music between 1660 and 1760, particularly the relationship of vocal music to literature and the history of ideas.

GUY BOURLIGUEUX

Bartholomaeus Comes. *See* LE CONTE, BARTHOLOMEUS.

Bartholomée, Pierre (*b* Brussels, 5 Aug 1937). Belgian composer and conductor. Drawn to composition at an early age, he studied at the Brussels Conservatory (1953–8), and received further piano tuition from Wilhelm Kempff. While beginning a career as a pianist he taught himself composition, an activity that received special impetus from his encounter with Pousseur in 1961. From 1960 to 1970 he worked as a sound engineer and later producer for the Third Programme on Belgian Radio, then for television; during this period, he wrote a good deal of incidental music, notably for film. A founder-member of the Liège-based Ensemble Musique Nouvelle in 1962, he began his conducting activities with the group in 1964; these became increasingly extensive and in 1977 he was appointed conductor of the Liège PO. From 1972 he taught music analysis at the Brussels Conservatory and from 1984 musical communication at the University of Louvain-la-Neuve. As a conductor he has been responsible for numerous premières (including music by Berio, Boesmans, Messiaen, Pousseur and Xenakis) and for rediscovering works by Lekeu and Tournemire among others. From his earliest works, such as the serial *Chansons* (1964) and *Cantate aux alentours* (1966), his conception of musical form has been based on the variation and repetition of recognizable structural elements (themes, harmonies, instrumental combinations, etc.). From the percussive articulation and chordal writing characteristic of his works of the 1970s, notably the harp piece *Fancy* and the compositions derived from it, he moved in *Mezza Voce* to a more open, heterophonic style, full of characteristic figurations and sonic gestures.

WORKS
(*selective list*)

Orch: Harmonique, 1970; Politophonie, 1984; Pavane pour une ondine du Levant, 1987; Rumeur, 1989; Humoresque, 1994; Fredons et tarabusts, 1997

PASCAL DECROUPET

Bartholomeus, Frater. *See* BARTOLINO DA PADOVA.

Bartholomeus Anglicus (*b* ?before 1200; *d* Saxony, ?1272). English Franciscan theologian. He has been falsely identified with Bartholomeus de Glanvilla (*fl* late 13th century). He studied at Oxford and later at Paris, where he was incepted as a regent master; he joined the Franciscans about 1225. He taught as a *lector* in Magdeburg, and was subsequently elected Provincial in Austria (1247), then Bohemia (*c*1255); he became bishop of Łuków (1257) and was appointed papal legate. Some ten years before his death he was elected minister provincial in Saxony. While at Magdeburg he completed his *De proprietatibus rerum* (*c*1245), of which well over 100 copies in manuscript survive; the editio princeps appeared in Cologne in 1472/3 (see *Bartholomaei Anglici de genuinis rerum . . . proprietatibus*, Frankfurt, 1601/*R*). The text was well known in university circles, and also appeared in several vernacular translations (that of John Trevisa into English, from 1398, is ed. M.C. Seymour and others, Oxford, 1975–88).

Chapters 132–46 of book 19 concern music. Some have questioned Bartholomeus's authorship of this section and, indeed, chapter 132 'De musica sive modulacione cantus' is largely a recapitulation of Isidore of Seville; the final section relies heavily on Boethius. The material drawn from Isidore describes the three kinds of music, *harmoniaca*, *rhythmica* and *metrica*, and the way in which pitches move and sounds are transmitted, as well as the different kinds of voice, such as *clara*, *dura*, *aspera*. As in Isidore, the *vox perfecta* is described as 'alta, suavis, fortis et clara'. The passages from Boethius deal mainly with the mathematical proportions underlying musical intervals.

Chapters 133–46 describe musical instruments and other musical terms, with much quotation from classical authors and attempts at etymology. A large proportion of this material is probably drawn from earlier glossaries – Isidore is quoted frequently – and it is repeated almost verbatim later in the century in the treatise of Egidius de Zamora. Certain descriptions are extremely brief: e.g. '*sambuca* is a kind of delicate wood, whose branches are curved, hollow and even, from which *tibie* and some kinds of *symphonie* are made, as Isidore says'. Instruments themselves are generally described at greater length, and with some allegorical and symbolic interpretation. The chapters deal with the *tuba*, *buccina*, *tibia*, *calamo*, *sambuca*, *symphonia*, *armonia*, *tympano*, *cithara*, *psalterio*, *lira*, *cymbalis*, *cistro* and *tintinabulo*. Although Bartholomeus's chief aim was biblical exegesis, his work is nonetheless useful for the investigation of 13th-century organology.

Bartholus (de Florentia) (*fl* Florence, *c*1330–60). Italian composer. In Filippo Villani's chronicle Bartholus (and not Giovanni da Cascia, as given in Galletti; the chronicle is also ed. G. Tanturli, Padua, 1997) is mentioned together with Lorenzo da Firenze. Villani wrote that Bartholus had introduced in Florence Cathedral a Credo which was performed with voices (*vivis vocibus*). This type is perhaps represented by his sole surviving composition, a two-voice Credo in *F-Pn* 568 (no.194; ed. in De Van erroneously under the name of Bartolino da Padora, also ed. in CMM, viii/1, 1954, and in PMFC, xii, 1976) which combines elements of earlier organal style with madrigalesque melismas. Bartholus is not to be confused with Bartolino da Padova.

KURT VON FISCHER

Bartleman, James (*b* Westminster, London, 19 Sept 1769; *d* London, 15 April 1821). English bass. Educated under Benjamin Cooke (ii) at Westminster Abbey, he became the leading bass of his generation. In 1788, his name first appears as a chorister at the Concert of Ancient Music, but in 1791 he left to become the first solo bass at the newly established Vocal Concerts at Willis's Rooms. He returned to the Ancient Concerts in 1795 as the principal bass singer, and later he was one of the proprietors and conductors of the Vocal Concerts at the Hanover Square Rooms. Ill health forced him to retire from singing by 1819.

Bartleman was noted for his wide range (*E* to at least *g′*) and his capacity to hold *g′* in chest voice with a tone that did not grate on the ears. William Crotch and John Callcott wrote music which took advantage of his range, but he was best known for his skill in singing Purcell and Handel. He is credited with transforming the heavy, ponderous style of bass singing to one that was polished and graceful. His ability to personify the characters he

represented, especially in songs like Handel's 'O ruddier than the cherry' (*Acis and Galatea*) and Purcell's 'Let the dreadful engines' (*King Arthur*), allowed bass singing to become what Bacon described as 'truly theatrical'.

ROBERT TOFT

Bartlet, John (*fl* 1606–10). English composer. Bartlet titled himself 'gentleman', indicating a claim to a coat of arms. He was 'servant' to a noted patron of music, Sir Edward Seymour, Earl of Hertford (1539–1621), accompanying him as musician on his embassy to Brussels in 1605. Hertford is the dedicatee of Bartlet's only publication, the *Booke of Ayres with a Triplicitie of Musicke* (London, 1606/*R*; ed. in EL, 2nd ser., iii, 1925 and in MB, liii, 1987). In September 1609 a 'Mr Bartlet' was employed as a musician in the household of Gilbert Talbot, Earl of Shrewsbury (1553–1616); John Bartlet of Magdalen College, Oxford, was admitted to the BMus degree on 11 July 1610. A 'John Bartlett, gent.' was given 500 marks 'as of his Majesty's free gift' in August 1613.

Despite criticism of his ayres by Warlock and Poulton, many are very effective in performance, though he attempted nothing in Dowland's passionate style. The homophonic settings of *Of all the birds* and *When from my love* work particularly well in the four-voice versions, and the latter has a splendid lute accompaniment sometimes independent of the lower voices.

Bartlet's songs enjoyed widespread popularity, appearing in a number of later manuscripts and prints. A pavan, *The Earl of Hartford's Muse*, exists in both consort and keyboard versions (ed. in CEKM, xliv, 1982). The treble part of another pavan is attributed to 'Joh Bar:' (*US-CLwr*).

ROBERT SPENCER

Bartlett, Homer N(ewton) (*b* Olive, NY, 28 Dec 1846; *d* Hoboken, NJ, 3 April 1920). American composer and organist. He studied the piano, the organ and composition in New York, where he began a career as a church organist at the age of 14. He spent 12 years at the Marble Collegiate Church, New York, and over 30 years at the Madison Avenue Baptist Church, retiring in 1912. A founding member of the American Guild of Organists, he was also active in the rival National Association of Organists (president 1910–11) and in the New York Manuscript Society.

Bartlett was a prolific composer: his published opus numbers reached 271. Some of his early salon pieces, for example the *Grande polka de concert* (1867), achieved great popularity and were published in several editions. Other works include *La vallière* (opera, 1887), *Magic Hours* (operetta, 1910), an oratorio, *Samuel*, church music, violin and cello concertos, and the symphonic poem *Apollo* (1911). He also composed chamber music, organ works, character pieces for piano, over 80 solo songs, and partsongs.

Late in his career Bartlett became fascinated with Japanese themes. The piano pieces *Kuma saka* (1907) and *Dondon-bushi* (1918) display this preoccupation with the 'exotic'; they are not based on any real understanding of Japanese music. His manuscripts are held in the Public Library at Lincoln Center, New York.

WILLIAM OSBORNE

Bartók, Béla (*b* Nagyszentmiklós, Hungary [now Sînnicolau Mare, Romania], 25 March 1881; *d* New York, 26 Sept 1945). Hungarian composer, ethnomusicologist and pianist. Although he earned his living mainly from teaching and playing the piano and was a relentless collector and analyst of folk music, Bartók is recognized today principally as a composer. His mature works were, however, highly influenced by his ethnomusicological studies, particularly those of Hungarian, Romanian and Slovak peasant musics.

Throughout his life Bartók was also receptive to a wide variety of Western musical influences, both contemporary (notably Debussy, Stravinsky, Schoenberg) and historic; he acknowledged a change from a more Beethovenian to a more Bachian aesthetic stance in his works from 1926 onwards. He is now considered, along with Liszt, to be his country's greatest composer, and, with Kodály and Dohnányi, a founding figure of 20th-century Hungarian musical culture.

1. 1881–1903. At the time of Bartók's birth, Nagyszentmiklós was part of the northern end of the ethnically diverse southern Hungarian province of Torontál. There, his father, also Béla Bartók (1855–88), was headmaster of an agricultural school; his mother, Paula Voit (1857–1939), was a teacher. Both parents were keen amateur musicians, and early encouraged the young Béla's musical development with dance pieces, and then with drumming. By the age of four he was able to play some 40 songs on the piano, and at five he started piano lessons with his mother. Impressions of a summer visit to Radegund, Austria, in 1887 led to one of his first compositions, *Radegundi visszhang* ('Echo of Radegund', 1891). At the age of seven Bartók was tested as having perfect pitch.

The earlier years of Bartók's schooling were unsettled. Not only was he very shy, the supposed result of confinement because of a persistent rash during his first five years, but the premature death of his father in 1888 also caused the family to move frequently in the following six years. Paula Bartók sought teaching positions in provincial towns which were suitably equipped for the broader education of her son and daughter, Elza (1885–1955). A move to Nagyszöllős (now Vinogradov, Ukraine) in 1889 was followed by time in Nagyvárad (now Oradea, Romania) during 1891–2, and in the larger city of Pozsony (now Bratislava, Slovakia) during 1892–3. Finally, after eight months in Beszterce (now Bistrița,

1. *Béla Bartók aged five, 1886*

Romania), where Bartók attended a German-language grammar school, the family was in April 1894 able to settle in Pozsony.

Despite these many moves and the periodic disruptions to Bartók's general education, his musical talents were rapidly developing. His first compositions, from the early 1890s, were frequently dance pieces – waltzes, ländlers, mazurkas, and, especially, polkas which he often named after friends or family members. Also among his first band of 31 piano compositions (1890–94) were occasional programmatic works, such as the ten-part *A Duna folyása* ('The Course of the Danube', 1890–94) or *A budapesti tornaverseny* ('Gymnastic Contest in Budapest', 1890), and some early attempts in sonatina and theme-and-variation forms. Bartók's pianistic dexterity rapidly increased during the early 1890s, and on 1 May 1892 he made his first public appearance, in Nagyszöllős, presenting a programme of works by Grünfeld, Raff and Beethoven, and his own *The Course of the Danube*.

At the Catholic Gymnasium in Pozsony, Bartók was soon appointed chapel organist, as successor to Ernő Dohnányi, and gained more specialized musical tuition from László Erkel and later Anton Hyrtl. During the school's celebrations of the Hungarian millennium in 1896 Bartók provided the piano accompaniment to Kornél Ábrányi's melodrama *Rákóczi*, and also played the piano in the school orchestra's rendition of the 'Rákóczi' March. In Pozsony he became increasingly involved in the playing and composing of chamber music, with a first attempt, in 1895, at a sonata for violin and piano, in C minor (BB6); a string quartet (now lost) in C minor in 1896; and a piano quintet in C (also lost) in 1897. During these years, as he experienced the city's concerts and occasional operas, his compositional style and harmonic vocabulary broadened from Classical to early Romantic models. By 1898, with two remarkably mature chamber works, the Piano Quartet in C minor BB13 and String Quartet in F major BB17, the imprints of Brahms and Schumann are strongly felt.

Bartók's health was never robust; a long list of childhood diseases culminated in February 1899 with the start of serious lung problems, which caused him to devote many months to recuperation over the coming two years. During December 1898 and January 1899, nonetheless, he undertook auditions at the Vienna Conservatory and the Budapest Academy of Music, both of which were keen to admit him. Despite his fragile condition, Bartók also managed to matriculate in June 1899 with three excellent results (probably in mathematics, physics, scripture) and four good ones (Hungarian, Latin, Greek, German).

Since the 'Compromise' of 1867, which had established the Austro-Hungarian monarchy, Budapest had grown rapidly. By the turn of the century it had become a vibrant centre of Hungarian culture, and, with a population of three-quarters of a million, the sixth largest city in Europe. In 1875 an Academy of Music had been established there, with Liszt as its first president. Notwithstanding Vienna's illustrious musical reputation, an offered scholarship and Pozsony's proximity to the Austrian capital, Bartók decided to study in Budapest with the same professors who had taught Dohnányi: Thomán, a pupil of Liszt, for piano; Koessler, a pupil of Rheinberger, for composition. On entering the Academy in September 1899, he was granted advanced standing in both subjects.

In Budapest Bartók keenly attended the Opera and the Philharmonic, and started to look beyond chamber music models in his compositions. Earlier in 1899, while still living in Pozsony, he had composed a song for soprano and orchestra, *Tiefblaue Veilchen* BB18. Now, along with his Academy studies in harmony and counterpoint, he engaged in orchestration exercises and wrote short pieces for orchestra. During 1900–1 these included a *Valcer* (BB19/3) and a Scherzo in B♭ (BB19/4). From 1899 until early 1902, however, Bartók's compositional zeal ebbed. He found Koessler a thorough and traditional if uninspiring teacher, who only raised a compositional block in him. Bartók's composition exercises of this time were dutiful but unremarkable, with little suggestion of his later genius. His growing knowledge of the works of Wagner and Liszt did not yet provide a strong stimulus for his own writing.

'From this stagnation I was roused as by a lightning stroke by the first performance in Budapest of *Also sprach Zarathustra* in 1902', Bartók wrote in his autobiography of 1921. Richard Strauss's music offered to Bartók some interim compositional solutions. In 1902 he drafted in piano short score a four-movement Symphony in E♭ (BB25), which merged a Straussian thematic and motivic technique with stylistic gestures of Liszt and popular nationalist rhythmic and melodic turns. He was still dissatisfied with this new amalgam of elements, and only fully orchestrated the third movement, a Scherzo. His only other substantial work of 1902, the Four Songs BB24, set texts of folk-like poetry by Lajos Pósa in a style drawn substantially from the clichés of popular art-song.

While Bartók's compositional development had been sluggish, he had been attracting attention as a pianist. At his first public Academy concert, on 21 October 1901, he

performed Liszt's Piano Sonata in B minor. A critic from the *Budapesti Napló* reported that Bartók 'thunders around on the piano like a little Jupiter. In fact, no piano student at the Academy today has a greater chance of following in Dohnányi's tracks than he'. That was, indeed, Bartók's aim. He remained close to his elder townsman through his later years at the Academy, and during the summer of 1903 took masterclasses with Dohnányi in Gmunden. Bartók gained further pianistic notice in late 1902, with private performances of his own piano transcription of Strauss's *Ein Heldenleben*, followed by its successful performance at a Tonkünstlerverein concert in Vienna during January 1903. This encouraged Hanslick to comment: 'So, he must be a genius of a musician at any rate, but it is a pity that he goes in for Strauss', a sentiment echoed by Koessler. Bartók's reputation as a pianist was further enhanced by a brilliant final Academy examination performance of Liszt's *Rhapsodie espagnole* on 25 May 1903.

2. 1903–8. Strauss's *Ein Heldenleben* provided Bartók with both the style and the structure for his next composition, *Kossuth* BB31, a ten-section symphonic poem which glorified Lajos Kossuth, the leader of the abortive Hungarian War of Independence from Austria in 1848–9. Bartók wrote *Kossuth* between April and August 1903, another period of nationalistic fervour concerned with the degree of independence of the Hungarian army. An irony, not lost on Bartók himself, was that this intensely patriotic work relied so heavily upon Strauss's Germanic idiom.

Kossuth and Bartók's rendition of *Ein Heldenleben* were central to the launching of his career as a pianist-composer. Hans Richter, an early promoter also of Dohnányi, scheduled the work with his Hallé Orchestra in Manchester during February 1904, and provided opportunities for Bartók as a pianist. Meanwhile, during 1903 Bartók had been invited back to Vienna as soloist in Beethoven's 'Emperor' Concerto, while the sizeable audience at Bartók's Berlin début on 14 December 1903, including Busoni and, at rehearsal, Nikisch, owed much to Godowsky's reports of Bartók's performing and compositional feats that year.

2. Béla Bartók, aged 22

From 1903 until 1906 Bartók pursued an itinerant life, following performing or compositional opportunities as they presented themselves. There were substantial residencies in Vienna, Berlin and Pozsony, as well as Budapest, and he spent August and September 1905 in Paris, where he participated unsuccessfully in the Rubinstein competition both as composer (where no award was made) and pianist (where Backhaus gained the prize). However, despite a two-month tour of Spain and Portugal in 1906 with the Hungarian violinist Ferenc Vecsey, Bartók's international performing career had effectively stalled by this point, and it was fortuitous that he was invited to replace Thomán on the piano staff of the Budapest Academy late the same year. He became tenured in 1909 and remained at the Academy (which in 1925 was renamed the Liszt Academy) until 1934. During 1907–9 Bartók all but gave up performing, although he played very occasionally in Academy concerts. One exception was his only appearance as a conductor, with the Berlin PO on 2 January 1909, when he directed a movement of his Second Suite.

Meanwhile, Bartók had begun to develop an enduring interest in peasant music. He realized that his compositional style still lacked originality and unity. His first two opus-numbered works, the Rhapsody for piano and Scherzo for piano and orchestra, for example, are ungainly stylistic and structural amalgams of Brahms, Strauss and Liszt, together with Hungarian identifiers, drawn either from patriotic compositions of Liszt, Mihály Mosonyi and Ferenc Erkel, or from stylized *verbunkos* and *csárdás* dances, popular art-songs or gypsy embellishing figures. Bartók was, however, yearning for a style which was autochthonously Hungarian – to its core, not just in its accoutrements. During May to November 1904 (except for some weeks at Bayreuth) he had stayed at the northern Hungarian resort of Gerlice Puszta (now Ratkó, Slovakia), where he split his time between piano practice and composition, finishing his Piano Quintet BB33, and writing the Rhapsody and Scherzo (originally titled *Burlesque*), both intended as showpieces for his forthcoming concerts. There he heard a Transylvanian-born maid, Lidi Dósa, singing in an adjacent room, and he noted down her songs. He did not yet appreciate the exact boundary between folksong and popular art-song, nor the different classes of Hungarian peasant music, but Dósa's songs had inspired a new direction in Bartók's thinking, as he wrote to his sister in December 1904: 'Now I have a new plan: to collect the finest Hungarian folksongs and to raise them, adding the best possible piano accompaniments, to the level of art-song.' The first, tentative fruits of this intention were his publication in February 1905 of his setting of a Székely (Transylvanian) song, *Piros alma* ('Red Apple') BB34, and a collection of settings of four folksongs (BB37), the second of which Bartók performed as a piano solo in the Rubinstein competition. In these earliest settings Bartók's piano accompaniments still retain many Romantic flourishes, but already show a tendency towards writing in simple block chords and a

use of rhythm which shadows rather than complements the melody. Yet Bartók was still some way from appreciating the full potential of folk music for creating a new home-grown style in his compositions. His Suite no.1 op.3 for orchestra (1905), despite his claim regarding its 'Hungarianness', self-consciously uses four-square 'international' thematic material within a five-movement cyclic structure, with frequent resort to Strauss in its orchestration. The Second Suite op.4 for small orchestra (originally Serenade), starts to show a way forward. While its first three movements, written in 1905, cling to national Romantic tenets, with a strong Lisztian influence in the second movement, its fourth and final movement, composed in 1907, commences with a short, pentatonic tune, and unveils a stark, spare texture, which he would develop in succeeding compositions.

On 18 March 1905 Bartók met Kodály, one year his junior, at the Budapest home of Emma Gruber (later Kodály's wife). Like Bartók, Kodály had studied composition under Koessler; he was also taking a teaching diploma, and a year later completed a doctoral dissertation on the stanzaic structure of Hungarian folksong. So began an enduring artistic, scholarly and personal relationship, which sometimes rivalled that of the Schoenberg–Webern–Berg school in intensity but lacked its master-student characteristics. Kodály held the ethnological knowledge, which Bartók for all his enthusiasm then lacked. Bartók had more practical musical skills and phenomenal aural capacities. They soon found themselves teaching colleagues at the Academy of Music, collaborators in many ethnomusicological projects, and the frankest critics of each other's compositions.

In March 1906 Bartók and Kodály issued a joint 'appeal to the Hungarian people' to support 'a complete collection of folksongs, gathered with scholarly exactitude', so setting a goal which remained far from realized even at Kodály's death in 1967. Their appeal warned that the influx of 'light music' and many 'imitation folksongs' would render Hungarian traditional music extinct within a few decades. They called for subscribers to a collection of simple settings for voice and piano of 20 songs (BB42), collected by Béla Vikár and themselves, with the first ten arranged by Bartók and the remainder by Kodály. This collection appeared in December 1906, but drew a scant response from the Hungarian public. Bartók, already feeling alienated from the 'rootless' Germans and Jews so prominent in Budapest's musical life, also now strongly resented the apeing of Western popular culture by the ethnic Hungarian aristocracy and middle class, as well as the undying urban popularity of the gypsy bands. The rural peasants, however, he came to idealize as the conveyors of the pure musical instincts of the nation. Their song was an unauthored 'natural phenomenon', with the potential of reforming the nation's musical life, and also of reforming his own musical approach. While Kodály allowed his attention to encompass broader literary and historical aspects of Hungarian musical folklore, Bartók's interests tended to be more strictly musical and class-related. Hence, he soon found himself becoming interested in the characteristics of the peasant music of the many ethnic minorities living within the Hungarian section of the Empire. As early as 1906 he started to collect Slovak folk music, followed in 1908 by Romanian, and he later collected much smaller numbers

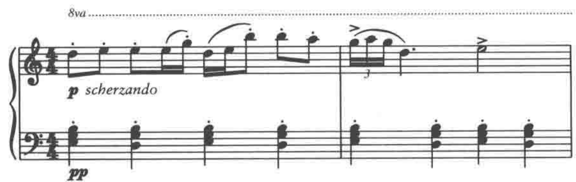
3. Bartók collecting songs from Slovak peasants in the village of Darázs (now Dražovce), 1907

Ex.1 *Romanian Folk Dances* (1915), movt. 3, bars 1-8

of Ruthenian, Serbian and Bulgarian tunes. His interest in the origins of the Hungarians even led him to plan trips further east, to the Csángó people in Moldavia and to the Chuvash and Tartar peoples living along the Volga River, although World War I banished all hope of such trips. He became fascinated not just with the transcription, analysis and classification of the many tunes he collected, but also with the comparisons between these different peasant musics and their dialects.

Ever since hearing Lidi Dósa's singing in 1904 Bartók had wanted to travel to her homeland, Transylvania, the heartland of the Székely people in the far east of the Empire. His collecting trip to the Transylvanian province of Csík during July and August 1907, with a local assistant and two phonographs, proved a revelation. There, among the older people, he found many examples of anhemitonic (lacking semitones) pentatonic tunes and came to realize the pentatonic basis of much of the oldest stratum of Hungarian folk music. As Bartók collected and analyzed more Hungarian tunes he started to distinguish old-style and new-style melodies: the old most characterized by a *parlando*, *poco rubato* performance style, in ecclesiastical (commonly Aeolian or Dorian) or pentatonic modes, and tending to non-architectonic forms (ABCD, ABBC, for instance); the new performed *tempo giusto*, favouring Aeolian or major modes, and generally with architectonic forms (ABBA, AABA, for instance). Finally, he came to recognize a large class of 'heterogeneous' songs, showing some degree of foreign influence. In a dictionary article on Hungarian music of 1935 (*Révai nagy lexicona*) Bartók determined the percentages of these three classes of Hungarian peasant music as 9% old, 30% new and 61% heterogeneous.

Bartók's Transylvanian tour of 1907 provided him with final proof that the renewal of his own style could be based on folk music. Folk music was not just a fertile field for arrangements, but also introduced a wealth of melodic, rhythmic, textural and formal models which might creatively be transformed, or transcended, in original composition. While still travelling in Transylvania he worked on the fourth movement of his Second Suite, with its pentatonic melody. Before the year was out he completed settings of three Csík folksongs, *Gyergyóból* ('From Gyergyó') BB45a for recorder and piano, and the first five of his *Nyolc magyar népdal* ('Eight Hungarian Folksongs') BB47 for voice and piano. Of these latter, three are *parlando rubato* with tales of sadness – the betrayed lover, the unhappily married woman, farewell – while the two *tempo giusto* songs are humorous.



When in Transylvania Bartók had also been working upon his own work of love, the Violin Concerto BB48a, written for and about his new infatuation, the violinist Stefi Geyer. Between passionate outpourings to her in a series of intimate letters about the meaning of life, religion and love, he was drafting a work of three movements, with the first depicting the 'idealized Stefi Geyer, celestial and inward', the second as 'cheerful, witty, amusing', and the third as 'indifferent, cool and silent'. One ascending line of 3rds, D–F♯–A–C♯, the so-called 'Geyer' (or 'Stefi') motif, dominates the first movement, while a jagged permutation of descending direction characterizes the second. Bartók decided not to develop the 'hateful' third movement, leaving an unconventional two-movement fantasy-like composition, completed on 5 February 1908, just one week before Geyer terminated the relationship. When she chose not to play it, and other violinists showed little interest, Bartók combined the first movement with an orchestrated version of the last of his *Fourteen Bagatelles*, also based on the 'Geyer' motif, to create the *Két portré* ('Two Portraits') op.5. The two movements were titled 'one ideal' and 'one grotesque'.

3. 1908–14. The many piano pieces of 1908–11 show Bartók's increasing confidence in using folk materials, as well as a growing emphasis upon grotesquerie, often in association with the 'Geyer' motif. Indeed, after this early Violin Concerto none of his works escapes a strong folk influence. In his later lecture 'The Relation between Contemporary Hungarian Art Music and Folk Music' (1941, in *Béla Bartók Essays*, 348–53), Bartók exemplified three types of arrangement: where the folk melody is mounted like a jewel (ex.1), where melody and accompaniment are almost equal in importance, and where the folk melody is a kind of inspirational 'motto' to be creatively developed (ex.2). In original compositions folk elements can be found either in the general spirit of the style, or in specific imitational features; Bartók gave *Este a székelyeknél* ('Evening in Transylvania') from his *Ten*

Ex.2 *Improvisations* op. 20 (1920), movt. 7, bars 29-33

Ex.3 Ten Easy Pieces (1908), *Evening in Transylvania*, bars 30-31

Easy Pieces as an example which uses such imitation (ex.3).

The *Fourteen Bagatelles* op.6 (1908) drew from Busoni the comment 'at last something truly new'. In these short pieces, of varying programmatic and abstract qualities, Bartók pioneered his new style of piano writing, devoid of the unessential embellishments and rippling excesses of late-Romantic piano figuration. The interval of the 7th, first found as a consonance in Bartók's music at the conclusion of the Second Suite's third movement, now assumed a role more equal to the 3rd and 5th, akin to its significance in pentatonic structures. Any sense of functional harmony is persistently undermined by the use of ostinato figures (nos.2, 3, 5, 10, 13), quasi-bitonal writing (nos.1, 13), streams of parallel 5ths and 7ths (no.4), of 4ths (no.11), of tritones (no.8), or of piled-up 3rds (nos.7, 9, 10). In pieces where dominant–tonic relations are invoked, they are soon subverted by dissonance (no.10) or mocked, as in the final Valse 'Ma mie qui danse' (no.14). Two of the pieces directly quote folksongs, an old Hungarian tune (no.4) and a Slovak song (no.5). 'Elle est morte' (no.13), written on the day Bartók received Geyer's letter ending their relationship, mercilessly distorts features of her motif, until near the close it emerges in 'pure' form, at which point Bartók has written in the score 'meghalt' ('she is dead'). The influence of Debussy, about whose works Bartók had recently learnt from Kodály, also lies behind several of the pieces, notably in the use of parallel chords, and in no.3, with its unchanging semitonal ostinato. Some other features, such as the use of 4th chords, could have been spurred either by Bartók's recent folk-music experiences or by his knowledge of the latest trends of his Western contemporaries. As a whole the *Fourteen Bagatelles* laid down a blueprint both for Bartók's new musical language and his new, leaner approach to keyboard writing.

Although Breitkopf & Härtel rejected Busoni's recommendation of Bartók's op.6 for publication, on the grounds that they were 'too difficult and too modern for the public', the pieces were soon accepted by the Budapest firm Károly Rozsnyai, which had already in March 1908 contracted Bartók to provide an educational edition of

J.S. Bach's *Das wohltemperirte Clavier* – the first of many historic editions which Bartók produced – and agreed to publish his next composition, the *Ten Easy Pieces* BB51 (1908). Rozsnyai also published Bartók's first large collection of folksong arrangements, *Gyermekeknek* ('For Children') BB53 (1908–10), which comprised 42 Slovak and 43 Hungarian tunes. (Two of the Hungarian settings were actually by Emma Gruber, and were omitted, along with four other settings, in Bartók's revision of 1943.) Bartók's aim in the series was to acquaint young pianists with 'the simple and non-Romantic beauties of folk music'. In other piano works of the 1908–11 period, such as the *Két elégia* ('Two Elegies') op.8b, he did sometimes return to the elaboration and stylized emotion of his earlier music. The *Három burleszk* ('Three Burlesques') op.8c unite both old and new aspects of Bartók's piano writing with that capricious programmaticism seen in earlier compositions dedicated to his female friends. For the first *Burlesque*, dedicated to his student and soon-to-be wife Márta Ziegler, he explained in one of its drafts: 'Please choose one of the titles: "Anger because of an interrupted visit" or "*Rondoletto à capriccio*" or "Vengeance is sweet" or "Play it if you can" or "November 27 [1908]"'. Another work dedicated to her, the first of the *Vázlatok* ('Seven Sketches') op.9b, is entitled 'Leányi arckép' ('Portrait of a Girl') and calls again on the 'Geyer' motif. In November 1909 Bartók married Márta Ziegler, and a son, Béla, was born in August 1910. Over the following 15 years she proved his worthy assistant as a copyist, translator and occasional folksong-collecting companion.

The First String Quartet op.7 (1908–9) is an exceptional work of stylistic transition. Although it betrays many disparate influences it is remarkably coherent. The Lento first movement, conceived as a funeral dirge, takes as its main theme the boisterous, jagged transformation of the 'Geyer' motif yet within a contrapuntal, Tristanesque mood of yearning; other late-Romantic influences are evident – those of Reger, about whose works Bartók and Geyer had been enthusiastic, and of Strauss. Yet Bartók's quartet unfolds, in Kodály's words, a 'return to life', with increasingly fast second and finale movements, which are more in keeping with his new, sparer style. The finale establishes the brusque, folk-like style used in the concluding movements of many later chamber works. It twice calls upon pentatonic phrases and in its introduction the cello parodies the opening of a popular Hungarian song, *Csak egy szép lány* ('Just a Fair Girl') by Elemér Szentirmai. The quartet was first performed on 19 March 1910, at one of the earliest concerts of the youthful Waldbauer-Kerpely Quartet, which would also provide the premières of his Second and Fourth Quartets (fig.5).

In the first half of 1910 Bartók's recognition as a composer appeared to be growing, and with it requests for him to perform. At a 'Hungarian festival' concert in Paris on 12 March 1910 he played several of his own works, as well as pieces by Szendy and Kodály. A press comment about these 'young barbarians' from Hungary probably prompted Bartók to write one of his most

6. Autograph MS of the first page of the piano score of 'Bluebeard's Castle', composed 1911; the German translation (unpublished) is in Emma Kodály's handwriting (Bartók Archives, Budapest)

popular piano pieces, the *Allegro barbaro* BB63, in the following year. In other works of 1910–12 French influences are at their most apparent, with Debussy's mark perhaps being too readily identified, notably in the orchestral *Két kép* ('Two Pictures') op.10 and the *Four Orchestral Pieces* op.12. The intervening op.11, the one-act opera *A Kékszakállú herceg vára* ('Bluebeard's Castle') (1911) is, however, a masterful Hungarian emulation of the realism of Debussy's *Pelléas et Mélisande*. Written to an expressionistic libretto by Béla Balázs about the 'mystery of the soul', the action of *Bluebeard's Castle* is negligible, involving just two singing protagonists, Bluebeard and his new wife Judith, who progress through the opening of the eponymous castle's seven doors, drawn by the woman's curiosity. The opera's climactic turning-point comes at the fifth door, to Bluebeard's kingdom, after which Judith's jealousy becomes obsessive, leading to her eventual entombment, along with all Bluebeard's previous wives, and eternal darkness. Bartók's work changed the course of Hungarian opera by successfully developing a fluid form of Hungarian declamation of Balázs's ballad-like text, based largely upon the inflections of *parlando rubato* folksong. He also managed to characterize the protagonists modally: Bluebeard through smooth, pentatonic lines; Judith through more chromatic and angular writing. Bartók's operatic conception owed much to Wagner, particularly in his use of a recurring minor-2nd 'blood' motif, while the orchestration is still indebted to Strauss, whose influence in other compositional respects had waned. The adjudicators of two Budapest opera competitions of 1911–12 nonetheless found little merit in this 'unperformable' work, and it was assigned to Bartók's drawer.

The year 1912 signalled Bartók's withdrawal from public musical life. He was increasingly seen as a radical, out of sympathy with the ruling musical clique led by such figures as the violinist Jenő Hubay. His efforts in 1911 to assist the formation of a New Hungarian Musical Society had, he felt, been futile, and he resigned from it in February 1912. He did not engage in serious composition in 1913, and saw no point in orchestrating his four op.12 pieces until there was some chance of their performance, which only occurred after the war. As a teacher, he was not generating a distinctive 'school', as did Hubay, Szendy or, later, Kodály, for he was fundamentally disinterested in questions of piano technique or didactic method. He did, however, in 1913 contribute nearly 50 easy pieces to the *Zongoraiskola* ('Piano Method') BB66, co-authored

with Sándor Reschofsky, from which 18 were later selected for *Kezdők zongoramuzsikája* ('The First Term at the Piano', 1929). In one field, folk music, Bartók's enthusiasms remained undiminished, and he was making reasonable professional progress. These ethnomusicological studies became his life's mainstay during the following six years of isolation.

Since 1906 Bartók had engaged in many folk-music collecting tours, some in collaboration with Kodály, but many undertaken independently. As well as informing his composition – the first Slovak folksong settings (BB46) date from 1907, and the first Romanian-influenced work, *Ket román tánc* ('Two Romanian Dances') BB56 from 1909–10 – these tours had led to Bartók's first ethnomusicological articles in 1908 and 1909. These were simple collections of transcriptions of melodies and texts of Transylvanian (Székely) and Transdanubian ballads. By the immediately pre-war years Bartók had developed more theoretical and speculative interests. His first essay on 'Comparative Musical Folklore' dates from 1912, and his first published book, about Romanian folksongs from the Hungarian county of Bihor (Bihár) which he had collected in 1909–10, appeared from the Romanian Academy in Bucharest in 1913. As a principle of grouping Bartók early came to adopt the system of the Finnish musicologist Ilmari Krohn, which had been endorsed in 1902–3 after a competition of the International Music Society. In Krohn's system all songs were transposed so that their final note was G. Songs were then ordered according to the cadence patterns of each verse. Further differentiation was possible according to cadence types and song ranges. With a growing number of modifications, this strongly structural scheme remained the model for Bartók's many later folk-music editions.

The richness of Romanian folk traditions, which in Bartók's opinion surpassed the Hungarian because of the greater primitivism and isolation of the Romanian population within the Empire, led him in 1913 to collect folk music of the Romanians of the Hungarian province of Máramaros (Maramureş). Bartók's excitement about this Máramaros material rivalled that surrounding his pentatonic discovery of 1907. It concerned his identification of an ancient *cântec lung*, or *horă lungă*. This 'long melody', or 'long dance', which he later identified in Arabic, Ukrainian and Persian musics, was strongly instrumental in character, improvisational, highly ornamented, and of indeterminate structure. Until 1913 virtually all of Bartók's collecting had taken place within Hungary. During June 1913, however, his comparative ethnomusicological interests drew him to north Africa, where among the Berber people around the oasis town of Biskra (now in Algeria) he experienced a folk music strikingly different from that of eastern Europe, in the narrower range and changeability of its scales and the almost constant drumming which accompanied most strict-time melodies. Both his Máramaros and north-African collections were prepared by 1914, but were, because of the war, delayed in publication.

4. 1914–26. Holidaying in France during July 1914, Bartók was almost caught unawares by the rush into World War I. For several months, as the Russians made incursions into the eastern provinces of Hungary, there were fears that even Budapest would be attacked; folk-music collecting became impossible. Bartók himself fearfully undertook several medical examinations, which however confirmed that he was unfit for service. Later, in lieu of military service, Kodály and Bartók were entrusted with the collection of folksongs from soldiers, which in January 1918 resulted in a patriotic concert in Vienna attended by Empress Zita. From Easter 1915, with the military situation stabilized, Bartók again resumed song collecting, mainly in Slovak regions fairly close to the capital, although in 1916 he ventured out into Transylvania on his task with the military. Romania's sudden attack on Transylvania in August 1916 ensured, however, that his further collecting did not venture too far from the Hungarian plain.

Although Bartók hardly performed at all during the war, its years were bounteous in folk-music arrangements. While 1914 had seen the start of work on two Hungarian piano sets – *Tizenöt magyar parasztdal* ('15 Hungarian Peasant Songs') BB79 and *Three Hungarian Folk Tunes* BB80b – both of which were completed in 1918, 1915 was a 'Romanian' year: piano settings of *Romanian Christmas Songs* (*Colinde*) BB67, the Sonatina BB69 (in 1931 transcribed for orchestra as *Erdélyi táncok*, 'Transylvanian Dances'); and one of Bartók's most popular works, the *Román nepi táncok* ('Romanian Folk Dances') BB68. The period 1916–17, by turn, was fruitful with three sets of Slovak folksongs for a variety of vocal resources (BB73, 77, 78).

Bartók's rate of composing original works was not impaired by his wartime conditions. Indeed, his isolation led to a more unified and concentrated compositional approach. With his three-movement Second String Quartet op.17 (1914–17) he maintained something of the nervous introspection of the First Quartet's opening in the outer movements, but for the central Allegro molto capriccioso movement (with which he experienced the most difficulty in composition) he drew on inspiration from north Africa, in the limited range of its harsh tune, in the drumming accompaniment and in the exaggerated embellishments. The Piano Suite op.14 (1916) similarly shows in its third movement a north-African influence, with its urgent ostinato and limited scalar patterns. This suite, originally in five movements with the symmetrical pattern of movement tonalities B♭–F♯–B♭–D–B♭, was later reduced to four movements with the removal of the second-movement Andante, yet still retains a strong interest in pitch symmetries, above all in its Scherzo. In a radio interview of 1944 Bartók described his intention in this work of refining piano technique to achieve 'a style more of bone and muscle'.

Also in 1916 Bartók deviated from his established pattern of vocal settings of folksongs to compose his only mature Lieder: two sets of *Öt dal* ('Five Songs'), opp.15 and 16. The quality of the poetry differs greatly between the works. Op.15 is a setting in *parlando* declamatory style of four love poems by a young woman, Klára Gombossy, with whom Bartók was involved during his 1915–16 collecting tours in Slovakia, with an extra poem by another adolescent friend. Bartók soon realized the folly of his musical (and personal) ways, and ensured that these songs were neither published nor performed during his lifetime. The op.16 songs are settings of poems by Hungary's leading progressive poet, Endre Ady. They exhibit a characteristic melancholy, with autumnal themes of isolation, loss and despair. Bartók's style of setting is less folk-influenced in these songs, but rather reflects a continuation of German Lieder traditions, especially in

the complementary rhythmic relationships between voice and piano. This work also pays stylistic homage to the composer Béla Reinitz, well known for his Ady settings, to whom Bartók dedicated the set in 1920.

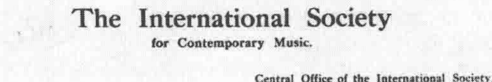
Most significant professionally among Bartók's wartime compositions was his one-act ballet *A fából faragott királyfi* ('The Wooden Prince') op.17, written to a scenario again by Balázs. The idea of this ballet had grown out of the visit of the Ballets Russes to Budapest in 1912. By March 1913 the Budapest Opera had requested a work from Bartók, but its composition and following orchestration had taken him until early 1917. In the journal *Magyar színpad* at the time of the ballet's production Balázs described how the work reflects 'that very common and profound tragedy when the creation becomes the rival of the creator, and of the pain and glory of the situation in which a woman prefers the poem to the poet, the picture to the painter'. Bartók crafted the work as a symmetrical tripartite symphonic poem, with the final part recalling materials from the first part in reverse order. Its music, as its plot, portrays the constant tension between the ideal prince and the grotesque puppet, who share the same thematic material.

Given Bartók's fatalistic attitude towards his own compositions, he was surprised by the ballet's highly successful première on 12 May 1917 under Egisto Tango (to whom he later dedicated the work). Not only did this success lead to many repeat performances of the work, but it also encouraged the Opera in Budapest to arrange for the première of *Bluebeard's Castle*, which took place on 24 May 1918. Importantly for the future, the enterprising Viennese publisher Universal Edition now contracted to publish Bartók's compositions, an event which he considered his 'greatest success as a composer, so far' and a sure road to greater international exposure. Universal worked hard to clear the backlog of the composer's many unpublished pieces, and, despite Bartók's frequent criticisms, remained his main publisher for the next two decades.

The last years of the 1910s witnessed widespread political and social dislocation in Hungary. Bartók and his family, living at Rákoskeresztúr, some kilometres east of Budapest, found transportation to the city increasingly difficult; food and fuel supplies became scarce; they had no electricity or running water. Medical help had to be brought from Budapest when in October 1918 Bartók succumbed to Spanish influenza during the pandemic. Finally in 1920 he was obliged to move to Budapest, where for two years his family took rooms in the apartment of the banker József Lukács. Meanwhile, the Austro-Hungarian Empire had collapsed. The new national boundaries, based on principles of majority ethnic self-determination and ratified by the Treaty of Trianon in 1920, saw Hungary stripped of those very areas of Transylvania and the northern, Slovak territories which Bartók had found ethnologically most interesting. For some years national tensions in the region ensured the unviability of collecting expeditions. Apart from a brief expedition to Turkey in November 1936 Bartók never again engaged in fieldwork, even within post-Trianon Hungary (as Kodály, for instance, continued to do). The remainder of his life was largely devoted to analyzing and categorizing his existing collection, which by 1918 numbered about 10,000 melodies (including 3,404 Romanian, 3,223 Slovak and 2,771 Hungarian), or to comparative studies involving knowledge of a large number of mainly eastern European collections.

With the succession of Hungarian governments during 1918–19 Bartók found himself courted for many positions, including director of the Opera, and head of a planned music department at the National Museum, although neither came to pass. In late October 1918 he was appointed by the liberal Károlyi government to be a member of the National Council, and under the short-lived communist government of Béla Kun in 1919 served on its music directorate, along with Kodály, Dohnányi and Reinitz. Bartók bore these rapidly changing events with apparent nonchalance, as he did the establishment of the right-wing rule of Miklós Horthy in the autumn of 1919. Yet he did think of settling abroad, with a first preference for Transylvania (by then part of Romania), followed by Austria or Germany. Of greater day-to-day significance to him was the continuation of sabbatical leave from the Academy of Music and of his attachment to the ethnographic department of the National Museum, both of which ceased in mid-1920. In 1920 he also had to fend off the first of several challenges in the press from the Hungarian right wing that, through his recent folk-music work, he was a supporter of the Romanian national cause and a traitor to Hungary. (This did not stop him in later years being accused by the Romanian authorities of being a Hungarian revisionist.)

Amid this turbulence Bartók succeeded in writing his iconoclastic pantomime *A csodálatos mandarin* ('The Miraculous Mandarin') op.19. He drafted the work in short score to a scenario by Menyhért (Melchior) Lengyel between October 1918 and May 1919, but only orchestrated it in 1924. Lengyel's is a superficially sordid plot about a prostitute, her 'minders' and clients, with a deeper message, conveyed by her last client, the Mandarin, about the powers of human love. The unsavoury aspect of the work caused it to be withdrawn immediately after its November 1926 première in Cologne, and contributed to the continual postponement of its Budapest première until December 1945, after the composer's death. Bartók approached the narrative in a mosaic-like way, using brief intervallically-determined 'tone patches' of variable tonal clarity and density of texture, which parallel the fluctuating sense of tension. *The Miraculous Mandarin* is, however, much more than graphic 'mime music'. Through various revisions up until 1931 Bartók refined a truly symphonic concept based upon his musical symbols of desire and love. It was a continual frustration to him, then, that this work, which he considered one of his finest compositions, so languished, while *The Wooden Prince*, a work he soon came to dislike, was staged more frequently.



With *Mandarin* and its immediate predecessor, the Three Studies op.18 for piano, Bartók launched into his most radical, Expressionist phase (1918–22), during which he believed he was approaching some kind of atonal goal. In his essay 'Das Problem der neuen Musik' (*Melos*, i/5, 1920, pp.107–10) he referred four times to Schoenberg, and recognized the need 'for the equality of rights of the individual 12 tones'; he drew examples of the 'previously undreamt-of wealth of transitory nuances [now] at our disposal' from his own opp.18 and 19. The following *Improvizációk magyar parasztdalokra* ('Improvisations on Hungarian Peasant Songs') op.20 (his last work to receive an opus number) also showed a bold

linking of innovative techniques of folksong arrangement and atonal direction. In 'The Relation of Folk-Song to the Development of the Art Music of Our Time' (*The Sackbut*, ii/1, 1921, pp.5–11) Bartók explained that 'the opposition of the two tendencies reveals all the more clearly the individual properties of each, while the effect of the whole becomes all the more powerful'; he further wrote of the peasant tunes saving such works as op.20 from a 'wearying or surfeiting extreme'. Yet towards the end of the 1920s Bartók claimed, in apparent contradiction to such statements, that atonality was incompatible with a style based on (necessarily tonal) folk music. In an interview in 1929 he even suggested that tonality in his early postwar works was not lacking 'but at times is more-or-less veiled either by idiosyncrasies of the harmonic texture or by temporary deviations in the melodic curves'; the Violin Sonatas nos.1 and 2 (BB84 and 85) for example, are, he maintained, in C♯ minor and C respectively. However, though these works of 1921–2 show further merging of folk-derived ideas and atonality, it is difficult to consider them in a key. Moreover, despite their titles, they only pay lip-service to traditional sonata principles. The first movement of the three-movement First Sonata adopts such a strongly variational approach to thematic materials that the point of recapitulation loses its traditional force. The two-movement Second Sonata, with its slower-faster progression is indebted to a rhapsodic model, while in long-term function the tritonal relationship F♯–C is of primary importance.

During the first half of the 1920s Bartók's compositional output slackened, not least because of his intense ethnomusicological work. Already in an essay of January 1918 he had articulated his old–new stylistic distinction in Hungarian folk music; by 1921 Kodály and Bartók had finalized a modest collection of Hungarian folksongs from Transylvania, published two years later; in 1924 Bartók's transcription and analysis of over 320 Hungarian songs was unveiled in his *A magyar népdal*. It appeared in German the following year, and in 1931 in English with the title *Hungarian Folk Music*. Bartók was also engaged during 1921–3 in compiling a two-volume study of some 1,800 Slovak peasant melodies, which he sent for publication in Czechoslovakia. (A third Slovak volume was completed in 1928, although all three remained unpublished during Bartók's lifetime.) He then immediately moved to prepare a volume of Romanian Christmas songs, which occupied much of his time from late 1923 until April 1926. (After many trials, only the musical part of this study appeared in a self-funded edition in 1935.)

The other draw on Bartók's time in the postwar years was his revitalized performing career. Amid the revolutionary atmosphere of 1918–19 he had unexpectedly re-emerged onto the concert platform, after seven years of virtual absence, with a willingness to perform in chamber, orchestral soloist and recitalist roles. One of his first Budapest concerts, on 21 April 1919, introduced his wartime compositions opp.14, 16 and 18 along with one of the earliest performances of the Second Quartet op.17. With the war over and Universal rapidly publishing his scores, Bartók was keen to grasp every opportunity for promoting his works through his own playing. Over the next 12 years he took part in over 300 concerts in 15 different countries. He also quickly took advantage of the promotional, as well as much-needed monetary, opportunities in writing for the international press, for which during 1920–21 he contributed over 20 scholarly or journalistic essays. Already by February 1920 he had re-established a performing connection with Berlin, where the conductor Hermann Scherchen and the theatrical entrepreneur Max Reinhardt sought to aid his cause. Further Hungarian performances and a concert tour of Romania (Transylvania) in February 1922 preceded a series of major performances during March to May of 1922 in Britain, France and Germany, which culminated in the German premières of *Bluebeard's Castle* and *The Wooden Prince* on 13 May in Frankfurt. Bartók's frequent partner in these concerts and further western European concerts in 1923 was the Hungarian-born violinist Jelly Arányi, to whom he dedicated both violin sonatas. Bartók was impressed by how seriously these sonatas were received, although his avowedly percussive approach to the keyboard was deemed unfortunate by many British critics, brought up on Matthay's views about relaxation and use of weight. The critics also had difficulties comprehending the frequent thematic segregation which exists between the instruments' parts in these two sonatas. Bartók's higher profile soon led to his inclusion in an international chamber music festival in Salzburg in August 1922, after which the International Society for Contemporary Music (ISCM) was founded. He became a staunch supporter of the ISCM; during the 1920s and 30s many of his pieces were performed, some for the first time, at its annual festivals. He served on its first festival jury in 1924, and was nominated to convene the aborted 1940 Budapest Festival.

Despite Bartók's growing opportunities for performing internationally, which extended during 1923–5 to include Czechoslovakia, the Netherlands, Switzerland and Italy, he did not immediately start to compose new works for

Hungary.

March 21st.1923.

Dear Sir,

The British Section of the International Society learns with pleasure of your visit to England in May, and hastens to ask you the length of your stay, and the dates on which you will be in London and disengaged. Our next concert is fixed for April 18th, so that a date as long as possible after this would be best for an evening which we should hope to devote to your work.(No Tuesday is free).

We should wish to perform your two Violin Sonatas, and would ask Miss d'Aranyi to play, also a group of pianoforte soli, and a group of songs, for which we should hope to secure a singer able to render them in Hungarian. We should be greatly honoured if you found it possible to play the solo pieces, and with Miss d'Aranyi. Would you accept an honorarium of £10.10.0 towards your expenses?

I hope very much that you will be able to come, and that I shall hear from you soon.

Yours very truly,

Secretary.

Communications should be in English, French, German or Italian, and addressed to the Secretary

7. Letter to Bartók from the British Office of the ISCM, inviting him to perform in London, March 1923 (Bartók Archives, Budapest)

this audience. His only composition of 1923, the orchestral *Táncszvit* ('Dance Suite') BB86a, was commissioned as a companion to Kodály's *Psalmus hungaricus* and Dohnányi's *Ünnepi nyitány* ('Festival Overture') for the celebration of the 50th anniversary of the union of Budapest. The style of the suite marked a retreat from his recent expressive radicality, not least through Bartók's re-acceptance of an accommodating rather than oppositional relationship between tune and accompaniment. It employs idealized peasant musics in its six movements, which are played without a break and connected by a ritornello theme in a serene Hungarian style. Its first movement, for instance, recalls the chromatic 'Arabic' inflections, the second, a brash, minor-3rd-based Hungarian idiom, while the third movement introduces an imitation of Hungarian bagpipe music followed by a section suggesting Romanian folk violins. The later movements reflect a growing stylistic internationalism, culminating in the colourful medley of the sixth movement. Bartók had also drafted a Slovak-styled movement, but omitted this from the final version of the piece. His next composition, *Falun (Dedinské scény)* ('Village Scenes') BB87a was, however, a setting in five movements of old Slovak ceremonial melodies. These mainly Lydian or Mixolydian tunes were given inventive 'motto'-like settings for female voice and piano; in 1926 the final three movements were arranged for female voices and chamber orchestra (BB87b) to a commission from the American League of Composers. The *Village Scenes*, with their themes of love, marriage and babies, are dedicated to Ditta Pásztory, whom Bartók had married in August 1923 following a sudden divorce from Márta Ziegler. Pásztory bore Bartók a son, Péter, in July 1924.

Apart from *Village Scenes* Bartók did not compose between August 1923 and June 1926, and by February 1925, as earlier in 1913–14, he was writing himself off as an 'ex-composer'. Nevertheless, he did devote much time in 1924 to orchestrating *The Miraculous Mandarin*, when there were early hopes of a first performance in Germany. His *Dance Suite*, however, gained a highly publicized performance, under Václav Talich, at the Prague ISCM orchestral festival in May 1925, which catapulted Bartók's work onto the international stage. Over the following two years it received over 60 performances in major European and American centres.

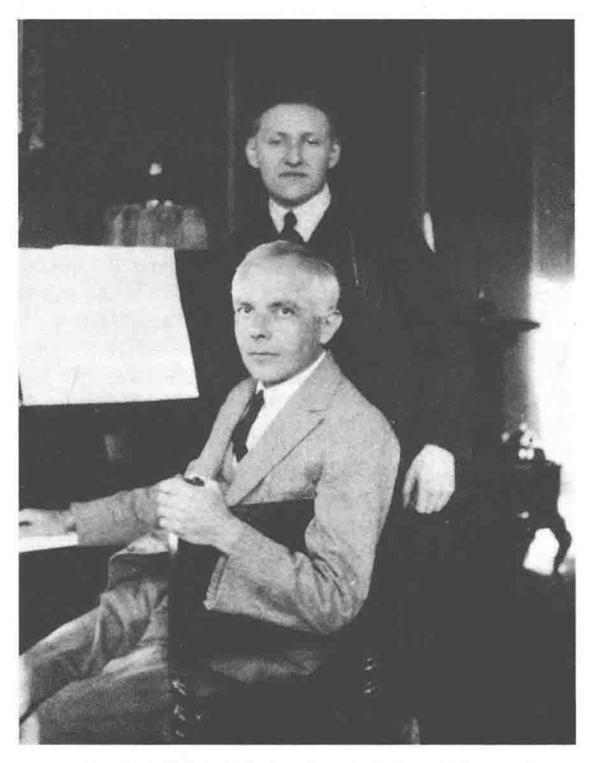
5. 1926–34. Between March 1925 and March 1926 Bartók visited Italy at least four times. There his long-standing interest in Baroque music, previously centred upon Bach, Domenico Scarlatti, Rameau and Couperin, was roused by the keyboard music of such Italian Baroque composers as Benedetto Marcello, Michelangelo Rossi, Della Ciaia, Frescobaldi and Zipoli. From October 1926 he started to perform his own piano transcriptions of their works and those of their contemporaries, 11 of which he later refined for publication. This new Baroque passion, coupled with the stimuli of rhythmic discoveries in Romanian Christmas songs, the additional performance opportunities which radio now afforded, and the hearing of Stravinsky's latest piano works (notably the Concerto for piano and wind), pushed Bartók into an almost frenzied phase of composition of piano works for his own performance. With these works of 1926 he initiated, in his own analysis, a fundamental creative shift from a Beethovenian ideal of artistic profundity to one more orientated towards the ultimate musical craftsman, Bach. In compositional process, however, he remained still a composer of essentially Romantic habit, a believer in inspired genius, whose music was 'determined by instinct and sensibility' rather than by theory, and who physically composed, as he explained in a 1925 interview, 'between the desk and the piano'.

While Bartók's international status had grown, his only available work for piano and orchestra remained the 1905 arrangement of the Rhapsody op.1 BB36b. By 1926, it was not only a stylistic anachronism, but also – as with the early Piano Quintet and First Suite – an occasional embarrassment for Bartók, when audiences took a liking to these early works over his more recent and dissonant compositions. From June to November 1926 he set about equipping himself with a new piano repertory: a three-movement Sonata (BB88), two collections of piano pieces, *Szabadban* ('Out of Doors') BB89 and *Kilenc kis zongoradarab* ('Nine Little Piano Pieces') BB90, and for his orchestral engagements the First Piano Concerto BB91. Three further short piano pieces later found a home within the *Mikrokosmos* collection. In these works of Bartók's 'piano year', he provided a preview of so many of the qualities which were to come to fullest maturity in the works of his 'golden age', 1934–40. 'Az éjszaka zenéje' ('The Night's Music') from *Out of Doors*, in depicting the nocturnal sounds of the Hungarian plain, introduced a genre of stylized representation of nature which would be repeatedly invoked up to his Third Piano Concerto of 1945. The 'Menuetto' from BB90 presented a pioneering example of Bartók's principle of expansion and contraction of scalar intervals – in this case notably a major 2nd into a perfect 4th (ex.4) – which would come to its most

Ex.4 *Nine Little Piano Pieces*, Menuetto, 3–4, 9–10

magisterial expression ten years later in the *Music for Strings, Percussion and Celesta*. The finale of the Sonata revealed Bartók's skilful imitation of traditional styles in the service of his concept of unity through variation. The movement's ritornello theme also provided the basis for the three intervening episodes, the first in imitation of vigorous peasant chanting, the second, of the peasant flute, and the third, of village fiddlers. Bartók drafted another longer episode, in bagpipe style, which developed a separate life as 'Musettes' (in BB89).

Straddling the borderline between Baroque and barbarism is the hammering rhythmic impulse which underlies the First Piano Concerto. From this impulse spring the main themes of all three movements. In the commencement of the slow, middle movement that impulse also provides the mechanism for the integration of piano and percussion, which Bartók explored further a decade later in the Sonata for two pianos and percussion. The sharp-edged timbral world of Stravinsky's Concerto for piano and wind is often alluded to in Bartók's, but it is especially evident in the middle movement, from which the strings have been banished entirely. Bartók's concerto, played



first under Furtwängler at the 1927 ISCM Festival in Frankfurt, proved only moderately successful as a new *carte-de-visite*. Its first edition was so studded with errors that it had to be replaced, and Bartók also confessed in 1939 that 'its writing is a bit difficult – one might even say very difficult! – as much for orchestra as for audience'. Even he found its solo part taxing, and with these experiences in mind he ensured that his Second Piano Concerto was more tuneful and less bristling with difficulties.

Having updated his piano repertory Bartók turned his attention in 1927–8 to chamber music, starting with the Third String Quartet (BB93), composed during the summer of 1927. In this quartet he attained the ultimate compression of his formal, pitch and rhythmic materials. Adorno (1929) wrote: 'What is decisive is the *formative power* of the work; the iron concentration, the wholly original tectonics. The traditional four movements are here fused into a single movement of about 17 minutes' duration. A new colouristic approach to string sonority is displayed, partly inspired by Berg's *Lyrische Suite*, which Bartók had recently heard. The score bristles with 'special effects' – glissando, pizzicato, *col legno*, *sul tasto*, *ponticello*, *martellato*, muted passages, the use of exaggerating vibrato, strumming, and their combinations – all of which give the piece its startling piquancy. In October 1928 it was awarded joint first prize, with Casella's *Serenata*, in a competition of the Musical Fund Society of Philadelphia, where it was given its first performance on 30 December of the same year.

Meanwhile, during the summer of 1928, Bartók had composed his Fourth String Quartet BB95. While taking over the expanded palette of string sonorities of no.3, the Fourth is formally very different. Originally conceived in only four movements, Bartók then added another (the published fourth movement) to provide a symmetrical five-movement structure. The slow, third movement, in a style reminiscent of 'The Night's Music' from *Out of Doors*, is the work's kernel. The second movement's tight thematic material is reflected, in more open guise, in the fourth, entirely pizzicato movement. The first movement's themes are also loosely mirrored in the finale, which ends with a coda that borrows liberally from the first movement's conclusion. Such symmetrical thinking about form had been evident in Bartók's works since the 1910s, but had never been expressed by him as clearly, either in the music or in his own analysis. The pitch relations of the quartet operate at a high level of abstraction, with much interplay between contracted and expanded expressions of short cells, yet in rhythm certain folk models are more apparent. In the first movement, for instance, Bulgarian-type irregular rhythms are used; the third movement involves rhythmic elements of both 'old' Hungarian and Romanian *horă lungă* precedent.

Two further chamber works, the Violin Rhapsodies (BB94, 96), originate from 1928. They were intended for Bartók's many performances with Hungarian violinists, as milder alternatives or adjuncts to his violin sonatas; but he also arranged them for violin and orchestra, as well as the first for cello and piano, on a request from Casals. Both pieces follow the traditional *lassú–friss* (slow–fast) rhapsodic pattern which Bartók knew so well from his scholarly work during the 1910s on Liszt's *Hungarian Rhapsodies* for that composer's complete edition. Bartók's Rhapsodies are cunningly devised concatenations of predominantly Romanian melodies, although Hungarian and Ruthenian tunes are represented. The First Rhapsody was dedicated to Szigeti, who had recently made a violin and piano arrangement of seven *For Children* pieces, and the Second to Székely (fig.8), who had similarly arranged Bartók's *Romanian Folk Dances*.

The concerts for which Bartók had intended his many compositions of 1926–8 found willing entrepreneurs. The late 1920s were Bartók's heyday as a pianist, with good offerings of concert opportunities, increasing radio work and, from 1928, contracts for producing gramophone records. By this time he often had the chance to specialize in playing his own works. When Bartók was granted a sabbatical from the Budapest Academy for 1927–8 he was finally able to realize a plan he had nurtured ever since graduating, of a concert tour of the USA. Notwithstanding the débâcle of the first two concerts on 22 and 23 December 1928, when the New York PO, under Mengelberg, proved unable to perform the First Piano Concerto and the Rhapsody op.1 had to be substituted at the last minute, Bartók's two-month coast-to-coast tour, with its mixture of small lecture-recitals and large concert events, was a successful musical and promotional undertaking as well as a personally eye-opening experience. In America he performed especially with Szigeti and his former student Reiner, under whose baton the First Piano Concerto did eventually have its American première on 13 February 1928. By 1929 Bartók was starting to live the life of the itinerant performer. During that year's first four months he undertook a three-week tour of the Soviet Union, followed by concerts in Switzerland, Denmark, Britain, Holland, Germany, France, Italy, Austria and

8. Bartók with Zoltán Székely, to whom he dedicated his second Violin Rhapsody and Violin Concerto 'no.2', 1925 (Bartók Archives, Budapest)

Hungary, where on 20 March he heard both his recent string quartets in sympathetically received performances from the Waldbauer-Kerpely Quartet. Even the pessimistic Bartók had good reason to be 'relaxed and happy', as his son reported of him on his 48th birthday.

Vocal music absorbed Bartók's compositional energies during 1929–30. Kodály's increasing list of Hungarian folksong arrangements jogged Bartók into contributing one last substantial set of voice and piano arrangements: *Húsz magyar népdal* ('Twenty Hungarian Folksongs') BB98. He grouped these songs thematically – four sad, four dancing, seven diverse and five new-style – but with no intention that they be performed in order. Bartók's settings mostly fall within his creative, 'motto' approach. In publication it was not the music but the German song translations which caused the most acute problems, as had often been the case with previous vocal works, notably his settings of Ady in the Five Songs BB72. Unlike Kodály, Bartók was insistent upon an idiomatic German translation which faithfully maintained the east European musical rhythms but also adhered as far as possible to natural German word accentuation. With *Twenty Hungarian Folksongs* a publishing compromise was finally reached, with both poetic and literal translations being provided for some songs. During early 1930 Bartók also arranged his four-movement *Magyar népdalok* ('Hungarian Folksongs') BB99 for mixed chorus.

For the *Cantata profana 'A kilenc csodaszarvas'* ('The Nine Enchanted Stags') BB100, written during the summer of 1930, Bartók set his own poetic working of an ancient Romanian epic ballad for tenor and baritone soloists, chorus and orchestra. However, before making the score's final copy, he replaced the text with a skilful Hungarian translation, of which he was particularly fond and later independently recorded. A three-movement work running without a break and anchored firmly in D, the cantata marked an important stage in Bartók's long-term reversion to more overtly tonal writing and longer thematic statements. His strengthening interest in symmetries can be clearly illustrated by comparing the mirrored nature of the modes with which the work begins (D–E–F–G–A♭–B♭–C–D) and ends (D–E–F♯–G♯–A–B–C–D). This latter, Slovak-influenced 'acoustic' form (so-called because of its congruence with the lower degrees of the harmonic series), through its association with the cantata's closing words 'From clear and cooling mountain springs', came to be recognized as Bartók's symbol for the purity of nature. Of all Bartók's compositions, the *Cantata profana* has elicited perhaps the greatest variety of interpretations of its overall musical form – implied four-movement structure (Ujfalussy), 'large sonata form' (Somfai), five-act classical dramatic form (Szabolcsi), to list but three – as well as of its textual message, with its components of initiation–transformation–purification, naturalistic freedom and pantheistic integration. Particularly in its aspects of generational conflict, the cantata has been seen as emblematic of Bartók's response to the rising fascism of its time.

As Bartók approached his 50th birthday he attracted the accolades of international fame, and became more overtly committed to internationalist goals. In late 1930 he received news of awards, namely the French Légion d'Honneur and the Hungarian Corvin wreath. He was honoured again in 1932 with a Romanian cultural award. While his interests in national folk musics remained intense, he was tending to write more generally and more comparatively about folk music, culminating in his study *Népzenénk és a szomszéd népek népzenéje* ('Our [Hungarian] Folk Music and the Folk Music of Neighbouring Peoples') which first appeared in 1934. As a composer Bartók harboured, even into the early 1940s, the aim of adding two or three further 'national' parts to his *Cantata profana*, as a musical tribute to the increasingly tenuous brotherhood of Danube-basin peoples. As a performer, too, he more sought international than national acclaim, having decided in 1930 no longer to perform his own works in unresponsive Budapest. He maintained this ban until late 1936, although he still sometimes played his own works in other Hungarian towns and occasionally other composers' music in the capital. None of Bartók's major works of the 1930s or 1940s received its première in Budapest.

On 13 January 1931 Bartók's internationalism took more concrete form in his acceptance of an invitation to join the Permanent Committee for Literature and the Arts of the League of Nations' Commission for Intellectual Co-operation, where his colleagues included Thomas Mann, Gilbert Murray and Karel Čapek. Over the next five years he occasionally introduced proposals about musical issues requiring international collaboration – gramophone records, Urtext and facsimile editions – but in 1934 also framed a proposal about artistic and scientific freedom. His joining of the Permanent Committee coincided with his much-quoted statement of compositional internationalism, in a letter of 10 January 1931 to the Romanian diplomat and music historian, Octavian Beu. While recognizing the three sources of his creative work as Hungarian, Romanian and Slovak, with the strongest influence being Hungarian, Bartók expressed his belief in

> the brotherhood of peoples, brotherhood in spite of all wars and conflicts. I try – to the best of my ability – to serve this idea in my music; therefore I don't reject any influence, be it Slovak, Romanian, Arabic, or from any other source. The source must only be clean, fresh and healthy!

Bartók's consolidation of a more thematic and less rhythmically reiterative style continued in his next major work, the Second Piano Concerto BB101, completed in October 1931. Symmetries abound at many pitch and rhythmic levels, as also in its overall five-part 'bridge' (ABCBA) structure, with the third movement being a free variation of the first, and the second movement of an Adagio–Scherzo–Adagio construction. Stravinsky is again a decided influence upon Bartók's use of instruments – the strings are not used until the second movement – and upon his thematic material, which occasionally alludes to the early Parisian ballets, notably *The Firebird* and *Petrushka*. Apart from this concerto Bartók composed no substantial new works during 1931–4.

During these fallow years, coinciding with the worst years of the Depression, Bartók was occupied with several arrangements of existing compositions and series of miniature 'educational' pieces. His publishers, anxious to counter falling sales by promoting his more popular piano or vocal compositions in new quarters, encouraged him to engage in four orchestral arrangements: of his Sonatina (via Gertler's violin and piano transcription) as *Erdélyi táncok* ('Transylvanian Dances') BB102b in 1931; of five of his piano pieces from 1908–11 in *Magyar képek* ('Hungarian Sketches') BB103 in 1931; of nine of his *Tizenöt magyar parasztdal* ('Fifteen Hungarian Peasant

9. Béla Bartók: caricature from 'Radio Times' (18 May 1934)

Songs') BB79 as *Magyar parasztdalok* ('Hungarian Peasant Songs') BB107 in 1933; and, in 1933, of five of his *Húsz magyar népdal* ('Twenty Hungarian Folksongs') (1929) as *Magyar népdalok* ('Hungarian Folksongs') BB108 for voice and orchestra. Bartók did not manage to complete other planned orchestrations of selected pieces from *Out of Doors* and *Nine Little Piano Pieces*; nor did he embark upon a planned 'string symphony' based on the Fourth String Quartet.

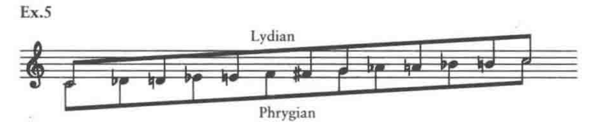
Apart from this relatively mechanical work of arrangement, Bartók composed the *Forty-four Duos* BB104 for violins during 1931. These pieces arose through a request from the German violin pedagogue Erich Doflein for permission to set some of Bartók's *For Children* pieces in Doflein's *Geigenschulwerk*. Bartók was excited by Doflein's project and offered to write new pieces which would introduce simple folk music (or, in two numbers, imitations) from a much greater range of cultures: Romanian, Ruthenian, Serbian, Ukrainian and 'Arabic', as well as Slovak and Hungarian. When in 1932 Bartók saw many of these pieces within the context of Doflein's five-volume progressive 'violin school', he formed a broader plan of his own: a series of piano pieces, graded from very easy to recital standard, which he later called *Mikrokosmos* (BB105). During the summer of 1932 he composed some 35 pieces, ranging in difficulty from 'In Dorian Mode' (no.32) to 'Chromatic Invention III' (no.145). When his young son, Péter, began piano lessons with his father in 1933, Bartók had an immediate incentive to compose many simple pieces; the same year he composed a further 30 pieces, including seven which eventually found their way into the first volume, comprising the easiest pieces, and nearly half of the sixth volume, the most difficult. Another 20 pieces were added to the collection in 1934, after which Bartók produced only occasional items until a second phase of intense activity in 1937–9.

6. 1934–40. In the summer of 1934 Bartók achieved a professional goal he had desired for over two decades: a full-time position as an ethnomusicologist. Within weeks of Dohnányi being appointed director of the Budapest Academy of Music Bartók received permission to transfer to the Academy of Sciences, where for the following six years, in conjunction with Kodály, he led a small team of folk-music researchers in an omnibus Hungarian folk-music project. Bartók was overjoyed at the release from institutional teaching, although he still maintained a small number of private piano pupils to supplement his income. The Academy of Sciences' project was based upon a proposal which Bartók and Kodály had originally made to the Kisfaludy Society in 1913 for a 'complete, rigorously critical and exact publication' of Hungarian folk music. The number of items, estimated at nearly 6,000 in 1913, had grown to about 14,000 by the time Bartók closed the collection in 1938. Of these about one fifth had been collected by Bartók himself. By 1940 he had succeeded in refining a complex, closed classification system for the melodies, which paid particular attention to rhythmic characteristics, and his team had transcribed or revised existing transcriptions of the tunes, yet he had managed neither to draft a justificatory introduction nor to address important editorial questions. More seriously, his classification system had diverged considerably from that which Kodály had understood would be used. (Over the years of their acquaintance Bartók and Kodály had come to differ on many fundamental questions on music, for

10. Draft score of Bartók's 'Mikrokosmos' nos.140 and 141, 1933 (Péter Bartók Collection)

11. Bartók with his second wife, Ditta, c1937

instance on the relative melodic versus rhythmic importance in categorization, and even on how differentiated or normalized the ideal transcription should be.) Although both Bartók and Kodály are recognized as the general editors of the Academy's *A magyar népzene tára* series, the first volume of which appeared in 1951, it was neither Bartók's nor Kodály's 'system' of classification which would ultimately prevail, but rather a principally genre-based one to which Pál Járdányi was a principal contributor. The first volume of the re-assembled Bartók system only appeared in 1991.



Bartók's transfer to the Academy of Sciences gave him greater flexibility in engaging his interests in other folk musics. He made final revisions to his Slovak study in 1935–6 and continued to work on his Romanian collections, leading to an expensive, failed attempt at self-publication in 1940. The draft of another study, posthumously published as *Turkish Folk Music from Asia Minor* (Princeton, NJ, 1976), resulted from Bartók's fieldwork in Anatolia during 1936, as part of his assignment to advise the Turkish authorities on the collecting of national folksong and other educational questions. He also further indulged his passion for east European folk music, in which he paid particular attention to south Slavic and Bulgarian musics. The irregular Bulgarian rhythms and metres, awareness of which had caused him considerably to revise his notations of Romanian folk music in the early 1930s, came to exert an important force upon his own compositions, and he developed but did not follow through plans to visit Bulgaria in 1935 to pursue these interests.

As a pianist Bartók started to claw back engagements from the depressed levels of 1932–4, and during 1934–40 he performed approximately equally at home and abroad. Engagements abroad were often hard to secure, due to the widespread popularity of 'home preference' schemes to assist local artists, to increasing tensions with Romania, and also to lack of opportunities for Bartók in Nazi Germany. Since 1933 German radio stations had not offered him engagements; after two years of negotiations to arrange an orchestral performance in Berlin, he finally in mid-1937 decided no longer to seek engagements in Germany. Accordingly, in the final years of the 1930s he performed more in Hungary, although he also developed some new touring circuits in Switzerland, the Low Countries and Italy, where he gave his last European performances abroad in December 1939. As a soloist during these years Bartók highlighted his Piano Concerto no.2, which was gaining a considerably better press than no.1. As a chamber player he forged an important new partnership, with his wife, Ditta (fig.11). Their concert début took place on 16 January 1938, as the two pianists in the première of Bartók's Sonata for two pianos and percussion. Over the following five years she was his frequent stage companion.

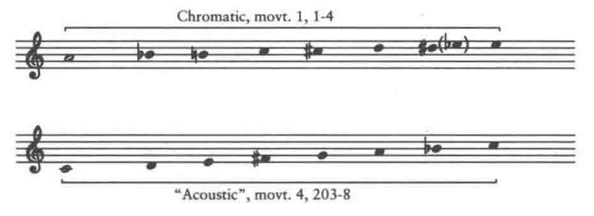
The years 1934–40 constituted, notwithstanding the slide towards war, the pinnacle of Bartók the composer; he produced masterpieces in each of his major genres: chamber, orchestral, vocal and piano music. The few works of his final American years are, despite their concert popularity, probably best seen as compositional addenda to these powerfully integrated creative statements. Apart from an arrangement for piano of several of the *Forty-four Duos*, entitled *Petite suite* (BB113), all pieces of this period are original compositions, nearly all written to commission. They exhibit a greater distance from any models of Bartók's contemporaries than do the works of preceding or following periods, and are also less immediately reflective of his recent folk-music findings than hitherto. Their homogeneity of style is unparalleled in

Bartók's output, and reflects the full flowering of that Bachian aesthetic to which he had been gravitating since 1926. Technically, this achievement was partly the result of the advanced state of evolution of Bartók's contrapuntal and chromatic writing, and also of his handling of variation. In his later Harvard lectures (1943) Bartók identified polymodal chromaticism as a main ingredient of his idiom. By this he meant a kind of chromaticism which draws its elements from strands of different modes based upon a single fundamental note; ex.5 shows a

Ex.5

typical, Lydian-Phrygian polymodal construction. From this Bartók further developed a structural (that is, non-embellishing) type of 'melodic new chromaticism' in which earlier modal obligations are dispensed with, even though allegiance to one focal note is retained. The opening 'Arabic' melody in the *Dance Suite* was identified by Bartók as his first 'new chromatic' melody, while he also referred, in his lectures, to examples in a majority of the works of 1934–40, of which the twisting A-based fugal theme in the first movement of the *Music for Strings, Percussion and Celesta* is perhaps the most famous. The 12-note 'row' theme found in the outer movements of the Violin Concerto (BB117) of 1937–8 (Bartók's second concerto for the instrument, though never numbered by the composer) is another instance of such chromaticism, with which, as reported by Yehudi Menuhin, Bartók 'wanted to show Schoenberg that one can use all 12 tones and still remain tonal'.

Bartók's fascination with documenting the ever-changing variants of folk music had by the mid-to-late 1930s also become an ingrained aspect of his compositional strategy. In 1937 he declared to the Belgian scholar Denijs Dille that 'I do not like to repeat a musical thought unchanged, and I never repeat a detail unchanged .... The extreme variety that characterizes our folk music is, at the same time, a manifestation of my own nature'. That variational orientation is seen in Bartók's very occasional theme-and-variation movements, such as the second movement of the Violin Concerto 'no.2'; but much more in his frequent writing of finales as variants of opening movements, his incessant variation (often involving inversion) of exposition material in recapitulations, and his bar-by-bar evolving variation of thematic and motivic materials. It is not by chance that in over 30 statements of Bartók's 12-note theme in the opening movement of the Violin Concerto no two statements are identical.



Most representative of the 1934–40 period, although each is of a very different construction, are four chamber works. Bartók's last two string quartets, the Fifth (BB110) of 1934 and the Sixth (BB119) of 1939, frame the period's output. Written to a commission from Elizabeth Sprague-Coolidge, the Fifth, like its predecessor, has five movements arranged symmetrically around the central, third movement, in this case a Scherzo and Trio in Bulgarian metres. Bartók's variational play is seen nowhere better than in a banal 'barrel-organ' interlude near the end of the finale, which turns out to be an inverted, diatonic relative of that movement's opening chromatic theme. By contrast, the Sixth String Quartet is in four movements, and stylistically retrospective, even nostalgic. Its *mesto*, solo viola ritornello theme recalls the opening dirge of the First Quartet, while the slow finale looks back to the grim ending of the Quartet no.2. Bartók originally intended to have a fast, dance-like finale, but the brooding ritornello came so to grow through the work – in duration, complexity and instrumental involvement – that it eventually consumed the entire role of finale.

Between these two quartets Bartók composed two chamber works for very different ensembles; in 1937 the Sonata for two pianos and percussion BB115, his only chamber work to involve percussion, and in 1938 *Contrasts* BB116, the only one to involve a wind instrument. The three orchestral works which Bartók had written since 1926 which used piano and percussion had convinced him that one piano could not provide sufficient balance to the sharp sounds of the percussion section – hence the Sonata's instrumentation. Bartók demanded intricate coordination from the two percussionists (although six were used in one early Italian performance), not just in the virtuoso playing of their seven instruments but also in achieving subtle distinctions of sound quality through using different wooden or metal beaters, and even the blade of a pocket-knife. The three-movement structure, as with the immediately preceding *Music for Strings, Percussion and Celesta*, moves from a 'closed', twisting opening chromaticism to the open, 'acoustic' scale forms of the finale. Moreover, the larger and smaller sections of these two works were early identified to have an uncanny sense of proportion, which the Hungarian analyst Ernő Lendvai from the late 1940s onwards claimed as manifestations of golden section principles (*See* FIBONACCI SERIES, and GOLDEN NUMBER). Although Bartók appears not to have known about such proportions, and many of Lendvai's calculations have since been discredited, it is undeniable that a fine sense of proportion and of chromatic–diatonic balance was articulated in these two works. Altogether different in form and intention was Bartók's *Contrasts*, commissioned by Benny Goodman as a light two-movement piece of about six minutes' duration, with each movement to fit on one record side. Bartók, however, exceeded both duration and movement expectations by producing a three-movement work which lasts some 15 minutes. Within the original slow–fast rhapsodic frame, he inserted a 'Relaxation' movement in which the slowly moving clarinet and violin simultaneously mirror each other's lines. In *Contrasts* Bartók formally acknowledged with the first movement's title 'Verbunkos' the resurrection of that kind of stylized national dance which had characterized some of his earliest works, had then been rejected under the sway of peasant music, but had slowly been re-emerging since the violin rhapsodies of the late 1920s.

The most significant of his chamber-orchestral works of the period is *Music for Strings, Percussion and Celesta* BB114, written for Paul Sacher and the Basle Chamber Orchestra during the summer of 1936. The piece shows great originality at all levels of its construction and seamlessly integrates the broadest range of Bartók's folk-music and art-music sources. Formal and pitch symmetries are plentiful, as in the A–C–F♯–A tonal pattern of the four movements, the forward and reverse cycles of 5ths of the opening fugue, and the ABCBA 'bridge' form of the third-movement Adagio. Bartók's variation of materials is constant, with a particularly poignant example in the finale, where, following the model of his Fifth Quartet, a

calmo, rhythmically uniform version of the movement's snappy opening theme momentarily halts the concluding rush. A sense of monothematicism is achieved through the reintroduction of the opening movement's chromatic fugue theme in each succeeding movement: as a contour model for the second's main subject, as the cement between each block of the third's bridge form, and, using scalar expansion (ex.6), as a grand 'acoustic' transformation at the culmination of the finale. Less technically demanding and profound, but even more in keeping with Bartók's Baroque aesthetic is the *Divertimento* BB118 of 1939, also composed for Sacher, which Bartók described as a cross between a concerto grosso and a concertino.

Ex.6 *Music for Strings, Percussion and Celesta*

The only work for full orchestra during the latter 1930s is the three-movement Violin Concerto 'no.2', written to a commission from Zoltán Székely. Not having written a violin concerto in three decades and never having heard a full performance of the earlier one, Bartók was nervous about the balance between soloist and orchestra. However, when he finally heard the work performed, in 1943, he was delighted that 'nothing had to be changed'. The concerto is probably Bartók's most diverse study in variation, not just in the theme and variations of the second movement, which is a virtual catalogue of his techniques, or in the ever-changing forms of his 12-note theme in the outer movements, but also in the way in which the third movement is derived entirely from first-movement material. To Székely, who had requested a traditional concerto, he confided: 'so I managed to outwit you. I wrote variations after all'. Even within the first movement, thematic interrelationships and textural transformations are most ingenious: the placid solo violin melody in the development section, for instance, reveals itself to be a literal quotation of the movement's opening pizzicato bass line. A *verbunkos* character is again present in the concerto's opening, with its suggestion of Transylvanian fiddlers. As in several of Bartók's later compositions, the ending was reworked to give a more expansive peroration in which the solo violin continues playing to the end.

During 1935–6 Bartók composed his last choral pieces, the *Twenty-Seven Two- and Three-part Choruses* BB111 for children's and women's choruses, and *Elmúlt időkből* ('From Olden Times') BB112, three songs for male chorus. Both works present Bartók's own fashionings of folk texts, the short choruses dealing with the domestic world of childhood and adolescence, the longer male chorus songs with the joys and sorrows of peasant life. Kodály, for whose growing choral movement the *Twenty-Seven Choruses* were written, later wrote that Bartók's recent studies of Palestrina might have been a source of inspiration for the heightened polyphonic plasticity and imitational resourcefulness found in these pieces. Despite the quality of Bartók's writing these two works have not gained the level of international attention accorded to Bartók's late instrumental works, partly because of their educational associations and partly because of the intractably Hungarian nature of their prosody.

At the same time as Bartók was writing this string of masterworks, his collection of *Mikrokosmos* piano pieces continued to grow. Already on 9 February 1937 he had given the public première of 27 of them at an ISCM concert in London, and he continued to unveil such selections in following years. During 1937 he composed ten, mainly more advanced pieces, including five of the 'Six Dances in Bulgarian Rhythm'; these brought what became the sixth volume almost to completion. He added some 50 further pieces in the following two years, including much of the first volume, and also the 33 exercises. In the preface which Bartók sent with the completed collection of 153 pieces to his new publisher, Boosey & Hawkes, in November 1939, he drew attention to the versatility of the series. He had included a second piano part in four pieces, to encourage early ensemble playing, and another four pieces were songs ('All instrumental study or training should really commence with the student singing'). Ten other pieces were recommended for playing on the harpsichord. Bartók stressed that his collection did not present a complete 'progressive method', but rather a base to which works by other composers, such as Bach and Czerny, should be added. In a letter to Boosey & Hawkes of 13 February 1940, he explained that he saw *Mikrokosmos* as a bridge leading from his own 20th-century shore to an older one, either through 'centuries-old folk music' or through such typical devices of older art music as canon and imitation. With the completion of both *Mikrokosmos* and the Sixth String Quartet in November 1939 Bartók entered his longest compositionally unproductive period, which lasted until 1943.

From his vantage point as a committee member of the League of Nations, Bartók was a direct witness to the deterioration in human rights and growing nationalistic intolerance which swept so many parts of Europe during the 1930s. His ethnomusicological work was still occasionally attacked by nationalists in both Hungary and Romania, and the publication of his Slovak collection was finally ruled out in early 1939, the victim of other nationalist tensions. Bartók was acutely distressed at Germany's dismemberment of Czechoslovakia in 1938–9, but it was Germany's annexation of Austria in March 1938 which had the most immediate effect upon him. Bartók's then publisher, Universal, was rapidly Nazified, and his main royalty agencies, AKM and Austromechana, were merged with the corresponding German organizations. Bartók quickly sought to secure publication through Boosey & Hawkes, and to join the British PRS. His worries about when Hungary, too, might succumb to Nazi domination caused him in late 1937 to start thinking about a safe haven for his more valuable manuscripts, and in April 1938 to start their despatch, first to Switzerland, and then, via London, to the United States, where they later became the basis of the New York Bartók Archives. In 1988 they entered the private collection of Péter Bartók in Homosassa, Florida. During the first half of 1939 Bartók seriously investigated the possibility of emigrating to Turkey, before deciding that the USA was the most desirable personal refuge. However, on 13 April 1938 Bartók had written 'I have my mother here: shall I abandon her altogether in her last years? – No, I cannot

do that!'; and only on her death in December 1939 did he feel morally free to leave. Despite the precarious times – with the period of 'phoney war' drawing to a close – Bartók undertook a successful concert tour of the USA during April–May 1940. Noteworthy were a sonata recital with Szigeti at the Library of Congress in Washington and a Columbia recording session of *Contrasts* in New York with Szigeti and Goodman. His confidence in a move of indefinite duration was immeasurably strengthened when he came to know of a large collection of Serbo-Croat field recordings undertaken by a Harvard professor, Milman Parry, and his associate, Albert B. Lord, in 1933–5.

Back in Budapest by late May of 1940, Bartók started to plan for his permanent return to the USA with his wife in October 1940. Bureaucratic complications associated with indefinitely leaving Hungary before the pensionable age of 60, when he would also become exempt from military service, as well as visa, travel and currency difficulties, were compounded by persistent pains in Bartók's right shoulder, which required daily hydrotherapy. These pains were later interpreted as the first signs of his eventually fatal blood disorders. A final orchestral concert for both husband and wife was held at the Budapest Academy of Music on 8 October 1940, before they travelled to New York, via Lisbon.

7. 1940–45. Bartók lived in the USA for the remainder of his life. After the trials of the first few months, with the couple's early two-piano concerts gaining less than enthusiastic receptions and insecurities over accommodation, finances, passports and their temporarily mislaid Hungarian luggage, Bartók settled into the familiar routine of regular ethnomusicological work and occasional concert tours. During his American years he declined several offers of composition-teaching positions, although he did privately teach a few students piano or composition. In November 1940 Columbia University awarded him an honorary doctorate, and during 1941–2 he held a research appointment there, working on Parry's Serbo-Croatian collection, which was on loan from Harvard. That work eventually resulted in the volume *Serbo-Croatian Folk Songs* (New York, 1951), of which Bartók completed the musical parts and Lord the textual. Probably Bartók's greatest discovery among this Serbo-Croat material lay with Dalmatian chromatic folk tunes. There he came upon a form of melodic chromaticism very similar to the 'new chromaticism' found in his own compositions since the *Dance Suite*. Moreover, he found that his compositional technique of melodic transformation through expansion or contraction of scalar intervals (exx.4 and 6) occurred naturally among the Dalmatians. Their chromatic melodies were none other than compressed diatonic melodies of surrounding areas. Another Dalmatian effect, which Bartók later compositionally imitated, involved the playing or singing of chromatic tunes in two parallel parts, separated by intervals such as major 2nds or minor 7ths. Mainly in his private time, Bartók also worked on the final forms of his volumes of Romanian instrumental and vocal melodies, which were essentially complete by December 1942, and of Romanian folk texts, which took until late 1944. He also revised and polished his Turkish volume, which was finished in late 1943. Without prospect of publication for either, Bartók deposited them in the music library at Columbia, to be available 'to those few persons (very few indeed) who may be interested in them'. These Romanian volumes were published in 1967, the Turkish in 1976. A further ethnomusicological appointment, for work on Amerindian music, was periodically offered by the University of Washington, Seattle, but never taken up.

The 'magnificent possibilities' to which Bartók's New York agent had made reference in 1940 soon turned out to be illusory. Twice during 1941 he ventured on tours across the continent, presenting numerous solo or two-piano recitals in universities or colleges. More prestigious engagements were few. His last solo concerto performances took place in Chicago on 20 and 21 November 1941, and his last public appearances were with his wife on 21 and 22 January 1943, when Reiner conducted the American première of his Concerto for two pianos, percussion and orchestra BB121, an arrangement of the Sonata for two pianos and percussion. After January 1943 Bartók did still seek performing engagements, and though in January 1945 he played for a New Jersey radio broadcast, for a variety of health and logistical reasons no further public performances followed. As a composer, too, his American output was initially meagre. The orchestral version of the Sonata was made in 1940 and the arrangement of his Second Suite, as the Suite for Two Pianos op.4b BB122, in 1941. But he did not engage in any original composition until the spring of 1942, when some ideas emerged perhaps for a suggested concerto for 'combinations of solo instruments and string orchestra'. From April 1942, however, chronic illness intervened and Bartók put this work aside.

Although suffering more acutely, Bartók decided to go ahead with a visiting appointment at Harvard for the spring semester of 1943. There his duties were to present one recital and two lecture series on recent Hungarian music, principally his own and that of Kodály, and on folksong and ethnomusicological procedure. While Bartók only managed to present three of the first series' lectures and to draft a fourth, these Harvard lectures provide Bartók's most candid and detailed explanation of his compositional techniques. He was then hospitalized, with a tentative diagnosis of blood (polycythemia) and lung (tuberculosis) disorders. The American Society of Composers, Authors and Publishers (ASCAP), of which Bartók was not a member, decided to underwrite the costs of his medical treatment and recuperation. For the following three summers recovery took him to Saranac Lake in New York State, and for the 1943–4 winter to a sanatorium in Asheville, North Carolina. It was while on these rest cures away from New York that Bartók's final compositions were written.

The Concerto for Orchestra BB123 was commissioned by the Koussevitzky Music Foundation in May 1943. Probably drawing on some of his fleeting ideas from 1942, Bartók started in August 1943 to draft the work in five movements, less overtly symmetrical, however, than Bartók's other recent five-movement compositions. The various folk-music and art-music components of its style are also less integrated than in his music of the 1930s. In a programme note Bartók depicted the work's mood as gradually progressing from the 'sternness of the first movement and the lugubrious death-song of the third, to the life-assertion of the last one'. The exception to this progression, as Bartók noted, was the jesting 'game of pairs' second movement, in which he imitated the two-part parallel Dalmatian style found in Parry's collection.

The fourth movement, 'Intermezzo interrotto', is uncharacteristically cheeky in mood, with its parody of a tune from Shostakovich's then-popular Seventh Symphony, and nostalgic quotation of a popular song, *Szep vagy, gyönyörű vagy Magyarország* ('You are lovely, you are beautiful, Hungary') by Zsigmond Vincze. Another strong, nostalgic influence upon the first and third movements is Bartók's own style from the 1908–11 period, in particular that of *Bluebeard's Castle*. The life-asserting finale is, however, a boisterous roll-call of some of Bartók's favourite folk styles. It attempts, if with limited success, to combine aspects of sonata form with the loose 'chain' forms which Bartók had invoked in the second and third movements. First performed in Boston on 1 December 1944, the Concerto for Orchestra proved immediately attractive to the American public, although Bartók was soon persuaded to write a second, less abrupt ending to the finale. Whether, or how much, Bartók's new accessibility betrayed his longer-term creative directions became a frequent point of debate after his death.

During October 1943 Bartók heard excellent multiple performances of his Violin Concerto ('no.2') in the hands of Tossy Spivakovsky, and in November inspired performances of his First Violin Sonata from Menuhin. On Menuhin's suggestion of a commission, Bartók had by 14 March 1944 written the four-movement Sonata for solo violin BB124, a work of overt homage to Bach, in particular Bach's solo Sonata in C, which Bartók had heard Menuhin perform. Of his four major American works this astringent sonata could, however, least be accused of stylistic compromise. Its use of Baroque imitative techniques is sustained in the first movement, marked *Tempo di ciaccona*, and also in the second movement, an ambitious four-voiced fugue whose chromatic subject is characterized by competing major and minor 3rds. The Presto finale is significant in introducing long passages of quarter-tone writing, and some reference to third-tones. However, only Bartók's semitonal alternatives were included in Menuhin's posthumous edition of the work.

While writing the sonata Bartók's health again declined. The first definite signs of leukaemia were detected in the spring of 1944, although through the use of blood transfusions and drugs, including penicillin, Bartók's condition was able to be held reasonably stable until the late summer of 1945. During the summer of 1944 ethnomusicological demands largely took over from composition, but Bartók also regained his enthusiasm for performance, even to the extent of wanting to make new recordings of his own works. His financial circumstances, which had been particularly exacerbated since 1941 because of double taxation on his British-derived royalty income, were now somewhat more secure. The successful premières of his first two American works within a week in late 1944 further reinforced his confidence, and led to several offers of commissions during the first half of 1945.

Bartók's final two substantial compositions were both concertos. While in Saranac during July–August 1945 he worked intensively on the Third Piano Concerto BB127, intended for his wife to perform, in tandem with the Viola Concerto BB128, commissioned by William Primrose. The idea of a new piano concerto grew from Bartók's realization that his wife could not master some of the more challenging sections of his previous one. In the Third, consequently, he wanted something texturally lighter and is reported to have examined Greig's concerto as one possible model for this new lucidity. Bartók's folk-, art- and nature-derived inspirations in the work are relatively undisguised. The second movement, for instance, begins with an extended imitation of Beethoven's 'Heiliger Dankgesang' (from the String Quartet in A minor op.132), while its middle, 'Night Music' section makes explicit reference to the call of the rufous-sided towhee bird, which Bartók had noted down while in North Carolina.

Bartók died in New York on 26 September 1945, after a month-long relapse in health. During his final weeks he managed to complete the Third Piano Concerto, except for the scoring of the final 17 bars, which his colleague Tibor Serly quickly accomplished. His Viola Concerto, however, only remained in sketch, the solo part suggesting a work of comparable ludidity and harmonic restraint to the piano concerto, but with incomplete and less conclusive detail about instrumentation, texture and even the final form. In early August 1945 Bartók had written to Primrose about his concept of a four-movement work with joining ritornello passages, but the evidence of the manuscript suggests only three movements with interconnecting, non-ritornello passages. Since 1945 several attempts have been made to complete the concerto, either for viola or cello. Two of the viola versions have 'authorized' status: that undertaken by Tibor Serly with additional input by Primrose, which was published in 1950 shortly after the première, and a 'revised version' of 1995, which was prepared by Péter Bartók and Nelson Dellamaggiore.

8. Legacy. Dying within weeks of the end of World War II, Bartók narrowly missed the wave of popularity which greeted his music in the first postwar decade. A Hungarian diaspora of conductors (Reiner, Doráti), violinists (Székely, Szigeti) and pianists (Kentner, Sándor) energetically spread his music around the world, as did recent commissioners of his works (Sacher, Koussevitzky, Menuhin and Primrose).

His later works, particularly the orchestral and chamber music, gained increasing access to mainstream concerts, sometimes to the chagrin of the postwar avant garde. Within Hungary itself, Bartók's compositions were during the late 1940s and early 1950s subjected to investigation for their socialist-realist qualities, with approval being accorded to his folksong settings, lighter piano works, and such orchestral works as the *Dance Suite*, and disapproval to what one Hungarian critic called 'formalist, modernist works written in an abstract language', such as *The Miraculous Mandarin*, the first two piano concertos, the Fourth String Quartet and the *Cantata profana*. The excesses of this phase passed with the early 1950s, however, and by the mid-1950s Bartók's works were in official favour with the communist authorities, just as his life was now interpreted as a socialist symbol of resistance both to European fascists and to American capitalists. In the 1950s, however, a complex dispute arose concerning the estates which Bartók had left, by different wills, in Hungary and America. Lasting into the 1980s, this dispute perpetuated a 'cold war' attitude of musical and scholarly non-cooperation between the two countries of his residence, and resulted in retarded dissemination of many important primary-source materials as well as distinctly different research traditions and repertory focusses.

Bartók's influence upon other composers certainly lacked the intensity and dogmatic hold of Schoenberg, or the widespread impact of the neo-classical Stravinsky. Always averse to teaching composition, Bartók did not leave behind any loyal 'school'. The composer most directly influenced by Bartók, and Bartók in turn by him, was undoubtedly Kodály. So closely did the two collaborate, especially in their earlier years, that the extent of their interdependence cannot be fully known. Leading composers of following generations on whose works Bartók exerted some measure of direct influence include Messiaen, Lutosławski, Britten, Ginastera, Copland and Crumb. Among Hungarians, György Kroó (in Ránki, B1987) has noted that Bartók provided a powerful model particularly for composers emerging between the late 1950s and mid-1970s, not so much in terms of specific techniques (although there had since 1945 been much superficial imitation of his distinctive string and percussion sounds, and of a narrow band of formal and folksong models) as in the human and professional ideals which he offered, as Hungarian music sought to throw off its postwar isolation and to re-establish a pan-European significance.

For a naturally reluctant teacher Bartók left a surprisingly powerful pedagogic legacy. That legacy lies, to a minor extent, in the students of his Academy and private piano lessons, who included the conductor Fritz Reiner, the pianists Lajos Heimlich (Hernádi), Ernő Balogh, Ditta Pásztory and Andor Földes, the ethnomusicologist Jenő Deutsch, and, briefly, the conductor Georg Solti. More significant, however, for broader musical education were Bartók's publications: the many, early instructive editions of piano 'classics' and studies which he produced between 1907 and the mid-1920s, as well as the Bartók-Reschofsky *Piano Method*, but, above all, his compositions for young pianists (*For Children*, *Mikrokosmos*), violinists (*Forty-four Duos*) and singers (*Twenty-seven Choruses* and many simpler folksong arrangements). That Bartók produced the most significant of these works in the 1930s, at the height of his maturity, attests to the importance which he placed on educating a new generation in contemporary styles.

As a performer, Bartók's personal legacy was not great. With his dour personality and diffident platform manners he did not manage to thrill the great public; within the Hungarian context he was overshadowed by his better-known contemporary Ernő Dohnányi. An outstanding corner of his pianistic legacy is, nonetheless, the collection of gramophone, piano-roll and live recordings, dating from his last quarter-century. These performances, with their wealth of tonal shadings, tempo fluctuations and occasional deviations from the published scores, remind present-day interpreters of the essentially Romantic underpinning to Bartók's performing art.

The ethnomusicological legacy of Bartók has been varied. Within the international history of that discipline, his stature is more that of a precursor than of a seminal figure. His significance outside Hungary is now largely historic, as an early proponent of transcriptional exactitude rather than as a founder of enduring disciplinary principles. Had he lived to complete his envisaged comparative study of eastern European folk musics his international significance might well have been more profound. Within Hungary his ethnomusicological legacy is perpetuated in the Academy of Sciences' long-term projects for a complete edition of Hungarian folk music and a complete collection of Bartók's own systematization of Hungarian folksong, both of which remain substantially unpublished. The greatest legacy of Bartók's folk-music studies, however, undoubtedly lies in his own compositions. It was exactly those ethnomusicological fascinations with musical detail and subtle observations of variant forms (which have led to periodic accusations from latter-day ethnomusicologists that he was not 'seeing the wood for the trees') which fed his greatest creative strengths. What contemporaries such as Schoenberg or Stravinsky could not well appreciate was that Bartók's folk-music studies provided him with a limitless arsenal for creative transformation. His approach to art-music sources was similarly transformational, as his Romanian colleague Constantin Brăiloiu once observed: 'Impressionism, polytonality, atonality, motorism: Bartók has passionately lived through all these revolutions and reshaped, as it were, for his own use, with his own rich resources, *all* systems' (in Moreux, E1949).

9. Interpretation and analysis. Bartók's highly synthetic process of composition has elicited diverse interpretations of his works. These interpretations have often plotted his achievement as a composer against such generalized coordinates as East and West, Romanticism and Modernism, nationalism and internationalism. More conservative studies of his art have tended to emphasize the first coordinate of these pairs, while more progressive studies, the second. In aesthetic terms Bartók plotted himself as moving along a spectrum from Beethoven (artist and harmonist) towards Bach (craftsman and contrapuntalist), with a decisive point of change around 1926. Between the frequently claimed modernist poles of Schoenberg (Expressionist or emancipator of pitch) and Stravinsky (neoclassicist or emancipator of rhythm), Bartók has sometimes been interpreted as a figure of compromise, and therefore of a lesser creative significance. János Kárpáti (in Crow, B1976), however, views Bartók's position among modernists as one of synthesizing greatness:

> in Bartók's art there is not a simple association between these two differing musical conceptions [Schoenberg and Stravinsky] but an organic synthesis of them. Far from wishing to reconcile the two extremes, Bartók merely used them in forming his own creative system . . . he found a point upon which the heritage of the past and the revolution of the present – in Adorno's words, restoration and progress – were converging.

Few commentators agree on the precise balance of Bartók's syntheses, for his approach to composition was highly eclectic. He progressed pragmatically through life, ever fascinated by new folk- or art-music experiences and contemptuous of theorizing about music. Most noticeably after his several fallow periods of compositional incubation – 1905–7, 1912–14, 1923–6, 1931–4, 1940–3 – Bartók launched into fresh creative phases with varying degrees of stylistic continuity. The most marked changes in compositional direction could be considered to have taken place in 1907–8 and 1926. Probably the most significant speculative deviation in his output occurred during 1918–22, when, under the influence of both Schoenberg and Stravinsky, Bartók seemed to be approaching an atonal goal. The 1934–40 period, with its many major works in chamber, orchestral, vocal and solo piano genres, shows a more regular transcendence of inspirational sources than does any other; accordingly,

these pieces are often deemed his most mature. Bartók himself was indifferent to charges of eclecticism or 'borrowing'. He considered the concept of artistic originality an outworn Romantic-era obsession, and openly acknowledged his liberal attitude to the use of materials by quoting Molière's defence to a charge of plagiarism, 'Je prends mon bien où je le trouve'.

Bartók's transformational approach to such a wide body of sources has generated a huge variety of analyses of his music. Depending upon the sources, theories or dialectical poles from which analyses are initiated, starkly different results can be educed. It is perhaps a measure of greatness that Bartók's music can accommodate so many different approaches yet ultimately defies them all. No one all-embracing theory for his music is, therefore, likely to emerge. Rather, reflecting Bartók's own eclecticism and relatively untheorized attitude to composition, an appropriate range of differing analytical approaches usually produces the best overall understanding of individual works or, indeed, the entire output.

Many analysts of Bartók's music have based their approaches upon the composer's own primary-source materials, as revealed in such documents as essays, analyses, recordings and the very notations of his works. Those interested in the music's pitch, rhythmic or variational components of folk origin have used Bartók's ethnomusicological treatises, with their own detailed analyses, as a profitable starting point (see Kárpáti, G1956; Burlas, E1971; Lenoir, E1986; László, E1995). Analysts of form (such as Hunkemöller, G1982, G1983) have drawn productively on Bartók's work analyses, particularly those of his later chamber pieces with their evidence of large-scale symmetrical thinking. Bartók's descriptions of the phases of his modal and tonal practice, most valuably in his Harvard lectures of 1943, have strongly influenced pitch analyses of his later compositions (see Oramo, F1977, F1980; Kárpáti, G1967, enlarged 1994); his terms 'polymodal chromaticism' and 'new chromaticism' have thereby entered the broader analytical literature. As compositional sketches and drafts have become increasingly available, they have led to notationally-based forms of semiotic analysis (see Gillies, F1989, F1993). Even Bartók's recordings have inspired close observation, not just of his performing style but also of his 'live' variational tendencies (see Somfai in *Documenta bartókiana*, 1977).

Nevertheless, the majority of analytical studies have sought their illumination through approaches less beholden to the composer's own documentary legacy. Among traditional formal analysts, Halsey Stevens (D1953) established enduring conclusions, particularly about the string quartets. Detailed motivic or thematic analyses have proven most analytically fruitful with such later works as the Violin Concerto 'no.2' (see Michael, G1976; Somfai, G1977; Weiss-Aigner, G1993–4), while Schenkerian approaches have been applied to the Fourth String Quartet (Travis, G1970) and the *Mikrokosmos* pieces (Waldbauer, G1982, G1987). Antokoletz (F1984), through concentration on the interaction of intervallic cells, scalar constructions, interval cycles and axes of symmetries, has demonstrated how Bartók progressively transformed folk-music sources into the more abstract principles of his compositions. Forte's pitch-class set theory has been usefully drawn upon in analyses of both tonal and atonal works (see Cohn, F1988, F1991; Wilson, F1992) while Forte (F1993) has also contributed to the relatively neglected field of analysis of Bartókian rhythm. 'Functional' analyses using aspects of sol-fa solmization have been carried out by several Hungarian scholars, notably Lendvai (F1983) and Bárdos (F1972). Lendvai's contribution to the analysis of proportions, particularly golden sections, in Bartók's music has generated one of the more long-lived debates in the field (see Lendvai, F1971, F1983; Bachmann, F1979; Howat, F1983).

Of increasing importance to Bartók studies during the 1980s and 1990s have been 'genetic' and contextual studies, which investigate the circumstances of the creation of Bartók's works. These studies have included technical documentation of work stages of compositions and resultant analytical conclusions (see Beach, G1988; Vikárius, G1993–4, Móricz, G1995), as well as speculative investigations of specific art-music influences upon Bartók compositions (see Suchoff, 'The Impact of Italian Baroque Music on Bartók's Music', in Ránki, B1987; Gillies, E1992; Schneider, G1997; Vikárius, E1999), or of cultural or natural phenomena believed to have influenced Bartók in composing particular works (Harley, G1994; Leafstedt, G1999).

The history of Bartók analysis has been one of slow changes in trend: from early, postwar concerns with style analysis, mainly in the pitch domain, through to the more structural concerns of the 1950s to 70s. Lendvai, whatever the virtues of his proportional interpretations, was most important during these decades in placing a solid emphasis on non-traditional, large-scale aspects of construction. During the 1980s and 90s, despite an apparently ever-growing divergence of methods, the tendency has again been to concentrate on more 'micro' levels of composition. Over the second half of the 20th century eastern European commentators have been somewhat more concerned with looking to Bartók himself for analytical inspiration, while scholars from elsewhere have been more prominent in other categories of analysis. By the 1990s, with the increasing internationalization of scholarship, these distinctions were becoming tenuous.

Despite the richness and variety of approaches to Bartók's music, only parts of his output have been thoroughly investigated. As with performances and recordings (see Lampert, E1995), Bartók's instrumental music is much more exposed than his vocal. This is more for reasons of language and of score accessibility than for reasons of quality. The range of his vocal music is substantially known only in Hungary; its wider propagation remains a challenge for the 21st century.

WORKS

Catalogues: L. Somfai: 'List of Works and Primary Sources', *Béla Bartók: Composition, Concepts, and Autograph Sources* (Berkeley, 1996), 297–320 [BB]

D. Dille: *Thematisches Verzeichnis der Jugendwerke Béla Bartóks, 1890–1904* (Budapest, 1974) [DD]

Publishers: Boosey & Hawkes [B], Dover [Do], Magyar Kórus [M], Rozsnyai Károly [R], Rószavölgyi [Rv], Universal [U], Zeneműkiadó (Editio Musica) [Z]

Editions [facsimilie]: *Hungarian folksongs*, ed. D. Dille (Budapest, 1970) [BB42]

Andante, ed. L. Somfai (Budapest, 1980) [BB26b, vn, pf]

Zongoraszonáta/Sonata, ed. L. Somfai (Budapest, 1980) [BB88]

MALCOLM GILLIES

Bartók Quartet. Hungarian string quartet. It was founded in 1960 by Péter Komlós (*b* Budapest, 25 Oct 1935), Sándor Devich (*b* Szeged, 19 Jan 1935), Géza Németh (*b* Beregszász [now Beregovo, Ukraine], 23 July 1936) and László Mező, all students in Leó Weiner's chamber music

class at the Liszt Academy of Music in Budapest. At first they performed as the Komlós Quartet – making their Budapest début in 1958 – and played in orchestras, the leader and viola player as principals of the State Opera Orchestra and the second violinist in the Hungarian State Orchestra. In 1960 Károly Botvay (*b* Sopron, 29 Dec 1932) replaced Mező and in 1963 they were given permission by Bartók's family to use his name. The following year they won the international competition in Liège and commenced the tours which have taken them all over the world. In 1970 they performed in the United Nations General Assembly Hall; in 1973 they gave three concerts in the festival marking the opening of the Sydney Opera House; and in 1981 they were awarded the UNESCO Prize. In 1977 Mező reclaimed the cello chair and in 1982 Devich withdrew, to be replaced first by Bela Bánfalvi and then in 1985 by Géza Hargitai. The ensemble is chiefly famed for performances of the Bartók and Kodály quartets but has championed such contemporary Hungarian composers as Bozay, Durkó, Farkas, Kadosa, Lang, Soproni and Szabó. Its cultured tonal qualities are also heard to advantage in Beethoven, whose late quartets it plays with impressive intensity. Its recordings include works by Haydn, Mozart, Beethoven (a complete cycle), Schubert, Mendelssohn, Brahms (all the chamber music for strings), Dvořák, Debussy, Ravel and Bartók (a complete cycle). Its instruments are a 1736 violin by Giuseppe Guarneri del Gesù, a 1774 violin by Giovanni Baptista Guadagnini, a 1787 viola by Lorenzo Storioni and a 1730 cello by Domenico Montagnana.

TULLY POTTER

Bartoletti, Bruno (*b* Sesto Fiorentino, Florence, 10 June 1926). Italian conductor. He entered the Florence Conservatory, where his studies included the flute with Bruscalupi and the piano with Nardi. After a brief period as flautist in the Maggio Musicale Orchestra he became pianist at the centre for lyric training attached to the Florence Teatro Comunale. He worked as assistant to many leading conductors including Rodzinski, Mitropoulos, Gui and Serafin, who encouraged him to take up conducting. Bartoletti made his conducting début at the Teatro Comunale in December 1953 with a production of *Rigoletto* prepared by Gui; he soon demonstrated the interpretative insight and versatility that enabled him to conduct contemporary works as well as the Italian opera repertory from Rossini to Dallapiccola to which his career has mainly been devoted. He was appointed resident conductor of the Teatro Comunale, 1957–64, and conducted the premières of Rocca's *Antiche iscrizioni* (1955) and Malipiero's *Il figliuol prodigo* and *Venere prigioniera* (1957) at Florence, Mortari's *La scuola delle mogli* (1959) at La Scala, and Ginastera's *Don Rodrigo* (1964) at the Teatro Colón, Buenos Aires. During this time he also introduced Egk's *Der Revisor*, Krenek's *Jonny spielt auf* and Shostakovich's *The Nose* to the Italian stage, and conducted the Italian repertory at the Royal Opera, Copenhagen, 1957–60. He made his American début at the Chicago Lyric Opera in 1956, and was appointed principal conductor there in 1964. He was conductor at the Rome Opera and artistic director of the Teatro Verdi, Pisa, 1965–73. In 1985 he was appointed artistic director at Chicago and musical adviser at the Teatro Comunale and Maggio Musicale in Florence (and subsequently artistic director, 1988–91). In 1992 he became principal guest conductor of the Orchestra della Toscana. He also teaches conducting at the Accademia Musicale Chigiana in Siena. His recordings include Puccini's *Manon Lescaut* and *Suor Angelica*, and Verdi's *Un ballo in maschera*; the Puccini performances were much admired for their dramatic excitement as well as sympathetic interpretation.

LEONARDO PINZAUTI

Bartoli, Cecilia (*b* Rome, 4 June 1966). Italian mezzo-soprano. She sang the Shepherd-Boy in *Tosca* as a child, and studied in Rome at the Accademia di S Cecilia. She made her professional opera début at Verona in 1987 and in 1988 undertook Rosina at Cologne, the Schwetzingen Festival and the Zürich Opera, an interpretation that delighted all who saw it. Following her La Scala début as Isolier (*Le Comte Ory*) in 1991, she quickly acquired a reputation as one of the world's leading Rossini singers, acclaimed both for her vocal accomplishments and her lively, quick-witted stage personality. She has also been admired in several Mozartian roles, including Cherubino (the role of her début at the Opéra Bastille in 1990), Zerlina, Susanna, Dorabella and Despina (the role of her Metropolitan début in 1996). Much of her reputation has, however, been built on her recording career, nurtured by the producer Christopher Raeburn. In addition to notable recitals of Mozart and Rossini arias and Italian and French song, Bartoli has been the central attraction in sets of *Rinaldo*, Haydn's *L'anima del filosofo*, *Il barbiere di Siviglia*, *La Cenerentola* and *Il turco in Italia*. These all reveal her warm, rounded tone, her extreme flexibility in *fioriture* (although she is inclined to aspirate runs) and above all, her infectious zest in projecting character.

Cecilia Bartoli in the title role of Rossini's 'La Cenerentola'

ALAN BLYTH

Bartoli, Cosimo (*b* Florence, 20 Dec 1503; *d* Florence, 25 Oct 1572). Italian diplomat, philologist, mathematician and humanist. After studies in Rome and Florence he took minor orders and was attached to the baptistery in Florence, where he was also active in the literary academy. In 1560 he became secretary to Cardinal Giovanni de' Medici and two years later became the Venetian diplomatic agent of Duke Cosimo I (Grand Duke from 1569), a post he held until his return to Florence in 1572. Bartoli's importance for music lies in his *Ragionamenti accademici* (Venice, 1567). Although the book is devoted to the criticism of Dante, its third chapter concerns Renaissance musicians living before about 1545. Ockeghem and Josquin are likened to Donatello and Michelangelo, as the originators and perfecters of their respective arts. Bartoli extolled the musicians of the court of Pope Leo X (1513–21). The great number of instrumentalists treated is particularly significant. Francesco da Milano, Alfonso dalla Viola and Alessandro Striggio are a few of the many performers cited. Bartoli's brother Giorgio was also knowledgeable in music, and translated Boethius's *De musica* into Italian (*I-Fn* Magl.XIX.75).

CLEMENT A. MILLER

Bartoli, Daniello (*b* Ferrara, 12 Feb 1608; *d* Rome, 13 Jan 1685). Italian scholar. He was a Jesuit and spent much of his later life in Rome (for a summary of his life and works see *DBI*). One of his publications is an extensive work on acoustics, *Del suono, de' tremori armonici e dell'udito* (Rome, 1679, 2/1680).

Bartoli [De Bartolo], **Erasmo** ['Padre Raimo'] (*b* Gaeta, 1606; *d* Naples, 15 July 1656). Italian composer and singer. His teacher was probably G.B. de Bellis. On 19 December 1626 he joined the royal chapel at Naples as a bass and remained there until 1636. In March of that year he was admitted to the Congregazione dell'Oratorio with a salary for life for himself and his mother. He was music prefect in 1642 and from 1652 to 1656. He played some part in the posthumous publication of Scipione Dentice's *Madrigali spirituali, libro secondo* (Naples, 1640) which he dedicated to Cardinal Buoncompagno. He died of the plague. He was a prolific composer of church music, which the fathers of the oratory valued so highly that in 1713 one of them, Scipione Narni, arranged for the copying of the most often performed works. The motets for four choirs (in *I-Nc* and *Nf*) are mainly homophonic, and the few contrapuntal passages are rather weak.

WORKS

Introit, mass and vespers for S Filippo Neri, 16vv (4 choirs), insts; 2 masses, 8, 10vv; 2 responsories, vesper hymns, 16vv (4 choirs), vc, db, org; litany, 4 choirs; psalms, 2 choirs; cantatas, 4vv; over 30 motets, 4 choirs; 26 motets, 2 choirs; mottetti pastorali, 4–6vv; *c*500 other motets; canzoni del P. Raimo; *c*250 other sacred works: *GB-Lbl*, *I-Nc*, *Nf*
Motets, 4 choirs, *Nc*, *Nf* (dated 1786)

RENATO BOSSA

Bartoli, Giovan Battista (*fl* 1617). Italian composer. He is known by one publication, *Il primo libro de madrigali a cinque voci* (Florence, 1617). Dedicated to Lorenzo Bonei, the book opens with a seven-part cycle *O primavera*. This is mostly written in the lighter manner, though its third section, *O dolcezza amarissime*, is a brief if concentrated essay in the pathetic style, making much use of suspensions, dissonances and chromaticism. The printing of the volume, one of Zanobi Pignoni's small number of music editions, is rather rough in appearance.

IAIN FENLON

Bartolini [Bartalani, Bertolini], **Orindio** (*b* Arcidosso, nr Siena, *c*1580; *d* 1640). Italian composer. He spent most of his working life, from 1609 to 1635, as one of a line of distinguished *maestri di cappella* of Udine Cathedral. For ten years before this he had been a singer at S Marco, Venice. His madrigals are conservative for their date (1606) and handicapped by undistinguished musical ideas and amorphous textures, but his canzonettas and arias are more modern. His three collections of large-scale church music form his main output. Two appeared in the 1630s after the great Venetian plague, which suggests that the choir at Udine was still a fair size if, as must be supposed, they were written for it. The requiem mass and *Te Deum* (both unusual forms) in the 1633 volume may indeed have been composed for the burying of the victims of the plague and thanksgiving for its end. The style of the earlier compline music for double choir (1613) is fairly conservative, but Bartolini shows a fine ear for sonority, a developed sense of form and a varied and imaginative approach to word-setting in the refrain structure of *Regina caeli*.

JEROME ROCHE

Bartolino da Padova [Magister Frater Bartolinus de Padua, Frater carmelitus, Frater Bartholomeus; erroneously: Dactalus de Padua] (*fl* Padua and ?Florence, *c*1365–1405). Italian composer, about whom no certain facts are known. As can be seen from *I-MOe* α.M.5.24 (*I bei sembianti*, ascribed to 'Frater carmelitus') and from the portrait of him in *I-Fl* 87 (f.101*v*; see illustration), he

Miniature thought to portray Bartolino da Padova: detail of initial from the Squarcialupi Codex (I-Fl Med.Pal.87, f.101v)

belonged to the Carmelite Order. He is possibly to be identified with one or other of the friars named Bartholomeus who are attested at the Carmelite monastery in Paduain 1376 and 1380 (see Petrobelli, *DBI* and 1968). It has been assumed, from the texts of some works (*Imperial sedendo*, ?1401, for Francesco Novello, *La douce çere*, perhaps also *Quel sole che nutrica*) that probably allude to the Carrara family, lords of Padua, that Bartolino was in their service from 1365 to 1405. It is still an open question whether he lived only in Padua or stayed also in Florence between 1388 and 1390 (as a companion of Francesco Novello who had fled from Padua). However, other pieces seem to contain references to the motto and emblem of the Visconti family (*La fieratesta*; *Alba colomba*, probably for Gian Galeazzo Visconti's entry into Padua, 1388; *Nel sommo grado*; *Quel digno de memoria*; perhaps also *Le aurate chiome*, ?1380), even though some of them could equally well refer to the Carraresi, and be interpreted as directed not in support of but against the campaigns of Gian Galeazzo Visconti in the 1390s. This is probably the case for the poem *La fiera testa*, which was also set to music by Niccolò da Perugia, and was transcribed into the *Novelliere* of Giovanni Sercambi da Lucca (ed. Rossi) in a different reading. It is interesting that a ballata by Paolo da Firenze quotes the same, well known, Visconti motto ('Sofrir m'estuet'), which also appears in poems by Franco Sacchetti and in a piece by Philippus de Caserta.

Evidence for Bartolino's reputation in Tuscany is strengthened by the inclusion of his ballata *Ama chi t'ama* into both the Chronicles and the *Novelliere* of Sercambi, and by the mention of madrigals 'fattia Padova per Frate Bartolino' in Giovanni Gherardi's *Paradiso degli Alberti* (ed. A.Wesselofsky, Bologna, 1867/*R*, i, 62; iii, 170).

The 38 works that can with certainty be attributed to Bartolino have come down to us complete in the Florentine manuscript *I-Fl* 87; the one exception to this is *Serva çiascuno* (in *I-La* 184). A group of works are also contained in the Florentine Codex *I-Fl* 2211. In the other Tuscan manuscripts his works occur only in isolation, whilst they are numerous in the northern Italian manuscript *F-Pn* n.a.fr.6771 (26 works) and in *I-La* 184 (12 works). Three pieces are intabulated for a keyboard instrument in *I-FZc* 117. Along with the 'Rondel franceschi', no longer surviving, five or six works are named in Prodenzani's *Liber saporecti*.

Bartolino's style was influenced by Jacopo da Bologna. The monophonic link passages between the lines of his madrigals, and the change in metre which occurs only in the ritornellos of the madrigals (and not always even there), provide evidence of this. It is also striking that Bartolino supplied text for both voices not only in the two-voice madrigals but also in the two-voice ballatas. The Italian tradition is emphasized by the avoidance of *ouvert* and *clos* endings in the ballatas and by the frequent extended melismas– not only in the madrigals – on the first and penultimate syllables of the line. The notation of his works is also strictly Italian. The three-voice pieces *Non cor(r)er troppo*, *Per un verde boschetto* and *I bei sembianti* conform partly with Jacopo's style with two upper voices set against a tenor part; however, elsewhere they show influence from the French style in that countertenor and tenor provide a supporting duet for the upper voice (*El no me giova*, *Sempre, donna*, *Alba colomba* and *La douce çere*). In these last-mentioned pieces, in accordance with the Italian fashion, only the top voice and the tenor are texted; the one exception is no.32 in *I-Fl* 87.

Italian Secular Music, ed. W.T. Marrocco, PMFC, ix (1975) [M]

BALLATAS

Ama chi t'ama, 2vv, W 190, M 8 (see Bongi, ii, p.242, and Rossi, ii, p.36)
Amor, che nel pensier, 2vv, W 173, M 10 (text incipit: cf Petrarch's sonnet cxl; same music used for L'invido per lo ben: see Diederichs)
Chi può servir, 2vv, W 181, M 12
Chi tempo à (Matteo Griffoni), 2vv, W 178, M 14
El no me giova (çova), 3vv, W 183, M 18 (in *I-MOe* α.M.5.24, a different Ct, probably by Matteo da Perugia)
Gioia di novi odori, 2vv, W 193, M 20
La sacrosanta carità (Giovanni Dondi dall'Orologio), 2vv, W162, M 34 (Debenedetti, no.29)
L'invido per lo ben, 2vv, W 187, M 38 (see Amor, che nel pensier)
Madonna bench'i' miri, 2vv, W 175, M 40
Miracolosa tua sembianza, 2vv, W 177, M 42
Nel sommo grado, 2vv, W 189, M 44
Non cor(r)er troppo, 2 versions: 2vv, 3vv, W 186, M 46, 48
Perché cançato è il mondo, 2vv, W 184, M 51
Per figura del cielo, 2vv, W 165, M 53
Per subito comando, 2vv, W 163, M 54
Per un verde boschetto, 2 versions: 2vv, 3vv, W 194, M 56, 58 (in *GB-Lbl* Add.29987 wrongly termed a madrigal; Debenedetti, no.25; ?lauda contrafactum, see Ghisi, p.78)
Qual novità cor duro, 2vv, W 176, M 64
Quando necessità, 2vv, W 171, M 70 (text inc.; in W incorrectly treated as a continuation of Le aurate chiome)
Quel digno de memoria, 2vv, W 182, M 72
Recordate de me (Recorditi di me), 2vv, W 188, M 77 (Ct in *I-La* 184 may be by another composer)
Sempre, donna, t'amai, 2 versions: 2vv, 3vv, W 179, M 79
Sempre se trova, 2vv, W 162, M 78
Serva chi può, 2vv, W 184, M 86
Serva çiascuno, 2vv, M 88
Strinçe la man, 2vv, W 167, M 89
Tanto de mio cor, 2vv, W 189, M 90
Tuo gentil cortesia, 2vv, W 191, M 92

MADRIGALS

Alba colomba, 2 versions: 2vv, 3vv, W 166, M 1, 5 (Debenedetti, no.29)
Donna liçadra, 2vv, W 172, M 16 (M does not consider the version from *I-La* 184)
I bei sembianti, 3vv, W 160, M 22 (attrib. 'Frater carmelitus' in *I-MOe* α.M.5.24)
Imperial sedendo, 2 versions: 2vv, 3vv, W 174, M 25 (inst version in *I-FZc* 117; Debenedetti, no.25; wrongly attrib. or misspelled Dactalus de Padua in *I-MOe* α.M.5.24; current attribution doubted by Fallows)
La douce çere (çiere), 2 versions: 2vv, 3vv, W 159, M 28 (French text italianized as La dolce cerra in *GB-Lbl* Add.29987; inst version in *I-FZc* 117; Debenedetti, no.25; wrongly attrib. 'Fra Bartolino da Perugia' in *I-Fn* 26)
La fiera testa, 2vv, W 164, M 31 (Italian-Latin-French text, ?Petrarch; see also Rossi, ii, p.203)
Le aurate chiome, 2vv, W 170, M 36 (text inc.; Senhal: 'Catarina'; Debenedetti, no.29)
Qual lege move, 2vv, W 192, M 60 (inst version in *I-FZc* 117)
Quando la terra, 2vv, W 169, M 66, 68 (text inc.)
Quel sole che nutrica, 2vv, W 168, M 74 (Senhal: 'Orsolina')
Se premio de virtù, 2vv, W 180, M 83 (ritornello after stanzas 1 and3; see Corsi, p.243)

DOUBTFUL WORKS

La bianca selva, 2vv, madrigal (see Fischer, 1958–61, p.277)

LOST WORKS

Rondel franceschi (see Debenedetti, no.47)

KURT VON FISCHER/GIANLUCA D'AGOSTINO

Bartolo, Erasmo de. *See* BARTOLI, ERASMO.

Bartolomeo da Bologna [Bartholomeus de Bononia] (*fl c*1405–27). Italian composer. In the fourth fascicle of *I-MOe* α.M.5.24 (*c*1410), he was described as a Benedictine brother; in the tenth fascicle of *GB-Ob* Can.misc.213 (*c*1425), he was described as 'dominus ... prior'. Pirrotta (in *MGG1*) has suggested that he was the prior of S Nicolò in Ferrara, who was also the cathedral organist in that town in 1407 and present no later than 1405; he is last documented at the cathedral on 5 January 1427 (for further discussion and documentation see Cavicchi, 1975, 1976). In *Que pena maior* Bartolomeo described himself as 'musa resonantem' and took a stand against critics. The Latin ballade *Arte psalentes* was addressed to singers in the papal choir – probably that of John XXIII, elected pope at Bologna in 1410. Both these works are in their formal structure and complex rhythm typical of the Ars Subtilior. In the rondeau *Mersi chiamando* (where the name Galeazzo – probably Malatesta – occurs) and in the two Italian ballate there is word repetition, typical of early 15th century Italian secular works. The rhythm is simpler than in the two earlier works in *I-MOe* α.M.5.24; accidentals (C♯ and G♯) are frequently added to leading notes.

The two mass movements are paired: both employ parody technique, although their modality and style differ, with the Credo set AVERSI. The Gloria incorporates the music of *Vince con lena*, from 'Gracias agimus' to 'deprecacionem', and thus resembles a contrafactum. In the Credo, however, only short sections of *Morir desio* are used, and these not in their original order. This pair of mass movements constitutes an early example of the linking of movements by parody technique; their composition was almost certainly influenced by the mass music of Zacara (who spent some time in the chapel of John XXIII in Bologna in 1412–13). In *GB-Ob* 213 the secular models were copied in juxtaposition with the mass movements based on them – a unique procedure, but nonetheless somewhat reminiscent of the 'parallel' transmission of Zacara's songs and the mass movements based on them.

HANS SCHOOP/R

Bartolomeo degli Organi [Baccio Fiorentino] (*b* Florence, 24 Dec 1474; *d* Florence, 12 Dec 1539). Italian composer, organist and singer. He acquired the nickname 'degli Organi' because of his profession; it was later adopted by his children. His musical career began shortly after his 13th birthday, when he was appointed a singer at the SS Annunziata. In later life he also sang in the baptistry's chapel, an appointment he received at the behest of Lorenzo de' Medici, Duke of Urbino, in whose personal service he remained for a number of years. He was employed as an organist at several Florentine churches, among them the SS Annunziata and S Maria Novella, before becoming principal organist at the cathedral on 21 December 1509, a position that he held until his death.

Bartolomeo's influence in Florentine musical circles of the time was considerable; one of his contemporaries referred to him as 'the prince of musicians of our city'. Among his pupils were Guido Machiavelli, son of the famous statesman, and the composer Francesco de Layolle. He was a friend of the poets Lorenzo Strozzi, three of whose poems he set to music, and Benedetto Varchi, who wrote a sonnet commemorating his death.

Bartolomeo's extant compositions include ten Italian secular works, four instrumental pieces and a *lauda*. The Italian works (comprising eight ballatas, one *strambotto* and one *canto carnascialesco*) are cast in traditional strophic forms and are characterized by clearly articulated phrases, logical harmonic progression within well-defined key areas and simple rhythms that unfailingly follow the accents of the texts. In several of the ballatas he composed new music for all of the *ripresa* and reduced the amount of repetition within the setting of the strophe. Two ballatas have new music for the entire stanza, a novel feature in Italian music at the time and one which was to be adopted by the earliest madrigal composers. The *lauda*, published in Razzi's 1563 collection, is doubtless an adaptation of a secular work, as is another piece in the same collection which Bartolomeo originally set as a carnival song. The instrumental pieces share similar motifs with works by Isaac and Agricola, with whom he may have studied in Florence.

Three of Bartolomeo's children became musicians: two of his sons, Antonio and Lorenzo, were organists and served in several of the principal Florentine churches; the youngest, Piero, who was also known as Pierino Fiorentino (*b* Florence, 8 Dec 1523; *d* Rome, 1552), gained fame in the mid-16th century as the outstanding pupil of Francesco da Milano and as a composer in his own right. The musician called 'Baccio degli Organi', who appeared on Medici court rolls as a music teacher in 1574, was probably his grandson.

FRANK A. D'ACCONE

Bartolomeus de Bruollis. *See* BROLLO, BARTOLOMEO.

Bartolotti, Angelo Michele (*b* Bologna, early 17th century; *d* ?Paris, after 1668). Italian composer, guitarist and theorbo player. After publishing two books of his guitar music in Italy, Bartolotti moved to Paris. On the title-page of a treatise on continuo accompaniment for the theorbo, the author is described as 'Angelo Michele Bartolomi Bolognese', but there is little question that 'Bartolomi' is simply a misspelling of Bartolotti. In France Bartolotti was admired principally as a theorbo player: Ouvrard praised him as 'without doubt the most skilful theorbo player in France and Italy', and Constantijn Huygens also mentioned him as a virtuoso on that instrument.

Bartolotti's first book for the five-course guitar contains a cycle of *passacaglias* in all the major and minor keys, combining the *battute* and pizzicato styles seen earlier in the music of Foscarini. His second book shows a more pronounced French influence, with an emphasis on pizzicato textures. These two books are among the most carefully notated Italian guitar tablatures of the period, with indications for various types of strum, arpeggios and left-hand ornaments, and contain some of the most advanced guitar music of the day. Bartolotti's treatise ranks, with those of Fleury (1660) and Delair (1690),

among the most noteworthy essays on accompaniment for the theorbo.

ROBERT STRIZICH/GARY R. BOYE

Bartolozzi, Bruno (*b* Florence, 8 June 1911; *d* Florence, 12 Dec 1980). Italian composer and violinist. He studied music at the Florence Conservatory, taking his diploma in violin playing with Gino Nucci (1930) and in composition with Paolo Fragapane (1944). His association with Dallapiccola, whom he met at the conservatory, was of enormous importance for his work as a composer. Bartolozzi also studied conducting with Galliera at the Accademia Musicale Chigiana in Siena and from 1964 was himself a lecturer in conducting at the Florence Conservatory. From 1944 to 1965 he played the violin in the orchestra of the Maggio Musicale Fiorentino.

Bartolozzi's first compositions, such as the Concerto for Orchestra (1952), the Divertimento for chamber orchestra (1956) and the Concerto for violin, strings and harpsichord (1957), adhere to 12-note technique, following Dallapiccola's influence. In the 1960s he began to experiment with new woodwind sonorities, thanks to his partnership with the bassoonist Sergio Penazzi, well-known for his dedication to contemporary music. This exploration of materials (microtones, multiphonics, etc.) later described in the volume *New Sounds for Woodwind* (London, New York and Toronto, 1967) had a creative outlet in such works as *Concertazioni* for bassoon, strings and percussion (1963), written for Penazzi, *Concertazioni* for oboe and four instruments (1965), for the oboist Lawrence Singer, and *Concertazioni a quattro* for woodwind quartet (1969). Bartolozzi assimilated other avant-garde compositional techniques of the 1960s, adopting aleatory procedures in the *Collage* pieces – for oboe (1968), bassoon (1969) and clarinet (1973) – and microtonality in *Tres recuerdos del cielo* for soprano and ten instruments (1967).

Bartolozzi's stylistic characteristics attain synthesis in his 'dramatic play' *Tutto ciò che accade ti riguarda* (1965–70). Written to his own libretto after Günter Eich's radio play *Träume*, the work centres on five people on a railway journey, none of whom knows where the train is going. The existential problem facing the characters is emphasized by the anguished, unanswered question posed by the chorus: who will save us? Bartolozzi represents the characters' tragic sense of loneliness and isolation by contrasting electronic and acoustic sounds, and different vocal techniques which, in the case of the chorus, involve not only singing, but also whispering, shouting and speaking. The work thus belongs in a line of avant-garde music-theatre works (which includes Nono's *Intolleranza 1960* and Manzoni's *Atomtod*) concerned with social themes and with the alienation of the individual in the modern industrialized world.

Bartolozzi, Therese. *See* JANSEN, THERESE.

Bartolucci, Ruffino. *See* RUFFINO D'ASSISI.

Bartolus, Abraham (*b* Meissen, nr Dresden; *fl* 1614). German theorist. He was a teacher at Beuten. His *Musica mathematica* was published at Altenburg in 1614 as the second part (pp.89–175) of Heinrich Zeising's *Theatri machinarum*. Bartolus's treatise is basically speculative in nature. He relied heavily on the horoscope in his interpretation of the effects of music, suggesting that the composer's choice of tonalities, as well as their effect on the listener, could be determined astrologically. Although the monochord tuning which he propounded had been devised by Andreas Reinhard in his *Monochordum* (Leipzig, 1604), Bartolus did suggest an interesting mechanical improvement to the instrument's movable bridge. The monochord also served as the foundation of his earth-centred interpretation of the cosmos.

CECIL ADKINS

Barton, Marmaduke (Miller) (*b* Manchester, 29 Dec 1865; *d* London, 24 July 1938). English pianist and teacher. Barton was an original scholar (1883) at the RCM. He studied under J.F. Barnett and C.V. Stanford and was the first student ever to play at a pupils' concert (1884). In 1887 he played at Queen Victoria's jubilee concert in Windsor Castle. On leaving the RCM he was granted a

further year's study abroad, which he spent at Weimar, under Liszt's pupil Bernhard Stavenhagen. In 1889 he returned to the college to teach. As a student he had been rather impetuous and intolerant, but he fell now under the beneficent influence of another original scholar, Anna Russell, a pupil of Jenny Lind and a devout Catholic. He adopted her faith, and in 1891 they were married. Barton was much in demand for playing concertos with the principal London and provincial orchestras and also for recitals, but teaching, both at the RCM and, from 1911, the GSM, was perhaps his main work. He made recital tours in South Africa (1911) and the Netherlands (1912). Two of his pupils have given complementary summaries of his teaching: '[He was] a stickler for hard work, good manners and punctuality' and 'A great artist who conveyed beauty by deeds, not words'. (G. Warrack: 'Royal College of Music: the First Eighty-Five Years, 1883–1968, and After', typescript, *GB-Lcm*, 203–4)

GUY WARRACK/ROSEMARY WILLIAMSON

Bartoš, František (i) (*b* Mladcová, nr Gottwaldov, 16 March 1837; *d* Mladcová, 11 June 1906). Moravian folksong collector and dialectologist. He was educated at the Gymnasium in Olomouc and at the University of Vienna and became a schoolteacher in Strážnice (1864), Olomouc, Těšín and in 1869 at the first Czech Gymnasium in Brno. From 1888 he directed the second Czech Gymnasium in Old Brno, where he was in contact with Janáček. In collaboration with other schoolteachers and organists, he organized the collecting, categorizing and editing of Moravian folksongs, and through his four published collections and about 4000 other folksongs which appeared in ethnographic monographs he became recognized as the successor to Sušil, the pioneer of Moravian ethnomusicology.

Like many other early scholars in European folk music, Bartoš sometimes changed the song texts, thereby reducing the documentary value of his collections; from a musical point of view, only part of his third collection (1901), a collaboration with Janáček, fulfilled the requirements of modern notational technique. Perhaps of more lasting significance is the comprehensive theoretical treatise written as an introduction to his second collection (1889), in which he worked out a classification of songs according to text and function. He declared that the tunes of some groups of Moravian folksongs follow the metrical, rhythmical and intonational features of the texts, rather than those of instrumental melodies, as is the case, for example, with folksongs from Bohemia. He thus revealed a basic structural feature of the repertory, one which became a subject of great interest to Janáček.

FOLKSONG COLLECTIONS

Nové národní písně moravské s nápěvy do textu vřaděnými [New Moravian folksongs with the tunes fitted to the texts] (Brno, 1882)

JIŘÍ VYSLOUŽIL

Bartoš, František (ii) (*b* Brněnec, 13 June 1905; *d* Prague, 21 May 1973). Czech composer and writer. He studied composition at the Prague Conservatory under Jirák and Křička (1921–5) and in Foerster's master classes (1925–8). In 1932, together with Bořkovec, Holzknecht, Ježek and Krejčí, he founded in Prague the Mánes group, whose interests focussed on modern French music. Bartoš was a competent critic for the daily press and co-editor of *Tempo* of Prague (1935–8, 1946–8); in later life he gave more of his attention to musicology. As a composer he had begun under the influence of late Romanticism, but subsequently, following the trends of the day, he sought clarity of form, precision and a tender expressivity, qualities which resulted in a cultivated balance, most particularly in the chamber compositions. The suite *Měšťák šlechticem* ('Le bourgeois gentilhomme') for wind quintet, an exquisite piece of neo-classicism, was adapted from Lully's original score. Other works of note include the String Quartet no.2, *Rozhlasová hudba* ('Radio Music') for orchestra (performed at the 1938 ISCM Festival), and the songs and choruses, which indicate his discriminating literary taste. The song cycle *Černý …* ('Black … ') is a rare essay on a social theme.

WORKS
(*selective list*)

Orch: Suita, op.6, 1928; Rozhlasová hudba [Radio Music], op.12, 1936; Skizzy ke Gogolovu Revizoru [Sketches for Gogol's Government Inspector], op.17
Choral: Klid [Peace] (A. Sova), op.1b, 1923; Přišel jsem k své milé [I Came to My Beloved] (F. Šrámek), op.3a, 1925; Hudba na náměstí [Music in the Square] (J. Hořejší), op.3b, 1927; 1917, op.9 (J. Hora), 1930; Láska [Love] (K. Toman), op.14, 1939; 2 ženské sbory [2 Female Choruses] (J. Neruda), op.15, 1942
Melodrama: Jaro [Spring] (Šrámek), op.2, 1925
Chbr and solo inst: Str Sextet, op.4, 1926; Str Qt no.1, op.5, 1928; Scherzo, wind qnt, 1932; Str Qt no.2, op.10, 1933–5; Měšťák šlechticem [Le bourgeois gentilhomme], wind qnt, 1934 [from ballet by Lully], Duo, op.13, vn, va, 1937; Polka rusticana, wind trio, 1952; pf pieces
Songs: Bouquet de l'amour (J. Neruda), op.1a, 1923–4; 3 písně [3 Songs] (J. Cocteau, I. Goll, F. Mauriac), op.7, 1928; V. Burlesky (M. Jacob, Nezval), op.11, 1933–4; Deštivé obrazy [Rainy Pictures] (Nezval), op.16, 1945; Černý … [Black …] (L. Hughes), 1959
Music for the theatre and cinema, folksong arrs.

Prinicipal publisher: Hudební Matice

JOSEF BEK

Bartoš, Josef (*b* Vysoké Mýto, Bohemia, 4 March 1887; *d* Prague, 27 Oct 1952). Czech musicologist. He studied under Stecker at the Prague Conservatory (1905–7), under Hostinský and Nejedlý at Prague University (1905–9) and for a year at the Sorbonne. On his return he taught French and Czech at training colleges. He translated Bergson, Carrière and Croce into Czech and many of their ideas influenced his own philosophical attitude to music. His articles and books are concerned mainly with Czech music of the 19th and early 20th century, including a valuable study of opera at the Prague Provisional Theatre. For many years he was music critic of the daily papers *Prager Presse*, *Národni práce* and *Právo lidu*.

JOHN TYRRELL

Bartsch, Franz Xaver. *See* PARTSCH, FRANZ XAVER.

Bartulis, Vidmantas (*b* Kaunas, Lithuania, 3 April 1954). Lithuanian composer. In 1980 he graduated from the Lithuanian State Conservatory where he had studied with Balsys. From 1980 to 1983 he taught at the J. Gruodis Music College in Kaunas. He has been director of the music department of the Kaunas Theatre since 1983, and a member of the Union of the Arts group since 1990. Bartulis received the Lithuanian National Prize in 1998.

Generically, the music of Bartulis displays extreme polarity, ranging from a mass setting to happenings, from chamber music to electronic works. Typical of his early work are chamber compositions which sound like the manifesto of a new generation of Romantics and which are clearly influenced by oriental philosophy. In later works this minimalist world of Romantic beauty is replaced by the search for a sacred dimension (*Aurora lucis*, the Mass) and the way in which that dimension relates to the present day is taken as a theme (the Requiem). Bartulis later rejected the harmony and transparency of this music and, through experimentation with alternative genres, came to write the only opera of the absurd in Lithuanian musical history, parodying stage conventions.

Confrontation with his musical heritage runs like a guideline through the whole body of Bartulis's work. Sometimes this confrontation is merely a case of allusion, or a few bars resembling quotation (*Hommage à Čiurlionis*), while the group of *I Like ...* works represents his attitude to a particular style. Strict rationality is foreign to Bartulis, who sets particular store by organic elements. However, there is almost always a tragic note concealed behind the playful and ironic quality of his music.

WORKS

Stage: Pamoka [One Hour] (op, Bartulis, E. Ionesco), 1993, Kaunas, 1996; incid music for more than 100 plays
Vocal: Sutemų giesmės [Song of the Twilight] (cant., S. Geda), S, org, 1986; Mass, chorus, org, 1987; Requiem, 3 solo vv, choruses, orch, 1989; Auge der Zeit (P. Celan), 2 B, 2 cl, 2 pf, perc, 1991; Nativitas Domini (cant., R. Mikutavičius), choruses, 2 vn, org 1991; Amen (D. Alighieri, Bartulis, Celan, J. Mekas, G. Patackas), S, trbn, db, pf, tape, 1992; Ant kalno [From the Mountain] (Celan, M. Claudius, H. Heine), 3 elegies, 1v, cl, pf, str qt, 1996; Enfance (P. Handke, A. Rimbaud), 1v, pf, db, trbn, perc, 1996; Aušrinė [A Legend], S, T, chorus, elec keyboard insts, 1998; Kukutis [Idylls] (M. Martinaitis], 1v, pf, trbn, db, perc, 1998; 30 choruses
Orch: Sym. no.1, 1980; Sym. no.2 'Mėlynasis angelas' [The Blue Angel] (S. Geda), chorus, orch, 1985; Pf Conc., 1994; Regensspiele, chbr orch, 1995; I Like F. Chopin (Sonata in B Major), 2 pf, orch, 1997; I Like F. Schubert (Quintet in C, Adagio), str, 1998
Chbr: Vakaryštei dienai [Yesterday], ob, cl, bn, 1981; Ateinanti [The Commands], pf trio, 1982; Keturios paguodos liūdnai violončelei ir daina be žodžių [Four Words of Comfort for a Mournful Cello and a Song With no Text], vn, vc, 1985; Aurora lucis, 2 vn, org, 1985; De profundis, cl, pf qt, 1988; O, brangioji [Oh, my Love], str qt, 1994; Hommage à Čiurlionis, sax, b cl, elec insts, kanklės, 1995; I Like J.S. Bach (Prelude in C Major), pf, perc, 1995; Reti susitikimai, kurių metu mes šokame aistringus šokius, mename mirusius draugus ir mus užplūsta sentimentalūs prisiminimai, cl, pf trio, 1997
Other: pf works, org pieces and music for computer, electronics and multimedia

RŪTA GAIDAMAVIČIŪTĖ

Barvyns'ky, Vasyl' Oleksandrovych (*b* Tarnopol', 8/20 Feb 1888; *d* L'viv, 9 June 1963). Ukrainian composer, musicologist, pianist and teacher. He took piano lessons first at the K. Mikuli Music School (1895–1905) and with W. Kurtz (1905–06) at the conservatory in L'viv. During the same period he studied jurisprudence at Lemberg University, and from 1907, philosophy at the University of Prague. In Prague Barvyns'ky studied musicology with Z. Nejedly and O. Hostinsky, the piano with I. Holfeld and composition with Vítězsláv Novák (1908–14), who

exerted a powerful influence on him. From 1915 to 1939 Barvyns′ky taught at, and was director of, the Lysenko Music Institute in L′viv, and also taught at the conservatory there (1939–41 and 1944–8). A prolific organizer, he initiated and took part in many musical activities in L′viv and became a member of the editorial board of the journal *Ukrains′ka muzyka*. In 1934 he helped organize, and later presided over (1936–9) the Union of Ukrainian Professional Musicians, SUPROM. During the purges of 1948, the Soviet authorities sentenced him to ten years' imprisonment in Mordovian labour camps. He was rehabilitated posthumously in 1964. After the period of exile he returned to L′viv and resumed his teaching until his death. In characterizing the L′viv school of composers (and by extension that of Western Ukraine), Barvyns′ky wrote: 'the musical output of the Galician composers, who were brought up in the same Slavic musical centre and in the same cultural atmosphere (Prague), relies to a significant extent on folksong, which inspires each of them in a different way'. Together with Stanislav Lyudkevych, he formed the professional Western Ukrainian school of composition, centered in L′viv. Three major influences formed Barvyns′ky's musical style: the national school as epitomized by Mykola Lysenko, whom he first met in 1967, French Impressionism and the Czech school of Novák. Essentially a traditionalist, Barvyns′ky's talent was lyrical and in essence contrapuntal with a refined harmonic sense influenced by a subtle use of impressionistic techniques (especially in his piano preludes). Barvyns′ky's main contribution was in the area of chamber music, a genre relatively unexplored in Ukrainian music in the early 20th century. His refined ear and an improvisatory manner influenced by folk music and clearly defined structures characterize these works. He was also the first Western Ukrainian composer to write a purely orchestral work, the *Ukrainian Rhapsody* (1911).

WORKS

Vocal: Vecherom v khati [Evening at Home] (B. Lepky), 1v, pf, 1910; V lisi [In the Forest] (Lepky), 1v, pf, 1910; Ukraïns′ke vesillya [Ukrainian Wedding], solo vv, chorus, orch, 1914; Zapovit [Testament] (cant., T. Shevchenko), vv, orch, 1917; Psalom Davyda [Psalm of David] (P. Kulish), 1v, pf, 1918; Pisnya pisen′ [Song of Songs] (V. Maslova-Stokiz), S, vn, pf, 1924; Nasha pisnya, nasha tuha [Our Song, our Grief] (M. Cherkasenko), vv, orch, 1933; Nadiya [Hope] (L. Ukrainka), 1v, pf, 1956

Inst: 8 Preludes, pf, 1908; Pf Sonata, 1910; 2 Pf Trios, 1911; Pisnya, serenada, improvizatsiya [Song, Serenade, Improvisation], pf, 1911; Ukraïns′ka rapsodiya [Ukrainian Rhapsody], orch, 1911; Sextet, variations, 2 vn, va, vc, db, pf, 1915; Ukrainskaya syuita, pf, 1915; Pf Conc., 1917–37, recently discovered; Variations on Ukrainian Folk Themes, vc, pf, 1918; 6 miniatyuri, pf, 1920; Variations and Fughetta on Ukrainian Folk Theme, pf, 1920; Sonata, vc, pf, 1926; Ov.-Poem, orch, 1930, lost; Works on Ukrainian folk themes, vn, pf, 1934–5; 20 Children's Pieces on Ukrainian themes, pf, 1935; Str Qt 'Molodizhniy' [Youth], 1935; Qnt, str qt, pf, 1953–63; Conc., vc, pf, 1956

VIRKO BALEY

Barwell, Mrs **John.** *See under* BACON, RICHARD MACKENZIE.

Baryphonus, Henricus [Pipegrop, Pipgrop, Pipgroppe, Heinrich] (*b* Wernigerode, Harz, 17 Sept 1581; *d* Quedlinburg, Saxe-Anhalt, 13 Jan 1655). German theorist and composer. Jacobs established that his German family name was Pipegrop, not Grobstimme as stated in some earlier biographical accounts. He attended the Lateinschule at Wernigerode, where he probably first studied music with the Kantor Johann Krüger as well as with the organist of the Oberpfarrkirche, Paul Becker. He entered the university at Helmstedt in April 1603. In 1605 he went to Quedlinburg as Kantor of St Benedikti and as a teacher at the Gymnasium, whose Subkonrector he became in 1606. He remained in these positions for almost half a century until his death. He seems to have been admired as a composer, but all but two of his pieces are lost, as apparently are all but one of his many treatises. Michael Praetorius, who supported him enthusiastically, announced in the third volume of *Syntagma musicum* (1618) that in the next volume he would publish Baryphonus's *De melopoeia*. He also listed 16 other treatises by him that he expected to finance for publication, but his death both put an end to this project and prevented the continuation of *Syntagma musicum*. His list of Baryphonus's treatises, which also appears in Walther's *Musicalisches Lexicon* (1732), contains only one extant work, *Pleiades musicae*. At least one other treatise not listed by Praetorius may also be lost. Baryphonus is known to have corresponded with Heinrich Schütz and Scheidt: Werckmeister printed a fragment of a letter to Schütz (also in Moser) and Scheidt's reply to a letter from Baryphonus (also in *VMw*, vii, 1891, p.192, and in Serauky). The first edition of *Pleiades musicae* (1615) shows Baryphonus's debt to the theoretical concepts of Zarlino and Calvisius. The second edition (1630), which was significantly expanded, influenced many subsequent theorists, including Werckmeister, J.G. Ahle and Walther (especially in his *Praecepta*). It includes a new section on the triad, which Baryphonus adopted without acknowledgment from Johannes Lippius's *Synopsis musicae novae* (1612). With Lippius, he was the first writer to organize compositional theory on the basis of harmonic rather than contrapuntal principles. Within the concept of the triad, which he called 'triga harmonica', he established a specially influential doctrine of intervals and intervallic progression, though curiously only for consonances, not dissonances. As might be expected from his emphasis on triadic structure, he was an advocate – one of the earliest in Germany – of composing from the bass part, a view that reflected the growing strength of the practice of thoroughbass that had originated in Italy some 30 years earlier.

WORKS

THEORETICAL WORKS

Pleiades musicae, quae in certas sectiones distributae praecipuas quaestiones musicas discutiunt (Halberstadt, 1615, rev. 2/1630 by H. Grimm as *Pleiades musicae, quae fundamenta musicae theoricae ex principiis mathematicis eruta*, together with S. Calvisius: *Melopoeia*)

The following listed by M. Praetorius, *Syntagma musicum*, iii (Wolfenbüttel, 1618, 2/1619/*R*), 223, 227–8; all lost

De melopoeia, intended for pubn in *Syntagma musicum*, iv

Exercitationes harmonicae, quibus omnia tam ad theoriam, quam ad praxin musicam necessaria per aphorismos, theoremata & problemata nervose & dilucide expediuntur

Diatribe musica artusia, ex tabulis Joan. Mariae Artusii collecta, latine reddita, exemplis illustrata

Dissertatio de modis musicis e veterum & recentiorum tam graecorum quam latinorum & italorum monumentis excerpta

Isagoge musica Euclidis cum notis Henrici Baryphoni; probably identical with *Isagoge musica* (Magdeburg, 1609)

Isagoge musico-theorica ex fundamento mathematico coram ratione & sensu judicium proportione; probably identical with *Institutiones musico-theoricae* (Leipzig, 1620)

Logistica musica, in qua usus proportionum in addendis, subtrahendis, copulandis, comparandis, aequiparandis intervallis synoptice ob oculos ponitur

Arithmologia harmonica, in qua scheseis tam numerorum harmonicorum primorum & radicalium, quam inter se compositorum & secundariorum & tertiariorum tabellares in constituendis intervallis simplicibus, compositis, prohibitis, diminutis & superfluis ob oculos ponuntur

Consonantiarum progressiones, quae ad quosvis animi affectus exprimendos accommodae

Ars canendi, aphorismis succinctis descripta & notis philosophicis, mathematicis, physicis et historicis illustrata (Leipzig, 1620)

Progymnasma melopoëticum in paideian & propaideian tributum

Catalogus musicorum tam priscorum quam recentium

Historia veterum instrumentorum musicorum 25. literis graecis & latinis monumentis atque philosophorum, philologorum, musicorum & historicorum

Exercitationes quatuor: de musica vocali; de musica instrumentali; de musices inventoribus; de musices usu

Monochordi in diatonico, chromatico & enharmonico genere descriptio

Spicilegium musicum, in quo quaestiones musicorum praecipuae per theoremata & problemata succincte & nervose discutiuntur

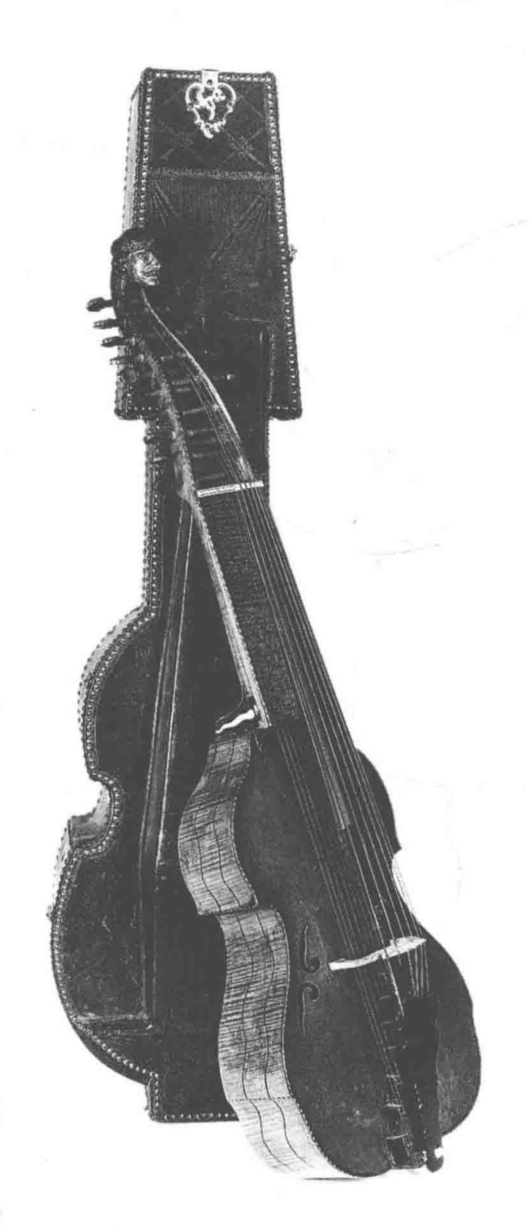
Baryton [bariton, barydon, paradon, paridon, pariton, viola di bardone, viola di bordone] **(i).** A bass string instrument that is simultaneously bowed from above and plucked from behind. (The term 'lyra bastarda' is occasionally – although incorrectly – applied to the baryton.) The baryton is a hybrid instrument based on the Baroque bass viol and incorporating features of the LYRA VIOL and the BANDORA, a metal-strung plucked bass instrument. There are three basic forms: Baroque, Classical and revival. The Baroque baryton was played 'lyra-way' as a solo instrument from tablature. It had six gut bowed strings attached and adjusted like those of a bass viol, but tuned in a range of scordatura tunings (the upper manual), and nine metal bass strings (*C–d*), hitched at the fingerboard nut and tuned by wrest pins in a separate bridge (the lower manual). The metal strings lay parallel to the fingerboard on the bass side and were plucked from behind the neck with the left thumb. They provided the instrument with the capability for self-accompaniment and enhanced the sound by sympathetic resonance (*see* SYMPATHETIC STRINGS).



The number and pitch range of the metal plucked strings was later increased and sometimes a third manual, with gut strings, was added. J.G. Krause, who composed the only known published collection for baryton (*IX Partien, auf die Viola Paradon*, before 1704), suggested 18 strings as the ideal for the lower manual. Daniel Speer (*Grund-richter … Unterricht der musikalischen Kunst*, 1687, p.91) described how a set of gut drone strings might be attached on top, to be plucked by the right little finger; music for such a baryton is found in a German mid-17th-century manuscript (*D-Kl*). Speer's instrument bore six upper, 19 lower and nine drone strings.

The Classical baryton was associated especially with Joseph Haydn and the Esterházy court during the 1760s and 70s. It was a modification of the earlier instrument, with the lower manual tuned to the same pitch range as the upper four strings of the bowed manual (*c–d′*). Other features included a seventh bowed string and either diatonic or chromatic stringing in a lower manual of 15 or more metal strings. Sympathetic (lower manual) strings were now hitched to individual bridges and tuned with pegs from the head of the instrument. At the end of the Esterházy period, which lasted little more than a decade, barytons with up to 44 lower-manual strings were reported; these instruments had both the bass-register strings of the Baroque instrument and the higher-octave strings of the Esterházy tuning. The 1750 instrument by J.J. Stadlmann owned by Prince Nicolaus Esterházy has seven strings on top and ten below (see illustration). The Austrian virtuoso, Andreas Lidl, was said by C.L. Junker (*Musikalischer Almanach*, 1782, p.105) to have played an instrument with 27 underlying strings.

The modern or revival instrument is essentially a reproduction of the Esterházy instrument. Initially a range of heavier modern barytons more appropriately called cellitons was built, but, due to advances in research, light sonorous instruments are now being made again.

Barytons from all periods survive. Important 17th-century instruments may be seen in London (3), Linz (2), Vienna, Berlin and Nuremberg. 14 are known from the 18th century, three from the 19th and at least 30 from the 20th. As befits the 'instrument of kings', almost all barytons are finely decorated with carved heads (painted or plain), purfling, inlay and herring-bone edging, in materials such as ivory, ebony and mother-of-pearl.

From the beginning, the instrument was played as a lyraviol-cum-bandora. While the bowed strings carried

Baryton by Johann Joseph Stadlmann, Vienna, 1750, once in the possession of Prince Nikolaus Esterházy (Hungarian National Museum, Budapest)

the tune, the plucked strings accompanied. The earliest works – an anonymous collection of dances (Swan baryton MS, *c*1640; now in *RUS-SPan*), manuscripts at Kassel (bearing the dates 1653, 1669 and 1670) and the Krause publication – are notated in modified French lute tablature. Instruction on playing the instrument is best gleaned from Krause's preface (facs. in Liebner) and the music itself. Later, in the 18th century, Haydn and his followers notated their baryton parts in the treble clef, sounding an octave below; the plucked notes were indicated by numbers below the treble staff, the strings numbered from lowest to highest (the reverse of earlier practice). Bass viol solos of the period, for example those by C.F. Abel, were also written in the treble clef. It is rare in the later chamber repertory for the baryton player to be called upon to play the upper and lower sets of strings simultaneously; in fact, they are usually played in alternation, signalling different roles in the musical texture. The most skilled players were renowned for their ability to accompany themselves throughout, following the original baroque practice.

Mersenne (*Cogitata physico-mathematica*, 1644) was one of the first to describe the instrument, but the addition of wire strings to viols for 'bettering the sound' was described in England in the patent application of Edney and Gill in 1608 (Lasocki) and in Germany by Praetorius in 1618 (*Syntagma musicum*). Mersenne's claim that the baryton was much admired by King James I of England (*d* 1625) – and also that Daniel Farrant invented it – remains unsubstantiated. However, the theory that the baryton was introduced to the Continent from England is supported by the reference to Walter Rowe playing the baryton to Peter Mundy in Königsberg in 1641 (Temple). Rowe was an important viol teacher and most probably influential in the creation of the Swan baryton manuscript. That the baryton was little known in France is indicated by Brossard's quaint reference to it (*Dictionaire*, 1703) as a 'viola di bardone' possessing up to 44 strings, and by an article in the *Almanach musical* claiming that it had been heard in Paris for the first time when Lidl toured there in 1775 (Prince Nicolaus Esterházy had, in fact, taken his baryton with him to Paris in 1767). The rest of the instrument's commentators, except for Burney, wrote in German: Majer (*Museum musicum*, 1732), Stoessel and David (*Lexicon*, 1737), Baron (*Abriss*, 1756), L. Mozart (*Versuch*, 1756), F.A. Weber (*Charakteristik der ... Instrumente*, 1788), Albrechtsberger (*Anweisung*, 1790) and Koch (*Lexikon*, 1802).

It was in Austria that the baryton was most beloved and cultivated. Schenk (1972) cited accompanied arias in Ariosto's *Marte placato* (1707) and Fux's *Il fonte della salute, aperto dalla grazia nel Calvario* (1716) as evidence of the occasional use of the baryton in Viennese operas and oratorios. By the middle of the century, however, the Baroque bass viol repertory was decidedly out of fashion; had Prince Nicolaus not taken up the viol and later the baryton, these instruments and their repertories would have suffered neglect earlier. While most of the manuscript music for baryton is in Austrian and German libraries (Dresden and Kassel), some has found its way into the far-flung libraries of St Petersburg, Stockholm, London, Paris, New York and Washington, DC.

Prince Nicolaus may have acquired his first baryton as late as 1765 when, on a trip to Innsbruck, he purchased the Stadlmann. While there he received the first pieces for 'paridon' from his Kapellmeister, Joseph Haydn. His enthusiasm for the baryton continued for more than a decade. Meanwhile, to satisfy the prince's voracious appetite for new chamber music, Haydn was required to compose dozens of trios as well as solos, duos, quintets, octets, concertos and a cantata with obbligato baryton; Haydn also enlisted his colleagues and pupils to compose chamber works using the instrument.

Haydn's own works for baryton were composed between 1765 and 1778. His pupils and colleagues in the Esterházy band, A.L. Tomasini (from 1761, first violinist of the Esterházy Hofkapelle and ultimately Konzertmeister), Joseph Purksteiner (or Burgksteiner; from 1766, a court violinist and violist) and Anton Neumann (Kappelmeister at Olmütz [now Olomouc] Cathedral, who presented the prince with music for the baryton in the

hope of gaining special favour) composed trios in a similar style. Tomasini and Purksteiner (1768) each composed at least 24 divertimentos for baryton, violin or viola, and cello, and Neumann composed 24 divertimentos (trios with baryton, 1767), followed by a set of duets (1769). According to the biographies by Griesinger (1809) and Dies (1810), Haydn himself had, in 1769, been upbraided for imprudently surpassing his patron in skill, having secretly learnt to play the baryton. Nevertheless, in that same year the prince sought the professional barytonist Lidl as a member of his band and, more particularly, as a partner for chamber music. Lidl remained until 1774, when he embarked on a tour of France and England. During his time at Eszterháza he composed pieces for the prince; in London he published trios (without baryton) in 1776 and 1778 which are likely to have been conceived with baryton (the Hamburg manuscripts may be compared with the London publications). As a soloist, Lidl was praised for his skill at self-accompaniment. Burney, however, was not impressed, and grumbled that 'it seems with Music as with agriculture, the more barren and ungrateful the soil, the more art is necessary in its cultivation' (*BurneyH*).

In 1769 two Esterházy musicians, both of whom belonged to the coterie of barytonists, resigned their posts: Haydn's friend, the cellist Joseph Weigl, who may have composed music for baryton (see Liebner), and Carl Franz, a virtuoso horn player, barytonist and cellist for whom in 1786 Haydn is said (by Pohl) to have composed the baryton part in his cantata, *Deutschlands Klage auf den Tod Friedrichs des Grossen* (HXXVIb:1). According to Pohl, Franz's playing was at once affectingly melancholic and like 'the sweetness of the pineapple'. Weber dwelt on Franz's superb intonation and the skill with which he provided a plucked accompaniment for his music.

The character of the Esterházy works for baryton was determined by Haydn – a compromise between the idiomatic possibilities of the instrument and the capabilities of its keenest patron. Nicolaus, it must be said, had no pretensions to being a soloist. Judging from the music composed for him, he preferred a few 'safe keys' (D, G and A), related to the instrument's tuning, and a limited use of plucked strings. The only duos for baryton and cello (HXII) accordingly make no use of the underlying strings. Among the trios (HXI:1–126), fewer than half call upon the barytonist to pluck with the left thumb. However, in the duet for two barytons (HXII:4) both parts include plucked notes. Nothing is known of the technical demands of the lost chamber concertos (HXIII:1–3), the lost sonatas for baryton and cello, and the missing baryton part to the Frederick the Great cantata.

Almost all of Haydn's trios were cast in three short movements; this was, perhaps, a reflection of the limited time and attention the prince had to devote to his art. Half of the trios begin with a slow movement; nearly all include a minuet and trio. Variations on the prince's favourite contemporary tunes (mostly from works by Haydn) and fugues frequently make up the remaining movement. Some scholars have seen the fugal movements in particular as experimental essays leading to the op.20 string quartets (see Kirkendale and Wollenberg).

The most common baryton trio texture – baryton, viola and cello – was devised particularly for Nicolaus and, while born of exigency, it proved a stroke of genius. The bowed strings of the baryton blend with the viola and the cello, and the plucked strings provide a contrasting timbre. The overtones produced by the baryton's many strings compensate for the absence of a treble instrument, although Tomasini did compose trios with violin instead of viola. The overall effect mystifies the listener because the individual instruments are often impossible to differentiate. Haydn was, of course, a master of this artful subterfuge, conceding nothing in musical integrity and detail even when composing domestic music. Within the textures of the divertimentos (HX:1–12) – a quartet, quintets and octets – the pair of virtuoso horns is inevitably more prominent than the pair of barytons, making it likely that they were composed for occasions at which the prince was not playing.

The true extent of the repertory, 17th- as well as 18th-century, remains to be determined. A manuscript collection (discovered in the early 1960s, in *A-SCH*) contains further works from the late 18th century: divertimentos for unaccompanied baryton by F.A. Deleschin and the Viennese father and son, Francesco and Giuseppe di Fauner; a sonata for 'viole paridon o viola da gamba', violin and cello by Joseph Fiala, the Czech oboist and viol player who was an intimate of the Mozart family in Salzburg; and a *Parthia per il baritono e violino* by the cathedral musician, J.P. Ziegler (*d* 1767). Similar repositories may exist elsewhere in Austria and Hungary.

Around the turn of the century the baryton still had a few exponents. Vincenz Hauschka, by profession a Viennese court official and member of the board of directors of the Gesellschaft der Musikfreunde, was, according to Pohl, an accomplished player. He contributed two collections of songs with baryton accompaniment (*Cinque notturni* for three solo voices, baryton and guitar, and *Sei canzonetti italiani* for solo voice and baryton); Fétis further attributed five quintets (baryton and string quartet) and five duets for baryton and cello to Hauschka. S.L. Friedl was a cellist, barytonist and composer attached to the Prussian Royal Chapel in Berlin from 1793 to 1826. According to the *Allgemeine musikalische Zeitung*, xiii (1811), he performed a potpourri (after Lefèvre) of his own arrangement on the baryton. He may have left manuscript works for the instrument. During the 1846–7 Paris concert season, Félix Battachon attempted to generate fresh interest in the baryton. The more successful late 20th-century revival was led by players such as José Vázquez, K.M. Schwamberger, A. Lessing, Janos Liebner, Riki Gerardy, John Hsu and Jörg Eggebrecht. Over 20 composers have written new works for baryton since 1960, including Ferenc Farkas and Stephen Dodgson (Gartrell, 1983). All compositions to date in the 20th century have used the Esterházy lower-manual tuning. The International Baryton Society was formed in 1993 to coordinate and promote baryton research and performance.

Baryton (iii) (Fr.). *See* BARITONE (i).

Barzelletta (It.: 'jest'). Of the different verse forms set by frottola composers, the *barzelletta* appears to have been the most popular, especially in earlier publications (until about 1510). Whereas the term 'frottola' is generic, referring to a variety of prosodic types, in its specific meaning it is usually synonymous with the *barzelletta*, as suggested by Petrucci's fourth book, *Strambotti, ode, frottole* [= *barzellette*], *sonetti* (RISM 1505[5]), or Antico's third book, *Canzoni, sonetti, strambotti et frottole* [= *barzellette*] (1513[1]). The *barzelletta* normally scans in trochaic metre, with eight syllables per line (trochaic *ottonario*), and consists of two sections: *ripresa,* four lines that rhyme as *abba* or *abab*; and stanza, six or eight lines in the order of two *mutazioni* or *piedi* (pairs of lines with identical rhymes) and a *volta* (a couplet or quatrain, whose last line generally rhymes with the first of the *ripresa*). A six-line stanza is likely to rhyme as *cdcdda* and an eight-line one as *cdcddeea*. Anticipated in the connecting rhyme or *concatenazione,* the *ripresa* as a whole or, more often, in part (two lines) recurs before successive stanzas (which number anywhere from two to five or more) and after the last one. Some *barzellette* are sung to two musical units (*AB*), others to four (*ABCD*) or more, depending on how many phrases of the *ripresa* are incorporated into the stanza. A two-unit structure may consist of *AB* for the *ripresa*, *AA* for the *piedi*, *B* for the *volta* and *A* for the *ripresa*. When new material appears in the stanza, it may be arranged as *CC* for the *piedi* and *D* for the *volta*. Musical phrases are often equal in length, grouping symmetrically into units of three or four measures. With its trochaic metre, the *barzelletta* tends to be lively and dance-like, with heavy downbeats and accents at the cadence (since Italian usually has stresses on the penultimate, the result is a sequence of strong–weak beats, leading to the so-called 'feminine' cadence, corresponding to a *verso piano*). In this respect it differs from the more languid strambotto, with 11 syllables in iambic verse (and the last syllable falling on a downbeat). The *barzelletta* relates, in prosody, to the ballata (and the French virelai), the *lauda* (of which many examples were *barzellette* supplied with sacred texts) and the Spanish cantiga or villancico. An etymological connection with the bergerette (a monostrophic virelai) may be assumed. *See* FROTTOLA.

DON HARRÁN

Barzin, Leon (Eugene) (*b* Brussels, 27 Nov 1900; *d* Naples, FL, 29 April 1999). American conductor and educator of Belgian birth. Taken to America in 1902 and naturalized in 1924, he studied the violin and viola first with his father, who was principal viola in the Metropolitan Opera Orchestra, and then with Edouard Deru, Pierre Henrotte, Eugène Meergerhin and Eugène Ysaÿe. He also studied composition with Lilienthal before joining the salon orchestra at the Hotel Astor in New York in 1917. By 1919 Barzin had moved to the second violin section of the National SO, shortly before it merged with the New York Philharmonic SO; he became first viola in the New York PO (1925–9). On Toscanini's advice he left this post to become assistant conductor of the American Orchestral Society, which he reorganized in 1930 as the National Orchestral Association with himself as music director (1930–59 and 1969–76). He had other appointments: music director of the Ballet Society, which became the New York City Ballet (1948–58), conductor of the Hartford (Connecticut) SO (1938–40) and guest conductor with the New York PO; however, he was primarily a teacher and a great trainer of young orchestras. His National Orchestral Association was a semi-professional training group for young musicians and he had great success broadcasting with them on local radio stations. The association became the training ground for thousands of musicians who went on to play in professional orchestras. While in Paris conducting the Orchestre Pasdeloup (1958–60), he was also an instructor at the Schola Cantorum and was made a member of the Légion d'Honneur. He also received the Columbia University Ditson Award and the Gold Medal of Lebanon.

JOSÉ BOWEN

Barzun, Jacques (*b* Créteil, 30 Nov 1907). American cultural historian and critic of French origin. He went to the USA in 1920 and was a pupil of Carlton J.H. Hayes at Columbia University (BA 1927), where he took the doctorate in 1932 with a dissertation on the origins of the

French race while working as lecturer (from 1927); he was then appointed assistant professor (1937), professor (1945), Seth Low Professor of History (1955) and university professor (1967). He also served as dean and provost (1955–67) and president of the American Academy of Arts (1972–5; 1977–8), and was made extraordinary Fellow of Cambridge University in 1960.

His writings have been mainly concerned with 19th-century European and 20th-century American culture. His work in music, which represents only part of his entire output, has centred on Berlioz, the subject of his large and exhaustively documented *Berlioz and the Romantic Century* (1950), a pioneering reappraisal of Berlioz's standing and achievement approached from a cultural rather than musicological standpoint. Its influence on postwar Berlioz appreciation has been profound. He has also edited a volume of Berlioz's letters (1954) and translated *Les soirées de l'orchestre* (1956). As a critic Barzun's work is wide-ranging, with a special understanding of the Romantic movement and its belief that music begins to speak at the point where words stop. He has consistently propounded the chief Romantic virtues of energy, sincerity, diversity and imagination as antidotes to the sicknesses of 20th-century society.

HUGH MACDONALD

Baschny, Józef. *See* BASZNY, JÓZEF.

Bas-dessus (Fr.: 'low treble'). Term used, especially in French sources, to denote a female voice below the soprano or *haut-dessus* – in effect a second soprano or MEZZO-SOPRANO. Rousseau (*Dictionnaire*, 1768) specifically identifies these as vocal terms, as opposed to the instrumental first and second treble (*premier dessus* and *second dessus*).

Until the mid-18th century the vocal term was associated only with part-singing. Brossard (*Dictionaire*, 1703) defines it as a second treble part; as early as 1597 Morley describes a bass descant as 'that kinde of descanting, where your sight of taking and using your cordes must be under the plainsong'. However, Rousseau points to the solo use of this voice in Italy and writes that the 'beautiful *bas-dessus*, full and sonorous, is no less esteemed in Italy than the soprano'. Although he says that France pays 'no regard' to these voices, he cites a Mlle Gondré (whose name appears on a 'Second Dessus' part for an 18th-century performance of Lully's *Armide*) for her 'very beautiful *bas-dessus*' that was 'very much applauded' at the Paris Opéra.

Choral writing in French operas from Lully onwards frequently made use of a three-part high-voice *petit choeur*, where the middle part was for *bas-dessus* and the lowest for the male HAUTE-CONTRE. In Rossini's *Guillaume Tell* (1829), both upper voices in four-part choruses were labelled 'dessus', the lower voice corresponding to the *bas-dessus*. Berlioz (*Grande traité d'instrumentation*, 1844) drew attention to Gluck's choruses of priestesses in *Iphigénie en Tauride*, which are for *dessus* and *bas-dessus* only, and observed that 'it cannot be denied that, in France, [Nature] is very sparing of [contraltos]'. *See also* ALTO (i).

LIONEL SAWKINS, ELLEN T. HARRIS

Baseggio [Basseggio], **Lorenzo** (*b* *c*1660; *d* before 1719). Italian composer. He wrote the opera *L'Adimiro* (text, B. Pisani) for Treviso in 1687 and his oratorio, *Il re pentito* (Padua, 1710), was performed at the home of Count Antonio Alberto De Conti. One of his masses was sung at SS Giovanni e Paolo, Venice, on 29 December 1712 to celebrate the canonization of Pius V. Two of Baseggio's settings of texts by Francesco Passarini also appeared in that year: the *favola boschereccia, Gli equivoci del caso* was performed at Dolo, near Venice, in June (*AllacciD*), and *Amor e fortuna* was performed at the Teatro Campagnella, Rovigo, in the autumn. His opera *Laomedonte* (text, G.B. Guizzardi or G.B. Ruperti) was performed at the Teatro S Moisè, Venice, in 1715. Baseggio was a member of the Venetian instrumentalists' guild from at least 1694 to about 1715. A motet, *Pulchra Sum suavis*, for soprano, two violins and continuo, survives (in *D-Bsb*).

THOMAS WALKER/BETH L. GLIXON

Basel (Ger.). *See* BASLE.

Baselli [Boselli, Bosello], **Constantino** (*fl* Vicenza, 1600–40). Italian composer and singer. He apparently spent his career at Vicenza. He was probably a pupil of Leone Leoni, *maestro di cappella* at Vicenza Cathedral from 1588 to 1607, and certainly had connections at Vicenza by 1600, since his second book of canzonettas, dedicated from there, includes pieces by Leoni and his circle. The

dedication of the first to Lorenzo Beccaria suggests that Baselli may have been in his service before 1600. He evidently took holy orders between 1600, when the title-pages of his works refer to him in secular terms, and 8 November 1605, when he is first listed in the *Libri dei processi* of the cathedral as a priest and singer. Eitner claimed that he was *maestro di cappella* there, but this is not supported by the *Libri*, which consistently list him as a singer up to the last reference, on 19 February 1631. Nothing more is known of him until the appearance in 1640 of the *Grati, gratiosi, giocondi, gioiosi et graditi canti*, dedicated to Count G.B. Porta of Vicenza. The forward matter of this publication is unusually elaborate: Porta's coat-of-arms (f.2) is followed by a portrait of Baselli, and the 17 pieces in the book are preceded by verses addressed to Baselli and his letter to the readers. Most of the music is for three voices and one work, *Poi che l'humil capanna*, is strophic.

IAIN FENLON

Baselt, Bernd (*b* Halle, 13 Sept 1934; *d* Hanover, 18 Oct 1993). German musicologist. He studied with Max Schneider and Walther Siegmund-Schultze at the University of Halle and took the doctorate in 1963 with a dissertation on P.H. Erlebach; he completed the *Habilitation* in 1974 with a thematic catalogue of Handel's stage works. In 1983 he succeeded Siegmund-Schultze as professor at the University and as director of its Musikwissenschaftliches Institut. As a member of the board of the Georg-Friedrich-Händel-Gesellschaft in Halle, Baselt was made a vice-president in 1987, secretary in 1990 and president in 1991, a position he held until his death. In 1991 he also became chief editor of the Hallische Händel-Ausgabe, on whose editorial board he had served for many years; at the same time he took over the editorship of the *Händel-Jahrbuch*.

Baselt was the leading German Handel scholar of his generation: his major contribution to Handel studies is the comprehensive thematic catalogue of the composer's works (HWV) published in three volumes as a supplement to the Hallische Händel-Ausgabe. His achievement is the more remarkable in that the work was done while Baselt was living in the German Democratic Republic, when opportunities for travel to England to consult the sources located there were limited. He played a major part both in raising the standard of the Händel-Ausgabe and introducing authentic performing practice of Handel's works, particularly the operas, to the annual festival in Halle. Although Handel became his main interest, Baselt was also an authority on other music of the Baroque period in Middle Germany; he edited works by Telemann and other composers, and his many writings contributed to a greater understanding of the German background in which Handel was brought up.

TERENCE BEST

Baseo, Francesco Antonio (*b* Lecce; *fl* 1573–82). Italian composer. Of the 28 compositions in his earliest recorded publication, *Il primo libro delle canzoni villanesche alla napolitana a quattro voci* (Venice, 1573[17]), only 18 are by Baseo himself, the rest being the work of seven other composers, unknown except for these pieces, together with some anonymous works. This, together with the tone of the dedication to Baseo's patron Antonio Mettula, suggests that the book represents the activities of a small musical academy that gathered at Mettula's house in Lecce and which included other members of Mettula's family. According to the title-page of the *Primo libro de madrigali a cinque voci, composti da diversi eccell. autori* (Venice, 1573[16]), Baseo had been appointed *maestro di cappella* at Lecce Cathedral by this date. The publication, which was assembled by Baseo, contains five of his own compositions together with pieces by Felis, Le Roy, Monte, Nola, Ortiz and Palestrina.

IAIN FENLON

Basevi, Abramo (*b* Livorno, 29 Nov 1818; *d* Florence, 25 Nov 1885). Italian music critic. Brought up in a wealthy Jewish family, he embarked simultaneously on classical and musical studies. He graduated in medicine from Pisa University and studied composition under Pietro Romani, having an opera performed in Florence in 1840 and another in 1847. Both were unsuccessful with the general public, although praised by some connoisseurs. Giving up composition, he soon became a prominent figure in Florentine cultural life as a critic and organizer. He founded and edited the journal *L'armonia* (1856–9). Through him began the Mattinate Beethoveniane, a series of concerts from which derived the Società del Quartetto di Firenze (1861), whose journal *Boccherini* (1862–82) he also edited, as well as a cycle of concerts of dramatic music (1865) dedicated to classic Italian opera composers such as Sacchini and Spontini, then largely forgotten. In 1861 he instituted an annual competition for string quartet composition and in 1863 organized the Concerti Popolari a Grande Orchestra. He was also from 1855 a member of the Istituto Musicale of the Accademia di Belle Arti, a *consigliere censore* of the Florence Liceo Musicale from its founding in 1859 and a corresponding member of the Brussels Academy of Music.

Basevi was one of the most important and influential figures in Italian criticism in the middle of the 19th century, especially in the movement to reform the Italian musical scene by bringing in new influences. He sought to re-establish a sense of Italy's own musical tradition by creating interest in its older, forgotten composers and collaborated with the publisher G.G. Guidi in bringing out cheap editions of classic Italian works. The concerts he set up were intended to awaken Italians to the German instrumental tradition, then little known. He was an early supporter of Wagner, but did not advocate the wholesale adoption by Italians of the Wagnerian system. Verdi he recognized as a skilful, sometimes inspired, musician, and his articles on the earlier Verdi operas (up to *Aroldo*), collected into a book in 1859, are still one of the most valuable and perceptive works of Verdi criticism. However, Basevi saw Verdi as one who followed the taste of the time rather than moulding and improving it. For him the most significant contemporary figure was Meyerbeer, whose work, seen as a synthesis of German learning and Italian melody, provided the most appropriate model for Italians to follow.

Basevi published numerous journal articles, some of which are collected in books. In his later years he gave most of his attention to philosophy, on which he also published several works. His valuable library was left to the Istituto Musicale, forming one of its most important holdings.

LEONARDO PINZAUTI

Baseya, Joan (*b* Mataró, nr Barcelona; *fl* 1679). Spanish composer and organist. As organist and choirmaster of Vich Cathedral he participated in a jury formed in October 1679 to choose an organist for S María del Mar, Barcelona. When the post again became vacant in 1687 one 'Joan Basseya', described as a priest and organist of Ripoll, competed for it without success; he is unlikely to have been the same person as the distinguished organist of Vich, but doubt is cast on the authorship of the surviving compositions. Baseya's reputation rests chiefly on three organ tientos (*E-Bc* 729; ed. H. Anglés, *Antología de organistas españoles del siglo XVII*, ii and iv, Barcelona, 1966 and 1968) which stand out in the 17th-century Spanish keyboard repertory for their sparkling counterpoint and skilful construction: they suggest the variation canzona infused with typically Spanish figuration. Two are for divided register, calling for the Gaitilla or Bagpipe stop in the right hand; the third is for undivided keyboard (*lleno*). A nine-part mass with instruments and two four-part villancicos attributed to Baseya are also extant (in *E-Bc*). José Elías may have studied with him as well as with Cabanilles.

ALMONTE HOWELL/LOUIS JAMBOU

Bashir, Djamil (*b* Al Mawsil, 1921; *d* Baghdad, 1977). Iraqi *'ūd* and violin player. He was born into a musical family and received his first musical education from his father, who played the *'ūd* and was a famous constructor of the instrument in Al Mawsil. Djamil studied the *'ūd* with al-Sharif Muhieddin Haidar and the violin with the Romanian Sando Albo at the Institute of Fine Arts in Baghdad. He became one of the best representatives of the Baghdad lute school which aimed to give the *'ūd* the status of a solo concert instrument. His musical activities were manifold. He accompanied important singers of the Iraqi *maqām*, thus acquiring knowledge of the Iraqi classical traditions; later he used this material in his *'ūd* and violin improvisations. His training in both European and Arab-Ottoman music helped him to create a new technique and a specific style for violin playing in Iraq. He also produced instrumental arrangements of Iraqi folksongs. He composed more than 20 pieces in various instrumental forms (*bashraf*, *samā'i*, *lunga*), some dance compositions and a concerto for *'ūd*, violin and symphony orchestra. In 1949 he published a collection of national anthems for schoolteachers. He used his knowledge of the Iraqi tradition and the instrumental technique he acquired from al-Sharif Muhieddin to write the first *'ūd* tutor in Iraq; published in 1961, it contains six levels of exercises based on Ottoman, Arab and Iraqi compositions. Unlike his younger brother MUNIR BASHIR, he was not widely known in the West.

SCHEHERAZADE QASSIM HASSAN

Bashir, Munir (*b* Mosul, 1930; *d* Budapest, 1997). Iraqi *'ūd* player, brother of DJAMIL BASHIR. He studied with al-Sharif Muhieddin Haidar at the Institute of Fine Arts in Baghdad and was also influenced by his elder brother . They both earned a living accompanying singers of the Iraqi *maqām*. From 1966 to 1973 he worked in Beirut as a producer, an arranger of folksongs and a musician in the ensemble of the Lebanese singer Fayrūz. During the 1970s Bashir's career took a new direction; under the influence of the musicologists Simon Jargy and Poul Rovsing Olsen, he limited his playing to solo improvisations (*taqsīm*), which brought him international recognition. In 1973 he became an artistic consultant to the Iraqi government, and was appointed head of the newly constituted Department of Music of the Ministry of Culture and Information. He regrouped the existing musical institutions within the department and centralized the process of making decisions, and also created some official troupes. His position helped to bring him worldwide contacts and the possibility of an international career; he gave recitals in about 50 countries and received numerous honorary positions, degrees and state medals. Bashir's music depends extensively on the melodic mate-

Munir Bashir playing the 'ūd, using the 'baṣm' technique with his right hand while the left hand produces harmonic pitches

rial of the Iraqi *maqām*; by treating this material through improvisations and using the techniques of the Sharif school, he initiated a new trend in *'ūd* playing, achieving al-Sharif Muhieddin's goal of developing a new role for the instrument beyond its use in vocal art. Bashir's music has been diffused through numerous recordings).

SCHEHERAZADE QASSIM HASSAN

Bashkirov, Dmitry (Aleksandrovich) (*b* Tbilisi, 1 Nov 1931). Russian pianist. He was introduced to music by his grandmother and studied with Anastasia Virsaladze at the Tbilisi Conservatory from 1938 to 1949 and subsequently from 1950 to 1955 with Goldenweiser at the Moscow Conservatory, where he began to teach in 1957. Bashkirov's best-known pupils, Dmitry Alekseyev and Nikolay Demidenko, share his intensity of temperament, which borders on wildness. After winning a prize at the 1955 Marguerite Long-Jacques Thibaud Competition in Paris, Bashkirov rapidly developed his performing career both in Russia and the West, making some 30 recordings for Melodiya and, more recently, also recording for Harmonia Mundi and Erato. He formed a well-known trio with violinist Igor′ Bezrodny and cellist Mikhail Komnitzer. Between 1980 and 1988 he was forbidden to tour outside the Eastern bloc, and in 1991 he made a second home in Madrid, teaching at the Queen Sofia High School for Music.

DAVID FANNING

Bashmakov, Leonid (*b* Terijoki [now Zelengorsk, Russia], 1 April 1927). Finnish composer and conductor. He studied the piano, orchestral conducting and composition (with Merikanto) at the Sibelius Academy in Helsinki (1947–54). He taught at the music college in Kotka before being appointed theory teacher at the Tampere Conservatory in 1959, and rector in 1979. He was conductor of the TTT-Theatre of Tampere between 1960 and 1984.

As a composer his stylistic roots lie in neo-classicism. In his works of the 1960s in particular, his use of melodies based on 2nds and 4ths, and his handling of rhythm and the orchestra, point to Bartók and to his teacher Merikanto. Bashmakov abandoned 12-note technique after his First Symphony (1963) in favour of free chromatic tonality and motivic techniques. The Stravinskian characteristics typical of Bashmakov's generation do not, however, emerge until his ballet *Tumma* ('Dark', 1976) and the closely related Fourth Symphony and Passacaglia. These are dramatically and colourfully orchestrated works marked by the sharp contrasting of characters. The textures are for the most part linear and contrapuntal in construction, and occasionally fugal. His Cello Concerto (1972) is typical in that the most expressive melodies are entrusted to the tenor register. He is a predominantly instrumental composer, with even his *Canzona I* (for mixed choir and orchestra) and *Canzona II* (for soprano and orchestra) being in effect instrumental vocalises. Major exceptions in this respect are *Jumalan elektronit* ('The Electrons of God') and the Requiem to texts by Lassi Nummi.

MIKKO HEINIÖ

Bashmet, Yuri (Abramovich) (*b* Rostov-na-Donu, 24 Jan 1953). Ukrainian viola player. He grew up in L′viv and played the piano as a boy but at eight took up the violin under the tutelage of Zoya Zertsalova, who remained his teacher when he changed to the viola at 14; in his teens he also played the guitar and the piano in a rock band. At 18 he entered the Moscow Conservatory to study with Vadim Borisovsky and then – after Borisovsky's death – with Fedor Druzhinin. He was also influenced by the playing of David Oistrakh, Viktor Tretyakov, Vladimir Spivakov, Gidon Kremer, Natalya Gutman and Rostropovich. In 1976 he won the Munich International Competition but for a decade his international appearances were strictly rationed by the Soviet authorities; he was usually allowed out only to play Mozart's Sinfonia concertante with Spivakov. However his recordings alerted many in the West to his qualities. Meanwhile he formed close ties with such colleagues as Richter, Oleg Kagan, Gutman and Alexey Lyubimov. In 1986 he founded the Moscow Soloists Chamber Orchestra and began to tour more frequently. That year he also gave the

première of the concerto by Schnittke, one of the best works written for the viola in the 20th century, and since then he has enjoyed an international career. In 1988 he founded an annual festival in the Rhineland. In 1995 he took part (with Kremer and Rostropovich) in the first performance of Schnittke's Concerto for Three. Although as a virtuoso he is not quite in the class of Michael Kugel – who defeated him in the 1975 Budapest International Competition – Bashmet has a formidable technique, and in the right repertory is as charismatic a performer as any today. His performances of Shostakovich's Sonata with Mikhail Muntyan, his regular piano partner, have generally been spellbinding, as have his interpretations of works by Hindemith and Britten. However he has been criticized for cancelling engagements, changing programmes arbitrarily and arriving ill-prepared for important premières. The Danish State RSO took the unprecedented step of announcing that it would not book him again, after he had gone to Copenhagen to receive an award and give the first performance of the concerto by Poul Ruders. In 1992 he came into conflict with the members of his orchestra, by then based at Montpellier in France, and was forced to form a new group with the same name.

Bashmet remains the most powerful advocate of his underrated instrument. He has taught for many years at the Accademia Musicale Chigiana in Siena, he is president of the Lionel Tertis International Viola Competition on the Isle of Man and he runs his own competition in Moscow, where he has established a foundation to present an annual prize in memory of Shostakovich. In addition to the two concertos, Schnittke dedicated *Monologue* to him; and works introduced by him include concertos by Edison Denisov and Allan Pettersson, *Vom Winde beweint* by Giya Kancheli and pieces by Andrey Tchaikovsky, Aleksandr Raskatov and Andrey Golovin. His recordings include two each of Berlioz's *Harold en Italie*, Britten's *Lachrymae* and the concertos by Schnittke and Walton, as well as Schnittke's Concerto for Three and *Monologue*, Bruch's Double Concerto (with Tretyakov), Mozart's Sinfonia concertante (with Spivakov), Reger's G minor Suite (in both solo form and an orchestral arrangement), Druzhinin's solo Sonata and much chamber music. He plays a 1790 Carlo Giuseppe Testore viola of only moderate size but produces a virile, opulent and flexible tone from it.

TULLY POTTER

Basie, Count [Bill; William] (*b* Red Bank, NJ, 21 Aug 1904; *d* Hollywood, CA, 26 April 1984). American jazz bandleader and pianist. He was a leading figure of the swing era in jazz and, alongside Duke Ellington, an outstanding representative of big-band style.

1. Life. 2. Ensemble style. 3. Solo style.

1. Life. After studying the piano with his mother, as a young man he went to New York, where he met James P. Johnson, Fats Waller (with whom he studied informally) and other black pianists of the Harlem stride school. Before he was 20 he toured extensively on the Keith and Theatre Owners' Booking Association vaudeville circuits as a solo pianist, accompanist and musical director for blues singers, dancers and comedians, an early training which was to prove significant in his later career. From 1923 to 1926 he performed with various bands in New York. Stranded in Kansas City in 1927 while accompanying a touring group, he remained there, playing in silent-film theatres. In July 1928 he joined Walter Page's Blue Devils which, in addition to Page, included Jimmy Rushing; both later figured prominently in Basie's own band. Basie left the Blue Devils early in 1929; later that year he joined Benny Moten's Kansas City Orchestra, as did the other key members of the Blue Devils shortly afterwards. He led members of Moten's band, independent of Moten, from 1933 to 1935, then rejoined Moten. When Moten died suddenly in 1935, the band continued under Buster Moten, but Basie left soon thereafter. The same year, with Buster Smith and several other former members of Moten's orchestra, Basie organized a new, smaller group of nine musicians, which included Jo Jones and later Lester Young; as the Barons of Rhythm it began a long engagement at the Reno Club in Kansas City. The group's radio broadcasts led in 1936 to contracts with a national booking agency and the Decca Record Company; it expanded and within a year the Count Basie Orchestra, as it had become known, was one of the leading big bands of the swing era. By the end of the 1930s the band had acquired international fame with such pieces as *One o'Clock Jump* (1937, Decca), *Jumpin' at the Woodside* (1938, Decca) and *Taxi War Dance* (1939, Voc.), but gradual recourse to written arrangements began to lead it towards stylization and conformity, and to subdue its personality to the personalities of its arrangers.

In 1950 financial considerations forced Basie to disband, and for the next two years he led a six- to nine-piece group. After reorganizing a big band in 1952, he undertook a long series of tours and recording sessions that eventually led to his becoming an elder statesman of jazz, while his band was established as a permanent jazz institution and training ground for young musicians. He made the first of many tours of Europe in 1954, visited Japan in 1963, and issued a large number of recordings both under his own name and under the leadership of various singers, most notably Frank Sinatra. In the mid-1970s a serious illness hampered his career, and in the 1980s he sometimes had to perform from a wheelchair; he devoted time increasingly to his autobiography. After Basie's death, the band continued under the direction of Thad Jones (1985–6) and Frank Foster (from 1986).

2. Ensemble style. Like all bands in the Kansas City tradition, the Count Basie Orchestra was organized about its rhythm section, which supported the interplay of brass and reeds and served as a backdrop for the unfolding of solos. Using an elliptical style of melodic leads and cues, Basie was able to control his band firmly from the keyboard while blending perfectly with his rhythm section. This celebrated group, consisting of Basie, Page, Jones and, from 1937, Freddie Green, altered the ideal of jazz accompaniment, making it more supple and responsive to the wind instruments and helping to establish four-beat jazz (with four almost identically stressed beats to a bar) as the norm for jazz performance. Of particularly far-reaching significance was Jones's technique of placing the constant pulse on the hi-hat cymbal instead of the bass drum, thereby immeasurably lightening the timbre of jazz drumming. Another important factor was the accuracy and solidity of Page's walking bass technique, which obviated the need for left-hand patterns in the piano and imparted a buoyant swing to the ensemble.

Basie's rhythm section was supreme in its day, and its innovations served as models for the even more spare and flexible rhythm sections of the bop school.

During the band's heyday in the late 1930s Basie preferred light, readily expandable arrangements which were particularly notable for their use of riffs, a legacy of the Moten band and of Southwest ensemble jazz generally. Ex.1 shows a typical riff pattern, which might easily have

Ex.1 Riff from *Shout and Feel It* (air-shot recording, first issued on *Shout and Feel It*, 1937, Alamac); transcr. J. B. Robinson

been developed in rehearsal and played from memory. This simple approach to ensemble accompaniment, which contrasts with the more elaborate group writing of Duke Ellington, Don Redman and Sy Oliver, gave full freedom to Basie's outstanding soloists. These included the trumpeters Harry 'Sweets' Edison and Buck Clayton, the trombonists Dicky Wells and Benny Morton, the singer Jimmy Rushing, and two excellent tenor saxophonists, Herschel Evans and Lester Young, whose widely differing styles and artistic personalities gave added breadth and tension to the group's performances. All of these soloists are prominently featured on the band's recordings between 1937 and 1941. Basie also recorded masterpieces with his band's rhythm section and soloists (notably Young), for example, *Lady Be Good*(1936, Voc.) and *Lester Leaps in* (1939, Voc.).

In his bands of the 1950s and 60s Basie retained his swing-style rhythm section but chose soloists with more modern learnings, particularly the trumpeter Thad Jones and the saxophonists Eddie 'Lockjaw' Davis, Frank Foster and Frank Wess. Although the band's sound tended to change with its current arrangers (most notably Neal Hefti, Benny Carter, Quincy Jones and Thad Jones), it was unequalled for its relaxed precision and control of dynamics, as may be heard on the album *April in Paris* (1955–6, Verve). Basie's later bands, though musically less satisfying, never lost their large popular following. In the end, the Count Basie Orchestra proved the most long-lived and enduring in jazz.

3. SOLO STYLE. Basie's eminence as a bandleader tended to overshadow his considerable achievements as a jazz pianist. Early recordings with Moten, such as the introduction to *Moten Swing* (1932, Vic.), reveal his mastery of the ragtime and stride idioms. By the mid-1930s, however, Basie had adopted a highly personal, laconic, blues-orientated style, compounded of short melodic phrases – often nothing more than jazz clichés – expertly placed and accented with wit and ingenuity. These seemingly fragmentary and disjunct solos, of which ex.2 is typical, were nevertheless capable of generating great forward momentum and cumulative energy, and of leading in the next soloist, a gift for which Basie was justly famed. Although sometimes wrongly attributed to laziness, Basie's 'minimal' style, with its avoidance of the ornate mannerisms to which other pianists of the time were prone, was in fact deliberately abstracted from the more elaborate jazz piano styles of his day to meet the demands of large-ensemble improvisation. It was of seminal importance to John Lewis and the cool pianists of the West Coast school in the early 1950s. Jazz pianists

J. BRADFORD ROBINSON

Basile. Italian family of poets and musicians.

(1) Giovanni Battista [Giambattista] **Basile** (*b* Giugliano, nr Naples, 25 Feb 1566; *d* Giugliano, 23 Feb 1632). Poet,writer and librettist. He was educated in Naples but left at an early age, travelling around Italy until he arrived in Venice in 1604. He became a soldier and was deployed with the Venetian army to defend Crete, where he joined the literary Accademia degli Stravaganti, taking the name 'Il Pigro' ('the lazy one'). In 1608 he abandoned his military career and returned to Naples, where he began work as a writer and published his first poetry in Neapolitan dialect. He became a member of the Accademia degli Oziosi in 1608 and of the Accademia degli Incauti in 1621. The support of his famous sister, (3) Adriana Basile, no doubt helped his career: after she moved to the Gonzaga court, Mantua, in 1610, Giovanni Battista joined her for a year and was awarded the titles

of *Cavaliere* and *Conte palatino*. He returned to Naples in 1613, where he married Flora Santora and entered the entourage of Prince Caracciolo di Avellino, in whose service he was appointed to various administrative posts as governor of Montemarano, Zungoli, Lagonegro, Aversa (1626) and finally Giugliano (1631), where he died of a contagious disease.

Basile's patron in Naples was Luigi Carafa, Prince of Stigliano, in whose service (3) Adriana already worked. Basile dedicated his first dramatic works in pastoral style to Carafa, including *Le avventurose disavventure* (1611), set in Carafa's villa in Posillipo, and the five-act *dramma per musica Venere addolorata* (1612), probably the first libretto used in a Neapolitan opera. In October 1630, for a visit by the Queen of Hungary, Maria of Austria, Basile carried out his first major assignment as theatre manager and librettist at the viceroy's court. However, only Basile's libretto and descriptions of the elaborate dances of the masquerade entitled *Monte Parnaso* (set to music by Giacinto Lambardi) have survived. Basile was able to display his considerable prowess in the musical dramas of his time, which can be seen in the last of nine eclogues in Neapolitan dialect making up *Le muse napolitane* (Naples, 1635). It was in his dialect works, which are undeniably superior to those in literary Italian, that he found himself as a writer. His masterpiece is *Lo cunto delli cunti*, a collection of 50 popular tales written in Neapolitan dialect under the anagrammatical pseudonym Gian Alesio Abbattutis (Naples, 1634–6) and subsequently translated into Italian and other languages. 15 of his villanellas were edited and set to music by his brother Donato and published in his *Primo libro di Villanelle* (Naples, 1610, dedicated to Prince Carafa). Two villanellas by their older brother (2) Lelio Basile also appear in the collection. Seven Spanish canzonettas by Giovanni Battista appear in a Neapolitan guitar manuscript (*I-Nn*, dated 1622–9), which may have belonged to (3) Adriana. Two poems on the eruption of Vesuvius at the end of 1631 were the last of Basile's works to be set to music. One of these, *Mentre d'ampia voragine tonante*, was set by Michelangelo Rossi. After Basile's death, (3) Adriana moved permanently to Rome where she oversaw a posthumous edition of all his work.

(2) Lelio Basile (*b* Naples, ?1575–85; *d* ?Mantua, after 1623). Composer and poet, brother of (1) Giovanni Battista Basile. In May and June 1610 he accompanied (3) Adriana Basile to Rome and Florence en route for Mantua, where Duke Vincenzo Gonzaga took him into his service, making him governor of several territories. He probably also accompanied Adriana to Milan in August 1611. On 30 June 1615 Duke Ferdinando Gonzaga assigned to him an income derived from the sale of silk and wheat. He had now been assigned the rank of nobleman. He published *Il primo libro de madrigali a cinque voci* (Venice, 1619), of which only the alto part now survives. The 22 madrigals in this volume include settings of texts by Petrarch, Guarini, Marino and Rinuccini. The penultimate madrigal, *Canto in un tempo e piango*, is canonic (possibly in all five voices), as probably is the final madrigal, *Se lontana voi sete*. There are several poems by Lelio Basile in the volume of poems dedicated to Adriana Basile, *Il teatro delle glorie* (Venice, 1623).

(3) Adriana [Andreana] **Basile** [Baroni] (*b* Posillipo, nr Naples, *c*1580–83; *d* probably Naples, after 1642). Italian singer and instrumentalist, sister of (1) Giovanni Battista Basile and (2) Lelio Basile. She was the mother of Leonora Baroni (*see* BARONI family, (2)). Little is known about her early life. She may have been the singer in the household of Luigi Carafa; Duke of Traetto, whom Cardinal Montalto considered trying to obtain for his sister, the Duchess of Bracciano, in 1590. Between 1609 and 1610, when Duke Vincenzo Gonzaga and his wife negotiated to bring her to Mantua, her husband, Mutio Baroni, a nobleman, was in Carafa's service and she was in the employ of Carafa's wife, Isabella Gonzaga. Adriana and her family travelled to Mantua via Rome, Bracciano, Bagnaia (the country residence of Cardinal Montalto) and Florence, where her singing won her considerable acclaim (she was lodged in the house of Giulio Caccini and performed with Jacopo Peri, among others). Adriana worked from June 1610 at the Mantuan court with other members of her family: Giovanni Battista and Lelio; her sisters Margherita and Vittoria, both singers; and her husband and their children Camillo, Leonora and Caterina. It was reported that Adriana's repertory comprised over 300 songs in Italian and Spanish, which she sang from memory, accompanying herself on the harp or guitar. Within a few months of her arrival, poets were sending verses to her and Monteverdi had declared her more gifted than Cardinal Montalto's singer Ippolita Recupito and the Medici singer Francesca Caccini. She and her husband were awarded a barony by Duke Vincenzo Gonzaga and the family enjoyed further privileges under his son Ferdinando. She visited Florence, Rome, Naples and Modena between 1618 and 1620, performing at court and in cardinals' residences. In Mantua in March 1621 she performed in Alessandro Guarini's *Licori, ovvero L'incanto d'amore*, and she probably also had a role in Monteverdi's *intermedi* to *Le tre costanti*, staged the following January for the marriage of Duke Ferdinando's sister Eleonora to Emperor Ferdinand II. In May 1623 Adriana accompanied Duke Ferdinando and Duchess Caterina to Venice. Six months later she took part in musical gatherings in Rome, where she sang the *Lamento d'Arianna* to harpsichord accompaniment and on another evening improvised musical settings to stanzas from Marino's *L'Adone* (an exercise Marino also requested of Francesca Caccini in a separate audience). Having been granted a leave of absence from Mantua, Adriana and her husband continued on to Naples to settle personal affairs. In the succeeding period she found favour with the Viceroy of Naples and contemplated, then decided against, entering the service of King Sigismund III of Poland, who had also tried to

recruit Monteverdi. Preparing to return to Mantua in 1626 after an absence of more than two years, she found that the Gonzagas no longer wanted her.

The next few years were spent mainly in Naples, where Adriana continued to be favoured by Don Alvarez de Toledo, Duke of Alba and Viceroy of Naples. In May 1630 she visited Florence and Genoa. Then, in 1633, the Baroni family settled in Rome, where Adriana and her daughters Leonora and Caterina gave musical performances in their house and enjoyed generous support from Cardinal Antonio Barberini (*see* BARONI family). She was still performing in October 1639 when André Maugars reported hearing the trio sing, Adriana accompanying on the lira, Leonora on theorbo and Caterina on harp. Until recently it was thought that Adriana died in Rome a short while later, but documents show that she left for Naples in November 1640 and was still living there in August 1642.

Adriana also composed: in 1616 Monteverdi recommended that she and her sisters write solos for the parts they were to sing in a dramatic entertainment. Her singing was extolled by several poets in *Teatro della glorie della signora Adriana Basile* (1623, 2/1628) and *L'idea della veglia* (1640), by Francesco Rasi in *La cetra di sette corde* (1619), and by Marino in *L'Adone*, canto vii (1623) and *Rime*, ii (edn. of 1629).

Her sister Margherita (*d* after 1639) was at Mantua from 1615 and in 1617 sang in Santi Orlandi's *Gli amori di Aci e Galatea*, staged on Ferdinando Gonzaga's marriage; she became the principal singer at the court in the 1620s. In 1630 she was among several Mantuan musicians in Vienna, and by January 1631 until apparently at least 1639 she held a position at the Imperial court. However, she may have returned provisionally to Mantua: she is listed on the Mantuan court roster of 1632 and four years later she was the recipient of a gift of land there. Margherita accompanied one of Emperor Ferdinand II's daughters to Poland in 1637.

Basili. Italian family of composers.

(1) Andrea Basili (*b* Città della Pieve, Perugia, 16 Dec 1705; *d* Loreto, 28 Aug 1777). Composer and theorist. After taking minor orders he studied in Rome with Bernardo Caffi. From May to December 1729 he was *maestro di cappella* of Tivoli Cathedral; in 1732 he was a member of the chapter musicians, described as a 'trombonist-organist'. In 1738 he was listed as a member of the Roman Congregazione di S Cecilia. From 10 March 1740 until his death from apoplexy he was *maestro di cappella* of the Santa Casa of Loreto. Among his contemporaries Basili had the reputation of a skilled contrapuntist and learned theorist. Several of his letters are among Padre Martini's surviving correspondence (*I-Bc*).

MICHAEL TALBOT/ENRICO CARERI

(2) Francesco Basili (*b* Loreto, 31 Jan 1767; *d* Rome, 25 March 1850). Composer and conductor, son of (1) Andrea Basili. He studied music first with his father, then with Giovanni Battista Borghi and finally with Giuseppe Jannaconi at the Accademia di S Cecilia in Rome. After successfully passing his examinations in 1783 he was accepted as a member of the academy (16 October), and for the next 30 years worked as *maestro di cappella* at

Foligno (1786–9), Macerata (1789–1803) and Loreto (1809–27); during this time his 13 operas, of which *Gl'Illinesi* (Milan, 1819) was the most successful, were composed and produced. He turned down the nomination for *maestro di cappella* at S Maria Maggiore in Rome to become censor of the Milan Conservatory in 1827, where he was responsible for Verdi's failure to be admitted to the conservatory (1832). Basili succeeded Fioravanti as *maestro di cappella* of St Pietro in Rome in 1837, a post which he held until his death. Inspired by Spontini, he and Giuseppe Baini sought to raise the musical standards of St Pietro, but their efforts were in vain.

Although now forgotten, Basili was well known in his day, particularly for his church music. The last decades of his life were devoted primarily to revising earlier works, especially sacred pieces. His style is similar to Spontini's, and is characterized by march-like rhythms and by melodies that are reminiscent of the Viennese Classical composers and of Schubert. In his earliest works, however, he anticipated Rossini, and in that respect his style contrasts markedly with that of his contemporaries.

LEOPOLD M. KANTNER/R

(3) **Basilio Basili** (*b* Macerata, 1803; *d* ?New York, ?*c*1895). Composer, active in Spain, son of (2) Francesco Basili. He started his career as an operatic tenor but turned to composition soon after arriving in Spain in 1827. In a musical climate monopolized by Italian opera, he tried to revitalize the tradition of Spanish musical theatre, composing several stage works in Spanish, with spoken dialogue. The dichotomy between Spanish and Italian music is presented allegorically in *El novio y el concierto*, in which the young hero's choice of bride symbolizes a choice between Italian opera and Spanish folksong. Basili conducted several seasons of Italian opera in Madrid during the late 1840s. In 1847 Basili, Hilarión Eslava and others formed España Musical, a group that promoted the cause of national music. Though none of Basili's dramatic works gained lasting fame, they paved the way for the successful revival of the zarzuela around 1849.

Basilicus, Ciprianus. *See* BAZYLIK, CYPRIAN.

Basilides, Mária (*b* Jolsva, 11 Nov 1886; *d* Budapest, 26 Sept 1946). Hungarian contralto. She studied at the Budapest Academy of Music under József Sík. In 1911, at the opening of the Budapest City Theatre, she made her début in Jean Nouguès's *Quo vadis?*, and until 1915 played there in such roles as Azucena, Mignon, Carmen and Ulrica. She then joined the Royal Hungarian Opera, appearing there until her death. Her repertory was wide: specially admired in Verdi and Wagner, she also sang Gluck's Orpheus and Clytemnestra and Sylvia in Monteverdi's *Orfeo*; she created the Housewife in Kodály's *The Spinning Room*. She made frequent guest appearances abroad. An innate musicality, a voice of velvety beauty (at its peak), and avoidance of vocal artifice endeared her to Budapest audiences. In addition she was one of Hungary's most eminent concert singers and an enthusiastic supporter of Bartók and Kodály, whose folksong arrangements she recorded (with Bartók at the piano). The second and eighth books of Kodály's *Magyar népzene* were dedicated to her.

Basin, Adrien (*d* after 1498). Franco-Flemish composer. In 1457 he was in the household chapel of Isabelle de Bourbon, wife of Charles the Bold (*F-Pn* fr.5904, f.32). When Charles became Duke of Burgundy in 1467, Basin was listed together with Busnoys and Hayne van Ghizeghem as 'chantre et valet de chambre' (Brussels, Archives générales du royaume, CC 1923, f.69*v*); he was still there in 1475 and 1476 (CC 1796, f.99). He seems thereafter to have been resident in Bruges, where he was involved in diplomatic activity in 1482 and 1488 (Strohm, 1979, p.35), later acting as heir to his brother, Pierre, in December 1498 (Wegman, p.154).

Basin's unusually short three-voice rondeau *Nos amys vous vous abusés* (ascribed 'A. Basin' in the Mellon Chansonnier) had considerable success: apart from its five musical sources, it was used for at least three masses (including a lost mass by Tinctoris) and cited as far away as Portugal and Poland; it seems moreover to have been the central piece in a group of songs with similar titles

and similar musical materials composed in the court of Charles the Bold shortly before he became duke. The other two songs, *Ma dame faytes moy savoir* and *Vien'avante morte dolente*, are both ascribed simply 'Basin' (in *I-Rc* 2856). Both have contrary ascriptions elsewhere: for *Ma dame faytes moy* the other ascription is cropped and unreadable, but its music is very much that of the Burgundian court; for *Vien'avante*, which must have begun life with a French rondeau cinquain text, the other ascription is implausibly to Robert Morton. All three songs are edited in *StrohmM*.

These last two pieces may possibly be by Adrien's brother, Pierre (or Pierquin) Basin (*d* Bruges, 19 April 1497), who was a singer and, according to his tombstone (now destroyed), councillor to the Duke of Burgundy. He sang in the chapel of Queen Marie d'Anjou from 1455 to June 1460 (Perkins); at St Donatian, Bruges, from 1460, becoming succentor in 1465–6; and in the Burgundian ducal chapel from 1467 to 1485. He held the 14th prebend at St Donatian from 1467 until his death and was briefly succentor again in 1491 after the sudden dismissal of Obrecht. He seems also to have endowed Obrecht's *Missa de Sancto Martino* on 14 March 1486 (using the profits from properties in Ghent), and, along with Gilles Joye, auditioned candidates for the position of organist at St Donatian in 1482. Given that *Ma dame faytes moy* was quoted in Obrecht's *Missa Plurimorum carminum I*, there seems a good chance that it was indeed by Pierre, who had such close contacts with the younger composer.

A third brother, Jean, is documented from 1460 in Bruges, where he became dean of the barbers' guild and in 1488 endowed an altar at the church of Our Lady.

Simon Basin, also known as Fassion, was a minstrel in the household of the Dauphin Louis, Duke of Guyenne, 1414–16. The basse danse *La Basine* (Michel de Toulouse, *c*1490) may possibly be connected with him, just as another dance, *La Verdelete*, is normally connected with his colleague Jean Boisard, known as Verdelet. Three minstrels named Jehan Facien (or Fassion) are recorded in the years 1415–40. Some or all of the Basins and Faciens may be related.

DAVID FALLOWS

Basiola, Mario (*b* Annico, nr Cremona, 12 July 1892; *d* Annico, 3 Jan 1965). Italian baritone. He studied with Antonio Cotogni in Rome, where he made his début in 1918. Appearances in Florence and Barcelona led to an engagement with the S Carlo company which toured America in 1923, and this in turn brought him to the Metropolitan in 1925. His roles there included Amonasro, Escamillo and Count di Luna. In 1930 he appeared in the American première of Felice Lattuada's *Le preziose ridicole* and in that of Montemezzi's *La notte di Zoraima* the following year. He was also the Venetian in the first Metropolitan production of *Sadko* (1930). In 1933 he returned to Italy where for many years he was a leading baritone in Milan and Rome. The enthusiastic reports of his work there were not entirely borne out when, after a serious illness, he came to Covent Garden (as Iago, Amonasro and Germont) in 1939; nor are they well supported by the recordings he made of *Pagliacci* and *Madama Butterfly* with Gigli. In 1946 he joined a company touring Australia, and in 1951 he returned there as a teacher. His earlier recordings show the full-bodied tone and flowing style which earned him a high reputation among the singers of his time. His son, Mario Basiola jr (*b* Highland Park, IL, 1 Sept 1935), was also a successful baritone, singing in many leading houses including La Scala and the Vienna Staatsoper; his repertory included the title role in *Wozzeck*.

J.B. STEANE

Basiron [Barizon, Baziron, Bazison], **Philippe** [Philippon, Phelippon] (*b* ?Bourges, *c*1449; *d* ?Bourges, shortly before 31 May 1491). French composer. He entered the Ste Chapelle of the royal palace in Bourges as a chorister in October 1458. He demonstrated exceptional musical ability: a clavichord was purchased for his use in late 1462 or early 1463 (when Guillaume Faugues was briefly Master of the Children), and in May 1464 he was deputed to 'instruct the other boys in singing and in the art of music'. He passed to the status of a vicar-choral between 1466 and 1467. On 5 February 1469 he was elected Master of the Children; his successor was appointed on 11 January 1474, when Basiron left the Ste Chapelle. Documents from Bourges are lacking from 1476 to 1486, and his return cannot be dated precisely, but about 1490 he is recorded as vicar of an altar in a church in Bourges under the jurisdiction of the Ste Chapelle, and on 31 May 1491 this benefice, last held by 'deffunctus magister Philippus Barizon clericus dicte capelle' was requested for 'Johannes Barizon', probably a brother (see Higgins).

Brief laudatory references by Crétin, Eloy d'Amerval and Moulu, and citations by Gaffurius and Spataro, show that Basiron was highly regarded by his contemporaries. His works were copied as far afield as Spain and Bohemia and reprinted as late as 1520. He was a precocious composer: the four three-voice chansons, which display a distinctive personal style, were composed before Basiron was out of his teens. Most of the surviving works probably date from before he left the Ste Chapelle in 1474 (Ercole d'Este's reference to the *Missa 'L'homme armé'* as 'new' in 1484 means no more than that the mass was new to Ercole). Though his style more resembles that of Busnoys and Ockeghem than that of contemporaries Josquin and Obrecht, he was remarkably innovatory in technique. Long chains of repetitions or sequences were a favourite device of his that was much refined by Josquin. His *Regina celi* is by far the earliest composition in which pervasive imitation in all voices is the sole structural technique. The peculiar method of partitioning the plainchant melody into points of imitation, otherwise unique, links this motet with an anonymous setting of *O sacrum convivium* which

was recopied in the early 1530s. The *Messa de Franza*, the most widely distributed of Basiron's works, uses a kaleidoscopic technique of chaining together freely composed sections in many different textures to create long movements. This distinctive procedure is shared with an anonymous *Missa 'D'ung aultre amer'*. In all his texted music, Basiron showed an attention to his words that is similar to Ockeghem's (an evident preoccupation with the chanson *D'ung aultre amer* may point to an association with the older composer). He was a master of pacing, who could effortlessly control wide spans of time.

Vanneus lists 'Johannes Basiron' in the company of much younger musicians headed by Willaert, Festa and Conseil. 'Johannes' may be a mistake for 'Philippus', or may refer to the Jean Basiron who inherited Philippe's benefice and who died in 1495. Another brother, Pierre, entered the Ste Chapelle at the same time as Philippe and lived until 1529. Jean or Pierre may be the composer of *Mary de par sa mère*, which seems to have been composed after 1491.

Basis (Gk.). In the late Renaissance, a name sometimes given to the bass part (*see* PART (ii)) of a polyphonic composition; in some theoretical writings, including Glarean's *Dodecachordon* (1547) and Zarlino's *Le istitutioni harmoniche* (1558), a designation for the bass line of a passage, and even the bass note of a chord. By a humanistic conceit, the four human voice ranges were compared with the four elements, the *basis* being appropriately likened to the element of earth.

□

Basle (Ger. Basel; Fr. Bâle). City in Switzerland. Its musical life probably differed little from that of other episcopal sees during the Middle Ages, but with the Great Council (1431–49), the foundation of the university (1460), the establishment of printing houses and the emergence of humanism, the city, located on the Rhine in northern Switzerland, developed an active cultural life. Sacred polyphony was performed, and instrument makers established workshops in the city. Those that took up residence in Basle included Erasmus and his student Glarean. Bourgeois families (among them the Ammerbachs, Iselins and Hagenbachs) cultivated domestic music-making and composing, collected instruments and commissioned portraits and paintings with music as the subject matter. The surviving tablatures show that intabulations were worked out both from written models and from popular tunes. Partbooks reveal a repertory of polyphonic secular music following the latest international trends. The printer Michael Furter published Virdung's *Musica getutscht* in 1511; Johann Froben brought out works of Glarean, including his *Isagoge in musicen*. Glarean's *Dodecachordon* was published in Basle in 1547 by Heinrich Petri. In contrast to the rest of Protestant Switzerland, which came under the reforms of Ulrich Zwingli, Basle was reformed by Johannes Oekolampadius (Husschyn), who had ties with Lutherans in nearby cities. As a consequence the organs were not destroyed, and playing them was soon allowed again. However, plainsong remained predominant, despite the printing of a four-part psalter (1606) by Samuel Mareschall, who taught at the university; only in 1854 did a four-part hymnbook, published jointly by the city and region of Basle for use in all parishes, gain acceptance.

The tradition of drumming and fifing, particularly common among the Swiss mercenary armies but once also widespread in Europe, has continued in Basle since the 15th century, and is maintained by many groups. Since the 19th century the repertory has included foreign marches, and new compositions have been added since the 1960s. In 1692 the collegium musicum was founded, a small group of aristocratic amateurs who played together once a week. A choir of Gymnasium pupils and other students was attached to them, and the combined forces were directed by the university or cathedral organist, who was also the head music teacher. The collegium musicum received subsidies, performed at

church and university functions and advised on such matters as musical education and the appointment of organists. Towards the mid-18th century it developed into a concert society, with a board of directors composed of performing members fulfilling their former advisory role, and a circle of subscribers. The latter, necessary for financial reasons, prepared the way for concerts open to the general public. There was also a private Kapelle in the house of the wealthy merchant Lucas Sarasin. His music catalogue and a third of his collection have survived, and show a lively interest in the instrumental repertory of such centres as Paris, Mannheim, Vienna and northern Italy.

As the number of cultured citizens in Basle increased in the 19th century, the cultivation of music also spread. Under German musical directors, especially Ernst Reiter (1839–75) and Alfred Volkland (1875–1905), the orchestra expanded and improved. In 1876 the concert society and the orchestra formed the Allgemeine Musikgesellschaft (AMG). Programmes included relatively early performances of Bach and Handel, as well as contemporary works. Spohr, Weber, Mendelssohn, Robert and Clara Schumann, Liszt, Bülow, Brahms and Joachim often gave concerts in Basle, and also frequented private musical circles. Choral singing also became widespread in the 19th century. The largest choir was the Basler Gesangverein, founded in 1824–5 and followed in 1852 by a male-voice choir, the Basler Liedertafel; both remain active. In 1867 the Musikschule was set up by a charitable society, the Gesellschaft zur Beförderung des Guten und Gemeinnützigen in Basel (founded 1777). The school was later supported mainly by the state, and its director was often also the conductor of the concert societies.

Theatrical and operatic performances took place in a ballroom until 1834, when the Theater auf dem Blömlein was built by Melchior Berri. In 1875 it was replaced by the Theater am Steinenberg, whose architect, Johann Jacob Staehelin, also designed the adjacent Casino with its three concert halls (still extant). The theatre burnt down and was reconstructed in 1909 as the Stadttheater.

About 1900 the musical life of Basle became dominated by native Swiss performers, who were often also accomplished teachers and composers. Under Hans Huber a conservatory affiliated to the Musikschule was founded (1905), and the teaching curriculum was extended to cover a number of academic disciplines. In concert life contemporary music assumed a new importance under the leadership of Hermann Suter, and greater attention was paid to pre-Classical music. Another influential figure was the musicologist Karl Nef, the first lecturer in the general history of music in Switzerland and the organizer of the international musicological congresses in Basle in 1906 and 1924. In recognition of his services, Basle was chosen as the headquarters of the International Musicological Society in 1927.

After World War I musical life expanded further. The Busch Quartet took up residence, followed in the 1950s by the Vegh Quartet. The AMG gave up its chamber music concerts and established itself as an organization separate from its orchestra, which from then on formed its own state-subsidized society, the Basler Orchester Gesellschaft. This development and the appointment of Weingartner, a conductor who specialized in the Classical and Romantic repertory, led to a number of new organizations. The Walter Sterk'sche Privatchor (1920) was active in promoting both early and contemporary music, and the local section of the International Society for Contemporary Music was founded in 1928. One of the most fruitful contributions to Basle's musical life was made by the patron and conductor Paul Sacher. With his Basler Kammerorchester (founded 1926) he commissioned and performed many works of Swiss and non-Swiss composers, including Bartók's Music for Strings, Percussion and Celesta and Divertimento for Strings; Stravinsky's Concerto in D and *A Sermon, a Narrative and a Prayer*; and important works of Conrad Beck, Willy Burkhard, Fortner, Honegger, Frank Martin, Martinů, Moeschinger and others. With so much emphasis on contemporary music, the city attracted many Swiss composers, including Beck, Robert Suter, Wildberger, Klaus Huber, Kelterborn, Wyttenbach, H.U. Lehmann and Holliger.

In the early 1930s Sacher intensified the efforts of his predecessors to revive early music, not only with the Kammerorchester but by setting up a private teaching and research institute, the Schola Cantorum Basiliensis. From 1934 August Wenzinger and his concert group, the Freunde Alter Musik in Basel, earned the institute a worldwide reputation. After World War II the institute was combined with the conservatory and the Musikschule to form the Musikakademie (directed by Friedhelm Döhl, 1974–82, and Kelterborn, 1983–94). Martin Linde, Eugen M. Dombois, Jaap Schröder, Thomas Binkley with his Studio der Frühen Musik, Dominique Vellard, René Jacobs and others took up residence there, the curriculum was expanded and a journal founded (*Basler Jahrbuch für historische Musikpraxis*). In the 1970s the conservatory established studios for electronic music and musical theatre, and courses in non-Western music.

In 1909 Karl Nef established musicology at the university. It reached prominence under Jacques Handschin (1930–55) and Leo Schrade (1958–64). Hans Oesch became the institute's director in 1967; he was succeeded by Wulf Arlt.

In 1964 the Radio Corporation of German-speaking Switzerland made Basle its centre for music programming; Kelterborn was its director in the 1970s. Premières of contemporary music, as well as the early music concerts of the Schola Cantorum, were broadcast. In 1975 the old Stadttheater, long considered inadequate, was replaced by a new building with two stages designed by Schwarz & Gutmann, where about six new productions and two revivals are produced each season. During the 1960s, 70s and 80s the Stadttheater was well known for its ballet productions, choreographed by Wazlaw Orlikowsky and his student Heinz Spoerli and based on a wide range of music from Orazio Vecchi's *Amfiparnaso* to works by Luigi Nono and Philip Glass.

The largest music collection, going back 800 years, is in the University Library. The Paul Sacher Stiftung research centre holds important 20th-century works. The city owns two notable collections of musical instruments, both begun in the 19th century. That of the Historische Museum contains more than 800 items (mostly European, including a few folk instruments), while the Museum für Völkerkunde holds more than 2000, most gathered from fieldwork in South-east Asia, New Guinea, Oceania and Africa.

TILMAN SEEBASS

Basner, Veniamin Yefimovich (*b* Yaroslavl′, 1 Jan 1925; *d* Repino, St Petersburg province, 3 March 1996). Russian composer. His musical gifts – absolute pitch and a phenomenal memory – became apparent from an early age. He studied the violin at the music school in Yaroslavl′; it was here that he became interested in the work of Schoenberg. It was also in Yaroslavl′ that in 1938, he heard Shostakovich's Fifth Symphony, an event which became greatly significant to his creative development. Upon leaving the music school in 1942 he was invited to join the Yaroslavl′ Philharmonia and also the Estonian State Philharmonia, evacuated to the town. Called up in 1943, he was transferred to a musicians' section where he mastered wind and brass instruments and acquired arranging skills. He entered the Leningrad Conservatory in 1944, studying the violin with Belyakov; after graduating in 1949 he worked both as soloist and orchestral player. He became a board member of the Leningrad section of the Composers' Union in 1955 and also directed its youth commission which auditioned works by would-be members of the organization. In 1994 he fulfilled a lifelong ambition by setting up and opening a Jewish music theatre in St Petersburg; called *Simkha* ('Joy'); the theatre functioned until his death in 1996. Throughout his career he received a number of awards and honours including People's Artist of the RSFSR (1982) and the Order of Friendship (1994).

Basner's relationship with Shostakovich both as composer and individual was crucial to his own creative personality. While Basner worshipped Shostakovich, the latter regarded Basner as one of his most dependable friends and had high regard for his compositions; the two friends frequently met to show each other their latest work. Basner's symphony *Katerina Izmaylova* is a tribute to his idol, constructed from material found in the notorious opera. He shared with Shostakovich an admiration for Mahler and also Jewish music, even though for Basner the latter originated from personal recollection from his childhood. In his musical *Yevreyskoye schast′ye* ('Jewish Happiness') Basner played the extensive and symbolic solo violin part at its production at the *Simkha* theatre.

Basner was invited to work as a composer of film music on Shostakovich's recommendation; each of his scores contain a song which subsequently had an independent existence. *Na bezïmyannoy vïsote* ('In the Nameless Heights') from *Tishina* ('Silence') of 1946 and *S chego nachinayetsya rodina?* ('From What Does the Homeland Originate') from *Shchit i mech′* ('The Shield and the Sword') of 1968 both enjoyed popularity throughout Russia, as did his songs about World War II. Although in these and many other songs Basner conveyed the feelings of a wide spectrum of society through the lyrical use of everyday turns of phrase, in the same songs he made use of complex intervallic relationships which bear comparison with those of Mahler.

WORKS
(*selective list*)

STAGE

Ops: Veshniye vodï [Spring Waters] (Ye. Gal′perina, after I. Turgenev), 1975; Otel′ Tanatos [Hotel Tanatos] (A. Pochikovsky, after A. Maurois), 1991, unfinished

Ballet: Tri mushketyora [The Three Musketeers] (A. Vanin, after A. Dumas), 1964

Operettas and musicals: Polyarnaya zvezda [The Polar Star] (Gal′perina and Yu. Annenkov), 1966; Trebuyetsya geroinya [A Heroine is Needed] (Gal′perina and Annenkov), 1968; Yuzhnïy krest [The Southern Cross] (Gal′perina and Annenkov), 1971; God golubogo zaytsa/Belïy tanets [The Year of the Blue Hare/The White Dance] (Gal′perina), 1978; Mezhdu nebom i zemlyoy [Between Heaven and Earth] (V. Konstantinov and B. Ratser), 1980; Blistayushchiye oblaka [Glittering Clouds] (N. Denisov and Ė. Nakhamis), 1982; Moya khata s krayu [It's No Business of Mine] (Gal′perina and Annenkov), 1985; Mï iz Odessï, zdras′te! [We're from Odessa, Hello!] (A. Belinsky, after Ė. Bagritsky), 1988, unfinished; Tï: velikaya aktrisa [You are a Great Actress] (Gal′perina and Annenkov, after Maurois), 1990; Yevreyskoye schast′ye [Jewish Happiness] (Ratser, after D. Friedman), 1994

OTHER WORKS

Vocal: Parabola (A. Voznesensky), Bar, pf, 1962; Vesna, pesni, volneniya [Spring, Songs, Excitement] (L. Martïnov), solo vv, chorus, orch, 1963; Goya (monologue, Voznesensky), B, eng hn, bn, pf, 1965; Vechnïy ogon′ [Eternal Flame] (M. Matusovsky and Gal′perina), B, children's chorus, orch, 1971; 8 Poems (A. Akhmatova), Mez, gui/pf, 1977; 5 stikhotvoreniy M.Yu. Lermontova [5 Lermontov Settings], B, orch, 1979, also version for B, pf, 1979; In Memory of Vladimir Vïsotsky, 6 ballads, 1v, inst ens, 1981; Suite (O. Mandel′shtam and others), B, ob, eng hn, 2 bn, pf, 1983; Sym. no.2 'Blokada' [The Blockade] (Matusovsky), B, chorus, orch, 1983; Sym. no.3 'Lyubov′' [Love] (E. Verhaeren), T, orch, 1988; many romances and songs (A.S. Pushkin and others), 1948–90

Inst: Str Qt no.1, 1948; Str Qt no.2, 1953; Poėma ob osazhdyonnom Leningrade [A Poem about Leningrad in the Blockade], orch, 1957; Sym. no.1, orch, 1958; Str Qt no.3, 1960; Vn Conc., 1966; Vc Conc. 'Tsar′ David' [King David], 1967–80; Str Qt no.4, 1969;

Sinfonietta, fl, str, 1972; Str Qt no.5, 1975; Sonata, vn, pf, 1982; Katerina Izmaylova, sym., orch, 1993 [after op. by Shostakovich]
Over 100 film scores

LYUDMILA KOVNATSKAYA

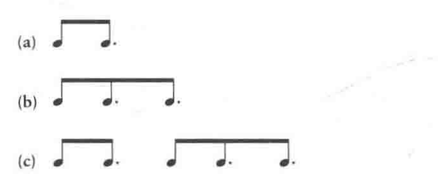
Basque, André de. *See* KETÈLBEY, ALBERT W(ILLIAM).

Basque music. If the term 'Basque music' exists today, it is because it enables us to describe various forms of musical performance. The provinces inhabited by the Basque people are divided politically in a stateless nation between north-eastern Spain and southern France. The sections that follow will outline what has been and what still is signified by the term. Basque music emerged in the 19th century at a time when Europe was being formed into large national entities, and the very idea of a Basque or Euskarian society assumed significance. Basque music assumes a position alongside the Basque language and Basque customs which constitute the identity of one of the oldest European communities.

1. Principal characteristics. 2. Instruments. 3. Recent developments.

1. PRINCIPAL CHARACTERISTICS. In northern Basque country, at Izturitz in Laburdi, a 22,000-year-old three-hole flute made from the bone of a bird was discovered; it is regarded as an ancestor of the modern *txirula* or *txistu* duct flutes. In the south, at Atxeta near Guernica in Biscay, José Miguel de Barandiaran found a trumpet dating from the Azilian period, suggesting that musical performance goes a long way back in this mountainous area. The studies of Resurreccion Maria de Azkue, Francisco Madina, José Antonio de Donostia and José Antonio Arana Martija attempt to trace Basque music's line of descent. Latin books of plainchant show that there was undoubtedly ritual performance of ecclesiastical chant in the Middle Ages, and the *Linguae vasconum primitiae*, published by B. Dechepare in 1545, as well as older songs such as *Alostorrea*, *Urtsoak zazpi leio* and *Bereterretxen kantoria* show that poems intended to be sung existed. However, people at that time did not consider them 'Basque music'. The outlines of a form of Basque music can be traced during the 19th century. A multiplicity of diffracted practices defined as Basque occurred at the very moment the consolidation of the European states threatened these practices, thus legitimizing preservation campaigns such as the publication in 1826 of Juan Ignacio de Iztueta's *Euscaldun anciña anciñaco*. Basque music was paradoxically born as a result of such partimonial efforts.

Iztueta intended his collection as a monument, in that future generations 'must receive the inheritance of their ancestors intact, and must act to preserve the inviolability of their country' (preface, p.i). Documenting a repertory fixes it, thus constructing an inheritance. In Iztueta's collection as in others that were to follow, song texts are given without systematic musical transcription. It was not until 1870, when J.D.J. Sallaberry published his *Chants populaires du pays basque*, that words, music and harmonization are given.



With developments in printing, an enthusiastic desire to publish seized Basque musicians. José Manterola published his *Cancionero vasco*, a nine-volume series, beginning in 1877. Between 1883 and 1898 the Lasserre publishing house of Bayonne printed four successive editions of A. Goyeneche's *Eskualdun kantaria*. In 1894 Iztueta's *Euscaldun ancina ancinaco* was reissued in Bordeaux, and Basque institutions soon followed the lead of collectors.

In 1912, a few years before the Euskaltzaindia (the Academy of the Basque Language) was established in Bilbao in 1918, the four districts of southern Basque country organized a competition with the aim of awarding prizes to collections of traditional Basque songs. Two eminent musicologists took part, Don Resureccion Maria de Azkue and Father Donostia, who published, respectively, a *Vox populi* containing 1810 vocal and instrumental tunes (edited as *Cancionero popular vasco*, 1920) and a *Gure abendaren ereserkiak* (in *Obras completas*, 1983) containing 523 melodies. These two collections mark the climax of a dynamic effort of writing and publication which allowed Basque music to be recorded and made available to a general public. Basque music came to be defined by four criteria: melodic scale, metre, formal structure and song.

The majority of the documented melodies are tonal, most of them in a major key, less frequently in a minor key. Nearly 25% of them, however, are modal. Although defective modes are seldom used, we can at least conclude that the Basques were familiar with modal scales. Most of the melodies are transcribed in single metres. As result, these transcriptions cannot take account of the constant displacement of agogic accent. However, no metres are mentioned in transcriptions of the wordless songs from the province of Soule. Why not extend that principle to the repertory as a whole? This unresolved methodological difficulty is evidence of the complexity of Basque rhythmical structures, as in the *zortziko*.

Zortziko refers to the eight steps of the dances to which the *zortziko* provides an accompaniment. This rhythm is in a double compound metre, the result of combining two single heterogeneous metres: binary (ex.1*a*) and ternary

Ex.1 Zortziko rhythms

(ex.1*b*). The asymmetry of the two basic durations makes this ostinato an irregular bichrome measure, which Constantin Brăiloiu would have classified as an *aksak* rhythm. The *zortziko* is regarded as peculiarly Basque. The Basque national anthem, *Gernikako arbola* (1853), composed by Iparraguirre, is sung to a *zortziko*.

The third characteristic of Basque music is that the strophic form of the melodies adheres to a tripartite structure, *ABA*, often transmuted to *AABA*. On the other hand, although the couplet-refrain form is common in France and Spain, it remains rare in the Basque country. The isomorphic syllabic character of the songs with one note of the melody corresponding to each syllable of the text, makes a great deal of borrowing possible. The same text can be sung to different tunes, and the same melody may be adjusted to fit different texts. Such an adaptation of a new text in rhyming verse to a tune that already exists may even take the form of an improvised poem, the special province of the *bertsulari*.

The *bertsulari* may improvise alone or, more often, contests are held in which *bertsulari* dispute among themselves. The process involves four formal structures, depending on whether the strophes consist of four or five lines (eight half-lines in the *zortziko*, ten in the *hamma-reko*), and on whether the lines consist of 13 or 18 syllables. There is the *ttiki* (small) form for 13-syllable lines (7/6), and the *haundi* (large) form for 18-syllable lines (10/8). The *bederatzi puntuko* for is also common with nine monorhymed and non-isometric lines: (7/6), 12 (7/5), 13 (7/6), 13 (7/6), 6, 6, 6, 6, and 12 (7/5). Subtle mnemonic devices are worked out for improvising on these tunes. The *bertsulari* value the art of sung improvisation, and they like to improvise on complex existing tunes.

This long-practised improvisatory art became especially popular in 1935 when Manuel de Lekuona published his *Aozko literatura*, the first work devoted to the art of the *bertsulari*, and Aitzol organized the first Basque *bertsulari* championship. The plan was for the competition to be held annually, but Aitzol was shot by Francoist soldiers in 1936 after extracting only a short-lived statute of independence from Spain, still Republican at that time. The Basque language, Euskara, was forbidden, and with it all Basque culture. The performance of Basque music thus became synonymous with resistance. The choral group Eresoinka sang all over the world; at home, the Dindirri dancers defied the cultural ban, and the singer Xabier Lete, among others, challenged censorship. During 24 years of silence, the *bertsulari* continued improvising in secret in remote villages. It was not until 1960 that a third championship was held. The *bertsulari* phenomenon thus surfaced again in the context of fervent claims for a Basque identity. Championships were held in 1962, 1965 and 1967. In 1968 the first violent confrontations between the Spanish Civil Guard and ETA (*Euskadi ta Askatasuna*, the Basque Country and Liberty), led to severe repression, and for another 13 years there was silence from the *bertsulari* who were unable to organize a national competition. From 1980 onwards, the championship has been held every four years. The final round at Anoeta in Gipuzkoa receives wide media coverage, and gives the audience of 12,000 a symbolic satisfaction to counterbalance the feeling that they are not free.

2. Instruments. The *txistu* is a three-hole flute made of ebony or other wood (and today sometimes of plastic), encircled by rings and with a metal mouthpiece. Usually in F, the *txistu* is played with the left hand by the *txistulari*, while the right hand beats a drum hanging from the elbow, using a stick. The *txistulari* plays dance music solo; *txistularis* also play in ensembles. In Soule, the *txirula* (*txülüla*)–*ttun-ttun* duo is regarded as a predecessor of the *txistu* and drum ensemble. The *txirula* is a small wooden flute in C, with a very shrill tessitura, and the *ttun-ttun* is a carved wooden box over which are stretched six strings that vibrate when struck with a wooden stick. Today, *trikititxa* ensembles, consisting of diatonic accordion, Basque drum and singer, are extraordinarily popular throughout the country. Such ensembles are used to accompany dances such as *jotas*, fandangos and *arin arin* danced in street parades.

The *gaita* of Arab origin is still found in Alaba in Navarre, and is played together with a drum. It is in the shawm family, with a double reed and eight holes; the *txanbela* is an additional variant from Soule. The *alboka* played in Biscay is an unusual instrument consisting of a double wooden pipe that connects two ends made of horn. One of the horns has two tongues, in the manner of a bagpipe, so that the instrumentalist can play using the continuous breathing technique. The *albokari* is usually accompanied by a *pandero*, a Basque drum. Finally, the *txalaparta* is a percussion instrument consisting of three wooden boards approximately 1·5 metres long. They are arranged horizontally and are struck by two instrumentalists using wooden sticks held vertically.

3. Recent developments. Like the *bertsulari* tradition, which has its own training colleges where the best improvisers teach, the playing of traditional instruments is well on the way to becoming a professional occupation. Traditional instruments are taught more and more in conservatories, but their performance is still the province of associations, grouped into federations, which organize

Dulziana (shawm) players from Navarre, accompanied by a drum

annual competitions to choose a champion and promote social mobilization. Youth championships are also a great attraction. A *Trikitilari gazteen txapelketa* ['Young *trikitilari* championship'], for instance, brings young players of the *trikititxa* together, and hundreds of children hear each other singing on the occasion of the *Haur kantu txapelketa* ['Children's song championship'] festival.

Traditional musicians are in great demand to play at carnivals, masquerades, *pastorales* and village festivals. *Joaldunak*, symbolic carnival figures of Ituren and Zubieta (in Navarre) that are dressed in sheepskins sewn with bells that ring in time to their steps, now figure in many street parades. Traditional instruments are played at the annual demonstration in support of Basque independence. These instruments are also featured in demonstrations supporting the Basque language and the schools that teach it. The *bertsulari* regularly pay tribute to Basque political prisoners held in French and Spanish jails. The *gaita* is played in the Baigorri valley at the funerals of any militant belonging to Iparretarrak (the armed separatist movement operating inside France), and the *txalaparta* is played at the funerals of ETA militants.

The Basque choral movement is one of the strongest in Europe. It includes a unique *oxote* ensemble, consisting of eight male voices singing *a cappella*. In Gipuzkoa in Biscay there are a number of wind bands with a great many instrumentalists. In Soule, a different village every year works on the production of a *pastorale*, a play in the tradition of medieval mystery plays, rendered in a declamatory style to the accompaniment of singing and dancing; it can be traced back to the 16th century. Nearly 5000 people go to the narrow valleys of Soule in summer to watch these open-air performances, which last for over three hours.

The enormous expansion of the modern distribution network for recordings allows singers such as Peio Serbielle and Benat Achiary, or groups like Oskorri, to draw on the traditional repertory. The same network also distributes the hard rock, trash, funk or ragamuffin music of groups such as Negu Gorriak and Ertzainak, which frequently quote traditional music. For instance, the *Bersto hop* performed by Negu Gorriak, takes up a *bertsu* improvised at a championship contest, one which everyone will remember, while some pairs of *trikititxa* players make use of a synthesizer in their performances. The widespread use of imitative forms continues to nourish Basque music, keeping it in an ongoing state of development. Basque music exists in multiple situations involving moments when, at a given moment and in an emotional context, a musician interprets a musical sequence for an audience who can identify it. Basque music is created in the complicity of this partnership, where shared knowledge fashions a common culture.

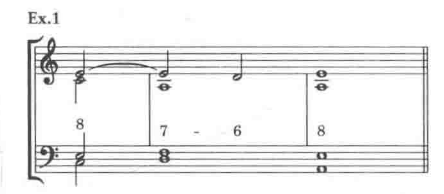
DENIS LABORDE



Bass (i) (Fr. *basse*; Ger. *Bass*; It. *basso*). The lower part of the musical system, as distinguished from the treble, specifically: that part or voice in a composition executed by the lowest-range performers ('bass part'); the lowest pitch in a sonority; hence the succession of lowest notes in a passage or composition ('bass line'); the lowest segment of an instrument's range, or the lowest octave or octaves articulated in a composition ('bass register'); and those notes which 'support' the other parts, which determine the harmonic identity of sonorities and which are in the main responsible for harmonic progressions, cadences, modulations and large-scale tonal relationships ('harmonic', 'functional' or 'musical' bass). These distinct but overlapping meanings are all usually simply called 'bass'. They share the original modifying sense 'low', as in BASS (ii) and (iii); 'bass' is cognate with the adjective 'base' ('low', 'unrefined'), both deriving from Late Latin 'bassus' ('low', 'thick', 'fat').

The term first appeared in music about the middle of the 15th century: in expanding from three- to four-part texture, composers wrote two contratenor parts, the lower of which was distinguished by the title 'contratenor bassus'. By 1500 'Bassus' alone was used as a noun, meaning the lowest part in a composition. In this new sense it rapidly acquired two cognates, one material, the other figurative: the nouns 'base' ('lowest or supporting part') and 'basis' ('main constituent', 'fundamental principle'). Thus Glarean's confusion in the *Dodecachordon* of 1547 (MSD, vi, 1965): 'The lowest voice is called 'bass' (*Basis*) . . . because all voices lean on it as a support' (i, 122); 'From this the common name 'bass' (*Bassus*) has by chance come into use' (ii, 247). Soon afterwards the term acquired philosophical legitimacy through the humanistic conceit of comparing the four human voice ranges with the four elements, as in Zarlino's *Le istitutioni harmoniche* of 1558 (trans. Marco and Palisca, 179):

> As the earth is the foundation of the other elements, the bass (*Basso*) . . . is the foundation of the harmony, . . . as if to say the base (*Basa*) and sustenance of the other parts. If . . . the element of earth were lacking, what ruin and waste would result! Similarly a composition without a bass would be full of confusion and dissonance.

These conflated meanings 'bass', 'base' and 'basis' have persisted to the present. Zarlino's usage 'foundation' became more common in the Baroque era, where the basso continuo assumed 'fundamental' importance. The continuo instruments were often called 'foundation instruments', and 'Fundamento' was a common title on bass parts. Thus Walther in the *Musicalisches Lexicon* (1732), 268: '"Fundamento" is, in general, any bass part; in particular, a basso continuo; also the harmony which the latter expresses'. Although 'Fundamento' rarely occurred after 1750, the generic term 'Basso' designated the bass in soloistic chamber music as late as Haydn's string quartets op.20 (1772), and in orchestral music and informal chamber music until 1800. Haydn discussed scorings of the bass part in a letter of 1768 as follows: 'I prefer just three basses [*Bässe*] – that is, one cello, one bassoon, and one double bass'; here 'bass' is still the generic term for any and all bass instruments. The modern practice of identifying every bass instrument by name in musical sources was not fully established until the 19th century.

The history of musical basses forms part of the history of TONALITY. Features that are taken to be characteristic appeared from the 14th century on: movement of the lowest part primarily by leap (Ciconia), articulation of the final at cadences by leap from the 5th above (Du Fay, Binchois), expansion of the tessitura downwards to encompass the full range of the bass voice (Ockeghem, Josquin), and homophonic style 'leaning' on the bass (the frottola). Besseler and Lowinsky argued that these features functioned in Renaissance polyphony as they have in major–minor tonality since 1700. More recently, however, it has been shown that this music was still based on the earlier 'discant theory'. The tenor was still the 'basis'; the 'skeleton' was the note-against-note counterpoint between tenor and soprano, and the bass was an 'added' part not only in compositional practice (as is believed), but in theory. Thus Aaron, in his *Thoscanello de la musica* (1529/*R*), described ex.1 as a cadence on E, governed by

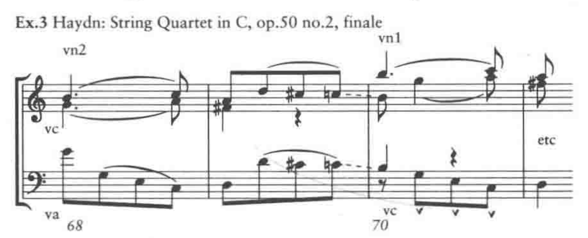
the suspension–resolution configuration 8–7–6–8 (*see also* CADENCE). But in tonality the 'outer parts', that is an expressive melody and a supporting bass, are the 'skeleton' of the music. The distinction is especially clear in early Baroque monody, where these two parts make up the entire notated texture.

Furthermore, Renaissance theorists still thought in terms of intervals. For Zarlino the triad was merely the most complex and perfect collection of intervals; he did not invoke the concept of chordal inversion, which, along with that of root, was first adumbrated just after 1600 in England and especially Germany. The 'basis' of tonality is the triad as a unified entity built on its bass: 'the lowest of the three notes which constitute a triad is called the bass [*Basis*] or fundamental note' (Brossard, *Dictionaire*, 2/1705/*R*, 169).

Finally, coherence in tonal music depends on the bass, which governs harmonic progressions, cadences (hence phrases and periods) and large-scale tonal relationships (hence form). Especially for large-scale relationships, no 'basis' of this kind has been shown for Renaissance polyphony.

The Baroque basso continuo incorporated every aspect of 'bass', being the bass part 'by definition'. It occupied the lowest register and was virtually always the lowest-sounding part; it was often a true line of melodic and contrapuntal interest; even more often it was the 'basis' of the form, as in the ostinato, the passacaglia and other variations, and numerous dance-related patterns; and it not only supported the other parts but, through the figures supplied, determined the entire harmonic contents. As late as C.P.E. Bach the theory and practice of composition itself were, for most practical purposes, synonymous with mastery of the continuo. Hence Mattheson's apotheosis (in *Der vollkommene Capellmeister*, 1739/*R*, 104) is less extravagant than may at first appear: 'Musical composition could not exist without the continuo; the one assumes

Ex.2 Bach: Brandenburg Concerto no.2, 2nd movt



the other; and the continuo was born at the same time as harmony itself'. Furthermore the continuo was articulated more strongly than any other part: in performance, by timbral and often by registral doubling between a keyboard instrument (organ, harpsichord, clavichord) and a melody instrument (cello, double bass, viola da gamba, bassoon etc.); in register, by separation from the melodic parts above it, as in solo sonata and trio sonata scoring; and often in musical structure, by its independent musical material and specifically bass-like character and progressions (ex.2). Continuo parts often assumed one of a number of definite types, such as ostinato, figural, walking or stationary basses. Finally, tonality itself was one prerequisite for the rise of autonomous instrumental art music, one of the signal achievements of the Baroque age; but as has been seen, tonality is dependent on the bass.

In the Classical and Romantic periods the hegemony of the continuo was broken in both theory and practice. Rameau's distinction between the 'actual' bass (the lowest pitch) and an 'ideal' bass (the root) once again split 'base' and 'basis' into separate entities. The succession of roots, or FUNDAMENTAL BASS, determined the nature of the harmonies, by its restriction to the 'functions' I, IV and V, and of harmonic progressions, by its preference for movement by 5ths and 3rds. This basis for tonal music lived on in the 'functional harmony' of Riemann and his followers.

Meanwhile a number of independently scored instruments began to share the continuo's old function of 'base'. By late Haydn and Beethoven, there were separate cello, double bass and bassoon parts. Often the horn functioned on its own as the bass; occasionally the timpani and, in exceptional cases, the contrabassoon and trombone assumed this role. In the 19th century the last two instruments became standard, and tubas, the bass clarinet and bass trumpet were added, as well as other inventions most of which have since disappeared. Each of these bass instruments was now a separate 'part', with its own name, staff in the score and musical substance; each could at any time be the bass, the others resting or playing above it. Hence the musical bass was no longer correlated with any single part; rather it became identified, by and large, with the 'bass line' – the succession of lowest-sounding pitches – the chief denotative sense it retains.

Under these conditions the parts could 'cross' in a meaningful way. Koch noted this new resource, so characteristic of chamber music, as early as 1782 in his *Versuch einer Anleitung zur Composition* (i, 245–6): 'When in a trio or quartet with obbligato cello [as opposed to continuo], the latter has solo passages, and the viola or second violin takes over the bass, . . . there is an exchange of bass function among the participating instruments'; this exchange is illustrated in ex.3. Haydn's basses are transitional in this respect: in these 'part-crossing' passages the nominal bass often functions as the musical bass, as a continuo would have done. Mozart and Beethoven almost always took the view that the lowest part must be the bass.

Ex.3 Haydn: String Quartet in C, op.50 no.2, finale

The bass retained all its harmonic, tonal and structural importance in Classical and Romantic music. In the hands of composers like Mozart or Chopin, even the much-maligned Alberti, 'murky' and 'oompah' basses were fully compatible with the highest art (see exx.4–5). Tovey wrote: 'A composer [Schubert] whose basses are magnificent is a great contrapuntist, even if (like Wagner) he never published a fugue in his life' (*Essays and Lectures on Music*, London, 1949, p.112). By the same token Brahms did not return to the 'values' of the Baroque era

Ex.4 Mozart: Piano Trio in G major K496, finale

Ex.5 Chopin: Ballade no.3 in A♭ op. 47

so much as he integrated his basses, at once melodic and structural, into complex textures and widely ranging harmonies.

In the 20th century tonally based art music developed no new general principles in its basses. Composers like Stravinsky, Hindemith and Bartók partly replaced harmonic progressions of the traditional type with repetitive patterns such as the ostinato. In 12-note and other rigorously non-tonal music, it may be doubted whether the bass any longer functions as a 'base' or 'basis' at all. On the other hand, jazz and popular music maintain strongly articulated bass lines as the foundation of their subdominant-orientated tonality.

Schenker's theoretical writings of the 1920s and 30s reinterpreted the bass as a synthesis of harmonic and contrapuntal forces: a line developed by prolongation of the triad in the form I–V–I. At the same time, in conjunction with the Schenkerian *Urlinie*, the bass retained its old importance as one of the two elements of the *Ursatz* or *Aussensatz*, the 'outer parts' in a structural as well as auditory sense. The marriage of bass and tonality remains indissoluble.

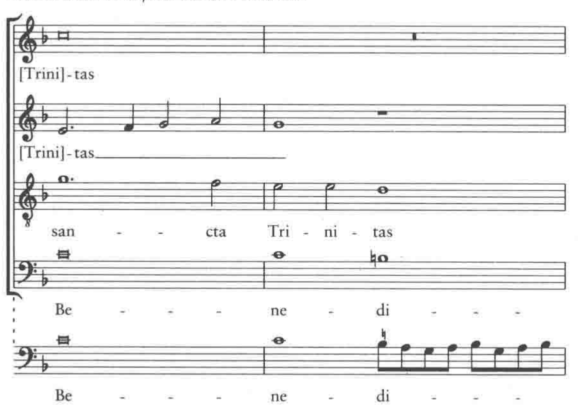
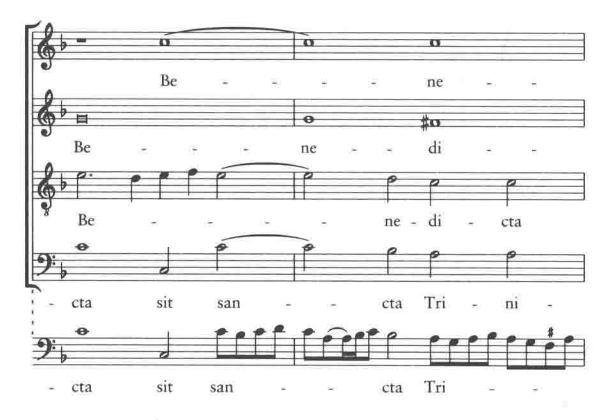
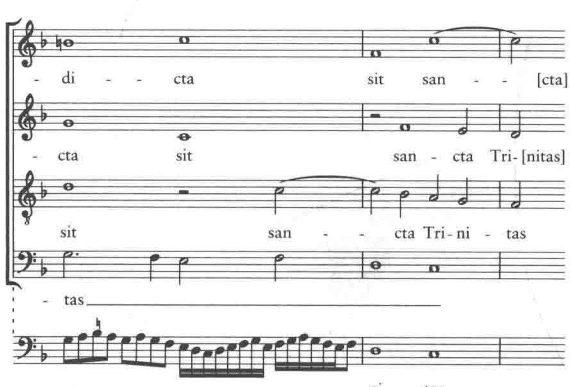
Bass (ii). The lowest male voice, normally written for within the range *F* to *e′*, which may be extended at either end, particularly in solo writing. Over time the bass voice has been subdivided into a number of distinct categories: the BASSO PROFONDO or BASSE NOBLE refers to a particularly low bass, the BASSE CHANTANTE (or *basso cantate*) a higher, lyrical voice, and the *basso buffo* a comic bass. By the 19th century the baritone split off from the bass, to be regarded as a separate category, although some overlap (and confusion) remains in the terminological distinction, especially between bass and bass-baritone (*see* BARITONE (i) and BASS-BARITONE).



1. Before 1600. 2. 1600–1800. 3. 19th century. 4. 20th century.



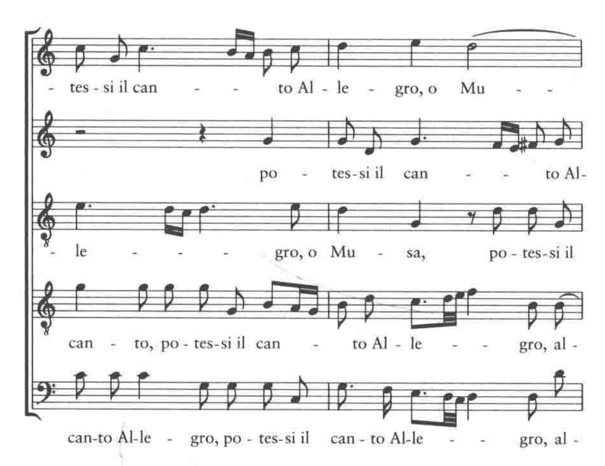
1. BEFORE 1600. Although the bass voice has no doubt existed since time immemorial, Western art music made no specific use of it for centuries, and early writers had therefore little to say about it. Isidore of Seville (*c*559–636) commented that 'in fat voices, as those of men, much breath is emitted at once', and he asserted that 'the perfect voice is high, sweet and loud' (*Etymologiarum sive originum libri xx*). In 9th-century parallel organum, as described in the *Scolica enchiriadis*, several dispositions of the parts called for the addition of apparently quite low voices an octave or 5th below the *vox principalis* 'for the sake of the symphony' (i.e. the sonority; *GS*, i, 186). Resonant bass voices must have created an imposing sound in such a 'symphony'.

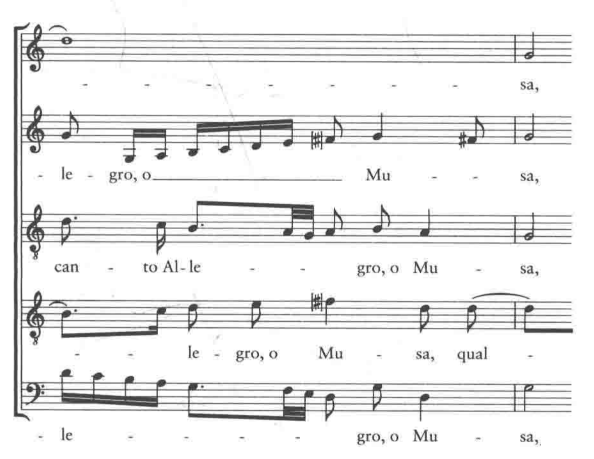


Until the second half of the 14th century, upper voice parts in polyphony were composed above a bottom line which, if not always a tenor in function (i.e. holding a cantus firmus), was at any rate written in the tenor range. In the early 15th century TENOR and CONTRATENOR, overlapping in the same range, shared the function of providing a harmonic foundation. After about 1450, however, the role of supporting the harmony was assigned to a single line by the creation of the *contratenor bassus*. Some theorists showed their understanding of the essential function of this line by referring to it not as *bassus* (the medieval Latin word for 'low') but by the Greek word *basis* ('foundation'). The unprecedented sonority created by these low-pitched *contratenor bassus* lines became in itself a source of fascination, as is evident in descriptive terminology of the age that played with the Greek prefix *bari-* ('low'; *see* BARITONE (i)). In the works of such composers as Busnoys, Ockeghem and La Rue there are not only bass lines ranging between *D* and *d* but also two or even three parts in what would now be described as the bass or baritone range. Tinctoris (*De inventione et usu musicae*, 1481–3) singled out Ockeghem as the finest bass he had ever heard. Polyphonic sonorities emphasizing the bass voice, although originating in the chapels of the Burgundian and French courts, soon spread elsewhere.

During the 16th century composers became increasingly sensitive to the bass's function of defining the harmony. Nicola Vicentino (*L'antica musica ridotta alla moderna prattica*; 1555, *f*.55*v*) remarked that 'it is the bass which governs, and gives the grace of beautiful progressions and

Ex.1 Palestrina: *In festo Sanctae Trinitatis*





variety of harmony to all the parts'. In this period there developed a tendency for bass lines to use wide intervals more than other voices did, to be more angular, and to span a wider range in general. Despite the relative angularity of bass lines, bass singers, like those with high voices, became increasingly preoccupied with the art of improvised ornamentation during the 16th century. Giovanni Bassano (*Ricercate, passaggi et cadentie*, 1585) illustrated how the bass part of a Palestrina motet might be sumptuously ornamented (ex.1), but such elaborate ornamentation of bass parts was attacked by Pietro Cerone (*El melopeo y maestro*, 1613), who complained that through such practice the whole fabric of polyphony 'falls to the ground'.

Ex.2 Wert: *Se tal erger*

In spite of such resistance, virtuoso basses attracted much attention in the period 1575–1625 and were in great demand. The Neapolitan bass Giulio Cesare Brancaccio was the highest paid singer in the élite corps of virtuosos assembled in Ferrara by Alfonso d'Este, and the availability of such skilled basses was essential to the development of the luxuriant style of madrigal composition cultivated at Ferrara by Giaches de Wert and others, in whose works the bass line is often as florid as any of the upper voices (ex.2).

2. 1600–1800. The Italian fashion for highly ornate bass music was extended into the monodies of the first

Ex.3 Landi: *Superbe colli*

decades of the 17th century, as can be seen in ex.3 from Stefano Landi's madrigal *Superbe colli* (*Aria a una voce*, 1620). Giulio Caccini, similarly, wrote virtuoso bass arias for Melchior Palontrotti and published one aria, 'Muove si dolce', in his *Le nuove musiche* (1601–2) with the divisions Palontrotti sang. In Italian opera during the 17th century, ornate writing for the bass voice was, in contrast, quite rare. In the surviving operas of Monteverdi the bass already appears in some of its most important historical role types: as a god (particularly the god of the underworld: Pluto in *Orfeo*, Neptune in *Il ritorno d'Ulisse*) or as a sepulchral figure (Charon in *Orfeo*). His most impressive use of the bass was in the tragic role of Seneca in *L'incoronazione di Poppea* (1643).

The comic potential of the bass voice was best realized in the tradition of the *basso buffo*, whose spiritual ancestor was the *commedia dell'arte* character Pantalone. Already in late Renaissance madrigal comedies (e.g. Orazzio Vecchi's *L'Amfiparnaso*, 1597, and Banchieri's *La pazzia senile*, 1598), the blustering, the stammering and the bathetic self-pitying of the classic old fool were given eloquent musical depiction. In the early history of opera similar comic male characters, usually basses, appeared occasionally on the fringe of plots (e.g. Penelope's wooer, Antinous, in Monteverdi's *Il ritorno d'Ulisse*, 1640) and were called upon to perform exaggeratedly wide-spanning phrases that plummet to the depths of the singer's range. In 17th-century Italian opera, the *basso buffo* was frequently aligned with the comic contralto role (*see* CONTRALTO). As a central figure, the comic bass began to appear only in the last quarter of the century (e.g. in Stradella's *Il Trespolo tutore*, 1679).

The diminishing importance of the bass voice in *opera seria* is reflected in the cantata: of Alessandro Scarlatti's solo cantatas, more than 600 are for soprano and five are for bass. However, the earlier tradition of the virtuoso bass continued to find expression in serenatas which include numerous representations of such characters as Belisarius, Nero and Seneca, usually in a mood of defiance or rage. These vehement emotions are expressed in angular, wide-leaping lines that show the influence of instrumental styles in the developing concerto. Handel inherited this tradition through such predecessors as Stradella and Scarlatti and during his Italian years wrote remarkable parts for bass in his Italian oratorios, serenatas and cantatas, such as Lucifer (*La resurrezione*), Polyphemus (*Aci, Galatea e Polifemo*), and in the cantata *Nell'africane selve*. Vivaldi's vocal music for the Venetian *ospedali* is normally written so that the bass parts can be performed an octave higher by the girls when bass singers were unavailable (Talbot, 1994); as a result the bass is rarely highlighted.

Most Handel operas include a role for bass who, though usually a secondary character, is of sufficient importance to be assigned an aria in each of the three acts. These roles are most often kings or generals, whose noble arias declare pride in rank; sometimes a villain (Achillas in *Giulio Cesare*, 1724, or Garibaldo in *Rodelinda*, 1725, for example) may be cast as a bass. A favourite type of aria is that of rage or defiance, often with huge leaps; James Miller wrote of Handel's Royal Academy bass G.M. Boschi, 'And Boschi-like, be always in a rage'. Boschi's parts are high-lying, in what would now be called a baritone range; some of Handel's finest bass parts were for Montagnana, who sang down to *F* in the remarkable role of the magician Zoroastro in *Orlando* (1733). The 'rage aria' was cultivated even in the oratorio; the most famous of all is 'Why do the nations so furiously rage together?' in *Messiah*.

In French opera, with no castratos for male roles, the bass retained more importance than it did in *opera seria*. Cavalli's only opera for Paris, *Ercole amante* (1662), has a bass title role. The importance of the bass in French opera was remarked on in François Raguenet's *Paralèle des italiens et des françois* (1702; Eng. trans., 1709): 'When the Persons of Gods or Kings, a *Jupiter*, *Neptune*, *Priam*, or *Agamemnon*, are brought on the Stage, our Actors, with their deep Voices, give 'em an air of Majesty, quite different from that of the feign'd Bases among the *Italians*, which have neither Depth nor Strength'. Lully's bass roles are often gods (Jupiter in *Cadmus et Hermione*, 1673, and *Isis*, 1677), especially those of the underworld (Pluto in *Alceste*, 1674, and *Proserpine*, 1680; Neptune in *Isis* and *Acis et Galatée*, 1686), but also include roles with comic elements (Charon in *Alceste*, Polyphemus in *Acis*). Only in *Roland* (1685) did he use the bass voice in a title role. Some of the most imposing roles for the bass voice in French Baroque opera are by Rameau, for example Theseus in *Hippolyte et Aricie* (1733) and Pollux in *Castor et Pollux* (1737), both were first sung by C.L.D. de Chassé (1699–1786). This French tradition is further evident in the late operas that Gluck wrote for Paris, which include such roles as Calchas in *Iphigénie en Aulide* (1774), Hercules in *Alceste* (1776) and Thoas in *Iphigénie en Tauride* (1779).

In Germany, the bass was prized for depicting seriousness and wisdom, both in opera and sacred music. In Buxtehude's cantata *Jesu, meine Freude*, for example, the bass sings 'Trotz dem alten Drachen' in which the lowest range of the bass (down to *D*) is explored for the word 'abyss'. J.S. Bach's works are full of remarkable solo parts for bass. In *Jesu, der du meine Seele* (BWV78, 1724), the bass (*G–d'*) represents the dying soul expressing trust in the Lord in an elaborate concerto aria ('Nun, du wirst mein Gewissen stillen'). In the *St Matthew Passion*, the bass arias towards the end are among the most beautiful and affecting in the entire work (especially 'Mache dich, mein Herze, rein'). In his secular music, Bach used the bass for Aeolus, god of the wind, in *Der Streit zwischen Phoebus und Pan* and the old, conservative father in the Coffee Cantata. Extensive passage-work in the music written for bass in Germany demanded a virtuoso technique, but J.F. Agricola (*Anleitung zur Singekunst*, 1757) complained that many German basses, by inserting a 'ga, ga, ga' before each note and gulping for breath every half-bar, created an unpleasing effect.

In England, following the Italian tradition of virtuoso basses, Purcell wrote remarkable arias for John Gostling ('They that go down to the sea in ships') and Richard Leveridge ('Ye twice ten hundred deities'), who had deep and agile bass voices with very wide ranges. Leveridge went on to perform in opera but made his name in such parts as Charon, Merlin and Pluto in the English theatrical pantomime, notably the witch Hecate in *Macbeth*.

In 1781 Mozart expressed a wish to recast *Idomeneo* 'in the French style' and change the title role from tenor to bass: 'I would have altered Idomeneus's role completely and made it a bass part for [Ludwig] Fischer'. Mozart's typical bass roles are more characteristic: Osmin, the comically savage overseer in *Die Entführung* (1782, written for Fischer) and Sarastro, a high priest, in *Die Zauberflöte* (1791, sung by Franz Gerl). Most of his roles nominally for bass in his mature Italian operas are now regarded equally as baritone roles. Figaro and Leporello are often sung by basses and are essentially *basso buffo* roles, the former designed for (and both sung by) the outstanding Viennese exponent Francesco Benucci; another such role is Bartolo in *Figaro*. The tradition to which these and many other roles belong is in fact the hallmark of *opera buffa*; it goes back to the 17th century, appears in numerous intermezzo-type works, such as Pergolesi's *La serva padrona* (1733), is central to the entire repertory of operas to Goldoni's librettos and the principal works of Paisiello and Cimarosa, and continues in the operas of Rossini and Donizetti.

3. 19TH CENTURY. Rossini expected his basses to have voices as flexible as the tenors, or indeed the sopranos and mezzos. Nicola de Grecis, a comic bass who had sung in operas by Guglielmi and others, was the first to inspire Rossini's *basso buffo* roles; he created roles in *La scala di seta* (1812) and *Signor Bruschino* (1813). Rossini wrote eight roles, serious and comic, for Filippo Galli, among them Mustafa in *L'italiana in Algeri* (1813), the title role of *Maometto II* (1820) and Assur in *Semiramide* (1823); Galli's noble, flexible voice later inspired Donizetti to write the part of Henry VIII in *Anna Bolena* (1830). Michele Benedetti, a more dramatic singer, created bass roles in seven of Rossini's serious operas for Naples, including Elmiro in *Otello* (1816) and the title role of *Mosè in Egitto* (1818).

The illustrious Neapolitan bass Luigi Lablache, who made his début as Dandini (Rossini's *La Cenerentola*), created roles in seven Donizetti operas in Naples (1826–32) and later sang the title roles in two Donizetti premières in Paris, *Marino Faliero* (1835) and *Don Pasquale* (1843). Also in Paris, he created Giorgio in Bellini's *I puritani*, and in London his performance of the title role in Balfe's *Falstaff* (1838) drew the remark that he was 'such a protagonist as would have made Shakespeare's heart leap for joy' (H.F. Chorley). At the Paris Opéra, Henri-Etienne Dérivis, a singer in the classical French tradition with an excellent coloratura technique, created roles in three Spontini operas; he also created Mahomet II in Rossini's *Le siège de Corinthe* (1826). His successor at the Opéra, Nicholas Levasseur, who had a voice of enormous range, sang Don Alvaro in Rossini's *Il viaggio a Reims* at the Théâtre-Italien (1825) and created many roles at the Opéra, including Walter Furst in *Guillaume Tell* (1829) and Zacharie in Meyerbeer's *Le prophète* (1849).

With the rise of the 'Verdi baritone', the bass voice played a smaller role in Italian opera of the second half of the century. Among the singers of Verdi's early bass roles, Lablache created Massimiliano (*I masnadieri*, 1847). Both Jean Procida (*Les vêpres siciliennes*, 1855) and Philip II (*Don Carlos*, 1867) were created by the French bass Louis-Henri Obin. With the role of Jacopo Fiesco (*Simon Boccanegra*, 1857), Verdi largely turned to a style of writing that allowed for a marked distinction between his baritone and bass roles. Based on the talents of the Italian bass Giuseppe Etcheverria, this style, found in practically all his main bass roles after 1860, generally avoided lyrical phrases (Philip II is an exception here), emphasized declamation and made full use of the lowest register (Budden, 1994–5). Verdi's bass roles, adhering to tradition, are chiefly old men, including priests, counts, squires and the like, villains and servants; he also contributed to the tradition of ghosts as basses, with Banquo (*Macbeth*, 1847), like Nino's ghost in Rossini's *Semiramide* and the Commendatore in *Don Giovanni*.

Among Wagnerian basses, Carl Risse created Daland (*Der fliegende Holländer*, 1843) and Wilhelm Dettmer sang the Landgrave (*Tannhäuser*, 1845). Ludwig Zottmayr, the first King Mark in *Tristan und Isolde* (1865), was probably a bass-baritone: his roles in Munich included Count di Luna and Hans Heiling. Kaspar Bausewein – Pogner in *Die Meistersinger* (1868), Fafner in *Das Rheingold* (1869) and Hunding in *Die Walküre* (1870) – was a true bass who also sang Leporello, Caspar and Rossini's Don Basilio. Hagen (*Götterdämmerung*) was created at Bayreuth (1876) by Gustav Siehr, who later alternated as Gurnemanz in *Parsifal* with Emil Scaria, the bass who created the role (1882); Scaria, Escamillo at Vienna in the first performance of *Carmen* outside France, sang Wotan in the first complete Vienna, Berlin and London *Ring* cycles.

Some of the finest basses in German opera were French. Léon Gresse, who created Phanuel in *Hérodiade* (1881) at the Théâtre de la Monnaie, Brussels, was the first Hunding in *Die Walküre* at the Paris Opéra. Pol Plançon, an effective actor as well as a most stylish singer, created Massenet's Count of Gormas in *Le Cid* at the Opéra (1885) and Garrido in *La Navarraise* at Covent Garden (1894). One of the greatest 19th-century basses, he made numerous recordings. Don Diègue in *Le Cid* was created by the Polish-born Edouard de Reszke, an equally fine interpreter of Italian, French and German opera. His prowess as a Wagner singer was legendary: at Covent Garden and the Metropolitan he excelled as King Henry, King Mark, Pogner, the Wanderer and Hunding.

From its beginnings in works by Verstovsky and Glinka, 19th-century Russian opera included important bass roles. The title role in Glinka's *A Life for the Tsar* (1836) was entrusted to Osip Petrov, who went on to create bass roles in many operas by Glinka, Rimsky-Korsakov and Tchaikovsky. Fyodor Stravinsky, father of the composer, who created many bass roles in Tchaikovsky's operas, was equally gifted in comic and dramatic roles. Ivan Mel'nikov created several bass roles in operas by Borodin, Rimsky-Korsakov, Musorgsky (including the title role in *Boris Godunov*, 1874) and others. Later, Fyodor Chaliapin virtually took over the role of Boris and transformed the role of the bass voice in opera by making it the equal in dramatic power (and market value) of the higher voices. His interpretations are as legendary for their vital

characterization as for the beauty of his tone and the clarity of his declamation. His roles included Ivan the Terrible (Rimsky-Korsakov's *The Maid of Pskov*), Dosifey (Musorgsky's *Khovanshchina*), and both Prince Galitsky and Khan Konchak in *Prince Igor*, as well as Boito's Mefistopheles, Philip II and Don Basilio.

Outside opera, basses found significant parts in sacred music and oratorio. From Beethoven's Ninth Symphony (1824) to many requiems, including the collaborative mass for Rossini (1869) and works by Brahms (1868), Verdi (1874) and Dvořák (1890), most concerted choral music included important bass or bass-baritone solos, often sung by opera singers. Ormondo Maini, the bass in the première of Verdi's Requiem, was esteemed not only for his Mephistopheles (both Boito and Gounod, in *Faust*) and Ramfis (*Aida*) but also for his Leporello and Don Basilio.

In operetta, the bass rarely played as important a role as the leading tenor or baritone. August Zschiesche, however, engaged for 50 years at the Berlin Hofoper, created Falstaff in Nicolai's *Die lustigen Weiber von Windsor* (1849); a genuine bass, he also sang Rocco (*Fidelio*), Osmin and Bertram (*Robert le diable*, 1831). Karl Formes, Plunkett in the première of Flotow's *Martha* (1847), also sang for many years at Covent Garden, notably as Tsar Peter. In Gilbert and Sullivan opera, the leading bass was Richard Temple, who had made his début as Rodolfo (*La sonnambula*); he was particularly praised for his Mikado.

The bass best known for his performance of song at the turn of the century was Chaliapin, who not only performed works by Glinka, Dargomïzhsky, Rimsky-Korsakov and Rubinstein but was highly esteemed as a singer of Schubert and Schumann lieder. He was renowned for his performances of Musorgsky's *Song of the Flea* and Russian folksongs. Songs written specifically for low voice include Rubinstein's op.72 (1864, for alto or bass and piano) and Wolf's Michelangelo settings (1898, for bass).

4. 20TH CENTURY. The bass roles in Puccini's operas are mainly character parts. Adam Didur, the Polish-born bass who sang for 25 seasons at the Metropolitan, created Ashby (*La fanciulla del West*, 1910) and sang several central roles in Russian operas. French opera, however, continued to contain important roles for bass. Félix Vieuille was the original Arkel in *Pelléas et Mélisande* (1902) and also created roles in Charpentier's *Louise* (1900) and Dukas' *Ariane et Barbe-bleue* (1907). In Strauss's operas, the role of Baron Ochs (*Der Rosenkavalier*, 1911), with its sustained low *E* at the end of Act 2, has always been cherished by basses although its first exponent was a baritone, Karl Perron. A famous early exponent of the role was Richard Mayr, who sang the role at the Viennese première; he also sang Figaro, Leporello and Sarastro at Salzburg and Hagen and Gurnemanz at Bayreuth. In Strauss he was unrivalled: he created Barak in *Die Frau ohne Schatten* (1919) and sang Count Waldner in the Viennese première of *Arabella*.

Strong basses have flourished in Wagner roles. Alexander Kipnis sang Gurnemanz, King Mark and Pogner at Bayreuth, as well as Sarastro at Salzburg and Glyndebourne. After World War II, Ludwig Weber, the finest Gurnemanz of his generation, was also admired as Rocco, Ochs and Barak. Gottlob Frick, a superb Hagen, was another notable Gurnemanz. Kurt Böhme, who sang Pogner, Fafner and Titurel at Bayreuth, was best known as Ochs. Martti Talvela brought a large, resonant voice to such roles as Fasolt, King Mark and Daland, and was an impressive Sarastro. At the end of the century Wagner's bass roles were sung by the British bass John Tomlinson (an admired Wotan at Bayreuth), the Americans James Morris (notable as Wotan and the Dutchman), and Paul Plishka (also renowned for his interpretations of Mozart and Verdi and of Boris Godunov) and the German Hans Sotin, voluminous of voice not only in Wagner but also Beethoven (Ninth Symphony) and Mozart (Sarastro).

Outside Wagner roles, Boris Godunov and Philip II (*Don Carlos*) provide particular challenges, realized in different ways by several distinguished basses: the Bulgarian Boris Christoff, a voluminous, intensely dramatic artist; Nicolai Ghiaurov, also Bulgarian, with a voice of great depth; Cesare Siepi, a noted Don Giovanni, a more introspective Philip; and Ruggero Raimondi, also an admired Don Giovanni, whose Philip belongs among a gallery of powerful Verdi characterizations.

Britten's operas contain many rewarding bass roles. Owen Brannigan, who created Swallow in *Peter Grimes* (1945), Collatinus in *The Rape of Lucretia* (1946), Noye in *Noye's Fludde* (1958) and Bottom in *A Midsummer Night's Dream* (1960), was a comic actor of great charm. Frederick Dalberg, creator of the evil Claggart in *Billy Budd* (1951) and Raleigh in *Gloriana* (1953), was darker in voice and a more forbidding personality. Michael Langdon, who took lesser roles but created the He-Ancient in Tippett's *The Midsummer Marriage* (1955), was also a stylish Ochs and a sound Wagnerian. Forbes Robinson, who created the title role of Tippett's *King Priam* (1962) and was a powerfully evil Claggart, sang Moses in the British stage première of Schoenberg's *Moses und Aron*.

The Rossini revival has called for basses with agile voices and a good coloratura technique; Justino Díaz, who created Antony in Barber's *Antony and Cleopatra* (which inaugurated the new Metropolitan opera in 1966), sang Mahomet in *Le siège de Corinthe*. Samuel Ramey has also sung Mahomet, as well as Moses, Mustafà, the Podestà (*La gazza ladra*) and Douglas (*La donna del lago*); his flexible but powerful voice can encompass a repertory that runs from Handel roles such as Garibaldo in *Rodelinda* and the Rossini roles written for Galli or Benedetti to Gounod's and Boito's Mephistopheles, Attila and the four villains in *Les contes d'Hoffmann*.

The early music revival has required voices that are not only flexible but light in tone. The English bass David Thomas has sung with distinction a 17th-and 18th-century repertory ranging from Monteverdi to Mozart; he has specialized in Handel (notably Polyphemus) and recorded arias written for Montagnana. The American Simon Estes has also made early music repertory a speciality, singing for example Jupiter in Cavalli's *Calisto* at Glyndebourne, but has also sung the title roles in Verdi's *Oberto* and Wagner's *Der fliegende Holländer* as well as presenting much contemporary music (such as the American première of Shostakovich's Symphony no.14).

Relatively few basses have excelled in the song repertory. Kipnis's unusually wide repertory included Mozart and Wagner operas, as well as Russian songs and lieder; he was a particularly fine interpreter of Brahms and Schubert. Christoff was a fine interpretator of Musorgsky's songs. The Belgian bass-baritone José Van Dam is a notable lieder singer with an operatic and concert

repertory covering a broad range both chronologically and vocally, from Mozart to Wagner and Stravinsky, with an emphasis on French music.

Classical basses who have crossed over into the popular repertory include Ezio Pinza, whose enormous repertory was chiefly in Italian (including such Wagner roles as Pogner, King Mark and Gurnemanz); he created roles in Pizzetti's *Debora e Jaele* (1922) and Boito's *Nerone* (1924). At the Metropolitan this velvet-toned bass dominated the stage dramatically and vocally for 22 seasons; late in his career he made a stunning success in musical theatre, creating Emile de Becque in Rodgers and Hammerstein's *South Pacific* (1949). No discussion of the bass voice would be complete without mention of Paul Robeson, the great black actor and singer who gave up the legal profession for the stage, where he was particularly esteemed for his performance of Shakespeare's *Othello*. In musical theatre he created the role of Crown in *Porgy and Bess* and Joe in *Show Boat*, whose song 'Ol' man river' became Robeson's signature piece.

Bass (iii) (Fr. *contrebasse*; Ger. *Bass* [E♭], *Kontrabass* [B♭]). In military and brass bands, the valved instrument in E♭ or low B♭ corresponding to the orchestral tuba.

The term is also used with other instruments, e.g. bass flute.

Bass (iv). A contraction of DOUBLE BASS or ELECTRIC BASS GUITAR.

Bassadanza. *See* BASSE DANSE.

Bassanelli. A family of late 16th century double-reed, conically bored wind instruments, softer in tone than shawms or curtals. No example survives, although *bassanelli* were described and illustrated by Praetorius (2/1619). They had seven finger-holes, the lowest controlled by a key, the lower part of which was covered by an elaborate *fontanelle*. A reed was fitted to a bassoon-like crook. Uniquely among Renaissance wind instruments *bassanelli* possessed a remarkable amount of decorative turnery. It has been suggested (Foster, 1992) that the *bassanelli* illustrated by Praetorius were of five-part jointed construction, the joints being strengthened and disguised with bulbous collars or bracelets; by extending or contracting these joints, a tuning variation of a semitone may have been obtainable. Praetorius listed three sizes capable of playing a range of about an octave and a 4th above C (bass), G (tenor/alto) and *d* (cantus).

Although Praetorius attributed the invention of the instrument to Giovanni Bassano, it seems most likely that the inventor was his father, Santo Bassano, who was awarded a patent for a new instrument on 13 June 1582 (Ongaro, p.412). Others have argued that the inventor was Jeronimo Bassano (i), perhaps in 1503 (Ruffatti). Instruments identifiable as *bassanelli* appear in three published inventories: Graz, between 1577 and 1590 (Schlosser, p.20); Verona, 1593 (Castellani, p.16); and Cassel, 1613 (Baines, p.30).

CHARLES FOSTER

Bassani. *See* BASSANO family.

Bassani, Giovanni Battista (*b* Padua, *c*1650; *d* Bergamo, 1 Oct 1716). Italian composer, violinist and organist. He is traditionally said to have studied in Venice with Daniele Castrovillari and in Ferrara with Giovanni Legrenzi, *maestro di cappella* of the Accademia dello Spirito Santo there from 1657 to 1670. The suggestion made by Hawkins, Burney and others that Bassani was Corelli's violin teacher is without foundation although he is likely to have been in touch with Bolognese musicians between early 1675 and 1677. From 1667 he was associated with the Accademia della Morte, Ferrara, where he acted as organist and composed his first oratorios. The libretto of *L'Esaltazione di S Croce*, performed at the accademy on 7 April 1675, refers to him as 'già organista della medesima Chiesa', suggesting that he had already left the position of organist by then. On 3 June 1677 he became a member of the Accademia Filarmonica at Bologna and in the same year he published his op.1, in which he is called 'maestro di musica e organista' of the Confraternità della Morte in Finale Emilia, near Modena. In 1680 he was *maestro di cappella* at the court of Duke Alessandro II della Mirandola, a position he probably accepted shortly after the performance of his oratorio *L'Amore ingeniero* in S Maria Maddalena there in 1678. On 9 April 1682 he was elected *principe* of the Accademia Filarmonica, Bologna. Also in 1682 he started participating in the annual celebration of the Accademia Filarmonica in S Giovanni in Monte, contributing several compositions up to 1694. At the end of 1683, probably his most productive year as a composer, he was elected *maestro di cappella* of the Accademia della Morte, Ferrara, succeeding G.F. Tosi. In 1686 he was appointed *maestro di cappella* of Ferrara Cathedral; because of his contribution to the musical life of that city he became known as 'Bassani of Ferrara'. Between 1710 and 1712 he composed 76 services in several cycles for use at Ferrara Cathedral. On 9 May 1712 he was called to Bergamo to direct the music at S Maria Maggiore. He also taught at the music school of the Congregazione di Carità, Bergamo, and continued in both posts until his death.

Bassani's music was prominent in the middle Baroque period in Italy, when the concertato style predominated.

His sacred works in this style are typical of those of the Bolognese school of composers in the last quarter of the 17th century, such as G.P. Colonna, G.B. Vitali and G.A. Perti. Perhaps above all he should be recognized for his solo cantatas, both sacred and secular. Yet although he was a prolific composer of other types of vocal music too, his fame has rested chiefly on his trio sonatas for strings. During his lifetime he was celebrated as a violinist. Some even considered his playing superior to Corelli's, a reputation probably enhanced by Burney, who also claimed that no one before him had written quite so idiomatically for the violin.

A sharp contrast between chamber and church sonatas, previously made by Legrenzi, is maintained by Bassani in his two known sets of trio sonatas. His op.1 contains 12 chamber sonatas, in each of which the four dance movements announced on the title-page follow the order given there. However, the number and character of the movements in the 12 church sonatas of op.5 are variable, and they often have polyphonic textures. According to Newman, Bassani's sonatas differ somewhat from Corelli's in that he preferred long unfolding lines to short balanced phrases, and the overall form, especially of the church sonatas, is less well integrated.

Of 13 known oratorios by Bassani to Italian texts the music of only four has survived, and his 13 operas seem to be entirely lost except for 10 arias from *Gli amori alla moda*. The secular solo cantatas are normally accompanied only by continuo and present a variety of structures, with a preference for da capo and *AAB* forms. Most of the solo motets are 'concerted' with the addition of two violins except in the recitatives, and each begins with a sinfonia. In his masses and psalm settings Bassani was an important exponent of the *stile concertato*; he worked in the style of Cazzati and Vitali (e.g. the latter's *Salmi concertati* op.6, 1677).

Bassani often designed sections and movements on a larger time scale than did his immediate predecessors but was less able than Corelli to build convincing forms. His harmonic range, well within the conventions of his time, is narrow, and he seems to have been unable in his use of clichés to avoid a certain monotony, which is accentuated by a lack of strong harmonic drive towards cadences. His choruses, in four or five parts, combine homophony and simple, weighty polyphonic writing that frequently includes telling use of suspensions; as in his sonatas, the orchestral accompaniments to these movements display his natural feeling for the violin. The figurations are based on, but emancipated from, the vocal lines, as in similar works by G.P. Colonna, and the voices are thus given a sonorous halo without the competition of countermelodies. The writing for solo voices in these works is characteristic of the 'instrumental' approach of the period: the precise mechanical patterns, usually in semiquavers, demand vocal agility and brilliance but lack the elegant contours found in, for example, Neapolitan opera.

WORKS

OPERAS

dm – *drama per musica*

L'amorosa preda di Paride (dm, 3), Bologna, Publico, 1683

Falarido tiranno d'Agrigento (dm, 3, A. Morselli), Venice, S Angelo, 1685

L'Alarico Rè de' Goti (dm, 3), Ferrara, Conte Pinamonte Bonacossi, Feb 1685

Vitige [Rè de'Vandali] (dm, 3), Ferrara, Feb 1686

Agrippina in Baia (scherzo drammatico, G. Contri), Ferrara, 1687

Gli amori alla moda (scherzo melodrammatico, 3), Ferrara, Bonacossi, 1688, 10 arias in *I-MOe*

Il trionfo di Venere in Ida (melodramma), Ferrara, 1688

La Ginerva, infanta di Scozia (dm, 3, G.C. Grazzini, after L. Ariosto), Ferrara, Bonacossi, 1690

Le vicende di Cocceio Nerva (dm, 3), Ferrara, Bonacossi, 1691

Gl'amori tra gl'odii, o sia Il Ramiro in Norvegia (dm, 3, M.A. Rimena), Verona, 1693

Roderico, Ferrara, 1696

L'Alarico (F. Silvani), Padua, 1709

Armida al campo, Ferrara, 1711

ORATORIOS

L'Esaltazione di S Croce (F. Berni), Ferrara, 7 April 1675

L'Epulone, Modena, 1675

La tromba della divina misericordia (G.B. Rosselli), 4 solo vv, chorus 4vv, insts, Modena, 1676; *MOe* Mus.G.14

L'amore ingeniero, Mirandola, 1678

Il mistico Roveto (L. Lotti), Mirandola, 1681

Il Davide punito overo La pestilente strage d'Israele (G.V. Snodelli), Bologna, 10 Dec 1682

La morte delusa dal pietoso suffragio (A. Ambrosini), 5 solo vv, chorus 4vv, insts, Ferrara, 1686; *MOe*; perf. as Nella luna eclissata dal Cristiano valore, Codigoro, 1687, and as La Pietà trionfante della morte, Ferrara 1692 and 1697

Il Giona (Ambrosini), 5vv, vns, va ad lib, Modena, 1689; *MOe*

Mosè risorto dalle acque, Ferrara, 1694; *FEc* Cl.I.n.675 (1696 version)

Il conte di Bacheville (F. Frosini), Pistoia, 1696

Susanna, Ferrara, 1697

Gl'impegni del divino amore nel transito della Beata Caterina Vegri detta di Bologna, Ferrara, 1703

Il trionfo della Fede, Ferrara, 1704

La morte delusa, ?orat, Milan, 1703; collab. G.B. Brevi, G.A. Perti, G. Bononcini, A. Scarlatti

MASSES

op.	
18	[3] Messe concertate, 5 solo vv, chorus 5vv, 2 vn, vle/ theorbo, org (Bologna, 1698)
20	Messa per li defonti concertata, 4 solo vv, chorus 4vv, 2 va, vle/ theorbo, org (Bologna, 1698)
—	Acroama missale, 4 solo vv, chorus 4vv, 2 vn, va, 3 trbn, org, bc (Augsburg, 1709); 6 masses, 3 of these in op.32 without trbn pts.
32	[4] Messe concertate, 4 solo vv, chorus 4vv, 2 vn, va, org, bc (Bologna, 1710)
—	4 other masses and fragments, *GB-Lcm*; *D-Bsb*, *Dmb*, listed in *EitnerQ*

OTHER SACRED WORKS

—	Il trionfo dell'amor divino (Rosselli), sacra rappresentazione, Bologna, 1682 [same lib as the orat La tromba della divina misericordia]
8	Metri sacri resi armonici, in [12] motetti, 1v, 2 vn, bc (Bologna, 1690)
9	Armonici entusiasmi di Davide overo salmi concertati, 4 solo vv, chorus 4vv, 2 vn, va, bc (org) (Venice, 1690)
10	[6] Salmi di compieta, 4 solo vv, chorus 4vv, 2 vn, va/vle, bc (org) (Venice, 1691)
11	Concerti sacri, [12] motetti, 1–4vv, 2 vn, vle/theorbo, bc (org) (Bologna, 1692)
12	[12] Motetti, 1v, 2 vn ad lib, bc (org) (Venice, 1692)
13	Armonie festive o siano [6] motetti, 1v, 2 vn, vle/theorbo, bc (org) (Bologna, 1693)
—	Motetti per concerti ecclesiastici, 5–12vv (Venice, 1698); listed by Eitner
21	Salmi concertati, 3–5 solo vv, chorus 3–5vv, 2 vn, bc (org) (Bologna, 1699)
22	Lagrime armoniche ò sià Il Vespro de defonti, 4 solo vv, chorus 4vv, 2 vn, va/vle, bc (org) (Venice, 1699)
23	Le note lugubri, Concertate ne Responsorij dell'Ufficio de Morti, 4 solo vv, chorus 4vv, 2 va, va/vle, bc (org) (Venice, 1700)
24	Davidde armonico, espresso ne' [6] salmi, 2–4vv, 2 vn, bc (org) (Venice, 1700)
25	[8] Completorij concenti, 4 solo vv, chorus 4vv, 2 vn, vle/ theorbo, bc (org) (Bologna, 1701)
26	[4] Antifone sacre … e 2 Tantum ergo, 1v, 2 vn, vle/ theorbo, bc (org) (Bologna, 1701)

27 [8] Motetti sacri, 1v, 2 vn, vle/theorbo, bc (org) (Bologna, 1701)
30 Salmi per tutti l'anno, 8vv, vle/theorbo, 2 org (Bologna, 1704)
— Cantata pastorale (F. della Volpe), 2 vv, insts, Imola ?(Ferrara, 1707)
— 76 services, most 4 solo vv, chorus 4vv, bc (vle), some with 4 vn, va, 1710–12, *I-FEd* (8 vols., 3 lost); listed in Cavicchi
— Several sacred works in *Bc*, *MOe*, *PAc*, *US-Wc*

SECULAR VOCAL

2 L'armonia delle sirene, [10] cantate amorose, 1v, bc (Bologna, 1680)
3 Il cigno canoro, [10] cantate amorose, 1v, bc (Bologna, 1682)
— Promoteo liberato (introduzione alla Festa popolare, G.A. Bergamori), Bologna, 24 Aug 1683
4 La moralità armonica, [12] cantate, 2–3vv, vle, bc (Bologna, 1683)
6 Affetti canori, [6] cantate et [6] ariette, 1v, bc (Bologna, 1684)
— Tributi dell'Eridano, cant, 4vv, insts, Ferrara, 1687
7 Eco armonica delle muse, [12] cantate amorose, 1v, bc (Bologna, 1688)
— Tributi de Parnaso (macchina musicale, G.C. Grazzini), Ferrara, 1688
— L'Immortalità trionfante, et il Tevere inconsolabile (intramezzo musicale, A.F. Antonini), Ferrara, 1689
14 Amorosi sentimenti, 1v, bc (Venice, 1693)
15 Armoniche fantasie di [6] cantate amorose, 1v, bc (Venice, 1694)
16 La musa armonica, 1v, bc (Bologna, 1695)
17 La sirena amorosa, 1v, 2 vn, vle, bc (org) (Venice, 1699)
19 Languidezze amorose, [12] cantate, 1v, bc (Bologna, 1698)
28 Cantate amorose, 1v, bc (Bologna, 1701)
29 Corona di fiori musicali, tessuta d' [24] ariette, 1v, 2 vn, vc (Bologna, 1702)
31 [12] Cantate et arie amorose, 1v, 2 vn, bc (Bologna, 1703)

INSTRUMENTAL

1 [12] Balletti, correnti, gighe e sarabande, vn, vn ad lib, vle/spinet (Bologna, 1677)
5 [12] Sinfonie, 2 vn, vc, bc (org) (Bologna, 1683), autograph score in *US-Wc*
— Sonata, 2 vn, bc (org) 1680[7]
— Several sonatas and organ works in later anthologies listed in Haselbach and *DBI* (A. Cavicchi)

PETER SMITH/MARC VANSCHEEUWIJCK

Bassani, Orazio [Orazio della Viola] (*b* Cento, *c*1550; *d* 8 Nov 1615). Italian instrumentalist and composer. Bassani was a renowned virtuoso of the *viola bastarda*. He entered the service of the Farnese court at Parma as a viola player on 1 November 1574. His service was interrupted by a brief period with Cardinal Farnese in Rome in 1583. During the 1580s and '90s the courts of Mantua and Ferrara tried vigorously but unsuccessfully to lure Bassani to their own music establishments. On the death of Ottario Farnese in October 1586, Bassani was called to serve Alessandro Farnese in Brussels, with an annual pension of 300 gold scudi. On the death of Alessandro Farnese in 1592, he returned to Parma and the service of Duke Ranuccio Farnese, who commissioned Agostino Caracci to paint his portrait (now in the Museo nazionale di Capodimonte in Naples). After returning to Rome again in 1599, Bassani returned a final time to Parma, where he remained until his death. A brother, Cesare, and a nephew, Francesco Maria, were also musicians in Parma. Bassani, a charter member of the Accademia degli Intrepidi at Ferrara (founded in 1601), was particularly admired for his ornamented versions of famous madrigals for solo *viola bastarda*. His place in the history of late 16th-century diminution, and particularly his relationship to Merulo, Luzzaschi and Monteverdi (who came to Mantua as a viol player), may be significant.

WORKS

Several pieces, va bastarda, 1626[14]; authorship questionable, attrib. in Sartori
Madrigal, 5vv, 1591[10], 1605[9]
Arr. madrigals, toccatas, *GB-Lbl, I-Bc*

ANTHONY NEWCOMB

Bassano [Bassani, Piva]. Italian family of musicians, instrument makers and composers, active in England. The family (see illustration) originated in Bassano del Grappa, about 65 km north-west of Venice, where they were known as Piva. Jeronimo [Gieronymo, Hieronymus] (i) (*d* ?Venice, ?1546–50), the founder of the musical dynasty, is first recorded in a contract of his father's dated 24 March 1481; in February 1502 he and his eldest son Jacomo [Jacopo] (*b* ? Bassano, before 1488; *d* Venice, 1559–66) were engaged to tune the organs in the churches of Bassano. They seem to have made the move from Bassano to Venice shortly afterwards. Jeronimo was apparently the 'Ser Jheronimo trombon' who worked in the *trombe e piffari* of the Doge of Venice around 1506–12. Numerous documents call him 'maestro', probably indicating the leader of an ensemble or an instrument maker. Lorenzo Marucini (1577) described him as 'inventor of a new bass wind instrument' and 'most excellent *pifaro*'. Strong circumstantial evidence suggests that Jeronimo was a Jew. Although he and his descendants passed for Christians, they retained some Jewish consciousness into the early 17th century and may well have been practising Judaism in secret. The family coat of arms, on which are displayed three silkworm moths and a mulberry tree, implies that the family had at some time been engaged in silk farming, a trade which the Jews introduced into Italy.

Jeronimo had six sons. At least five were wind players; most or all were also instrument makers. Alvise (*d* London, 15–31 Aug 1554) worked for the Scuola di San Marco, Venice, in 1515, and the Concerto Palatino in Bologna between 1519 and 1521. He and his brothers

The Bassano family tree

Jasper [Gasparo] (bur. London, 8 May 1577), John [Zuane] (*d* Venice, Sept–Dec 1570) and Anthony [Antonio] (i) (bur. London, 19 Oct 1574) served in the sackbut consort at the English court in 1531 but soon went back to Venice. Anthony returned to England in 1538 and was appointed 'maker of divers instruments' to the court. His brother Jacomo came with him but was not appointed to the court and apparently went back to Venice between 1542 and 1545. His descendants formed the Venetian branch of the family; (4) Giovanni Bassano was his grandson. Alvise, Jasper and John emigrated to England in 1539–40 with Baptista (bur. London, 11 April 1576); they and Anthony were appointed 'brothers in the art or science of music' to the court, and Anthony gave up his position as instrument maker. In 1531 the brothers had used the surname 'de Jeronimo'; on their return to England they adopted Bassani or Bassano, and later generations used Bassano exclusively.

The five brothers in England formed a consort of 'recorders', which may have played other instruments including an early version of the mixed consort of Elizabethan times. Seven of their descendants also served in the recorder consort: Alvise's sons (1) Augustine and (2) Lodovico, Anthony's sons Arthur (*b* London, 31 Oct 1547; bur. London, 10 Sept 1624), Edward (i) (*b* London, 19 Oct 1551; bur. London, 25 May 1615) and (3) Jeronimo (ii), Arthur's son Anthony (ii) (*b* London, 15 Oct 1579; bur. London, 22 Apr 1658) and Jeronimo (ii)'s son Henry (bap. London, 8 April 1597; bur. London, 29 Aug 1665). Henry also served in the sackbut consort, as did three other Bassanos: Anthony (i)'s sons Mark Anthony (*b* London, 10 Jan 1546/7; *d* London, 11 Sep 1599) and Andrea (*b* London, 12 Aug 1554; bur. Horne, Surrey, 3 Aug 1626) and Jeronimo (ii)'s son Edward (ii) (bap. London, 28 Dec 1588; *d* London, 22 Oct 1638). Andrea's probable son Thomas (?bap. London, 27 Feb 1589; bur. London, 29 Sept 1617) apparently served in the flute consort, and Anthony (ii) deputized in it. Jeronimo (ii)'s son Scipio (bap. London, 11 Dec 1586; *d* London, 26 Nov 1613) probably served in the viol consort.

Besides Anthony (i), Alvise also made instruments, and John had a 'fraterna Compagnia' (brotherly company) with his instrument-making brother Jacomo in Venice and perhaps Anthony and Jasper. An inventory made about 1571 by Johann Jakob Fugger, superintendent of the music at the Bavarian court, of a chest of 'beautiful and good' instruments 'made by the Bassani brothers' in London lists 45 wind instruments: six unidentified (perhaps bombards, quiet shawms or bassanelli), seven *Pfeiffen* (perhaps flutes), ten cornetts and a fife considered as a set, twelve crumhorns and nine recorders, all tuned to organ pitch; an accompanying letter mentions a chest of six large viols and a chest of three lutes. The Bassanos presumably also made some of the instruments in the

inventories of Henry VIII's collection (1542 and 1547). Edward Seymour, the Lord Protector, bought shawms from Anthony in 1539. Another Fugger, Raimund, an Augsburg banker, listed a case of 27 recorders 'made in England', presumably by the Bassanos, in 1566.

The making, and particularly the repairing, of instruments was continued by the next generation. It was probably Arthur, who bequeathed instruments and tools to Anthony (ii) in his will, who sold 'rare wind instruments' (apparently cornetts) to Brussels. Andrea jointly held (with Robert Henlake, then Edward Norgate) the office of keeper and repairer of keyboard and wind instruments at the court from 1603 until his death in 1626. Only Anthony (ii) of the succeeding generation seems to have made instruments. It was probably he who made the famous large recorders depicted in Marin Mersenne's *Harmonie universelle* (1636) which 'have been sent from England to one of our kings'; Mersenne also apparently knew the Bassanos' crumhorns.

Jacomo's daughter Orsetta married a wind-instrument maker named Santo Griti; Ongaro (1985, 1992) plausibly speculates that he changed his name to Santo Bassano (*d* Venice, 3 Dec 1586). Santo and Jacomo entered into a business partnership with three musicians of the Doge in 1559, in which the latter became in effect their salesmen in return for a large loan; the agreement mentions cornetts, crumhorns, curtals, flutes, recorders and shawms. Santo took out a patent in 1582 to make and sell a new wind instrument, almost certainly the BASSANELLI (although it may well have been invented by Jeronimo (i).

The maker's mark of the Bassanos has been the subject of much speculation. Lasocki (1983, 1985, 1995) surmised that it was what has hitherto been called the 'rabbit's foot' mark found on more than 120 surviving woodwind instruments (cornetts, crumhorns, curtals, flutes, recorders and shawms), and that this mark in fact represents silkworm moths, as found on the family coat of arms. Kirk, building on this theory, suggests that the single mark was used by Jeronimo (i), the double mark by his Venetian descendants (Jacomo and Santo), and the triple mark by the English branch, especially Arthur and Anthony (ii). The HIER.S mark, found on 31 instruments may also belong to the family.

Through instrument-making and business connections the English branch kept up with Venice and made several documented visits there, presumably acting as one of the conduits through which Italian music came to England. Bassano daughters married other court musicians: Ambrosio Grasso, Joseph Lupo, Alphonso Lanier and Nicholas Lanier (i). There is no evidence that the family was related to the Venetian painter Jacopo Bassano (also known as Jacopo or Giacomo da Ponte).

(1) **Augustine** [Agustino] **Bassano** (bur. London, 24 Oct 1604). Wind player and composer. He was appointed to the recorder consort on 18 April 1551 with effect from 25 March 1550. He became a denizen of England on 17 March 1545, presumably having been born in Venice before 1530. In his will he made a bequest of four lutes, but the evidence that he played the instrument at court, as some authors have suggested, is equivocal. A pavan and galliard, probably written as consort music as early as 1550, survive in arrangements for keyboard (*GB-Rro*, Trumbull Add.6), bandora (*Cu* Dd.2.11) and lute (*Lbl* Add.29485). Some other pieces are in the style of the third quarter of the 16th century: two six-part pavans by 'A.B.', probably Augustine (*US-NH* Filmer A16/a–c, *GB-Cfm* 734); and two pavans and two galliards for five-part consort as well as a 'galliard' (more likely a corant) headed 'Aug Bassano set by P.P.', presumably arranged by Peter Philips from a lute piece (*Lbl* Eg.3665). Three allmandes for six-part consort by 'A.B.' (*Cfm* 734) are probably late works of Augustine's.

(2) **Lodovico** [Lodouick] **Bassano** [Bassany] (bur. London, 18 July 1593). Wind player and composer, brother of (1) Augustine Bassano. He was appointed to the recorder consort on 22 July 1569 with effect from the previous 29 September, although he had been serving unofficially since his father's death in August 1554. He married 'Elizabeth Damon' (probably a daughter of William Daman) on 13 November 1592. Lodovico may be the composer of three surviving lute pieces. A 'Pavan Helena. Lo[dovico?]' is found in *Cu* Dd.2.11. 'A pavan . . . mr Lodwick' is in *Lbl* Add.31392 and also anonymously in *Lbl* Add.38539 and in *Cu* Dd.2.11 with the instruction '4 leaves turn back for the galliard'. In the plague year 1593 he died of 'a thought', apparently serious depression.

(3) **Jeronimo** [Jerome] **Bassano (ii)** (*b* London, 11 March 1559; bur. Waltham Abbey, Essex, 22 Aug 1635). Wind and viol player and composer, cousin of (1) Augustine Bassano and (2) Lodovico Bassano. He was appointed to the recorder consort on 29 January 1579 with effect from the previous 25 March. He served actively until at least 1630, when he was described as 'the ancientist musition the King hath'. In 1609–13 he also received three payments (one as 'Musycon for the vyoll de Gambo') for viol strings provided for court service; therefore he was probably serving unofficially in the newly developed viol consort. He acquired considerable property – enough to merit the title 'Esquire' – in Hoxton and Waltham Abbey, Essex. Two six-part galliards (*US-NH* Filmer A16/a-c), four skilful five-part fantasias (*GB-Och* 716–720, *Lcm* 1145), and a six-part fantasia and two wordless madrigals (*Cfm* 734) probably all date from the third quarter of the 16th century. Three six-part almandes by 'J.B.' (*Cfm* 734) are probably Jeronimo's works from around 1600.

(4) **Giovanni** [Zanetto, Zuane] **Bassano** [Bassani] (*b* ?Venice, 1560/61; *d* Venice, 16 Aug 1617). Wind player and composer, second cousin of (3) Jeronimo Bassano (ii). In May 1576 he was appointed one of the six 'pifferi del doge', a group of instrumentalists placed directly under the authority of the Venetian doge; he was then 'a very young man' of 15 or 16, which explains his appearance under the diminutive 'Zanetto' in the earliest documents. Indeed, he may well have been the Zanetto who was appointed a boy chorister at S Marco in early 1572; this would help explain his appointment in 1583 as singing teacher to the seminary of S Marco, a post normally reserved for singers. He published his manual of ornamentation two years later. In 1586 he was nominated by the Augustinian friars of S Stefano to provide instrumentalists when required for the convent church. He succeeded GIROLAMO DALLA CASA as head of the instrumental ensemble at the basilica in 1601; he remained in this post until his death. He was mentioned in 1612 as leader of one of the many companies of instrumentalists who were periodically engaged to play during major festivities in the various parish and monastic

churches of Venice. His age at the time of his death (in the parish of S Maurizio) is stated in the necrology as 56.

Bassano is today largely known for his instruction book (1585) and for his examples of embellished motets, madrigals and chansons by Willaert, Clemens non Papa, Crecquillon, Lasso, Rore, Striggio, Palestrina and Marenzio (1591), several examples of which are published in Erig. His method was to decorate continuously a contrapuntal line, which thus stands out from its fellows to form an unequal relationship, obviously akin to that of solo and accompaniment. The actual ornaments are, however, much more rigid than those of the monodists of the following decades, since the music must still obey the criteria of polyphony, and the rhythms of the various figures are thus quite regular. Although Bassano's collections contain no compositions by his Venetian contemporaries, the similarities between his embellishments and the highly florid works later published by Giovanni Gabrieli suggest that the latter was applying a practice well known in virtuoso circles since the 1580s and probably earlier. Gabrieli's *Canzona in echo* (*Sacrae symphoniae*, i, 1597), probably written for Bassano to play, shows the application of his virtuoso ornamental lines to concertante music in a most forward-looking manner.

Bassano was also a composer of some talent. Some of his charming canzonettas were known (probably through his London cousins) to Morley, who printed them in his *Canzonets or Little Short Songs to Foure Voyces* (London, 1597). The first volume of his motets was dedicated to the governing body of S Marco, and the music doubtless partly reflects his activities there, but it is also likely that some of the motets were conceived for performance on the major feast days in the other churches of Venice. The works are for *cori spezzati*, less intense than those of Giovanni Gabrieli but brighter in sonority in the manner of Giovanni Croce and Andrea Gabrieli. *Dic, Maria, nobis* (1599) is especially attractive with strong rhythms and lively use of the upper voices, much as in the early works of Schütz (who probably knew his music).

WORKS

all published in Venice

SACRED

Motetti per concerti ecclesiastici, 5–8, 12vv (1598; b (org) pubd separately, 1599)

Concerti ecclesiastici, libro secondo, 5–8, 12vv (1599)

SECULAR

Fantasie per cantar et sonar con ogni sorte d'istrumenti (1585)

Canzonette, 4vv (1587)

Il fiore dei capricci musicali per sonar con ogni sorte di stromenti, 4vv (1588)

Madrigali et canzonette concertate per potersi cantare con il basso & soprano nel liuto & istrumento da pena, con passaggi a ciascuna parte ... libro primo (1602)

INSTRUCTION MANUAL AND ARRANGEMENTS

Ricercate, passaggi et cadentie per potersi esercitar nel diminuir terminatamente con ogni sorte d'istrumento (1585)

Motetti, madrigali et canzone francese di diversi eccellenti autori, 4–6vv (1591)

Bassany, Lodovico. *See* BASSANO family, (2).

Bass-bar (Fr. *barre*; Ger. *Bassbalken*; It. *catena*). In bowed string instruments, a strip of wood glued to the underside of the belly beneath the bass foot of the bridge. It is of vital importance to the acoustical function of the instrument, and is complemented by the soundpost which is placed close to the treble bridge-foot.

In modern practice, the bass-bar runs for three-quarters of the length of the belly, and is made from spruce carefully matched to that of the belly. It is fitted slightly within the outer edge of the bridge foot, and set at a slight angle to the centre line of the instrument, determined by the proportions of the upper and lower bouts. It is deepest at the centre, generally about 12 mm in a violin, and tapers towards the ends, being on average 265 mm long and 6 mm wide. The glued surface is fitted to the curves of the belly, although some luthiers shape it to a slightly tighter radius than the belly itself, known as 'springing', providing a certain amount of stress within the structure when glued in place. An undersized or badly positioned bar cannot provide sufficient stiffness to the front of the instrument and results in a dull, unfocussed sound (particularly in the bass register) and, in extreme cases, deformation and eventual collapse of the arching. Conversely, an oversized bar can stifle the sound, making the instrument unresponsive.

The bass-bar developed as a way of making bowed instruments more responsive by allowing the belly to be made thinner yet still be strong enough where it is needed to withstand the downward pressure of the strings. A painting by Raphael (*Allegory of St Cecilia*, *c*1514–16; *see* VIOL, fig.7) shows an early viol with an enormously

thick belly, which would presumably have had a rather limited sound. Early instruments were made with the bass-bar carved integrally with the belly rather than glued in separately, often in a central position. This practice continued in some areas outside the classical Italian tradition well into the 18th century, although with the bar closer to the modern position near the bass foot of the bridge. At what point the bass-bar migrated away from the centre is not clear. A bass viol from the late 16th century with a central bar is in the Ashmolean Museum, Oxford, ascribed to Gasparo da Salò of Brescia, but the earliest violin bass-bar recorded is from 1621, made by the brothers Antonio and Girolamo Amati in Cremona, and was separately fitted in the offset position.

Early bass-bars were fairly small. The 1621 example is some 5 mm lower than modern practice and 1·5 mm narrower, although it is slightly longer than a modern bar. Bass-bars from early 18th-century violins are shorter than the 1621 model, but with the same height and width and are generally flat along the length. By the late 18th century the bar acquired more mass and a 'hump-backed' shape, and this tendency continued into the 20th century, following the increased demands for projection and depth of sound in modern concert performance.

JOHN DILWORTH

Bass-baritone (Ger. *Bassbariton*, *Hoher Bass*). A male voice combining the compass and attributes of the bass and the baritone (*see* BASS (ii) and BARITONE (i)). The term follows the German *Bassbariton*, and the voice itself is particularly associated with the German 19th-century upward development of the bass range. Wagner called the bass-baritone 'Hoher Bass' and first used the term to designate the roles of Wotan, Alberich, Donner and Fasolt in *Das Rheingold* and *Die Walküre*. These, as well as Hans Sachs (*Die Meistersinger*) and the Dutchman, require a powerful upper register for phrases in the baritone range *e* to *f*♯′, but also numerous phrases in the range *A* to *a* requiring the resonance of a bass. The special attribute of this voice type, however, lies less in its range than in the full and powerful sound required at the extremes of the tessitura. Basses with even wider ranges are well known from much earlier periods (for example, JOHN GOSTLING and ANTONIO MONTAGNANA), but these used falsetto in the highest registers. Although associated primarily with Wagnerian and later roles, earlier operatic precedents with similar demands include Mozart's *Figaro* and *Don Giovanni*, Pizarro in *Fidelio* and Caspar in *Der Freischütz*. Another bass-baritone part is that of Elijah in Mendelssohn's oratorio.

OWEN JANDER/ELLEN T. HARRIS

Bassbrechung (Ger.). In Schenkerian analysis, the ARPEGGIATION (ii) of the bass; the lower part of the URSATZ.

Bass clarinet (Fr. *clarinette basse*; Ger. *Bassklarinette*; It. *clarone*). A member of the clarinet family (*see* CLARINET), generally pitched in B♭, an octave below the soprano clarinet (it is classified as an AEROPHONE). Its range is usually extended to *E*♭ (usually written *e*♭; sounding *D*♭) on French and English instruments, *D* (written *d*; sounding C) on German instruments, and there is a growing tendency to use instruments extended to *C* (written *c*; sounding *B*♭′) in the manner of the basset-horn. The upward extension of the range is even less well standardized; the composers who established the instrument's position in the modern orchestra were more interested in exploiting its full and fruity chalumeau register than in its upper reaches.

Many late 19th-century orchestral parts use only about two and a half octaves of the range; many bass clarinets are constructed on the premise that this limited range is expected. However, as a solo instrument the bass clarinet has as great a range as the soprano; many of the compositions dedicated to the Czech virtuoso Josef Horák cover four octaves or more.

Technically, the instrument has similar characteristics to the soprano clarinet. In the lower register, the attack is not so effective, for which reason its use in combination with the harp, favoured by the Second Viennese School (as at the opening of Berg's Violin Concerto), is very successful. Particularly striking is the ease with which a wide dynamic range is achieved; in Tchaikovsky's Sixth Symphony (the end of the exposition of the first movement, bar 160) a passage for the bassoon, marked *pppppp* (following a downward clarinet arpeggio), is in practice often given over to the bass clarinet, which achieves this dynamic with ease.

1. History. 2. Notation. 3. Mechanism.

1. HISTORY. Apart from the instruments discussed under CHALUMEAU, the earliest extant bass clarinet is probably that by Anton and Michael Mayrhofer of Passau (Musikinstrumentenmuseum in Münchner Stadtmuseum, Munich, 52.50; see Young (1980), pl.244). This remarkable instrument is curved in the manner of the better known basset-horns by the same makers, but with an additional 360° section at the lower end. Like contemporary basset-horns, it possesses a key for *c* (sounding *B*♭′), but not for *d* (sounding C). It seems possible that the 360° section at the bottom, which carries the lowest tone hole, was replaceable by a shorter section to give *d* (sounding *C*) instead.

Better known is the bass clarinet by Heinrich Grenser, dated 1793 (see illustration), and the similar example dated 1795 by his uncle August Grenser (i) (Darmstadt, Kg 67:133). These finely made instruments are pitched in B♭, with nine keys, and descend to written B♭ (sounding A♭′). The keywork is diatonic from *e* down and there are two thumb-holes, in the manner of the bassoon of that period. It seems not unlikely that the instrument was intended to replace the bassoon in military bands. Several other 19th-century bass clarinets may have been devised for the same purpose: some, like the Grenser example, were built in a doubled-up form like the bassoon, and several had a compass to *c* or *B*♭. Among the early models were the straight bass clarinet of Desfontanelles of Lisieux (Musée de la Musique, Paris, no.1136); the *basse guerrière* of Dumas, Paris, 1807; the *basse-orgue* of Sautermeister, Lyons, 1812; the bassoon-shaped 'patent clarion' by George Catlin of Hartford, Connecticut, *c*1810; the bass clarinet of J.H.G. Streitwolf, Göttingen, 1828, and the bassoon-shaped *Glicibarifono* of Catterini, Padua. The modern instrument owes a great deal both to Adolphe Sax and to Buffet *jeune* (*see* CLARINET, §II, 4(iii)). Musically, the history of the bass clarinet may be said to

Bass clarinets: (a) by Heinrich Grenser, Dresden, 1793 (Statens Musiksamlingar Musikonmuseet, Stockholm); (b) American, probably made in Hartford, Connecticut, c1815; (c) in B♭, by A. Nechwalsky, Vienna, mid-19th century (both Smithsonian Institution, Washington, DC); (d) in A, by Wilhelm Heckel, Biebrich, modern (private collection)

start with the important part assigned to it in Meyerbeer's opera *Les Huguenots* (1836); the Act 5 solo employs a range from *e* to *g‴*. In the same year Neukomm composed a setting of verses from Psalm lxx for 'a counter-tenor-Lady's voice, with the bass clarionet concertant'. The part for bass clarinet in C, which descends to written *c*, was played in its first performance by Thomas Lindsay Willman, very likely on an instrument by George Wood; although no specimen of Wood's bass clarinet is known, his published fingering chart for the instrument shows it to have been a bassoon-shaped model with a claimed chromatic range of four octaves and a whole tone.

From the later 19th century the bass clarinet figured frequently in orchestral scores; Mahler, Wagner, Schoenberg and Stravinsky used it regularly. In smaller combinations it was used particularly extensively by Webern, in preference to the bassoon. Occasionally two were specified (Stravinsky, *The Rite of Spring*).

2. Notation. Many of the early bass clarinets were pitched in C, as they were intended as replacements for bassoons rather than as additional members of the wind section. With the instrument's increased acceptance in the orchestra, bass clarinets in B♭ and A became more popular, although instruments in C were made into the 20th century. Many 19th-century composers assumed that the bass clarinet player would alternate between instruments in B♭ and A according to the key of the music. The long bass clarinet solo in Bartók's Suite for Orchestra op.4 was originally scored for an instrument pitched in A. With the widespread lowering of pitch standards to *a′* = 440, very few players or opera houses saw the need to retain the instrument in A, which may now be said to be extinct along with its companion in C.

There are several current conventions regarding notation for the bass clarinet. The so-called 'French system' is generally preferred by players: in this the part is written entirely in the treble clef, to sound a 9th lower than written. As players are accustomed to handling a number of different-sized clarinets with similar key layout (Mahler, in his Fifth Symphony, expects one player to play six

different instruments), this system is the most convenient, as no adjustment of fingering relative to notation is needed.

The so-called 'German system' (used by Wagner and Janáček, for example) uses both clefs, but mainly the bass clef, the notes sounding (for the B♭ instrument) a whole tone lower than written. In the treble clef this runs counter to the player's instincts; in an attempt to avoid confusion, some composers change to a 9th transposition when using the treble clef. This may be compared with Mozart's practice (e.g. KA91/516*c* and KA581) of writing for the lower notes of the basset clarinet in the bass clef, to sound a 7th above the written notes, and with his notation for the horn and basset-horn. Schoenberg notated a few bass clarinet parts in C, perhaps feeling that to specify an instrument in B♭ (or A) carried undesirable implications of tonality. More recently this practice has been revived, possibly because of the chromaticism of present-day music, or simply to avoid the trouble and expense of copying parts in the proper manner.

3. MECHANISM. The size of the bass clarinet has always necessitated some difference in keywork from that of its smaller companions. Thus the instrument by Desfontanelles of Lisieux was built with 13 keys in 1807, before the soprano instrument was built with this number. Today the Boehm-system bass clarinet differs in a few respects from the soprano. In part, this is due to the necessity for large tone holes, so that all are covered by plates rather than directly by the fingers, and for a hole spacing wider than can be directly reached by the fingers. In part, it is that the instrument is large enough to accommodate improvements that are applied with less ease to the smaller instrument (and moreover the weight of additional keywork is of little significance since a spike or a sling is always used). Thus several bass clarinets incorporate superior venting in the lower joint. Possibly the most ingenious attempt to apply to a clarinet Boehm's principles of perfect venting for every note is the bass clarinet by Buffet-Crampon (Galpin Exhibition, Edinburgh, 1968, no.201; Bate Collection, Oxford) which incorporates keywork similar to the Dorus key of the flute, on both the *c*♯′/*g*♯″ key and the *a*♭/*e*♭″ key.

The third and most noticeable distinction in bass clarinet keywork concerns the speaker key. The compromise represented by this key, which is required both to define the speaking length of the tube for *b*♭′ and to remain open for all higher notes in the instrument's range, becomes more and more unsatisfactory in lower-pitched instruments. It was Sax who first lessened the compromise by providing two speaker keys. One opens a larger hole lower down the instrument, giving a good *b*♭′ and being satisfactory for several notes above; the second is smaller and closer to the mouthpiece, and serves for all higher notes. Today most bass and alto clarinets, some basset-horns and very few soprano clarinets incorporate this feature. Because of the inconvenience of moving the thumb rapidly from one key to the other while continuing to cover a hole at the same time, various mechanisms have been devised whereby only one touchpiece is used. When the touchpiece is depressed, one hole or another is opened, as determined by some other key. For example, one popular model is so designed that if either the *a*′ key is opened, or the plate controlled by the right-hand third finger is depressed, the lower hole is opened, controlling the notes from *b*♭′ to *e*♭″. The slightly more complex mechanism required by automatic speaker keys is regarded with mistrust by a few players, so that some bass clarinets are still made with two separate touchpieces.

Basse (Fr.). *See* BASS (ii). *See also* EUPHONIUM.

Basse chantante (Fr.: 'singing bass'). In the Baroque era a term used to distinguish a vocal bass from an instrumental bass or basso continuo (Brossard, 1703; Walther, 1732; Rousseau, 1768). In the 19th century it came to mean a bass singer with a particularly high or light voice as distinct from a deeper, heavier bass (*see* BASSO PROFONDO and BASSE NOBLE). Operatic roles demanding this voice type include Max in Adam's *Le chalet* (1834), Lothario in Thomas's *Mignon* (1866) and Escamillo in Bizet's *Carmen* (1875). The Italian equivalent of this later usage is BASSO CANTANTE; *see also* BARITONE (i) and BASS (ii).

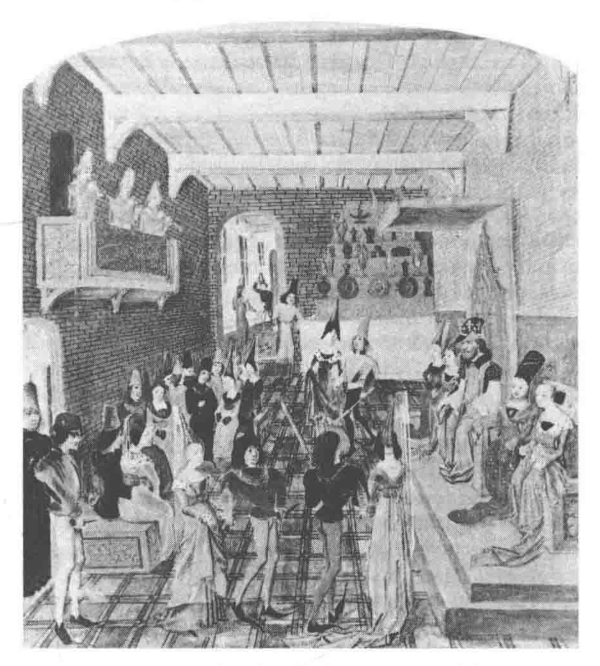
OWEN JANDER/ELLEN T. HARRIS

Basse chiffrée (Fr.). *See* FIGURED BASS.

Basse-contre (Fr.). A term derived from the Latin 'contratenor bassus' (*see* CONTRATENOR ALTUS), found in 16th-century French sources for the lowest-pitched member of the viol family. In this sense it is synonymous with 'contrebasse' and equivalent to the English DOUBLE BASS. The term has been used also for a bass voice of exceptionally low tessitura.

Basse danse (Fr.; It. *bassadanza*). The principal court dance during the late Middle Ages and Renaissance. It reached a height of cultivation during the 15th century and disappeared after the middle of the 16th century. The musical practice that grew up around it served as a proving ground for many early instrumental techniques such as improvisations over a ground, variations and the forming of suite-like combinations.

1. Choreography. 2. Mensuration. 3. Musical realization.



1. CHOREOGRAPHY. While no pre-15th-century documents describing steps and music have been found, the name of the dance was cited as early as 1340 by the troubadour Raimond de Cornet, who wrote of 'cansos e bassas dansas'. In a poem of about 1415 Alain Chartier described

> Ses fais comme la dance basse,
> Puis va avant, et puis rapasse,
> Puis retourne, puis oultrepasse.

The character of the dance is implicit in its name, which betokened a dance low to the ground, generally lacking the more rapid movements and leaps characteristic of the 'alta dansa' or 'saltarello'. Combination of these two types to form a varied pair can be documented throughout Europe during the late Middle Ages. The classic phase of the form corresponds to the heyday of the Burgundian court under Philip the Good and Charles the Bold. The main source preserving the Burgundian repertory is the Brussels Basse Danse manuscript (*B-Br* 9085), an anonymous treatise with steps and music copied in the late 15th

century as a retrospect of several decades. Closely related to it is another version of the same treatise, containing many of the same dances, printed at Paris by Michel de Toulouse in or before 1496 and surviving now by the thread of a single copy in the Royal College of Physicians, London. As presented in these and other French, English and Spanish sources, the dance was performed by couples and employed only five different step-units: *R* (*révérence*); *b* (*branle*); *s* (*simple*, usually found in pairs); *d* (*double*) and *r* (*reprise* or *des marche*). These five steps were combined into codified patterns called *mesures*. Several *mesures* made up a complete dance, some dances being of six *mesures* (a total of 62 step-units, as in *Le doulz espoir*). A typical choreographical structure involved alternation of one *mesure* with another of different length. The Italian variety, called 'bassadanza', was recorded by Italian dancing-masters such as DOMENICO DA PIACENZA, GUGLIELMO EBREO DA PESARO and ANTONIO CORNAZANO. Their choreographies allowed more freedom in the variety and sequence of steps, and in the number of participants. In these respects the bassadanza approached a still freer form, the ballo, in which various steps and metres were combined (*see* BALLO, (2)). All sources, northern and southern, laid great stress on lightness and grace of motion, a quality achieved particularly by raising and lowering the body. The resulting effect was wavelike, described by Cornazano as 'ondegiarre'. During the 16th century the variety of step sequences disappeared from published and manuscript versions of the dance. The choreography gradually ossified into a single pattern with no more than 20 step sequences, called the *basse danse commune*, to which could be added a final 12 step sequences, called 'moitié' by Antonius de Arena, 'retour' by Thoinot Arbeau, and 'recoupe' in a musical source, Attaingnant's *Dixhuit basses dances* of 1530. The French afterdance most commonly appended to the basse danse during the 16th century was called 'tourdion', and was characterized by quicker motions such as little leaps.

2. MENSURATION. Only three 15th-century Italian bassadanza 'tunes' have been found in the extant treatises, although bassadanza sections exist in many balli. The lack of mensural sigla in the three Italian treatises and in the more than 50 15th-century Burgundian basse danse 'tunes' with dance steps generated considerable controversy among musicologists in the first half of the 20th century. Many dance historians have chosen to perform basse danses and bassadanzas in a triple (6/2) metre, using the 'tune' as a tenor, around which other musical parts are improvised (see Bukofzer, 1950); this can, however, cause an interesting hemiola effect when the number of dance movements in a step sequence does not correspond with the 6/2 metrical pulses. For example, if the accompaniment consists of six beats, divided usually into 3 + 3, the dancers would have to move in two against the music's three, a rhythmic skill that may help explain the quaint speech in Domenico's treatise: 'I am the bassadanza, queen of measures, and I deserve to wear the crown; few succeed in my employ and those who dance or play me well must perforce be gifted of heaven'. The advent of the *basse danse commune* brought an end to more than one challenging feature. The sextuple division of the long was changed to a quadruple one, i.e. from six semibreves to four dotted ones. The 15th-century afterdance, called 'pas de Brabant' in the north, stood in the relationship of

Basse danse: miniature from Jean de Waurin's 'Recueil des croniques et anchiennes istoires de la Grant Bretgaigne', c1471 (A-Wn 2534, f.17)

diminution by one half to the main dance, i.e. from 6/1 to 3/1 = 6/2. Cornazano explained the proportions in reverse, saying that the saltarello had three beats, while in the bassadanza 'every note is doubled, and the three are worth six and the six, twelve'. Italian theory taught two other diminutions: *quaternaria* in 4/1, called also 'saltarello tedesco' and said by Cornazano to be 'used more by Germans'; and piva, an expression meaning bagpipe, in 12/4 = 6/4 + 6/4. The latter was little used at court, to believe its speech in Domenico's treatise: 'I am called piva, and am the saddest of the measures because the peasants employ me'. Cornazano described it as 'low and vulgar, unsuitable for magnificent persons and dancers of good standing'. Yet it must have had its proponents even so. J.A. Dalza's variation suites for lute printed at Venice by Petrucci in 1508 consisted of *pavana*–saltarello–piva. They testify to the practical consequences of the old measure-theory even as the original dance, the 'queen of the measures', was passing out of existence in Italy.

Marrocco (1981), however, claimed that the *nota senza valore* was purposeful, encouraging the dancers and/or musicians to choose a duple or triple metre at will. To be sure, basse danse music published in the 16th century is predominantly in duple metre, and the 16th-century Italian dancing-masters' choreographies that include 'bassa' in their title begin with duple-metre sections and subsequently include a *sciolta* or *gagliarda* triple-metre afterdance section.

3. MUSICAL REALIZATION. The cardinal principle of the 15th-century form was that one note of the basse danse tenor corresponded to one complete step-unit. Since every step-unit was of equal duration, lasting three or four seconds in reconstructions by dance historians, there resulted a string of long isometric tones, a cantus firmus constructed to the length of the choreography, which served in performance as the basis for improvised

elaborations. Cornazano included three cantus firmi which he labelled 'Tenori da basse danze et saltarelli': *Re di Spagna* (46 notes in length), *Cançon de' pifari dicto el ferrarese* (46) and *Collinetto* (73). They are notated in semibreves. More than 50 different tenors are preserved in the Brussels manuscript and Toulouse's print ranging in length from 24 to 62 notes. Toulouse contains the sole concordance with Cornazano, its *Casulle la novelle* (46) corresponding to the famous *Spagna* tenor. The northern manner of notation was in breves, the blackening of which hinted at the augmentation to longs that players had to make for the basse danse proper. French chansons were a favourite source from which to fashion dance tenors in both Italy and north Europe. The oldest known example of this is *Je suis pauvre de liesse* (Brussels no.46, 42 notes in length), which was inscribed as a tenor by Noël de Fleurus in some notarial records at Namur dating from 1421–3. The tenors of polyphonic chansons yielded the material for several dance tenors. Much of the vast modern literature on the subject is taken up with such correspondences. Although the source of many dance tenors was in vocal music, their use as dance music was exclusively instrumental. This was made abundantly clear by the Italian masters. Guglielmo counselled the dancers to listen attentively when the instruments begin in order to ascertain which of the two keys, 'B molle' (minor) or 'B quadro' (major), they employ; and the Italians taught that all performances should begin with preparatory upbeats to lead the dancers into the first step. The most popular dances towards the end of the 15th century were *Filles à marier* (32 notes in length) and *Le petit Rouen* (40). This pair inaugurated the Toulouse incunabulum and probably the Brussels manuscript as well, before it was wrongly reassembled in the 19th century. They found their way to England, where their choreographies were written out in the Salisbury Basse Danse manuscript (in Salisbury Cathedral Library) of about 1500 and printed in the Robert Coplande treatise *There followeth the manner of dancing base dances* (London, 1521). *Filles à marier* also reached Spain, while *Le petit Rouen* lived on far into the 16th century as a German Hoftanz. Unlike most tenors in the repertory, these two were built symmetrically in phrases of eight notes. Their periodic nature may provide a clue to their wide dissemination – they were easy to remember. The symmetrical grounds of the 16th-century passamezzo family may be viewed as one offshoot. Signs that the old cantus firmus practice was giving way about 1500 are evident even in the Brussels manuscript. *La franchoise nouvelle* (24), for instance, takes the form of a melody using a variety of rhythmic values, constructed in short phrases of two longs, each with varied repeat; still reminiscent of the past is the notation in a low register and the division of the long into six semibreves. Tuneful melodies in many small sections with abundant repetitions became the normal accompaniment to the 16th-century form. French chansons remained the favourite model for imitation, especially those of Claudin de Sermisy. The final stage is illustrated in Arbeau's treatise of 1588: a *basse danse commune* arranged from Claudin's *Jouyssance vous donneray*.

Bassengius [Bassengo; Passenger], **Aegidius** (*b* Liège; *fl* 1588–94). Flemish composer. In 1588 he was a chorister at Salzburg Cathedral; a year later he was unsuccessful in securing a permanent position in the imperial court chapel in Prague, but was engaged there on a temporary basis and received fees amounting to 65 gulden. His *Motectorum quinque, sex, octo vocum, liber primus* was published in Vienna in 1591. At that time he was Kapellmeister to Archduke Maximilian, as he was until 1594. If Bassengius was identical with 'Eg. Bassange', then he was the town organist of Wiener Neustadt in 1595. (*SennMT*, 187)

JOHN CLAPHAM

Basse noble (Fr.: 'noble bass'). A term first used in the late 19th century as a French equivalent to the Italian BASSO PROFONDO. The higher and more flexible BASSE CHANTANTE is clearly distinguished (in *EMDC*, II/ii, 1926, p.920) from 'the bass without a qualifying adjective [that] is the lowest bass voice, also called *basse taille*, *basse noble*, *basse profonde*'. Although the *basse noble* has been distinguished from the *basso profondo* in terms of its greater flexibility and lighter tone, qualities it shares with the *basse chantante*, comparison of the *basse noble* with the *basse chantante* in range should be avoided.

ELLEN T. HARRIS

Bassere, Jo. (*fl c*1450). ?French composer. He is known through a three-voice mass (in *I-TRmp* 89). Reference to this composition (*EitnerQ*) as a *Missa super Christus surrexit* seems incorrect and apparently arose from a confusion of the work with a mass using *Christus surrexit* which occurs later in the same source. The mass is unified by a head-motif, a pattern of mensurations and the use of F as the cadence pitch of all major sections.

TOM R. WARD

Basse-taille (Fr.: 'low tenor'). In the Baroque, a term for the lowest male tenor voice of three: *haute-taille*, *taille* and *basse-taille*, which correspond to the three *parties intermédiares* of the string orchestra, all played by instruments of the viola type: *haute-contre de violon*, *taille de violon* and *quinte de violon*. Brossard (*Dictionaire de musique*, 1703) uses it to define the Italian word *baritono*, for which he provides the additional synonym *concordans*. However, he distinguishes their ranges, giving the range of the *basse-taille* as *B* to *f'*, whereas the range of the *concordans* extends to *G*. Rousseau (*Dictionnaire de musique*, 1768) places the *basse-taille* between the tenor and the bass, but allows that true *basses* are sometimes 'distinguished properly by that name alone, to which custom has given the name *basse-taille*'. This meaning persisted well into the 19th century. Manuel García (*Traité complet de l'art du chant*, 1840–47/*R*), however, gives *basse-taille* as the lowest male voice and writes that this 'sonorous and powerful' voice extends from *E* to *d'* with a lower extension to *D*♭ and an upper extension to *e'*.

ELLEN T. HARRIS

Basset clarinet. A soprano clarinet (*see* CLARINET, §II, 1) whose range is extended downwards to written *c*, in the manner of the basset-horn (it is classified as an AEROPHONE). The instrument was probably devised by Anton Stadler in collaboration with the Viennese instrument maker T. Lotz. Several of Mozart's compositions were intended for a basset clarinet rather than for an instrument of conventional range: the Concerto K622 and the Quintet K581 required a basset clarinet in A, while the clarinet obbligato in *La clemenza di Tito* required a basset clarinet in B♭. Manuscript cadenzas to a concerto by Leopold Kozeluch [*A-Wn* 5853) are written for a basset clarinet, but little is known of the history of the instrument other than in Stadler's hands. A basset clarinet dating from about 1840 (16 keys) by J.G.K. Bischoff is in the collection at Darmstadt (Kg61:116) and a later 19th-century example (with contemporary 'simple-system' keywork) can be found in the Bate Collection, Oxford (for a list of surviving instruments, see Lawson). The basset clarinet was revived (with modern keywork) in Prague in 1951 by Jiří Kratochvíl in order to perform Mozart's concerto as the composer intended; since that date a number have been made, notably in England by E. Planus. Richard Rodney Bennett (*Crosstalk*, *c*1966) and Anthony Gilbert (*Spell Respell*, 1968) have composed for the instrument.

The term 'basset clarinet' has been preferred for the late 20th-century revival of the historical instrument because the term 'bass clarinet', used originally by Stadler for his extended soprano instrument, is now used to describe the instrument pitched an octave lower.

NICHOLAS SHACKLETON

Bassetgen (Ger.). *See* BASSETT (i).

Basset-horn (Fr. *cor de basset*; Ger. *Bassetthorn*; It. *corno di bassetto*). Woodwind instrument; a member of the clarinet family (*see* CLARINET, §II, 1, fig.2*f*), normally now pitched in F (it is classified as an AEROPHONE). A distinctive feature is the extension of its compass downwards to written *c* (sounding *F*), a major 3rd below the lowest note of the conventional clarinet. In most early examples, this is achieved without inconvenience by the curious 'book' or 'box' in which the extra length of tube makes three excursions before emerging into a rather flamboyant metal bell. A straight form of basset-horn was invented around the beginning of the 19th century, and a crook for it first appears in the last decade of the 18th (*see* CLARINETTE D'AMOUR).

The origin of the basset-horn, like that of the clarinet itself, is not as clear as is widely believed; it is generally thought to be established by a few instruments (see illustration) which bear on the 'book' the inscription 'ANT et MICH MAYRHOFER INVEN. & ELABOR. PASSAVII', and which are thought to have been made in Passau in the 1760s by the Mayrhofers (similar instruments were made by others). The simplest sickle-shaped basset-horn (which may predate the Mayrhofer instruments) has a mere five keys: thumb-keys for *e* and *c* (no *d* was possible), a fish-tail key for *f*/*c''* (playable with either hand uppermost) and the two obligatory keys on the

Basset-horns: (a) by Mayrhofer, Passau, c1770 (Oberhaus Museum, Passau); (b) by August Grenser, Dresden, 1795 (Gemeentemuseum, The Hague)

upper joint. Thus the state of development is equivalent to that of the three-key clarinet.

The basset-horn in G, a late 18th-century instrument, is the equivalent in the clarinet family of the C bass chalumeau, the lowest of the three instruments for which the trios for three chalumeaux by Christoph Graupner were written; that is to say, there was probably a direct link from the bass chalumeau to the basset-horn. The question as to whether a lower-pitched clarinet was made and then extended in range by the invention of the 'book', or whether a chalumeau of downwards extended range had already been devised, is certainly not answered by the well-known claim of Mayrhofer, particularly as so many makers have made exaggerated claims as to their innovatory achievements. In short, the history of the lower-pitched clarinets and chalumeaux in relation to the basset-horn is an open question.

Scarcely less secure is the position of higher- and lower-pitched instruments of extended compass. The term BASSET CLARINET is reserved for soprano clarinets of extended range, but the fact that Mozart first drafted the first movement of his concerto K622 for an instrument in G, and then rewrote it for one in A, is a reminder that the line between basset-horn and clarinet is indistinct. The obbligato to *Parto, parto* in *La clemenza di Tito* is for a B♭ instrument of extended range; at the other end of the scale, the distinction between the basset-horn in D specified by Druschetzky and the bass clarinet in C extended to (written) *c* by means of thumb-keys is again an arbitrary one.

Mozart was especially enamoured of the basset-horn, using it particularly in masonic pieces; when writing for three instruments, he often used the treble clef for the upper two (the instruments sounding a 5th lower than written) and the bass clef for the lowest (sounding a 4th higher than written). The Serenade in B♭ K361/370*a*, the Requiem K626 and four of the notturnos for two sopranos and baritone accompanied by a trio of basset-horns use the basset-horn in F; the notturno K437 (incomplete) specifies a basset-horn in G together with two clarinets in A. It seems that only the instrument in F was made in the 19th century. A number of basset-horns survive, although the fact that many are in good condition suggests that they were never extensively used, as one may also judge from the comparative scarcity of music written for the instrument. Beethoven specified the basset-horn once only (*Prometheus*); Mendelssohn composed (for Heinrich and Carl Baermann) two concert pieces for clarinet, basset-horn and piano. Otherwise, the basset-horn's use was as an alternative recital instrument and in the abundant wind bands of the period.

The manufacture of the instrument diminished greatly during the mid-19th century, although it cannot be said to have become extinct. Henry Lazarus (1815–95) played one, and it was in a sense revived by V.-C. Mahillon at the end of the century. Richard Strauss used it to great

effect in several of his operas (e.g. at the opening of *Daphne*) and in his wind Sonatinas AV139 and 143.

It is generally recognized that the particular timbre of the classical basset-horn was due to the fact that its bore was scarcely larger than that of the contemporary clarinet, whereas the alto clarinet in F, which was developed in the early part of the 19th century, had a substantially wider bore. This has left modern makers in something of a quandary as to the ideal towards which they should aim, namely whether a basset-horn can be made to balance the forces of the modern orchestra without losing the special character that distinguishes it.

Some modern examples are made with a clarinet bore, others with a slightly wider bore, and yet others with an alto clarinet bore. The keywork is that of today's clarinet, with the added complexity of an extra four semitones to be coped with. Either control may be exercised entirely by the right thumb, as in all early examples, or the burden may be shared with the already overworked fourth finger of either hand. Most German instruments take the former course, most French the latter. In order to free the thumb, the weight of the instrument is always taken on a sling or a spike. French instruments have an upturned bell like that of the alto and bass clarinets, but many German makers favour a straight wooden bell like that of the soprano clarinet.

NICHOLAS SHACKLETON

Basset: Nicolo. Term used by Praetorius for a type of wind-cap instrument. *See* CRUMHORN.

Basse-trompette [trombe]. As distinct from *trompette basse* (bass trumpet), a type of upright SERPENT patented by LOUIS ALEXANDRE FRICHOT of Paris in 1810. It was evidently an improvement on the so-called 'English' BASS-HORN which Frichot had invented during the 1790s. The *basse-trompette* was provided with six finger-holes in two groups of three, and four or five keys. Unlike that of the bass-horn, which was sharply mitred and had a large looped crook, the body tube of the *basse-trompette* was bent upon itself three times, forming one large and one smaller loop with a short mouthpipe to carry the mouthpiece. According to the patent specification (see illustration) the lower curve of the smaller loop was formed by interchangeable bows of different length for pitch adjustment (*pièces de rechange*); this idea may have influenced Coëffet's design for his ophimonocleide, which incorporated a double slide (*pompe*) for altering the pitch.

There is a *basse-trompette* in the Musée de la Musique, Paris (no.651). It was described in detail and much praised by Choron (1815), who mentioned that it could be played with a mouthpiece of either serpent or trumpet proportions, yielding different and characteristic tone qualities. However, it is unlikely that a trumpet mouthpiece would be effective on a bass instrument with a large conical bore. Sachs suggested that the *basse-trompette* was the same instrument as Frichot's *basse-cor* of 1806. This view was held by Langwill, who also noted an alternative, later

Basse-trompette: arrangement after Frichot's patent specification, 1810

name (*trombe*) and mentioned the announcement of Frichot's invention by the Académie of Beaux-Arts, Paris, in 1812. Pierre (1893) gave the *basse-trompette* as dating from 1806 to 1810, thereby corroborating Sach's opinion. Pierre also referred to the tromba of 1812, but did not associate it with the earlier instrument.

PHILIP BATE/STEPHEN J. WESTON

Bassett [basset] (i) (Ger. *Bassett*, *Bassetgen*; It. *bassetto*). Diminutive of BASS (i). The lowest part of a passage or composition lacking a bass part and which executes the musical bass in higher register. It was defined by Praetorius in the *Syntagma musicum*, iii (1618), 121–2:

> the lowest voice in a high-register chorus, which executes the fundament and whose structure resembles a true bass; ... any lowest-sounding part in a high register ... in both concertos and motets [i.e. in both *stile moderno* and *stile antico*], whether soprano, alto, or tenor, as we see most often in fugues.

This usage, peculiar to the Baroque era, frequently appeared in discussions of basso continuo, where it denoted a passage notated in a C clef or G clef rather than the usual F clef. 'Bassetto' also denoted the lowest part of each separate chorus in a polychoral composition.

JAMES WEBSTER

Bassett (ii) (Ger., also *Bassl*, *Bassetl*). A diminutive of *Bass* in the sense of 'double bass', hence analogous to the Italian *violoncello*, which is a diminutive of VIOLONE. 'Bassetl' was the common designation for the cello in

Austria and south Germany during the 18th century; Leopold Mozart, in his *Violinschule* (1756), wrote: 'The Bassel or Bassette ... also goes under the name *Violoncell*'. The term did not designate a small, short-necked or other type of 'miniature' double bass.

JAMES WEBSTER

Bassett (iii). A term specifying instruments in baritone, tenor or alto range, for example the BASSET-HORN and BASSET CLARINET. Praetorius called the tenor shawm 'Bassett' or 'Tenor Pommer', and the lowest (bass) recorder in F 'Bassett'.

Bassett (iv). An organ stop with flue pipes.

Bassett, Leslie (Raymond) (*b* Hanford, CA, 22 Jan 1923). American composer. He studied at the University of Michigan with Finney, by whose teaching he was particularly influenced, and also had lessons with Boulanger and Honegger (1950–51), Gerhard (1960) and Davidovsky (electronic music, 1964). In 1952 he joined the faculty of the University of Michigan, becoming head of the composition department in 1970 and Albert A. Stanley Professor in 1977; he was also a founder-member of the university's electronic studio and directed the Contemporary Directions Performance Project until he retired in 1991. Among the awards he has received are the Rome Prize (which took him to the American Academy in Rome, 1961–3), a Pulitzer Prize (1966, for the Variations for orchestra), Guggenheim Fellowships (1973–4, 1980–81), a Naumburg Foundation recording award for the Sextet for piano and strings (1974) and a Rockefeller Foundation grant (1988); his *Echoes from an Invisible World* was commissioned by the Philadelphia Orchestra for the Bicentennial. In 1976 he was elected a member of the Institute of the American Academy and Institute of Arts and Letters. Bassett's music is carefully structured, its formal processes clear; conventional pitch materials are frequently deployed in an original manner. Even his writing for voices is instrumental in character, a quality he uses to advantage in the choral works, where voices and instruments are cohesively combined.

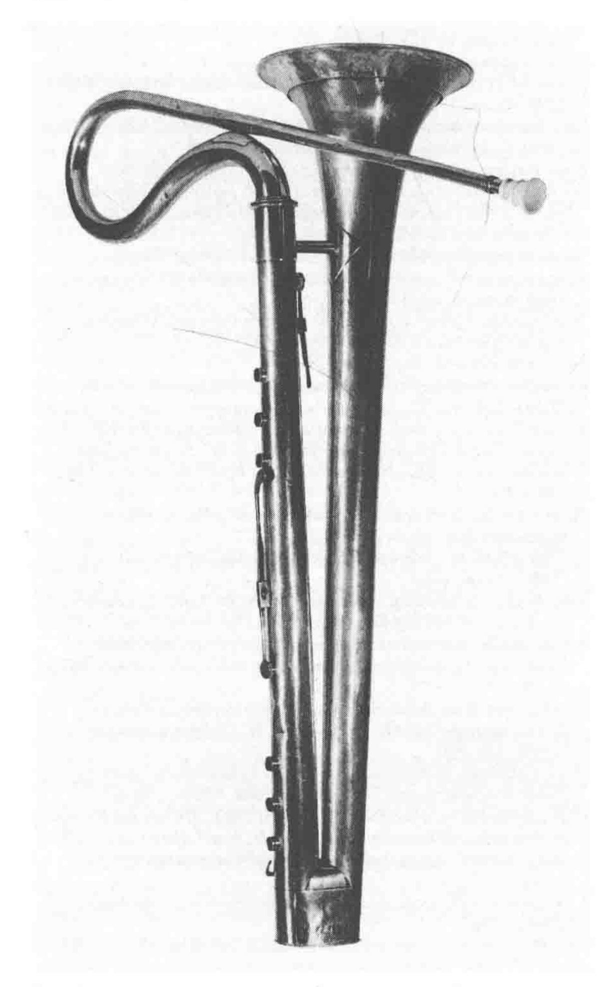
EDITH BORROFF/MICHAEL MECKNA

Bassey, Shirley (*b* Cardiff, 8 Jan 1937). Welsh pop singer. With a booming yet imperious contralto and an arresting stage presence, Shirley Bassey was one of Britain's most popular singers of show tunes and pop ballads during the 1950s and 60s. Her forte was the melodramatic ballad, usually taken from a successful musical play or popular film. Thus, early in her career Bassey made hit recordings of 'As long as he needs me' (from Bart's *Oliver!*) and 'Climb ev'ry mountain' (from Rodgers and Hammerstein's *The Sound of Music*). One of the songs most associated with her was a contrasting showstopper, the brassy, up-tempo 'Big Spender' from Coleman's 1966 musical *Sweet Charity*. In the cinema, Bassey was chosen to perform three of John Barry's themes from the James Bond film series: *Goldfinger* (1964; lyrics by L. Bricusse and A. Newley), *Diamonds Are Forever* (1972; lyrics by D. Black) and *Moonraker* (1979; lyrics by H. David).

Bassey's best-known British recordings were arranged and conducted by Johnny Franz and Norman Newell, but she worked in a more jazz-orientated setting when she recorded the album *Let's Face The Music* in 1962 with leading American bandleader Nelson Riddle. The most unusual of her performances were the collaborations with

Yello on *The Rhythm Divine* (1989) and with the Propellerheads on *History Repeating* (1997). By the early 1990's Bassey was semi-retired and her contribution to British show business was recognised by the award of a CBE in 1993 and a DBE in 2000.



DAVE LAING

Bass flute (i). A term occasionally used to denote the alto flute in G, although more properly reserved for the flute in C an octave below the concert flute. *See* FLUTE, §II, 3(v).

Bass flute (ii). *See under* ORGAN STOP (*Bassflute*).

Bass guitar. *See* ELECTRIC BASS GUITAR.

Bass-horn. An early variety of upright SERPENT invented by LOUIS ALEXANDRE FRICHOT in the 1790s. It is classified as a trumpet. The instrument consists of a conical tube about 230 cm long and generally made of copper. The larger end terminates in a widely flared bell and the smaller in a graceful swan-neck crook, this last accounting for nearly one-third of the instrument's total length. The tube is cut at a distance of about 81 cm from the bell and the two straight sections are set at a very acute angle into a short butt which ensures the continuity of the air column (see illustration).

Bass-horn with four keys, maker unknown, c1800 (Spencer Collection, Brighton Museum and Art Gallery)

The bass-horn has six finger-holes and usually either three or four keys. It was always considered to have C as its true fundamental. Compass, fingering and manner of blowing are the same as for the serpent, but its tone was said to be more powerful. With its more convenient playing position, it probably lent itself more readily than the serpent to the display of virtuosity.

The instrument enjoyed considerable popularity in England for more than 30 years but, just as the more conventional types of upright serpent and Russian bassoon never found favour in Britain, so the bass-horn was never taken up on the Continent, though the word is sometimes met in Germany to denote one of these other instruments, as in *russisches Basshorn* (It. *corno di basso*, for Russian bassoon), and Johann Streitwolf's *chromatisches Basshorn* of *c*1820.

Its natural place was, of course, the wind band, but it was also occasionally found in the large festival orchestras. There were actually four in the orchestras of the 1825 and 1828 York festivals, but by 1835 they had given place to ophicleides with, however, one exception, a sort of contrabass bass-horn called the HIBERNICON. As late as 1840 there was still one London maker who described himself as a 'bass-horn and serpent maker', but by that time the bass-horn had become obsolete. It is likely that the ophicleide part in the overture to Mendelssohn's *Midsummer Night's Dream* was initially played in England on the bass-horn.

There are only two other instruments that can be considered as structurally allied to the bass-horn: Frichot's BASSE-TROMPETTE, a truly remarkable instrument, and Joseph Cotter's hibernicon mentioned above.

REGINALD MORLEY-PEGGE/ANTHONY C. BAINES/R

Bassi, Amedeo (*b* Montespertoli, nr Florence, 29 July 1874; *d* Florence, 15 Jan 1949). Italian tenor. He trained in Florence, making his début at Castelfiorentino in Filippo Marchetti's *Ruy Blas* in 1897. After travelling widely in Italy he sang with great success in South America, where he performed regularly until 1912. He joined the Manhattan Opera Company in 1906 and made his Covent Garden début the following year; he returned in 1911 for the British première of *La fanciulla del West*, in which he also sang at the first performances in Rome and Chicago. At Monte Carlo in 1905 he participated in the première of Mascagni's *Amica* and in Naples the following year that of Frédéric d'Erlanger's *Tess*; he was also in the first American performance of Wolf-Ferrari's *I gioielli della Madonna* (1912). In the 1920s at La Scala he began a second career, as an admired Wagnerian tenor. He taught in Florence where Ferruccio Tagliavini was among his pupils. Early recordings show a powerful voice produced in the typical *verismo* style.

J.B. STEANE

Bassi, Luigi (*b* Pesaro, 4 Sept 1766; *d* ?Dresden, 1825). Italian baritone. He studied in Senigallia with Pietro Morandi and appeared on the stage at the age of 13. He completed his studies with Laschi in Florence, where he appeared at the Pergola Theatre. In 1784 he joined Bondini's company in Prague and in 1786 sang Count Almaviva in the first Prague performance of *Le nozze di Figaro*; the next year he created the name part in *Don*

Giovanni (1787). He is said to have asked Mozart to write him another air in place of 'Fin ch'han dal vino' and to have induced Mozart to rewrite 'Là ci darem' five times. In later years he stressed that no two performances were the same and that Mozart had specifically wished that he should improvise as long as he paid attention to the orchestra.

Bassi was praised in the *Gothaer Taschenkalendar* (1793):

> This rewarding singer was from the start the ornament of the company and he still is. His voice is as melodious as his acting is masterly. Immediately he comes on, joy and cheerfulness pervade the whole audience and he never leaves the theatre without unequivocal and loud applause.

In 1793 Bassi sang Papageno in Italian at Leipzig. But by 1800 his voice had deteriorated, although his histrionic ability remained unimpaired. According to the *Allgemeine musikalische Zeitung* (1800):

> Bassi was an excellent singer before he lost his voice, and he still knows very well how to use what remains. It lies between tenor and bass, and though it sounds somewhat hollow, it is still very flexible, full and pleasant. Herr Bassi is furthermore a very skilled actor in tragedy with no trace of burlesque, and with no vulgarity or tastelessness in comedy. In his truly artful and droll way he can parody the faults of the other singers so subtly that only the audience notices and they themselves are unaware of it. His best roles are Axur, Don Giovanni, Teodoro, the Notary in *La molinara*, the Count in *Figaro* and others.

In 1806 Bassi left Prague because of the war and relied on the patronage of Prince Lobkowitz, making occasional appearances in Vienna. In 1814 he returned to Prague, where Weber consulted him about *Don Giovanni*. In the autumn he was engaged for the Italian company in Dresden; and in 1815 he was made director. He still appeared in Mozart's operas; in 1816 he sang Count Almaviva, although he could no longer encompass the role vocally, but in 1817 he was well received as Guglielmo. He no longer performed Don Giovanni but sang Masetto, for which he was criticized because his figure was unsuited to the part. His contract with the Dresden company continued until his death; in his last years he also appeared in Florence, but only to sing in oratorio.

CHRISTOPHER RAEBURN

Bassilly, Bénigne de. *See* BACILLY, BÉNIGNE DE.

Bassklarinette (Ger.). *See* BASS CLARINET.

Basso, Alberto (*b* Turin, 21 Aug 1931). Italian musicologist. He took a degree in law at Turin University (1956) and though he had no formal training in music he was appointed in 1961 to teach music history at the Turin Conservatory; he became librarian in 1975. For UTET he edited *La musica: enciclopedia storica*, i–iv and *La musica: dizionario*, i–ii (with Gatti), the three-volume *Storia dell'opera* (with Barblan) and the *Dizionario enciclopedico universale della musica e dei musicisti*, all of which are major contributions to Italian musicology. He is also editor of Opera, a series of music guides (1973–5), and director of the editorial committee of Monumenti di Musica Piemontese (1976–), a special series of Monumenti Musicali Italiani. His research interests centre on Bach, organ literature and music in Piedmont. He has been active in various organizations, as vice-president (1968–70) and president (1973–9, 1995–7) of the Società Italiana di Musicologia and co-editor of its *Rivista italiana di musicologia* (1970–74), as an administrative council member of the Teatro Regio, Turin, as a frequent contributor (from 1956) to Italian radio, and as a member (1982) and later vice-president (1996) of the Accademia Nazionale di S Cecilia. In 1984 he was awarded a prize for his monograph, *Frau Musika: la vita e le opere di J.S. Bach*.

Bass oboe. *See* OBOE, §III, 5(i).

Basso cantante (It.: 'singing bass'). A light, legato bass voice as distinct from a deeper, more powerful bass (*see* BASSO PROFONDO). Its early meaning sometimes took on a pejorative tone as when the Earl of Mount Edgcumbe referred to 'these new singers [who] are called by the novel appellation of *basso-cantante* (which by-the-bye is a kind of apology, and an acknowledgment that they ought not to sing)' (*Musical Reminiscences*, London, 1824). Although more closely associated with vocal tone than range (*see* BASSE CHANTANTE), the term has also been used in modern commentary to identify the lyrical baritone and bass-baritone roles of the period of Bellini and Donizetti.

Basson (i) (Fr.). *See* BASSOON.

Basson (ii) (Fr.). *See* ORGAN STOP (*Fagotto*).

Basson d'amour. A type of bassoon with a spherical brass bell, used in Swiss Protestant churches between about 1760 and 1810; *see* HAUTBOIS D'ÉGLISE; *see also* BASSOON, §3.

Basson quinte (Fr.). *See* TENOROON.

Basson russe (Fr.). *See* RUSSIAN BASSOON.

Basso numerato (It.). *See* FIGURED BASS.

Bassoon (Fr. *basson*; Ger. *Fagott*; It. *fagotto*). A wooden conical wind instrument, sounded with a double reed, which forms the tenor and bass to the woodwind section. In the modern orchestra, the family exists in two different sizes: the bassoon and the double bassoon or contrabassoon, sounding one octave lower. Built in four joints, its precursor the dulcian was of one-piece construction. Because of its wide compass and its range of characteristic tone-colours, from richly sonorous at the bottom to expressively plaintive at the top, it is one of the most versatile and useful members of the orchestra. Certain design features are peculiar to it: the doubling back on itself of the bore, like a hairpin; the 'extension bore' beyond the sixth finger-hole; and local wall thickness allowing for finger-hole chimneys. These features give the instrument its essential tone qualities and condition its complex acoustics. The standard compass of the present-day bassoon is from *B*♭′ to *f*″ or *g*″. It is a non-transposing instrument and its music is notated in the bass and tenor clefs; occasionally the treble clef is also used.

In the Hornbostel-Sachs classification it is classified as an oboe.

1. THE MODERN INSTRUMENT AND REED. The modern bassoon exists in two versions: the German or 'Heckel' system, and the French or 'Buffet' system of differing keywork and slightly modified bore (fig.1). As the German type is more commonly used today, it provides the frame of reference for general statements here about the construction of the modern bassoon.

While early bassoons (like dulcians: see §2) were sometimes made of harder varieties of wood, maple has been the wood traditionally used. Carl Almenraeder (see §4) favoured North American dark maple (*acer nigrum*), considering harder varieties to be unsuitable because they produced a duller tone, while softer varieties, although giving a better tone, were less durable. Most German makers preferred the medium-hard flamed or curly ring maple to the harder and heavier grenadilla or palissander (Brazilian rosewood) more often used by the French. The last serious attempt to make the body out of metal was by Lecomte, and was exhibited in Paris in 1889. However, ebonite has since been used in England for military instruments destined for the tropics. German bassoons today are made of sycamore maple (*acer pseudoplatanus*; Ger. *Bergahorn*). In America they are also made of local sugar maple (*acer saccharum*), though plastics such as polypropylene are successfully used as an alternative to wood. Before World War II the wood was customarily seasoned for up to 12 years, and machined only in gradual stages; now modern drying processes are used and the wood is often impregnated under pressure to stabilize its inner structure.

The machining of the bore and tone holes needs to be done with the utmost precision to achieve a good instrument. Final tuning has to be done by hand and calls for considerable time and skill. The crook is a crucially important element which needs to be carefully matched with its instrument. These factors make the bassoon traditionally more expensive than other wind instruments.

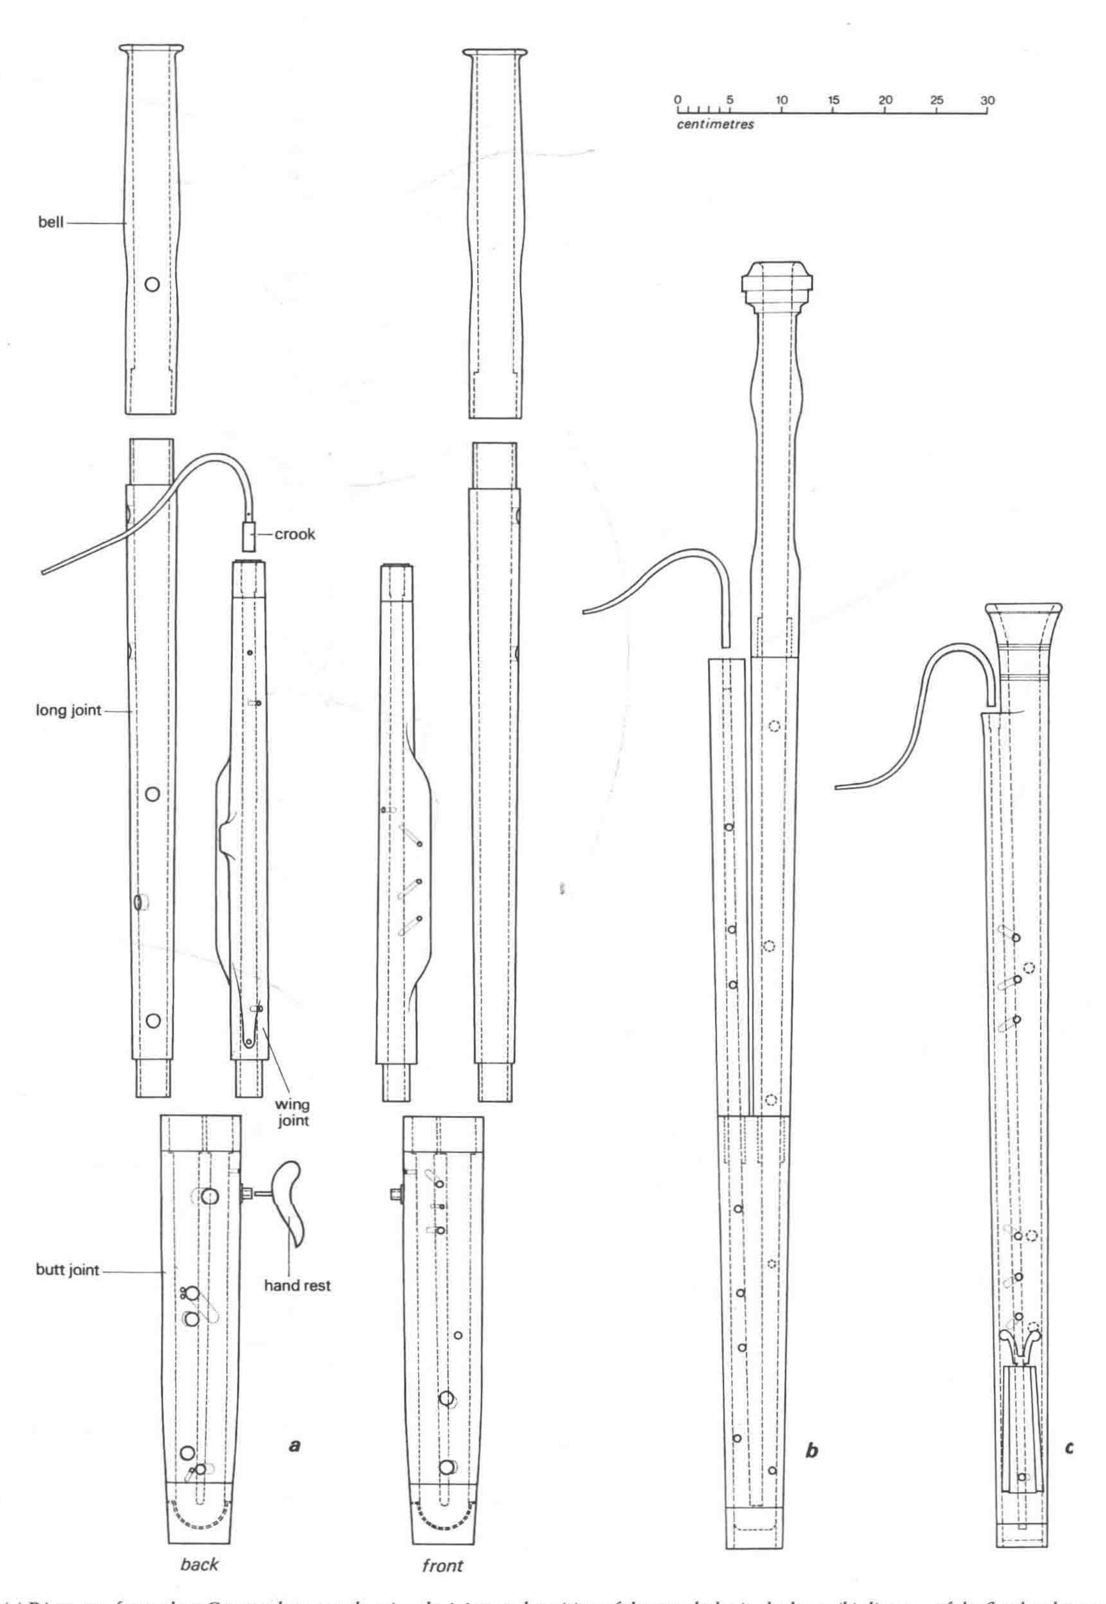
The bassoon stands about 134 cm tall and consists of four wooden joints together with a metal crook and reed (fig.2*a*). The total length of the bore is about 254 cm, flaring from a width of 4 mm at the narrow end of the crook to 39 mm at the bell. The components are:

(a) The tenor or wing joint, named after the projecting 'épaule' (a part of the wall thickened to accommodate three obliquely drilled finger-holes); this joint has a protective lining of hard rubber or plastic.

(b) The double or butt (boot) joint, which contains two continuously flaring bores connected at the bottom by a metal U-bend bow, which is screwed on to the body and protected by a metal cap. The narrower of these two bores is also lined for protection against water. A 'crutch' or hand rest to support the right hand is usually fitted to this joint.

(c) The long joint or bass joint, which lies adjacent to the wing joint.

(d) The bell joint, usually with a decorative outer profile and often tipped with an ornamental rim of ivory or plastic. A longer bell for the *A*′ was first demanded by Wagner in *Tristan und Isolde* (1865); followed by Liszt, Strauss, Mahler, Delius, Nielsen, Schoenberg and Stravinsky among others. It is generally found to have a detrimental effect on playing characteristics.



(e) The crook or bocal which is inserted into the upper end of the wing: a tapering metal tube with a nipple perforated by a pinhole near the wider end; the reed is placed at the other end. The crook is usually bent into a characteristically curved 'S', but this shape is sometimes altered to suit individual players. Crooks are built in different lengths to assist tuning.

When played, the bassoon is held obliquely across the body. Its considerable weight is supported by means of a neck strap or shoulder harness attached to a ring on the

1. Modern bassoons: (a) German system, by Wilhelm Heckel, Biebrich; (b) French system, by Buffet-Crampon, Paris (private collection)

butt, a seat strap or adjustable spike attached to the bottom of the butt, or a leg support fitted to the top of the butt. The left hand is held uppermost: raising the three middle fingers of each hand produces a basic scale of *G* to *f*. With the help of the crook- and other register-holes these overblow an octave higher. The other fingers control keys which extend the range down to $B\flat'$. This considerable extra length of 'resonator' is an important factor in the acoustics of the bassoon, as are the wall thickness, which produces chimneys of significant length on the

2. *(a) Diagram of a modern German bassoon showing the joints and position of the tone holes in the bore; (b) diagram of the five-key bassoon after an engraving in J.-B. de La Borde's 'Essai sur la musique' (1780); (c) diagram of a dulcian (Choristfagott) after those shown in fig.5 below*

wing joint, and the relatively small size of finger-holes. (For a fuller discussion of acoustics see Benade (1976) and Krüger (*MGG2*); *see also* ACOUSTICS, §IV, 6.)

The fingerings of the upper register are complicated: above *c″* the notes become somewhat more difficult to produce, requiring a progressive increase of wind pressure. While the French instrument with its slightly narrower bore and different layout of tone holes is able to reach *e″* and *f″* without undue difficulty, these notes are less easy on the German bassoon, though extra keys are now available to facilitate them.

Response and intonation is greatly affected by comparatively minute deviations in the conicity of the bore. In recent years makers have devoted great efforts to designing a more evenly-scaled instrument. Luckily the degree of pitch alteration available to the player through regulating air support and embouchure is comparatively great, and players often use individual fingerings to 'humour' certain notes. A new bassoon requires 'playing in' and thus players are hesitant to change their instruments. The problem of playing softly is sometimes assisted by the use of a mute; this can take the form either of a piece of cloth stuffed in the bell (e.g. as demanded by Ligeti) or of a short sleeve-like metal cylinder (*see* MUTE). Many players (especially in the USA) take great pains to seal every trace of porosity in pads and body to facilitate response.

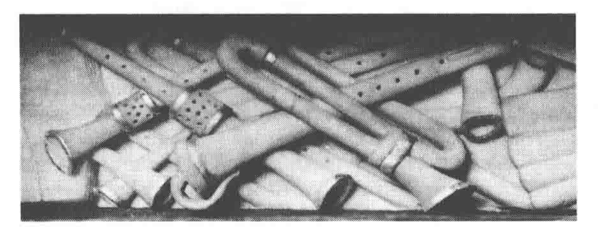
In London there have been two efforts made in the late 20th century to reform the instrument. The 'Logical Bassoon' of Giles Brindley employed an electronic circuit to open and close the tone holes, thereby simplifying the fingering whilst making possible ideal combinations of holes for each note (Brindley, 1968). Edgar Brown's promising experimental bassoon, developed in collaboration with the bassoonist Zoltan Lukacs (1936–91), is built to a design by the distinguished acoustician Arthur Benade (1925–87); in the interests of greater tonal homogeneity, 'the hole proportions are such as to give a uniform tone-holes lattice cut-off frequency' (Brown, 1998).

The French bassoon differs from the German in bore, disposition of tone holes and system of keywork (see fig.1). In general it has retained the basic design of the early bassoon, in contrast to the reformed Almenraeder instrument with its low-register open holes enlarged, increased in number and placed further down the bore. Formerly in common use throughout the non-German-speaking world, it has since the 1930s been replaced by the German model. There is controversy over their respective merits – the light, free tone quality of the French contrasts with the dark homogeneousness of the German. However, much depends on the style of playing and of the reed chosen by the individual player. In general the German instrument may be considered 'safer' and easier to control for the player.

Like the oboe, the bassoon uses a double reed (see fig.11*d* below) made of a type of bamboo cane (*arundo donax*), of which the most suitable quality grows in the Var district of southern France. Cane from Italy, America, southern Russia and China is also used by local players. The modern method of manufacture is as follows: a piece of tube 12 to 14 cm long and about 2·5 cm in diameter is split vertically into three or four pieces and the inside of each planed to the desired thickness by a gouging machine; on the outside the 'bark', except on the top and bottom quarters of the length, is removed to a contoured bevel by a 'profiler'. The piece is then folded to half its length, cut to size in a metal 'shaper', formed on a mandrel and bound with three wires and thread; lastly the tip of the fold is cut off. The final thinning of the reed blades may be done with a tip profiling machine, or with a file and scraping knife. The reed is very fragile and sensitive (the blade tip is only some 0·1 mm thick) and plays a crucial role in the tone and response of the instrument. Both the quality of the cane and the contour of blade thickness are very important. Recent research by Heinrich (1987), subjecting reed cane to analysis under laboratory conditions, has yielded new insights into the behaviour of what he defines as a *bilâme hydrique* (bilaminate reacting variously to water), and the interaction of the banding wires with cane density. Reeds for the German instrument differ from those traditionally used on the French in the way they are finished; 'French' reeds are usually bevelled evenly like a chisel while the 'German' scrape leaves a thicker spine down the centre. There is considerable divergence of style and scrape between players. Formerly made exclusively by hand, nowadays reed manufacture has become increasingly mechanized. Various experiments have been made with plastic reeds, but so far they have not proved suitable for professional use.

At times the bassoon has been played with a clarinet-type mouthpiece. According to *GerberL* the clarinettist J.W. Hesse attempted to do this in 1786, and in England small bassoon mouthpieces from the early 19th century have survived. They have never been used seriously because of the way they denature the tone, although they were formerly used for tuning instruments. They are still marketed in the USA.

2. THE DULCIAN AND OTHER PRECURSORS. The early history of the bassoon is obscure: few early specimens survive and it is not possible to be sure when and where these were made. Iconographic evidence, though sparse, is more trustworthy than that from written documents, which, because of ambiguities of nomenclature, must be interpreted with caution. In general, two successive versions of the instrument may be distinguished: the earlier, in use up to the beginning of the 18th century (though later in Spain), was essentially in one piece and is best labelled 'dulcian' (fig.2*c*) to distinguish it from the later 'bassoon' proper (i.e. in four joints). Although one early specimen in Vienna (a 16th-century Italian instrument by HIER.S, refurbished during the Baroque era) is inscribed 'DER. DULCIN. BIN. ICH. GENANT ...' the names given to the instrument in early times were, unfortunately, seldom consistent or unambiguous. Derivatives of at least four different names have been in use since early times, 'Fagott' and 'curtal' as well as 'dulcian' and 'bassoon' (also 'tarot' and 'sztort'). Since, of all the derivatives of these names, 'dulcian' has arguably been the least ambiguous, this is the preferred terminology.



The first term originated in 14th-century France as 'fagot', meaning a bundle of sticks, a faggot. While also used as the name of a dance by Phalèse (i) (1549) and Susato (1551), it was first used to denote a musical instrument in the early 16th century in Italy. 'Choristfagott' was an early name for the dulcian, and the name 'Fagott' was applied in the 17th century to the bass pommer as well, in spite of the fact that neither resembled a bundle of sticks. From the mid-18th century onwards *Fagott* and *fagotto* have been respectively the German and Italian names for the bassoon. The name 'dulcian' is

commonly used today for the original version of the instrument in one piece (as opposed to the later type in joints). Deriving from the Latin root *dulc* (soft, sweet), it has traditionally been held to refer to the instrument's more subdued tone quality than that of the louder shawms and pommers. However, Klitz (1971) showed that forms like *dulzan* can refer to the pommer as well as to an earlier type of shawm called the 'dolzaina' (*douçaine*). In England the earliest name for the dulcian was 'curtall', which was used well into the 18th century for the bassoon as well, and is related to other wind instrument names such as the French *courtaud* and the German *Kortholt*, which all derive from the Latin *curtus* (short), referring to instruments shortened because of their folded bore. 'Basson' meant originally the bass-register version of an instrument (e.g. *basson de hautbois*, *basson-flûte*). In 18th-century Germany it became the name of the new jointed version of the dulcian, which had been developed in France. In England, Talbot's manuscript made a similar distinction: 'Basson has 4 Joynts, Fagot entire'. Purcell's *Dioclesian* score of 1690 specified 'bassoon' and this anglicized version of the word has been used ever since.

With the rise of instrumental playing in the 16th century, the desire to extend the range of instruments into the lower register caused them to be developed in families: larger versions of the shawm and recorder were made possible by an improved technology which enabled makers to bore longer tubes and to control widely spaced extension holes with the aid of keys. As Kolneder (*MGG1*) showed, there must have been a demand in the 16th century for a deep instrument to form a bass to the wind band that would surpass the trombone in agility, the bass recorder in loudness, and the bass pommer in ease of handling. Early in the 16th century all the constructional elements of the dulcian would have been available: the double reed of the shawm, the curved crook of the bass recorder and bass shawm, and the doubling back on itself of the bore (within a single block of wood) of the phagotus.

The shawm had already been built in large versions which were known as 'bomharten' or 'pommers': it may be assumed that the largest of those made in Nuremberg by Sigmund Schnitzer the elder and described by Johannes Apel in a letter of 1535 as 'vill höher und lenger den ich' (i.e. 'much taller than I') was already like the largest pommer illustrated by Praetorius in 1620. It must have been a cumbersome instrument to manage, especially out of doors.

The first mention of the dulcian in a reference work is in Zacconi's *Prattica di musica* (1592); Virdung (1511), Agricola (1529, 5/1545) and Luscinius (1536) made no reference to it. Zacconi wrote that 'the Fagotto chorista has a range *C*-*b*. It is so called because there is another kind which is not of its pitch but either a little higher or lower'. Sachs derived 'chorista' from the instrument's usual function of supporting the bass in choral music; however this term was applied to other instruments as well to mean a certain register or PITCH level, for example 'Dui corneti, uno di ton chorista, et uno più basso' (Accademia Filarmonica inventory, Verona, 1562).

3. *Early form of dulcian: detail of an alabaster relief by Antonius von Zerun, from the monument to Moritz, Elector of Saxony, 1563 (Freiberg Cathedral)*

Of these different types, the *Choristfagott* soon established itself as the most useful member of the family. It consisted of a single shaft of wood (maple or fruit), oval in section, nearly a metre tall, drilled with two bores connected at the bottom so as to form one continuous, conical tube. At the top a curved brass crook was inserted into the narrow end of the bore, and the other end was slightly extended to form a flared bell. This bell sometimes took the form of a perforated cap, thus making the instrument *gedackt* (i.e. covered) as opposed to *offen*, and doubtless affecting both the tone quality and pitch. The thickness of the walls enabled the finger-holes to be drilled obliquely to accommodate the span of the fingers. There were eight finger-holes and two open keys protected by perforated brass boxes: six fingers gave *G*, and by adding the keys and using the player's thumbs, notes down to *C* could be played. The basic scale overblew the octave, giving a range up to about *g'*. The 'swallow-tail' end of the little-finger key allowed the player to hold the instrument on either side of his body with right or left hand uppermost. Sometimes, especially in the larger sizes, the body of the instrument was made in two half-lengths, or even in three sections, which were joined together under an ornamental band, as in figs.4 and 5 below.

Over 50 dulcians of various sizes datable to the 16th and 17th centuries are in museums at Vienna (10); Berlin, Brussels (7); Augsburg, Linz (6); Frankfurt, Nuremberg, Salzburg (4); Brunswick, Leipzig, Merano, Sondershausen (2); Barcelona, Dresden, Hamburg, Paris, Prague (1). Of those in Vienna, eight come from the famous collections of Catajo and Ambras and include several of the earliest dulcians known. The four signed by J.C. Denner (*d* 1707) may be presumed to be among the last non-Spanish examples made. Sachs was the first to dispute the traditional view that the dulcian was a development of the pommer. That the two instruments coexisted for some time is shown in the paintings of a wind band by Alsloot (in the Prado, Madrid; *see* SHAWM, §3, fig.9) and Sallaert (in Galleria Sabauda, Turin). The Nuremberg Stadtpfeifer dropped the pommer in 1643 in favour of the dulcian, but in some places the bass pommer survived into the 18th century.

Where, when and how the dulcian evolved is unknown, there being insufficient evidence to allow tidy conclusions to be drawn. The sparse evidence that is available shows different forms appearing in different places and at different times. Lockwood's researches (1985) into the Ferrara *guardaroba* archives of Willaert's patron Cardinal Ippolito I d'Este reveal that as early as 1516 the musician Gerardo *francese*, in the cardinal's service since 1504, was paid for 'uno faghotto da sonare cum le chiave d'argento' and identified that year as a 'sonator de fagoth'. There is a further reference to payments in 1517 'per fagotto che sona Janes de pre Michele', evidently a colleague. The following year we find the lutenist Giovanni Angelo Testagrossa, in a letter written to Isabella d'Este at Mantua, offering instruments and referring to 'un altro instrumento quale se chiama un fagot' (Bertolotti, 1890).

4. Dulcian made in two halves, and joined under an ornamental band: detail from the 'Nativity' by Giovanni Benedetto Castiglione, 1645 (S Luca, Genoa)

The phagotum, demonstrated in 1532 at the court of Mantua by its inventor Afranio degli Albonesi and described in 1539 by his nephew Teseo Ambrosio, was traditionally considered to have been the earliest ancestor of the bassoon on the strength of its name; however, with its bellows-blown pair of twin cylindrical bores (each called a *fagoto*) sounded by single metal reeds, it is rather a type of bagpipe. The next earliest Italian citation is from the Verona Accademia Filarmonica *Libro degli atti* of 1546 which mentions 'il 9 maggio furono comperati da Alvise soldato un Fagotto ed una Dolzana'.

Of all the signatures known on early wind instruments, variants of HIER.S (25; *see* HIER.S) and of the so-called 'rabbits foot' (about 143) by far predominate. An attractive theory links both to the Bassano workshop. Significant research by Lasocki and others has revealed much concerning the activities in both Venice and London by members of this remarkable family. He has identified three generations of makers and players descended from Jeronimo (i) (*d* ?1539), a native of Bassano, some 65 km north-west of Venice. By 1531 four of his sons had visited London in their capacity as sackbut players, where they settled by about 1538. Both they and two subsequent generations were active there and in Venice making and repairing instruments. It is most likely that the eight surviving dulcians signed 'HIER.S' and 'HIERO.S' may be products of the Bassano workshop – the instrument depicted by Castiglione (fig.4) shows a two-section dulcian made in a similar style – as are also the eight others bearing the 'rabbit's foot' mark.

In Germanic countries references appear somewhat later. A Graz inventory of 1577 lists 'a set of old, bad [or plain] fagati, 2 bass, 2 tenor and 1 descant' and '1 good fagat in daily use'; from this, Kolneder deduced that they were at least 40 to 50 years old, setting the time of their introduction in Graz at about 1530. In Augsburg, where a unique set of six (made in Italy) survive (fig.5), they were first listed in 1566.

Nickel argued that in Nuremberg the instrument did not make an appearance until 1575, when a *dulzin* (here

5. Dulcians: (left to right, shown from the front) Oktavbass, Quartbass, Choristfagott (all marked 'Hiero. S'), probably made in Venice, second half of the 16th century; (left to right, shown from the back) Choristfagott (unmarked, probably by the same maker), Tenor and Diskant (both by the same unknown German maker), late 16th century (Maximilianmuseum, Augsburg)

meaning dulcian) was procured from Antwerp: earlier references elsewhere to *dulzana*, *doltzana* and the like refer to the *dolzaina*, an instrument in common use since the 15th century; and the *fagati* of Augsburg and Graz, he suggested, were pommers. Neudörfer (1547) praised the Nuremburg maker Sigmund Schnitzer the younger (*d* 1578) for his ability to turn, tune and perform on large oversized *Pfeiffen*, which Doppelmayr (1730) called *Fagotte*. That this might refer to a *Grossbasspommer*, rather than a dulcian, is supported by the fact that the player Rosenkron who was engraved holding one in 1679 is called *fagotist*. In view of these verbal ambiguities, pictorial sources are more reliable. A relief carved in Antwerp by Antonius von Zerun for the Moritz monument erected in 1563 in Freiberg Cathedral (Lower Saxony) shows a dulcian among a group of wind instruments (see fig.3); the instrument is portrayed again in an engraved frontispiece by Collaert of about 1590 (reproduced in Fraenkel, no.39). These and other sources suggest that it appeared early in Flanders. Venice was also supplying instruments to courts in Germany and Austria in the late 16th century (in 1588 the Munich Hofkapelle acquired 'ein Vagott von Venedig'); in Nuremberg, the leading centre of wind instrument making of the period, the first dulcian was made in 1595.

By the time of Praetorius, the family had reached its maximum extent: in *Syntagma musicum*, ii (2/1619) he described a complete consort of *Fagotten* or *Dolcianen* consisting of eight instruments of varying size – the *Discantfagott* (*g* to *c″*), the *Fagott Piccolo* or *Singel Corthol* (*G* to *g′*), the *Choristfagott* or *Doppel Corthol* (*C* to *g′*), and two varieties of *Doppelfagott*, a *Quartfagott* (*G′* to *a*) and a *Quintfagott* (*F′* to *g*). In his *Theatrum instrumentorum* (1620) he showed in addition an *Altfagott* (presumably *c* to *f′*). A hitherto unknown source was discovered in 1994 in Edinburgh (*GB-Eu* Dc.6.100). The *Instrumentälischer Bettlermantl* by 'A.S.', a south German manuscript datable to the mid-17th century (Campbell, 1995) describes and illustrates four sizes of *Vagött* – Discant, Alt, Tenor and Bass; the accompanying instructions for reed making (see §5 below) are the earliest known. How long the use of the dulcian persisted is hard to ascertain. Eisel's treatise (1738) dismisses the *Teutscher Basson* as outmoded, but still supplies a chart. Its use by the *Pfeifergericht* at the ceremonial opening of the Frankfurt fair persisted well into the 18th century.

In Spain the dulcian (Sp. *bajón*) enjoyed a long and well-documented period of use, which, according to the researches of B. Kenyon de Pascual, extended from the early 16th until the early 20th century. The earliest reference dates from 1530, when Juan de la Rosa of Pamplona was paid two ducats for repairing *bajones*. The 1616 workshop inventory of the court maker Bartolomé de Selma y Salaverde included small and large dulcians. The four Spanish dulcians preserved in Brussels comprise a tenor, two altos, and one descant, indicating that such smaller models were also in use. Surviving music and inventory records show that they were frequently used through to the 18th century. The fact that all known iconographic sources have an ecclesiastical setting indicates that they were primarily played in church, though there is some evidence of secular use. They were still made and played after the jointed bassoon (*fagot*) was introduced; a 1739 Royal Chapel report specified that 'the *fagoto* – which is an instrument of the same family, though its voice is not so full as that of the *bajón* – will also play'. An early 19th-century listing of 'bajón' with choristers and two 'fagots' with orchestra shows the different functions discharged by each instrument. As late as 1902, a cathedral chapter record mentions a *bajonista*. A painting by the Italian Bernardo Bitti on an organ from a Peruvian convent datable to 1590–95 shows early evidence of a kind of longitudinally sectioned dulcian. Several early 19th-century examples of a five-keyed jointed *bajón* in three or four sections survive.

Evidence for the dulcian's early use in Flanders is the fact that it was there in 1563 that the earliest known represention was carved (see fig.3), while in 1566 some *bajones* were ordered for Valladolid. A print from Philipp Galle's *Encomium musices* (Antwerp, *c*1590) shows another longitudinally sectioned dulcian. In the following century it was portrayed by such painters as Denis van Alsloot, Jan Breughel the younger, Theodoor Rombouts and Anthonis Sallaert, among others. Evidence from other countries (Poland, Denmark etc.) also shows considerable use of the instrument.

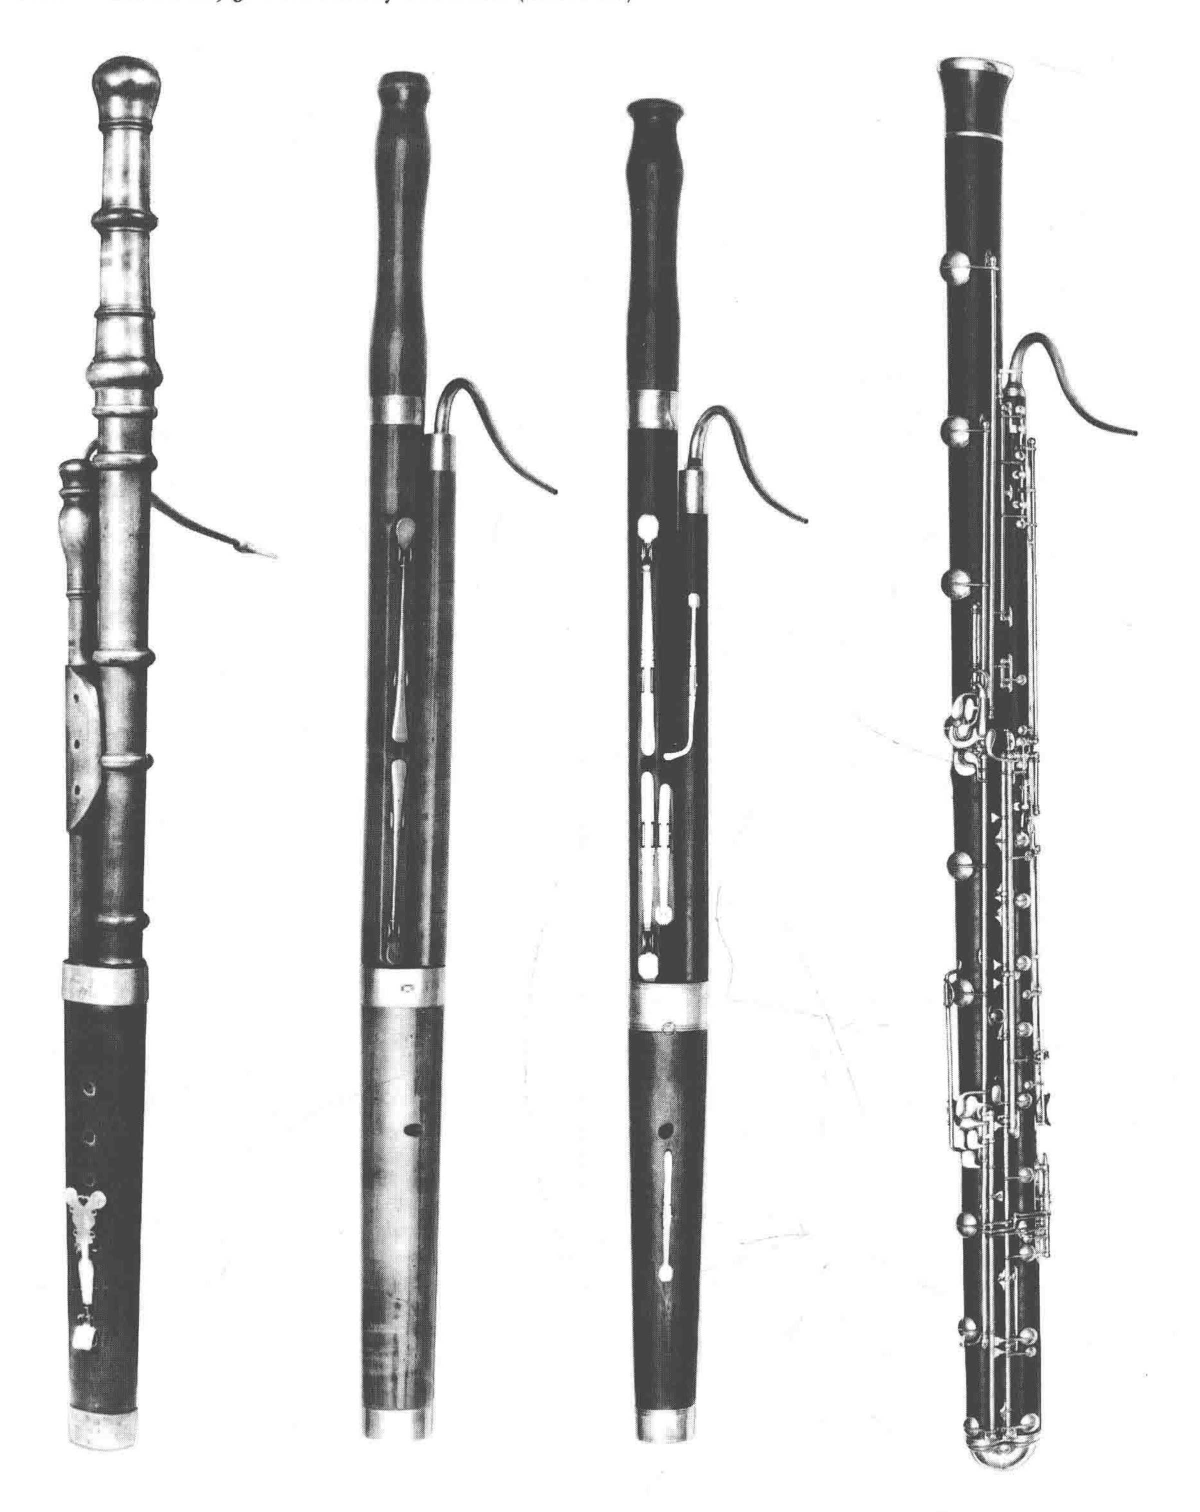
In England it is likely that members of the aforementioned Bassano family were making and repairing dulcians from about 1538 onwards. A Suffolk account book of 1574 records payment 'for an instrument called a curtall'. In 1575 the Waits Band of Exeter was using a 'Double Curtall', and in 1597 the chamberlain of the Corporation of London was ordered to provide a curtall for the musicians at the charge of the City. About 1582, Stephen Batman referred to 'the common bleting music in ye Drone, Hobius and Curtall' (i.e. bagpipe, shawm and dulcian). The Talbot manuscript, which was probably written between 1690 and 1700 (*GB-Och* Music MS 1187), while describing fully the 'Basson' (jointed bassoon) still sees fit to describe fully the 'Double Courtaut' (dulcian). The 'Tenor & Treble Courtaut' and 'Fagot' are briefly mentioned; he tells us that the 'Fagot', which is 'entire' and thus evidently also of dulcian construction, is 'unused', while the 'Double Courtaut' is 'not used in Consort'.

Evidence of the dulcian in France is mysteriously lacking. The fact that it does not figure in Cellier's manuscript of *c*1585 (*F-Pn* fonds fr.9152) suggests that at that time it was still unknown. It is however in France that evidence regarding other precursors of the bassoon may be found. Predecessors other than the dulcian, such as the 'fagotted' bass shawm and the sectioned dulcian, were evidently also filling the gap before the emergence of the jointed bassoon. Mersenne described and illustrated instruments which may loosely be considered transitional, and recent researches by Kopp and White have yielded fresh insights. Comparing closely Mersenne's Latin version *Harmonicorum libri* (1635–6) with the French *Harmonie universelle* (1636–7), Kopp (*JAMIS*, 1991) has been able to resolve confusing inconsistencies of nomenclature. White ('The Bass Hautboy in the Seventeenth Century', 1994, 167–82) challenges the conventional assumption of a straight development from bass shawm to dulcian to bassoon, arguing that of these the dulcian, far from being more primitive, requires tooling capable of greater accuracy; none of the instruments illustrated show one-piece construction, but rather two discrete tubes wrapped externally (the illustration of the bass *hautbois de Poitou* showing just such a construction). Mersenne wrote that they were 'different from the

preceeding bass [shawm] only in that they break into two parts to be able to be managed and carried more easily; that is why they are called Fagots because they resemble two pieces of wood which are bound and faggotted together'. White surmises: that 'the bassoon may not have evolved directly out of the dulcian, but rather out of an interim "fagotted" version of the bass shawm early in the sixteenth century'; and that the dulcian's simplified 'modern' design allowing for oblique chimneys represented an improvement over the sectioned instrument that must have preceded and then co-existed with it. Trichet appeared to corroborate his contemporary Mersenne in his treatise (*c*1640) by describing, in addition to a small conventional dulcian, a three-piece 'basson' constructed of two discrete tubes, 'deux tuiaux joincts ensemble', the larger of which 'pour la commodité se peuvent desmonter et se briser en deux parts'. Only one sectioned model of dulcian survives, in the Kunsthistorisches Museum, Vienna (Sammlung Alter Musikinstrumente no.201); unsigned, but of Italian provenance and datable to about 1600, its upper part is divided into two halves.

3. THE EARLY BASSOON (TO 1800). It is not clear when or where the precursors of the bassoon evolved into the four-jointed instrument of today, descending one extra tone below the C of the dulcian. The gradual abandonment and replacement of the dulcian was doubtless brought about by such factors as the need for an instrument to match the range of the contemporary 'basse de violon' which descended to *B*♭′, and to replace the old high church-pitch instruments that were incompatible with new instruments built at French flat pitch. There was an evident demand for such an instrument with this extended range. Selma y Salaverde had already called for it (see §7 below) and the compass of one of Mersenne's instruments had also been extended to *B*♭′ with the aid of a third key. The impulse for this development can be identified as emanating from Amsterdam, Nuremberg and Paris.

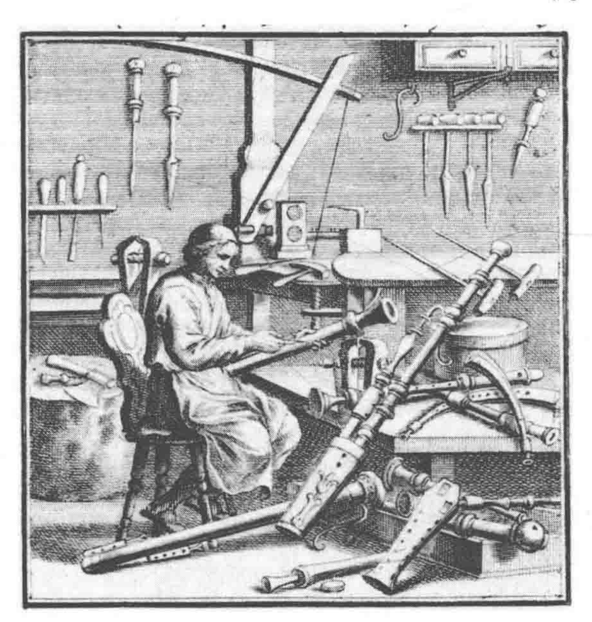
An important early iconographic source for the new bassoon is the Dutch painting *Der Fagottspieler* in the Suermondt Museum, Aachen. Unsigned, its attribution to Harmen Hals (1611–69) is dubious, White dating it to nearer the end of the century. The instrument has turned mouldings on the upper joints that served both as decoration and mounts for the keys. The wing joint has the characteristic 'épaule' or thickening of the wall necessary to retain the oblique bore of the finger-holes. The extra length afforded by the bell, which has a bulb-like cavity at the end, enabled the range to be extended a whole tone downwards to *B*♭′ with the aid of an extra key, and the longer bore and lighter construction made the instrument more free and flexible in the upper register as well. A well-preserved three-keyed bassoon by Richard Haka (Schlossmuseum, Sondershausen), datable to a *terminus ante quem* of 1699, provides significant evidence. Its Baroque profile resembles that of the instrument portrayed in *Der Fagottspieler*. His contemporaries Jan Juriansz van Heerde (*fl* 1670–91) and Jan Juriansz de Jager (*fl c*1684–1694) also made bassoons. The additional G♯ key for the right little finger, shown on the trade card of the Amsterdam maker Coenraad Rijkel (*c*1705), stabilized the position of the player's hands; formerly the swallow-tail design of the F key had permitted interchangeable hand position. Rijkel's contemporaries, Abraham van Aardenberg, Thomas Boekhout, Michiel Parent and Hendrik Richters, among other notable Dutch woodwind makers, also made bassoons.



The bassoons from J.C. Denner's Nuremberg workshop (fig.6*a*) resemble Richard Haka's model. It is known that by 1684 Denner was copying the new French recorders and oboes, and his bassoons may have been built to a French pattern. An engraving by Weigel of a bassoon maker – possibly Denner – at work shows both the two-key dulcian and three-key *Basson* being made (fig.7), but soon the new instrument with its greater potentialities was to dominate. Some 33 three-key bassoons survive.

The traditional view is that the bassoon, along with other Baroque woodwinds, was developed in the time of Louis XIV in France by members of the Hotteterre family, working as wind players and makers in Paris. Nicolas Hotteterre (i) (*c*1637–1694), a bassoonist for the royal chapel from 1668 and the first identifiable bassoon maker of the family, was possibly foreshadowed by other earlier relations. However, both the dulcian and bassoon are conspicuously absent among the woodwind instruments represented in the Gobelin tapestries of 1669, which show instead the *cromorne*, which appears to have functioned as bass to the reed group in France at this time (see Haynes, 1997).

Borjon de Scellery's *Traité de la musette* (1672) mentions the use of musette with 'cromornes, flûtes & bassons'. Haynes concludes that 'since bassoons played with *cromornes* and musettes, and hautboys did as well, hautboys and bassoons were probably able to play together by 1672. Thus some new model of bassoon would have been in existence by that date'.



By the 1680s there are references to bassoons of the new type, i.e. designed to play at flat pitch like the other new Hotteterre woodwind instruments. In 1680 Lully scored for basson in his opera *Proserpine* and regularly thereafter (with a range of *B*♭′ to *f*). In 1686 the Darmstadt court appointed the bassoonist Maillard, presumably from France.

It was in England that the new instrument was first described and illustrated. Here James Talbot gathered detailed information from London professional players, both native and French: White tentatively dates his inquiries to 1685–8. Talbot confirmed that the 'French Basson' in '4 Joynts' had three keys and a compass extending down to *B*♭′. According to his brass authority William Bull, it had been the 'Fr. Basson' that had replaced the trombone after it had been 'left off' towards the end of the reign of King Charles II (*d* 1685). Around this time, Randle Holme (before 1688) described and illustrated what he called a 'double curtaile', which however appears to be a three-jointed bassoon. The employment of Jacques Hotteterre, brother of Jean (1648–1732), in London as an oboist is documented in 1675 (Giannini, 1993); doubtless he helped introduce the family products. Both the tenor oboe and bassoon had arrived from France by 1687 (see Lasocki, 1988). This traffic is documented later in a letter of 1711 by Louis Rousselet, another French oboist employed in London, who ordered two bassoons, one right-handed and one left-handed, from the well-known Parisian maker Jean-Jacques Rippert (Giannini, 1987). The earliest French illustration of the new bassoon is on the title page to Marais' *Pièces en trio* (1692). The plain severity of its bell, free of Baroque turnery, resembles that of Stanesby.

6. Early bassoons: (a) three-key by Johann Christoph Denner, Nuremberg, c1700 (Musikinstrumenten-Museum, Berlin); (b) four-key by Thomas Stanesby (ii), London, 1747; (c) seven-key by Friedrich Kirst, Potsdam, late 18th century (d) Boehm system, with 30 keys, by Triébert-Marzoli-Boehm, Paris, c1855 ((b)–(d) private collection)

Two unique double-reed instruments – the *basse de musette* and *basson d'amour* – built in the 1760s in a French-speaking Swiss valley colonized by Huguenot refugees, were possibly derived from lost French models. The four-jointed, three-keyed *basson d'amour*, 14 examples of which survive, displays unique features; these include a globular brass bell, which augments the tone like a Helmholtz resonator, and a pirouette at the crook

7. Bassoon maker (possibly Denner) at work on a two-key dulcian, with a three-key 'Basson' to his right: engraving by Christoph Weigel, 1698

end to facilitate playing (see HAUTBOIS D'EGLISE). Designed for church use, many lack the left-hand keys deemed unnecessary for psalm accompaniment (see Staehelin, 1969–70).

The four-key instrument was to remain the model in standard use for the rest of the century. Halle (1764) reported that the best were made of boxwood: examples by J.H. Eichentopf, Poerschmann and Scherer survive. The Baroque mouldings of the upper three joints disappeared, the keys being mounted instead on projecting bosses or on saddles. The bore of the bell was changed to an inverted taper and sometimes a small resonance hole was added. The earliest extra keys to be added were for those low notes for which the standard 'forked' fingerings were less satisfactory: a chart by Hotteterre and Bailleux (*c*1765) first shows the fifth *E♭* key for left thumb (later moved by Grenser to left little finger), and a right-thumb key (for *a'*; also *F♯*) followed later. A more significant advance was the addition of a 'harmonic key' on the wing joint to obtain high-register notes, sometimes even being added to existing instruments (fig.6*c*). This was first reported in France in 1787 (according to Ozi, it was 'in almost universal use') and 1786–7 in Germany (a six-keyed instrument, complete with hand rest, is depicted on the seal attached to the will of Franz Anton Pfeiffer, court bassoonist at Ludwigslust). From Ozi (1787) we also learn that French makers had by this time already shifted the G♯ key-hole away from its traditional site on the narrow butt bore to just below the F key-hole; other makers were not to follow suit for at least a generation. Ozi used an instrument by Keller of Strasbourg; the best-known Paris makers of this period were Bizey, Lot, Porthaux and Prudent. In Germany, the Dresden *Fagot* was considered the best; most notable were those made by the Grensers and their contemporaries Grundmann and Floth. A portrait of Felix Rheiner, painted in 1774 by Horemans (fig.8), shows the earliest recorded use of a pinhole in the crook, here operated by a key. Cugnier also advocated the pinhole in 1780, but it was not to come into general use until the 19th century. Almenraeder considered that it might be dispensed with on a broken-in, but not on a new, instrument. Extra keys of any sort were slow in becoming standard: Koch's lexicon of 1802 describes the five-key instrument with two octave keys 'found on recent instruments'.

In England, bassoons were made in considerable quantities throughout the 18th century; John Ashbury (*fl* London, 1698), Peter Bressan (1663–1731) and Thomas Stanesby (i) are the earliest recorded makers. However, only two English bassoons have survived from before 1750 (one each by Stanesby (i) and (ii); see fig.6*b*). The Milhouses of Newark and London later became the most notable makers. The bell of these earlier English instruments has a characteristic baluster contour and a pronounced inverted taper. The widespread use of church bands, in some places having up to seven instruments, as well as the demands of professional and military music making, gave work to numerous makers in London and the provinces. The tone-colour of the bassoon became more mellow and expressive throughout the 18th century. In Germany, Mattheson's 'stoltze Basson' (1713) became the 'Instrument der Liebe' of Koch (1802), while French writers stressed its powers of expression, comparing it to the human voice. The early Sonata by Telemann (1728) already makes considerable technical demands, and the works written by Mozart in 1774 (K191/186*e* and 292/196*c*) indicate the expressive range expected from the instrument by then.

4. DEVELOPMENT OF THE MODERN BASSOON. In the 19th century, several factors helped to bring about developments in instrument making. These included the

8. Felix Rheiner: portrait by Peter Jacob Horemans, 1774 (Bayerisches Nationalmuseum, Munich); this is the earliest recorded evidence of a pinhole in the crook of a bassoon, here operated by a key

increasing demands of composers regarding technique, expression and extension of the range upward; the rise of the solo virtuoso-composer; larger orchestras and concert halls demanding louder-toned instruments; international trade exhibitions encouraging competition and experiment; instrument makers who had backgrounds as excellent performers (including Savary *jeune* and Almenraeder); and technical advice from acoustic experts such as Gottfried Weber.

While Cugnier's exceptional chart of 1780 showed fingerings up to *f″* apparently possible on a five-key instrument without octave keys, the gradual introduction of up to three such keys on the wing undoubtedly facilitated notes from *a′* upwards, even if composers were still reluctant to write above *g′* in the orchestra. Simiot of Lyons, an important innovator, provided, in addition to these, closed keys for *B′* and C♯, notes hitherto unobtainable except by 'faking'; other refinements included bushing finger-holes with metal tubes against water, and (in 1817) replacing the cork plug with a metal U-bend bow, an improvement later adopted in Germany.

Improvements made by the leading Paris makers Savary *jeune* and Adler included key-rollers (introduced in 1823) and one or two tuning-slides on the wing to obviate the need for several *corps de rechange*. Attempts were made to obtain the greater volume desired for the military band by widening the end of the bore with a broad flaring bell, or even widening the bore of the entire instrument (Winnen's 'Bassonore' of 1834), and by making the instrument in metal. Both Charles-Joseph and Adolphe Sax experimented with brass instruments with covered keys; Sax *fils* patented in 1851 a 24-key metal bassoon with regularly spaced holes which was demonstrated at the London Exhibition that year. The instrument favourably impressed Boehm, who subsequently calculated his 'Schema' of hole dimensions for a bassoon bore which Triébert and Marzoli of Paris used for their model of 1855, together with many of Boehm's innovations for the uniquely intricate keywork (shown in fig.6*d*). Another system comparable to that of Sax was worked out in London by Ward and Tamplini and patented in 1853. However, altering the traditional relationships between size and position of holes and wall thicknesses caused the instrument to lose its characteristic tone quality. The complexity and expense also militated against the 'Boehm bassoon', and it failed to catch on. Meanwhile, however, the efforts of the player and teacher Jancourt, working with Triébert, Gautrot *aîné* and Buffet-Crampon, led to the development in 1879 of the 22-key model which has with minor modifications since established itself as the standard French-system bassoon (fig.1*b*).

In spite of the achievements of the Dresden makers, the bassoon in Germany was still far from satisfactory, especially as compared to the other woodwinds. Fröhlich (1810–11), who praised its qualities – the majesty of its bass and the grace of its middle and high registers – described the situation at this time: to adjust to different pitches, instruments were sold with a set of three wing joints of differing lengths, and with as many crooks. Standard bassoons had six keys, the more recent ones with two extra 'octave' keys on the wing for *a′* and *c″*; but many instruments still had only five or even four keys. Because of the lack of standardization of keywork or bore, no given set of fingerings would suit everyone; different notes were always out of tune, needing correction with special fingerings. On French bassoons of the period many fingerings were different; those given in the 1805 and 1806 translations of Ozi's 1787 tutor were impracticable on German-built instruments.

This state of affairs was to be remedied by Carl Almenraeder (1786–1843), the 'Boehm of the bassoon' (Sachs, *Reallexikon*, 1913). Though some of his innovations can be traced to others, he nevertheless remains the most important figure in the history of the instrument. With the advantage, like Boehm and Savary, of a virtuoso ability on his instrument, he had experience as bandmaster, teacher, player and composer. In 1817, while playing in the Mainz orchestra, he met Gottfried Weber, who had recently published valuable articles on woodwind acoustics, and started working in the Schott factory at those experiments to improve and reform the bassoon which were to occupy him almost up until his death in 1843. His treatise of 1823 and subsequent articles describe how, by adding certain keys and relocating others, he improved the intonation and response of certain notes, extended the range up to *g″* and facilitated passages in extreme keys. While leaving the bore as far as the fifth finger-hole essentially unaltered, he enlarged the tone holes sounding from A downwards and moved them further down towards the bell. Highly significant too was the replacing of the old resonance hole in the bell with an open key for *B′*. Reports of these improvements appearing in Schott's house journal *Caecilia* attracted the attention of Beethoven, who closely questioned the local Viennese player Mittag about them and even asked Schott (letter of 25 November 1825) to send him one of the new instruments. An important discovery was that the intonation and response of certain notes could be improved by opening a second vent hole into the large bore of the double joint; other innovations included fitting a metal U-bend bow at the end of the butt, using stuffed pads and connecting keys with a pin through the inner wall of the double joint.

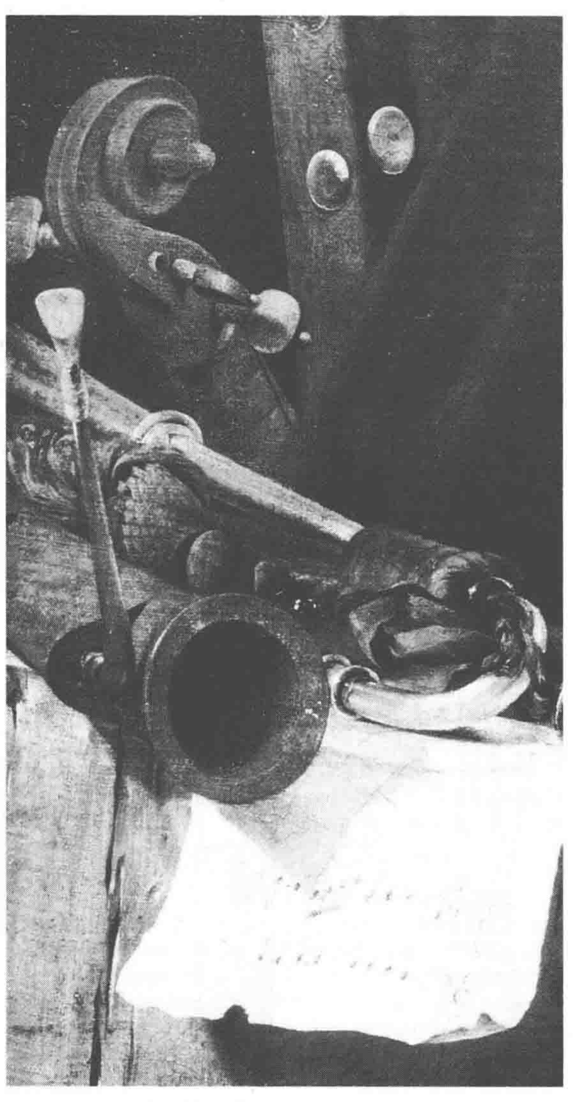
Almenraeder's monumental tutor (completed 1836, but not published until 1843) is for his improved 17-key model with a complete chromatic range of four octaves (*B♭′* to *b♭″*), and gives many interesting data on technique, reeds and instrument construction. In 1831 he had founded his own factory in Biebrich with J.A. Heckel (1812–77). After Almenraeder's death in 1843 Heckel (and his descendants for two generations) continued the manufacture and gradual refinement of what has since become known as the *Heckelfagott*, the model gradually adopted by the other German makers. Wagner, who in 1862 was living nearby and took an interest in these developments, persuaded Heckel to build a longer bell to reach *A′*, and later endorsed Wilhelm Heckel's improved double bassoon of 1879, which he subsequently employed in *Parsifal*.

By 1887, when Weissenborn's tutor for the Heckel bassoon appeared, this model of the instrument was starting to predominate throughout Germany and also in Austria, where the traditional 'Wiener Fagott' of Ziegler and Uhlmann (which retained the traditional venting of the bell by having a closed *B′* key like the instruments of the French makers) had hitherto held its own against the reformed instrument. As early as 1825 C.-J. Sax exhibited a model entirely key-operated, while his son Adolphe patented a similar 23-key model in metal in 1851. Elements derived from Boehm's 1832 and 1847 flute

models were soon adopted by such makers as Ward-Tamplini, Triébert-Marzoli and Haseneier. The latest and most promising of such 'reform' models was that of F.W. Kruspe (patented 1893), a radical new design that offered logical and simple fingering patterns, though it failed to catch on. Heckel's achievement had been to recapture the good singing qualities of the old Dresden bassoons, which the earlier Almenraeder instruments with their harder tone quality had forfeited, while retaining the technical advantages developed by Almenraeder. Further improvements by Heckel, who in 1898 claimed to have made over 4000 bassoons, included minor alterations to bore and tone-hole placement, especially on the butt; lining the wing, an idea first adopted by Morton (London, *c*1870), with hard rubber (1889); and fitting a key for the crook-hole (1905).

In England the local production of instruments had dropped considerably by Victorian times owing to the disappearance of the church bands and the preference of professional players, many of them foreigners, for French instruments. Ward's 'Boehm' model, patented in 1853, failed to raise any further interest. The foremost maker, Morton, trained in Vienna, made instruments on the French pattern. From about 1900, while English bassoons remained in military use, the requirements of low-pitch orchestras were met by instruments from abroad.

In the 20th century the use of the German bassoon gradually became more universal. In England the importing by Hans Richter of a pair of Viennese players to Manchester in 1899 subsequently established there a cell of 'German' players which, as Baines related, later spread to London. Cecil James, who retired in about 1980, was the last English protagonist of the 'Buffet' model. In the USA, the takeover occurred even earlier, and Italy and Spain have now followed suit. This process has been brought about by the ever-increasing demands of conductors and record producers for power of sound, homogeneity and balance, but has not always met with approval. In 1934 the English composer and conductor John Foulds remarked that:

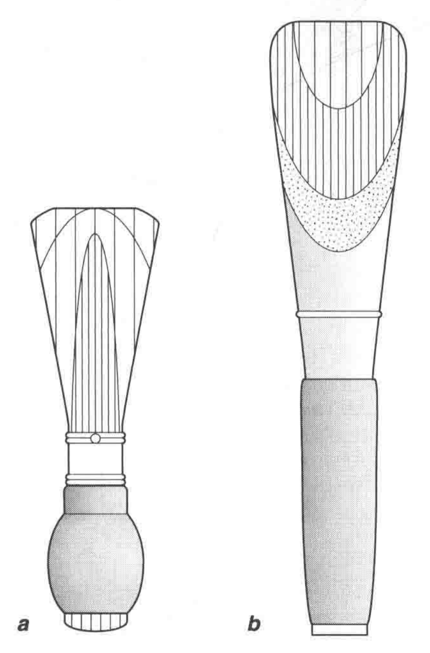


> it was the common prSeeactice of Schubert (and his contemporaries) to eke out his two horns with two bassoons in four-part harmony. Now the bassoon is the bass instrument of the oboe family. But so intent have been both players and conductors upon producing instruments capable of fulfilling the duties of deputy horns, so to say, that German bassoons of today, forsaking their true family, have become a sort of wooden horn and have, to really sensitive ears, lost more than they have gained.

He went on to say that 'French, Belgian, and some English bassoons retain the true, slightly more reedy, certainly more sympatheitc quality which allies the instrument to its true double-reed family' (*Music To-Day*, London, 1934). The dying-out of the French instrument would indisputably be a deplorable loss, and there are continuing efforts to improve the instrument and to safeguard its future. At the Paris Conservatoire both systems are currently taught in separate classes.

Among players of German bassoons, the instruments by Heckel maintained a unique status for many years. The production of instruments from other factories, however, has steadily increased. Before World War II the makers Adler, Hüller, Kohlert and Mönnig were notable. Current makers include: Adler-Sonora, Amati, Heckel, Mollenhauer, Mönnig, Moosmann, Püchner, Schreiber, Soulsby, Walter, Wolf (Europe); Bell (Canada); Fox, Linton (USA); and Yamaha (Japan). There are others in China and Brazil. 'Buffet'-model instruments, formerly produced not only in France (Paris and La Couture) but in Belgium (Mahillon) and London (Boosey, Hawkes, Morton), are now made only in Paris (Buffet-Crampon, Selmer). Current makers of replica models include: Olivier Cottet, Laurent, Vergeat (France); Moeck, Rainer Weber, Guntram Wolf (Germany); Matthew Dart, John Hanchet, Graham Lyndon-Jones, Barbara Stanley (UK); Peter de Robinson and Koningh (the Netherlands); Robert Cronin, Robinson and Ross (USA).

5. THE EARLY REED. In view of the relative importance of the reed, which is continually stressed by the writers on the instrument, it is unfortunate that so little is known about what they were like until comparatively recent times. As an ephemeral accessory in constant need of replacement, surviving specimens (and their reed cases) are relatively rare. Of these, pitifully few can be tentatively assigned to the 18th century.



The earliest iconographic source for a dulcian reed is the painting by Bernardo Bitti in Cuzco, Peru (1590–95);

9. Dulcian reed: detail from 'Portrait of a Musician' by Jan de Reyn, c1670 (Kunsthistorisches Museum, Vienna)

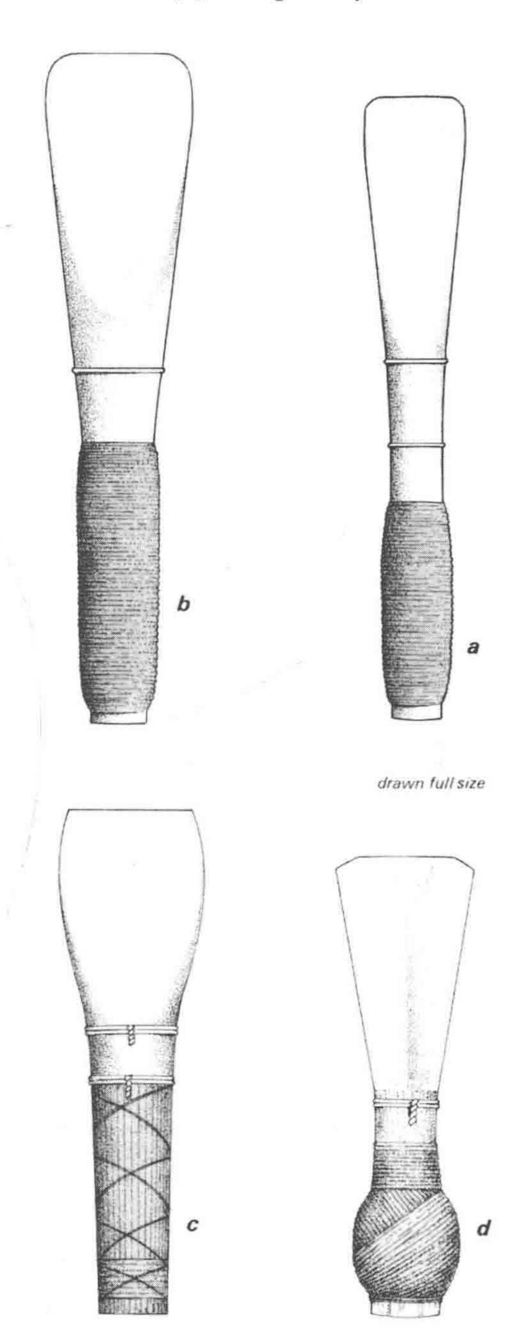
reeds are also illustrated in Praetorius (1620), Mersenne (1636–7) and by Jan de Reyn (*c*1670; fig.9); all are shaped somewhat like a straight-sided isosceles triangle. A still life by Franz Friedrich Franck (Städtische Kunstsammlungen, Augsburg) shows a dulcian with reed attached of a longer bassoon-like model with a long 'V' scrape extending to the thread wrapping. The earliest reed-making instructions are those in the *Instrumentälischer Bettlermantl* (mid-17th century); though tantalizingly vague, they offer some valuable data – the reed is to be bound with either wire or resined thread – that is not otherwise available at this early date. Otherwise, the sole evidence available is offered by the 21 reeds in Madrid that accompany the late-18th-century *bajones* there (Kenyon de Pascual, 1984; White, 1992). Most are shorter (55–6 mm), flatter and wider (19–20 mm) than bassoon reeds: like these, they are wired.

With regard to the historical bassoon reed, White's ground-breaking research (1992, 1993, 1994) has shed light on many aspects of this hitherto neglected area, while raising many intriguing questions that have yet to be answered. He has subjected the available written sources, together with some 22 reeds for *bajón* and 91 for bassoon, to close scrutiny. His methodology delineates scrape patterns topographically, distinguishing between cane stratae – bark, dermis, dense and broad parenchyme (fig.10). He is able to show that 17th-century reeds were built on staples, were relatively long and narrow, bound with waxed thread rather than metal bands, and scraped to a V or U shape. Several stapled reed-forms co-existed: a conventional oboe-type staple; a cane section inserted into an external staple; or direct reed insertion into a wide-mouthed crook. The transition from stapled to 'cane only' construction occurred towards the end of the era of the four-key bassoon (although persisting locally well into the 19th century). Thread binding was replaced by metal banding. Pre-formed bands were pressed into position to tune the reed, like the rasette (tuning-wire) of an organ reed-pipe, a system persisting longest in England.

10. Reed scrape patterns: (a) modern reed; (b) early reed

Continental reeds mostly conformed to Ozi and Almenraeder models well into the late 19th century.

The gouge, scrape, banding, size and proportions of early reeds differ markedly from their modern counterparts. Early reeds were hand-gouged, often internally tapered towards the tip, allowing blade material to be of denser cane quality. External scraping was shallow, resulting in a V or U shape stopping well short of the front banding. The adjustment capability of the 'positional' pre-formed band differed both from the continuous support of the earlier thread-wrap and the re-distribution of fulcrum forces through the fixed-position, double-wire banding of today's reed. Tensional difference between these systems may have required compensational alterations in scrape, gouge thickness and embouchure support. White's findings raise uncomfortable questions regarding how certain anachronistic practices employed today relate to 'authenticity'.



Early bassoon reeds were considerably longer than modern ones (fig.11). In *Der Fagottspieler*, the bassoon player's reed is approximately the length of his middle finger and has a wide flare. An engraving (1760) of the virtuoso Felix Rheiner shows him holding a broad reed of similar length with a horseshoe-shaped area of bark removed as in some modern oboe reeds. De Garsault (1761) illustrated a narrow reed 7·5 cm long and 1 cm wide at the tip (fig.11*a*), while Cugnier (1780) recommended a length of 28 or 29 to 32 lignes (6·5–7 cm). Ozi (1803), Fröhlich (1810–11), Neukirchner (1840) and Almenraeder (1843) all gave detailed accounts of reed making which broadly correspond, although Almenraeder's reed is narrower and longer than that of Fröhlich (fig.11*c*). All agree on one significant point: the piece of cane was placed in a wooden mould for gouging by hand with a scoop-shaped chisel in order to leave it thinner at the middle, so that when made up little thinning at the blade was required once the bark was removed. The cane at the tip of the blade was thus of finer texture and more durable: Almenraeder achieved a life of up to two years for a reed in daily use. However, the subsequent universal adoption of the gouging machine (invented by the oboist Henri Brod 1834, later developed by Triébert *c*1845) which gives a rigidly vertical gouge to the piece of cane means that with most modern reeds this rind-wood is removed towards the tip, exposing coarser-grained pith-wood. Flament (*Exercises techniques*, op.40, 1919) recommended storing reeds for four years to avoid spongy cane, but still expected them to last only about a week. It cannot be said that modern machinery and precision techniques have done much to alleviate these perennial problems.

6. Charts and tutors. Early fingering charts and tutors constitute a valuable reference source that documents the history and development of every woodwind instrument. With the bassoon, given the virtual non-availablity of surviving historical reeds, authentic matched crooks and even 'uncorrupted' instruments, fingering charts alone are able to offer unimpeachable evidence. White (1990) states that 'by applying these fingering patterns to surviving original bassoons, or modern copies of these instruments, one can determine how close the modern player/maker is coming to an original concept of sound, reed style, temperament, pitch standard, and tuning'. Likewise, guidance on questions of performing practice may be derived from tutors of the period.

Fingering charts are found in many treatises and encyclopedia articles, as well as in tutors and independently published flysheets. They are usually presented in the form of a table: they are especially useful when also accompanied by written annotations regarding individual notes. Apart from the fingerings themselves, other significant information can be gleaned by the way in which they are differentiated, how some distinguish between *d*♯′ and *e*♭′, the compass selected, and the illustrations of contemporary models that usually accompany them. Table 1 lists a selection of works containing dulcian and early bassoon charts.

Early tutors can offer information unavailable elsewhere on such significant topics as ornamentation and reed making, as well as playing techniques. The mid-17th-century German treatise *Instrumentälischer Bettlermantl* is an important early source regarding reed making (see §5 above); J.S. Halle's *Werkstätte der heutigen Künste*, iii (*c*1779) also includes brief but significant information on the subject (p.368). The earliest known monograph dedicated to the bassoon is the anonymous *Compleat Instructions for the Bassoon or Fagotto* (London, *c*1770). However the informative 20-page article in La Borde's *Essai* (pp.323–43) by the player Pierre Cugnier constitutes the first real tutor for the instrument. Two significant methods were published by Etienne Ozi: his *Méthode nouvelle et raisonée pour le basson* (1787) has seven pages of material relating to playing position, model of instrument, embouchure, choice of reed and tone production. Ozi's later work, *Nouvelle méthode de basson*, first published in 1803, is the earliest comprehensive tutor for bassoon and has remained in print ever since. It includes information on reed making, with illustrations of tools, and is an entirely different work from his 1787 tutor. The earliest original tutor published in German is Wenzel Neukirchner's *Theoretisch practische Anleitung zum Fagottspiel* (1840); the significant works of Carl Almenraeder have already been discussed (see §4 above). Julius Weissenborn's *Praktische Fagott-Schule* (1887) relates specifically to the Heckel bassoon; it remained in use for a century. More recent examples are by Seltmann and Angerhöfer (based on the German system), Maurice Allard (French system) and Sergio Penazzi (for avant-garde techniques). Additional pedagogical sources are cited in the bibliography.

7. Repertory and use. While the earliest use of the dulcian was as a strengthening element to the bass, it began in the early 17th century to assume a more independent role; Schütz in his Psalm xxiv (SWV476) used a consort of five dulcians of different pitches (total range *A*′ to *a*″) as a self-contained group. The instrument also began to be used with just one or two other instruments and continuo, for example by Mikolai Zielenski (*Fantasia*, 1611), Biagio Marini (*Affetti musicali*, op.1, 1617; *Sonate*, op.8, 1629, ded. 1626), Gabriele Usper (*Compositioni armoniche*, 1619), Giovanni Battisti Riccio (*Terzo libro delle divine lodi musicali*, 1620), Stefano Bernadi (*Madrigaletti*, 1621), Giovanni Picchi (*Canzoni da sonar*, 1625), Dario Castello (*Sonate concertante: libro primo*, 1621, *libro secondo*, 1629), Mathias Spiegler (*Olor Solymaeus nascenti Jesu*, 1631), Giovanni Battista Buonamente (*Sonate et canzoni*, 1636) and Giovanni Battista Fontana (*Sonata*, 1641). (For an extensive listing of 17th-century dulcian music see Wagner, 1976.) The first solo composition was a *Fantasia per fagotto solo* in the

11. Bassoon reeds: (a) French, mid-18th century (after de Garsault, 1761); (b) English, end of the 18th century (Bate Collection, University of Oxford); (c) German, early 19th century (after Fröhlich, 1810–11); (d) modern, by Ludwig, Munich

Canzoni, fantasie et correnti by Selma y Salaverde (Venice, 1638), who was descended from a family of Madrid instrument makers. In a dedicatory sonnet he is praised for his skill on the instrument; exceptionally, the piece descends to *B*♭′. The nine sonatas comprising the *Compositioni musicali* (1645) by the player Bertoli, the earliest set of sonatas for any one instrument, were written for the two-key dulcian (range *C* to *d*′), as was the *Sonata sopra La Monica* (from *Sacra partitura*, 1651) by the

Darmstadt *Fagottist* P.F. Böddecker, a tour de force of technical virtuosity for its time. A sonata by 'M.G.' (*c*1686, *I-MOe*) remains unpublished. Daniel Speer's tutor (1687) contains two sonatas for three dulcians designed to exemplify writing for the two-keyed instrument. Its use in ensemble is documented as early as 1589, when *tromboni, cornetti, dolcaina e fagotti* took part in the *intermedi* composed for *La Pellegrina* in Florence by Christofano Malvezzi (Elsner, 1935, p.58). The earliest known use of the instrument in opera is in Cesti's *Il pomo d'oro* (performed 1668), where it is grouped with cornetts and trombones.

The late 17th century was a point of transition when the dulcian still co-existed with the new jointed instrument; therefore it is hard in certain circumstances to know which instrument may have been intended. However, the advent of the new jointed bassoon, with its increased range of tone and expression, gave new impetus to composers, and orchestras increasingly began to include the instrument. In Hamburg, where up to five were available, Keiser's *Atlanta* (1698) and *Octavia* (1705) each included an aria accompanied by five *Fagotte*. With the operas of Lully the instrument assumed a new function of bass to a wind trio consisting of two *hautbois* and *basson*, which are used as a contrasting group to the strings (e.g. *Psyché*, 1678); the same pattern was followed by Purcell in *Dioclesian* (1690). Mattheson (1713) perceived the role of the 'Proud Bassoon' as forming 'the usual bass, *Fundament* or *Accompagnement* to the oboe'. He went on to say that 'it is reckoned easier to play, not calling for the same *Finesse* or ornamenting (but perhaps other skills instead); however anyone wishing to distinguish himself on it in the upper register with delicacy and speed has a considerable task'. In 1728 Telemann published his Sonata in F minor, with its pathetic echo effects and tenor cantilena. Two sonatinas followed in 1731. From this period there are also sonatas by Carlo Besozzi, J.F. Fasch, J.D. Heinichen and Christoph Schaffrath. Vivaldi's 39 concertos for *fagotto* (preserved at *I-Tn*), outnumbering those he wrote for any other instrument save the violin, represent a unique legacy. While RV502 was dedicated to a local player Gioseppino Biancardi, and RV496 to his Bohemian patron Count Wenzel von Morzin, the others were presumably written for the girls of the Pietà orphanage where the composer taught from 1703. Fertonani (1998) dates their composition to between 1720 and 1740. The remarkable solo writing pre-empts many of the characteristics of later bassoon style, including rapid leaping between registers, lyrical tenor passages, and the occasional use of dynamic and expression marks. While the *a'* in RV487 and the *B♭'* in RV495 would appear to demand bassoon, the somewhat restricted compass of C to *g'* employed in the other concertos suggests dulcian, raising doubt as to the instrument intended. Other concertos are by J.G. Graun, Graupner, Müthel, J.F. Fasch and J.C. Bach. Chamber works include trio sonatas by Telemann, Handel and C.P.E. Bach and a remarkable set of sonatas with two oboes by Zelenka. J.S. Bach in his cantatas gave the bassoon several important obbligatos; his use of the instrument was limited by the players at his disposal, but for players like Torlle at Cöthen he was able to make considerable demands: movements like the second Bourrée in the fourth suite require fluency in an extreme key, and the 'Quoniam' of the B minor Mass is written up to *a'*. C.P.E. Bach gave the bassoon an obbligato in his oratorio *Die Israeliten in der Wüste* (1769), while 'Non m'alletta' from *Temistocle* (1772) by J.C. Bach resembles a concerto in miniature.

In England in 1733 Galliard published his six sonatas, which display characteristic writing for the instrument: no.4 descends to *B'*, a note obtained by 'pinching'. Merci's six sonatas followed in about 1735. The use of the bassoon in English orchestras was also increasing. Galliard's 'New Concerto grosso [for] 24 Bassoons, accompanied by Caporale on the Violoncello', performed on 11 December 1744 in London, has not survived. Concertos with string accompaniment were written by Capel Bond (1766) as well as Henry Hargrave (1762). Boyce's *Solomon* (1743) contains the once well-known aria 'Softly rise' with bassoon obbligato: a reported concerto is lost.

In France Boismortier published, from 1726 onwards, several sets of duets for two bassoons; his were the earliest of a considerable quantity subsequently written for teaching purposes. Corrette wrote a charming work, *Le Phénix*, for four bassoons as well as *Les délices de la solitude* (*c*1739) with continuo. In Germany the bassoon was considered indispensable in the orchestra (even if not always given an independent part) as a means of consolidating and clarifying the bass line. Writing in 1784–5, C.F.D. Schubart asserted that the bassoon was able to 'assume every role: accompany martial music with masculine dignity, be heard majestically in church, support the opera, discourse wisely in the concert hall, lend lilt to the dance, and be everything that it wants to be' (*Ideen zu einer Ästhetik der Tonkunst*, Vienna, 1806/*R*). For orchestral playing Quantz in 1789 recommended the proportion of one bassoon to nine strings, two bassoons to 13 strings and three bassoons to 21 strings. A pair were to become the regular complement of the Classical orchestra, although in France two pairs were usual. There the demand for players was so great that for a period at the end of the century the Conservatoire was employing four professors to teach the bassoon.

Mozart's use of the instrument shows a great understanding of its nature and potentialities; his early Concerto in B♭ K191/186*e* (1774) remains the most significant in the bassoonist's repertory. It is not known who commissioned the 18-year-old composer to write it; the amateur Baron Dürnitz, a composer of bassoon music himself for whom the sonata with cello K292/196*c* was probably written, can be discounted. Jahn's supposition that he wrote three further concertos for Dürnitz is unfortunately not supported by any other evidence. A second concerto (KA230/196*d*), first published by Max Seiffert in 1934, was attributed by Hess (*MJb*, 1957) to Devienne, although Montgomery (1975) convincingly disproved this. Chamber works for bassoon and strings, a combination unlikely to entail problems of balance, were written in considerable quantities in the Classical period. G.W. Ritter's lead (1778) was followed by Carl Stamitz, Devienne, Krommer, Danzi, Johann Brandl, Reicha and many others.

Works for bassoon with orchestra from this time fall into two categories. The first consists of concertos written by professional composers, usually with specific players in mind. Among these are notable works by Danzi, David, Michael Haydn (that by Joseph Haydn, *c*1803/4, is lost), J.N. Hummel, J.W. Kalliwoda, Kozeluch and Berwald. Efforts to identify definitively a reported *Concerto da Esperienza* (*c*1845) by Rossini have not so far proved

convincing, although more than one work has been proposed. A *Pezzo da Concerto* (1813) for bassoon and horn by Paganini has recently vome to light (as has also his youthful set of three *Duetti concertanti* for violin and bassoon commissioned in 1800 by a Swedish amateur). Weber composed two works of capital importance to the repertory: the concerto written in 1811 for Brandt of Munich, in which the alternation of brilliant passage-work and lyrical melody shows off well the bassoon's capacity for both wit and pathos, and the Andante and Hungarian Rondo, a successful reworking of a piece originally for viola. A recently discovered *Capriccio* by Verdi for bass clef instrument and orchestra, datable to the early 1830s, was probably intended for bassoon. In the second category are works written as display pieces by performers (usually for their own use), for example Gebauer, Jacobi and Almenraeder. According to the fashion of the time, these often took the form of pot-pourris and variations. Among the many concertante symphonies, the one ascribed to Mozart (for oboe, clarinet, horn and bassoon) and that by Haydn (for oboe, bassoon, violin and cello) are notable. Works for two bassoons and orchestra by Dieter, Johnsen, Schacht and Vanhal survive; one by Danzi is lost.

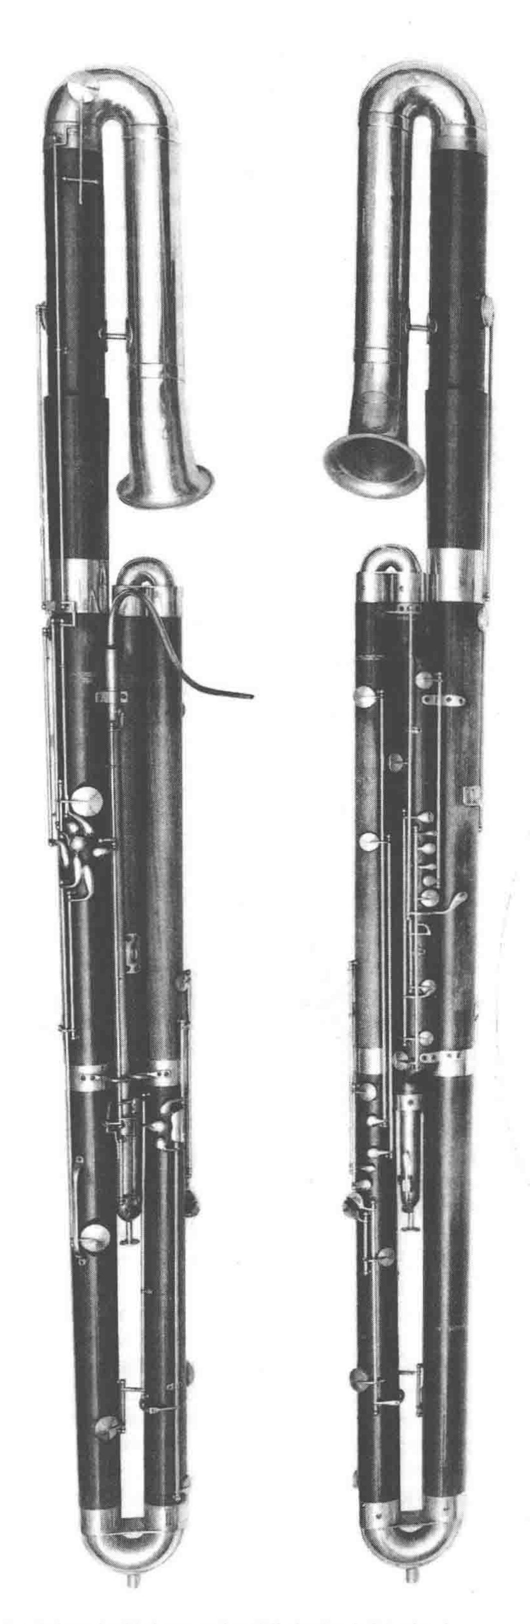
Sonatas with piano were comparatively rare at this period. The substantial sonata by Liste (1807) may be considered the most important for any woodwind instrument prior to Weber. Others were composed by Reicha, Krufft, Amon, Moscheles and Theuss; there are some smaller pieces by Spohr, Christian Rummel and Jacobi. Almenraeder's solo pieces, with their unique exploitation of the highest register up to *g′*, mark the end of an era in which solo music for wind was fashionable. In France, the virtuoso Jancourt assembled for his repertory a large number of transcriptions as well as his own compositions. Notable examples of 'morceaux de concours' were written by Pierné, Bourdeau and Büsser.

Concerning its role within the orchestra, the bassoon was criticized by 19th-century writers as being 'a weak-sounding instrument that gets lost among loud forces' (Fétis, *Revue musicale*, viii, 1834, pp.148 and 326). Fétis recommended that 'in a well-equipped wind orchestra, there should never be less than eight bassoons'; he even recorded an occasion where he used as many as 30. Berlioz too noted the bassoon's lack of volume and remarked that 'its timbre, totally lacking in *éclat* and nobility, has a propensity for the grotesque which must be borne in mind when giving it prominence'. However, he also said that 'the character of its high notes has about it something painful, complaining, almost wretched, which can sometimes be surprisingly effective in a high register melody or an accompanimental pattern' (*Grand traité d'instrumentation*, 1843).

Among the vast output of the 20th century, the following works are noteworthy: concertos and other concert works by Elgar, Wolf-Ferrari, Villa-Lobos, Jolivet, Françaix, Jacob and Maconchy; recent British works by John Addison, Judith Bingham, Stephen Dodgson, Robin Holloway, John Joubert and Peter Maxwell Davies, and in North America by Elliott Schwartz, Gunther Schuller, John T. Williams and E.T. Zwilich; a concerto by the Russian composer S.A. Gubaydulina (along with two other significant works for bassoon); concertante works by Strauss (clarinet and bassoon) and Hindemith (trumpet and bassoon); sonatas and other works by Tadeusz Baird, Roger Boutry, Eugène Bozza, Mario Castelnuovo-Tedesco, Dutilleux, Hindemith, Hurlstone, Longo, Nussio, Saint-Saëns, Skalkottas – his Sonata Concertante (1943) is the outstanding sonata of the century – and Tansman (a sonata by Poulenc, 1957, remained unfinished at his death and is lost); unaccompanied solo pieces by Apostel, Arnold, Bruno Bartolozzi, Jørgen Bentzon, Berio, Boulez, Jacob, Stockhausen and Isang Yun; bassoon ensembles by Bozza, Victor Bruns, Alois Hába, Jacob, Prokofiev, William Schuman and Peter Schickele; and bassoon and string works by Kalevi Aho, Bax, Françaix and Jacob. The increased prominence given to the bassoon in many 20th-century orchestral scores is exemplified by the opening of *The Rite of Spring*, a solo in the upper register. During the century various new techniques were demanded of the instrument, among them double- and triple-tonguing, flutter-tonguing, multiphonics, pitch bending, quarter tones, and vocalizing while playing. Many of these are exploited in Bartolozzi's *Concertazioni* for bassoon, strings and percussion and Stockhausen's *Adieu* for wind quintet (see Penazzi, 1982, and Ouzounoff, 1986). More recent is its use with contact microphones and live electronics.

8. Performers and teachers. The earliest performers known by name are the composers Bertoli, Selma y Salaverde and Böddecker, whose florid writing indicates the existence of a high level of dulcian technique in the 17th century. Vivaldi's concertos suggest that standards in Italy were particularly high; the playing of Paolo Girolamo Besozzi (1704–78) of Parma was praised by several writers, and the earliest German virtuoso of note, Felix Rheiner (1732–82) of Munich, of whom two interesting portraits survive (see fig.8), was sent to Turin to study with him. His pupil Franz Anton Pfeiffer (1752–87) was praised, among other things, for his double-tonguing; his use of 'three-part harmony' in a solo cadenza was doubtless a multiphonic effect. Georg Wenzel Ritter (1748–1808), 'the finest bassoon player I ever heard' (Kelly, 1826), of Berlin started his career in the Mannheim orchestra, making Mozart's acquaintance there; while in Paris in 1778 he published a pioneering set of bassoon quartets. The bassoon part in the Sinfonia concertante Mozart said he wrote in Paris was for him. Among Ritter's pupils were Carl Baermann (1782–1842), who succeeded him in the Berlin orchestra and became well known as a soloist, and Georg Friedrich Brandt (1773–1836) of Munich, for whom Weber wrote his concerto and Hungarian Rondo. Other German virtuosos included Carl Almenraeder, the Bohemian Wenzel Neukirchner (1805–89) of Stuttgart, who like Almenraeder wrote a tutor and solos as well as attempting practical improvements to his instrument, and Carl Jacobi (1791–1852) of Coburg, who published a number of interesting bravura pieces. Julius Weissenborn (1837–88) of Leipzig and Ludwig Milde (1849–1913) of Prague left teaching material which is still widely used today.

In France the best-known players have traditionally taught and written tutors as well. The treatise of Pierre Cugnier (*b* 1740) appeared in La Borde's *Essai* of 1780; Cugnier wrote that the bassoon 'might imitate the sound of the recorder, were it possible for that instrument to play as low. But its tone must never be denuded of that kind of "bite" (*mordant*) proper to it which lends it the necessary timbre; otherwise it will resemble that of the serpent, which would be disagreeable'. The tutors of



Etienne Ozi (1754–1813), who was appointed to the Conservatoire in 1795, have already been discussed (see §6 above). Tutors were also written by his successors Berr, Willent-Bordogny, Jancourt, Cokken and Bourdeau (see §6 above, esp. Table 1); Eugène Jancourt (1815–1901) had a notable career as a soloist as well, and wrote and arranged an extensive repertory of solo pieces; this corpus of 116 works forms a valuable contribution to the repertory. His tutor includes information on tone vibrato, which was not to be confused with embellishment. Jancourt wrote that 'this is not an ornament dictated by taste, but the result of deep feeling expressed on the instrument' and that it was obtained 'by shaking the right hand over the finger-holes'. Writing over 100 years later, the English bassoonist Archie Camden expressed his opinion that 'the wide, throbbing kind of vibrato – wow-wow, wow-wow – is in bad taste ... whether it is vocal or instrumental, and can easily make a bassoon sound like a badly played saxophone'.

In England, early players of note included Kennedy, for whom Galliard in 1733 wrote a set of sonatas; Miller, who was to Burney 'the best Bassoon I can remember'; and James Holmes (*d* 1820), who played in the première of Haydn's Concertante. John Parry (ii) (1830) wrote of Holmes that his 'tone resembled the most perfect human voice' and that his 'execution was as accurate as rapid'. In the 19th century the renowned James Mackintosh (1767–1844) was followed by the Paris-trained Belgian Friedrich Baumann (1801–56), who was brought over by the conductor Jullien. William Wotton (1832–1912) and his brother Thomas (1852–1918) were succeeded as the leading players by another notable pair, E.F. James (1861–1921), for whom Elgar (himself an amateur bassoonist) wrote his Romance of 1909, and his brother Wilfred (1872–1941). Writing in 1836, George Hogarth noted that 'English performers, in general, use stronger reeds than foreigners, with a corresponding difference in the quality of their tone' (*Musical World*, iii/38, 1836, p.180). He differentiated between a 'strong, thick reed' which 'produces a great volume of tone; but the pressure of the lips which it requires prevents the attainment of smoothness and flexibility' and a 'weak reed' which 'is easily blown into; but the tone is feeble, and defective in roundness'. Hanslick (*Welt Ausstellung: Paris 1867*) also observed that the English (along with the French and Belgians) preferred very wide reeds, which in his opinion promoted 'strength of tone at the cost of beauty'. The establishment of the German bassoon in England owes much to Archie Camden (1888–1979), who as a soloist helped popularize the instrument and trained a whole generation of players. Other influential teachers have included Karl Öhlberger (Austria), Karel Pivonka (Czech Republic), Maurice Allard (France), Albert Hennige (Germany), Mordechai Rechtman (Israel), Enzo Muccetti (Italy), Gwydion Brooke (UK), Simon Kovar and Sol Schoenbach (USA), and Roman Terëkhin (Russia).

Notable performers and teachers of the late 20th century include: Milan Turkovic (Austria), Gilbert Audin, Pascal Gallois (France), Sergio Azzolini, Dag Jensen and Klaus Thunemann (Germany), Masahito Tanaka (Japan), Valery Popov (Russia), and Norman Herzberg and Stephen Maxym (USA). 'Period' performers include Danny Bond, Michael McCraw, Milan Turkovic and Marc Vallon. Jazz bassoonists include Paul Hanson and Michael Rabinowitz.

9. The double bassoon. The modern double or contrabassoon (fig.12) is basically similar in construction to the bassoon. The normal compass extends from *B♭″* to *c′*. Modern instruments, mostly of the 'compact' model, stand about 122 cm tall with a bore length of 5·5 m. Earlier models have a tall down-turning metal bell, for which a short bassoon-shaped wooden 'C' bell may be substituted when the lowest notes are not required. There are also models descending to *A″* (or even *A♭″*) which require an even taller extension bell. The reed, somewhat larger than that of the bassoon, can vary more than the latter in its dimensions; while some players use inflated bassoon reed dimensions, others alter the ratio of blade to shaft (as required by the model of instrument). The crook fits into a metal shank incorporating a tuning-slide and water-key. The contrabassoon is a transposing instrument, notated one octave higher than it sounds; in a few scores (Wagner, Debussy) its part is written at pitch. As with the bassoon, the crook is crucial as regards response, intonation and tone. The basic problem for the player is to produce a sound of good quality which will nevertheless 'tell' in a tutti passage. While the upper register is weak, it is in the lower register that the contrabassoon sounds at its best, lending a rich organ-like sonority to the full wind section. Brahms specified its use in his Requiem op.45, should no organ be available (letter to Hermann Levi, spring 1869). From the turn of the century, its orchestral role became more independent (works by Ravel, Schoenberg, Berg, Stravinsky, Britten, etc.). Works such as Schoenberg's *Kammersymphonie* op.9 no.1 and Berg's *Kammerkonzert* set new standards for the player. Modern scores often demand the player to double between bassoon and contra, a manoeuvre often requiring considerable dexterity. During the era of acoustic recording, the instrument proved an indispensable reinforcement for the string bass. Rarely, a pair is called for; Schoenberg in his *Gurrelieder* allowed the first player to appear in the unusual role of inner voice. Its use in a solo context is only a recent development. As early as 1922 Ervín Schulhoff scored his *Bassnachtigal* for unaccompanied double bassoon, partly for extra-musical reasons; more recently concert works have been written by Henk Badings, Victor Bruns, Ruth Gipps, Roger Smalley and Gunther Schuller. There are compositions for double bassoon and piano by Victor Bruns and Vítězslav Novák.

If the folding of 8′ register pommers in the interests of commodity made sense, this was even more the case for 16′ models. Larger members of the bassoon family have existed from the earliest period of its history; Zacconi (1592) referred to more than one size of dulcian and Praetorius (2/1619) listed an entire consort whose deepest members were two 'Doppelfagotte', the *Quartfagott* (*G′* to *f*, *g*) and *Quintfagott* (*F′* to *e*, *g*). The two larger dulcians in the Vienna collection correspond to the former. Praetorius also referred to a projected *Fagotcontra* by Hans Schreiber of Berlin which would be pitched one octave below the *Choristfagott* size of dulcian. The consort of dulcians in Augsburg (see fig.5) contains one such instrument, of Italian origin, dating from the second half of the 16th century (see §2 above). The instrument is constructed of five sections, the glued tenons strengthened with ornamental bands. Of the four keys, the E and D thumb-keys are mounted one over the other. A flush pepper-pot lid similar to that of the *gedackt* dulcian is

12. Modern double bassoon by Wilhelm Heckel, Biebrich (private collection)

inserted in the bell (see Weber, 1991). Another early period *Oktavbass* instrument is at Dresden (Museum für Kunsthandwerke, Schloss Pillnitz). The other instruments known are two that are slightly later, now in the Schlossmuseum, Sondershausen (one is dated 1681; both are ascribed to Johann Bohlmann) which, aside from detachable bell are of one-piece construction. Four early octave bassoon models survive. One in Leipzig is signed A. Eichentopf, dated 1714. Another in Sondershausen is unsigned but attributed by Heyde to the same maker and tentatively dated to *ante* 1711 (Heyde, 1987). These are like a large version of one of Denner's bassoons and descend to *B♭″*. An interesting example in the Museum Carolino Augusteum, Salzburg, by the Milanese maker Anciuti, is dated 1732. In England Talbot (*c*1695) mentioned a 'Pedal or Double Basson' descending to *F′*, which would appear to be a jointed version of the 'Quintfagott' of Praetorius. The famous London maker Thomas Stanesby (i) is reported to have made a double bassoon in 1727; a fine specimen in Dublin by his son (dated 1739) descends to *B♭″*, is built like a large bassoon of the period with four keys, and stands 253 cm high. A contemporary advertisement refers to 'Two Grand or Double Bassoons, made by Mr Stanesby jun. the greatness of whose sound surpasses that of any other Bass Instrument whatsoever'. The double bassoon is not referred to in England for several decades after 1803, and it is unlikely that any other such English instruments were made until the late 19th century.

In Germany the *Quartfagott* was more common than the true *Kontrafagott* pitched one octave below the normal bassoon. Bach used the former in the cantata *Der Himmel lacht! die Erde Jubilieret* BWV31 (1715), and in his *St John Passion* a 'continuo pro Bassono grosso' part is mentioned. Some works (e.g. the cantata *Nach dir, Herr, verlanget mich* BWV150) which contain passages descending to written *A′* were transposed so as to enable old *Chorton* instruments (bassoon, organ) to play with newer low-pitch woodwinds. *Kontrafagotte* were included in German and Austrian military bands towards the end of the 18th century and were used occasionally in the orchestra when available. Mozart wrote a part for *gran fagotto* descending to *C′* in his *Maurerische Trauermusik* K 477/479*a* (however, his Serenade for 13 wind instruments K361/370*a* specifies *contrabasso*, i.e. string bass). By 1807 the Vienna court orchestra included a double bassoon, and Haydn and Beethoven made use of it in their larger works.

During the 19th century, experiments were made by many different makers to develop a satisfactory double bassoon, mainly to satisfy the need for a powerful contrabass-register instrument in the military band. One type developed was of metal, with a closed key for each note; the earliest maker was Stehle of Vienna, who exhibited his 'Harmonie-Bass' there in 1839. It measured 169 cm and its 15 keys were operated singly like those of the ophicleide giving a range of two and a quarter octaves from *E♭″* to *g*. Six of these instruments survive, of which two are in Budapest, and one each in Leipzig, Nuremberg, Paris and Toronto. Later models were more compact: these included Červený's 'Tritonicon' of 1856 and Moritz's 'Claviatur-Contrafagott', which was fitted with a keyboard like that of a piano-accordion. A version by Mahillon from 1868 was called 'contrebasse à anche', and later on similar instruments of this name (Eng. reed

contrabass; Ger. Rohrkontrabass; It. contrabbasso ad ancia) were produced for military bands in France and Italy. The deepest of all was Červený's 'Subkontrafagott' of 1867 which descended to *B♭″*. Another solution was to widen the bore. Haseneier's wooden 'Contrabassophon' of 1847 had a bore which flared from 6 mm to over 10 cm and tone holes of exceptionally large diameter. It had 19 keys covering all holes and its range extended down to *C′*. Since the tube was in four sections, the overall length of the instrument was only 140 cm; it was considered a success and was copied by several makers. Some models, such as that of Berthold in 1875, were made in papier-mâché to lessen the weight; W.H. Stone brought one such to England, where it was copied by Morton. However, the open and not easily controlled tone of all these instruments, while acceptable in the military band, was not suitable for the orchestra. The contrabass sarrusophone which later replaced them in France is still found occasionally and appears in some scores by Ravel, Debussy and Delius.

However, it was the achievement of the Heckel factory to bring about the development of the modern instrument. For the preceding years the double bassoons outwardly resembled a large bassoon with a long looped metal crook; their range descended to *D′* or *C′*. In 1875–6 J.A. Heckel redesigned the instrument, retaining its narrow bore but disposing it into three separate wooden tubes; it was held on the left of the player's body and its range descended to *C′* (it was patented in 1877 by Heckel's foreman Friedrich Stritter). In 1879 an improved model was made which was held and fingered conventionally; Wagner praised its new-found ability to play smoothly, and subsequently employed it in *Parsifal*. For the first time the instrument was comparable to the bassoon in tone and general response. Later a down-turned metal bell was added, extending the range to *B♭″*, and after 1900 to *A″*. All subsequent instruments have been based on these Heckel models, including a version by Buffet-Crampon with French-system keywork introduced in 1906.

10. Other sizes. The family of dulcians as described by Praetorius included three progressively smaller sizes which he called *Diskantfagott*, *Altfagott* and *Fagott Piccolo* or *Singel Corthol*. A set of four small dulcians, of Spanish provenance and listed as *bajoncilli*, is now in Brussels. An early incidence of scoring for such an instrument is by Flaccomio (*Liber primus concentus*, Venice, 1611), marked 'con basoncico alias fagotto piccolo'. Ever since the appearance of the jointed bassoon, smaller-sized instruments have continued to be built by every bassoon maker of note; their survival in surprising numbers is perhaps explained by their lack of serious use. They can be divided into two categories. The more usual type of tenor bassoon pitched in F (a 5th higher than normal) or occasionally in G or E♭, was also known as the 'tenoroon'. This name, presumably a contraction of 'tenor bassoon', appears to have been originally applied to the alto oboe, and Stone in *Grove1* misleadingly confused the two instruments. The French name for this type, *basson quinte*, should not be confused with the *Quintfagott* of Praetorius, the large dulcian which descended to *F′*. The second type, pitched one octave higher than normal, is named 'octave bassoon' or 'fagottino'. A fine early specimen, 63·6 cm tall, by J.C. Denner, is in Boston.

The only known early works for small bassoon are a mid-18th-century wind parthia by J.G.M. Frost, which includes parts for two *fagotti-octavo* and two *fagotti-quarto*, and a cantata by F.W. Zachow, which includes *bassonetti*. In France a small bassoon was reportedly used about 1833 at the Bordeaux opera to replace the english horn; Larousse (1865), comparing the two instruments, considered that the tone of the *basson quinte* had greater force and penetration. Later it was used occasionally in the military band; Buffet-Crampon exhibited three new models in 1889 and Morton made some in London.

As a solo instrument, the small bassoon had long been used by such recitalists as Eugène Jancourt and E.F. James. In 1992 Guntram Wolf (Kronach) built the first tenor bassoon in modern times for the English player Richard Moore, who subsequently commissioned Victor Bruns to write for it. Another significant use has been as an instrument for young beginners: Almenraeder recommended starting ten-year-olds this way – the age at which Bärmann began his studies with Ritter. The same practice was reported in the Foundling Hospital of London and more recently in the band of a Sicilian orphanage. Since 1992 Wolf, followed by Moosmann and Howarth, has developed successful models for the seven- to ten-year-old age group.

The name 'Caledonica' was given to a modified version of the octave bassoon invented about 1825 by the Scottish bandmaster William Meikle; it had a wider flaring bore and was played with a small clarinet mouthpiece. An improved model was subsequently developed by the London maker George Wood which he called the 'alto fagotto'.

WILLIAM WATERHOUSE

Bassoon stop. Name given to a strip of parchment or silk which is made to buzz against the bass strings of the piano by means of a handstop, knee lever or pedal. It was first used towards the end of the 18th century and continued to be popular on the Continent until about 1840.

DAVID ROWLAND

Basso ostinato. *See* GROUND and OSTINATO.

Basso profondo (It.: 'deep bass'). A term first used in the late 19th century to describe a particularly deep, resonant bass voice, often associated with Russian basses and choral singing (*see* BASS (ii)). Earlier identifications of this voice type appear especially in France. Brossard (*Dictionaire de musique*, 1703) writes that this deep voice is called *bassista*, or 'more commonly, *basse-contre*'. Rousseau (*Dictionnaire de musique*, 1768) states that the *basse-contre* 'sings the bass under the bass itself, and should not be confused with the *contre-basse*, which is an instrument'. Raguenet (*Paralèle*, 1702; Eng. trans., 1709) specifically cites the low bass as a particular strength of French opera as opposed to Italian:

> Our operas have a farther advantage over the Italian in respect of the voice, and that is the bass, which is so frequent among us and so rarely to be met with in Italy. For every man that has an ear will witness with me that nothing can be more charming than a good bass; the simple sound of these basses, which sometimes seems to sink into a profound abyss, has something wonderfully charming in it. . .When the persons of gods or kings, a Jupiter, Neptune, Priam, or Agamemnon, are brought on the stage, our actors, with their deep voices, give 'em an air of majesty, quite different from that of the feign'd basses among the Italians, which have neither depth nor strength

In opera, the deep bass solo voice has so often been associated with roles of great authority or majesty that today 'profondo' sometimes is taken to mean 'profound' as well as 'low'. Examples from Mozart operas include Sarastro from *Die Zauberflöte* and Osmin from *Die Entführung aus dem Serail*; later roles include the Grand Inquisitor in Verdi's *Don Carlos* (1867). The Russian school of singers has produced notable deep basses although the most famous exponents (Chaliapin, Regzen) have not been remarkable for their depth and the great Russian roles do not make heavy demands on the lowest register. The *basso profondo* is distinguished from the BASSO CANTANTE by its lower range extension and especially its power (*see also* BASSE NOBLE).

J.B. STEANE, ELLEN T. HARRIS

Basso seguente. A term used by Adriano Banchieri in *Ecclesiastiche sinfonie ... per sonare et cantare et sopra un basso seguente* op.16 (Venice, 1607) to describe the work's CONTINUO bass part, which was drawn from whichever part in the ensemble was the lowest at any one moment. In the third edition of *Cartella* (Venice, 1614 as *Cartella musicale*), Banchieri offered the term *barittono* as an equivalent, thereby pinpointing the wide range of such a bass part. The *Cartella* also suggests that a *basso seguente* part is by definition unbarred (? i.e. unbroken or *seguente*) and therefore less useful to an organist directing an ensemble than a barred bass part or *bassi continui spartiti*. The use of the term in a restricted sense is essentially a theorist's, and such a composer as G. Piccioni does not appear to have intended any strict distinction between it and *basso continuo* when he published his *Concerti ecclesiastici* for voices *con il suo basso seguito* (Venice, 1610). However, the notion of a 'bass' line played by one or other continuo instrument and incorporating whatever notes or phrases in the ensemble happened to be lowest – for instance, the opening treble theme of a fugue – was one to live well into the second half of the 18th century, especially in Italian and italianate music. Theorists from Praetorius to Quantz and later generally called it the *bassetto* or *bassetgen* part, and it is one of the unsolved questions in figured bass playing – to know when composers no longer expected continuo players to double themes and answers in a fugal exposition.

PETER WILLIAMS/DAVID LEDBETTER

Bass tuba. *See* TUBA (i). The first instrument to be designated 'tuba', introduced in Germany in 1835, was called Bass-Tuba.

Bassus (medieval Lat.: 'low'). The lowest voice in a polyphonic composition. In the second half of the 15th century, as four-part writing became increasingly common, composers invented various designations for the lowest voice: *tenor secundus* (?Du Fay, *Missa 'Caput'*), *theumatenor* (Busnoys, *Regina caeli laetare*), *basistenor* (Busnoys, *Victimae paschali laudes*), *baritonans* (Gaffurius, *Practica musicae*, 1496) and *contratenor bassus* (extremely common in this period). *Basis*, the classical Latin word derived from Greek and meaning 'foundation', was used by various scholars (Glarean, *Dodecachordon*, 1547), while Ornithoparchus (*Musicae activae micrologus*, 1517) used both *basis* and *bassus*. The latter became the generally accepted term in the high Renaissance.

OWEN JANDER

Bass viol. A bowed string instrument. Although in modern usage the term refers to a six- or seven-string instrument of the VIOL family often called VIOLA DA GAMBA, in the 18th and 19th centuries in the USA and occasionally in Britain 'bass viol' meant a four-string instrument tuned in 5ths like a cello. It was probably a shortened version of the term 'bass violin'. Such instruments were of two kinds: the first like a cello except for certain local constructional details, the second of larger body size but with the same string length and fingerboard as a cello, with a short neck (accommodating playing only up to the second position without recourse to thumb positions). Instruments of both kinds were occasionally made with five strings, but no contemporary instruction book refers to the practice or indicates the tuning. The large-sized instruments are called 'church basses'. Certain archaisms in construction reflect earlier European building techniques, the commonest being an f-hole in which small connecting bridges of wood are left at the turns, a groove or channel routed in the wood of the back and belly into which the ribs were fitted and glued, and the use of a foot-like extension of the neck block (almost always integral with the neck itself) projecting into the body and fixed to the wood of the back by a butted glue joint and a screw. A peculiarly American feature is the use of plank-sawn wood in the belly and back, giving the instruments a curious florid

appearance; but the best makers used quarter-sawn wood according to traditional European practice.

From the late 18th century up to the mid-19th there was an active American industry in the manufacture of these instruments, probably created partly by the demand for bass instruments to accompany the church choirs which had been relieved of their Puritan obligation to perform unaccompanied. By the 1830s there were makers specializing in the production of bass viols; over 35 are known to have been working in New England in this period. The earliest known maker was Crehore of Boston, who is reported to have made his first bass for a local music master in 1785; he made basses of both sizes. The most prominent and prolific was ABRAHAM PRESCOTT, who made his first instrument in 1809. The popularity of the instrument declined around the time of the Civil War, partly because the pipe or reed organ had superseded it in church music.

FREDERICK R. SELCH

Bass violin (Fr. *basse de violon*; It. *basso viola da braccio, violone*). The bass of the violin family in the 16th and 17th centuries. It originally had three gut strings tuned *F–c–g*. By constructing large bass violins with a string length of about 74 cm, it became possible to obtain lower notes, and in the mid-16th century a fourth string was added at the bottom, producing the *B♭′–F–c–g* tuning found in many 16th- and 17th-century treatises. Such instruments were often pictured supported by a stool or resting on the ground. However, bass violins were also made small enough to be played standing or walking, supported, in the words of Jambe de Fer (1556), 'with a little hook in an iron ring, or other thing, which is attached to the back of the said instrument'. They were probably tuned *F–c–g–d′* (*PraetoriusSM*) or *G–d–a–e′* (Banchieri, 1609, 1611, 1628), though Zacconi (*Prattica di musica*, 1592) assigned *F–c–g–d′* to the tenor *viola da braccio* – the origin of the modern notion of the 'tenor violin'. The *violoncino*, called for in collections by G.B. Fontana (1641), Cavalli (*Musiche sacre*, 1656) and others, was presumably also a type of small bass violin, though the lowest notes written for it could only have been obtained by using strings that were thick and unwieldy.

This situation was changed by the invention of thin covered or wire-wound strings dense enough to produce good low notes with a short string length. Bonta has argued that covered strings were first developed in Bologna around 1660, and that they were exploited first on the violoncello, a small variant of the bass violin. Bolognese composers soon developed a solo repertory for the cello, and it rapidly superseded the bass violin in Italy, despite the fact that it lacked the weight of tone of the larger instrument. For this reason, it became necessary to double violoncellos at the octave in orchestras, producing the standard bass scoring of later times.

Italian cellists popularized their instrument in northern Europe in the years around 1700, though the bass violin remained in use in London and Paris until the second decade of the 18th century. According to the *Privilège ... pour l'Académie Royale ... pour l'année 1712–13*, two *basses de violon* were played in the *petit choeur* and eight *basses* in the *grand choeur*, and despite contemporary references describing the *basse de violon* as a crude instrument strung with thick strings that did not speak easily, Saint-Lambert listed it as a continuo string bass. Although the *basse de violon* was probably never used as a solo instrument, Theobaldo di Gatti (*c*1650–1727) became a virtuoso on it. Large bass violins were often subsequently cut down to serve as cellos, and relatively few survive in original condition.

For further discussion of terminology for bass instruments of the violin family *see* VIOLONCELLO and VIOLONE; *see also* VIOL.

LUCY ROBINSON, PETER HOLMAN

Bastaini, Vincentio. *See* BASTINI, VINCENTIO.

Bastard [Bastart], **Jean** (*fl* 1536–52). French composer. He succeeded Jean le Bouteillier as *maître des enfants* at the Ste Chapelle, Bourges, between 1 April 1536 and 13 February 1552. In *Le temple de chasteté* (Paris, 1549, f.6*v*) François Habert praised him as a musician and a poet. Two of his four-part chansons were printed in anthologies in Paris: *Soyez seur que la repentence* (ed. in RRMR, xxxviii, 1981; RISM 1547[12]) and *Si ton plus grand désir* in 1550 (RISM 1550[7]). The five-voice motet *Ambulans Jesus juxta mare Galileae* was published with ascription to 'Bastart' in a German collection of works by internationally famous composers (RISM 1550[2]).

FRANK DOBBINS

Bastiaans, Johannes Gijsbertus (*b* Wilp, nr Deventer, 31 Oct 1812; *d* Haarlem, 16 Feb 1875). Dutch organist, composer and theorist. After early musical studies in Deventer, he moved in 1832 to Rotterdam as a watch-maker. There he studied counterpoint with C.F. Hommert (1834–6), becoming acquainted with the '48'; in 1836 he attended J.C.F. Schneider's Musikschule in Dessau. In Leipzig in 1837–8 he took composition lessons from Mendelssohn, studied the organ and hymnology with C.F. Becker and played the double bass in the orchestra of the Musikverein Euterpe.

After Bastiaans's return to the Netherlands in 1838, some of his compositions attracted the attention of the Maatschappij tot Bevordering der Toonkunst. He was

organist of the Zuiderkerk in Amsterdam (1840–58), and played the double bass in several orchestras. From 1842 to 1844 he also taught singing at the Institute for the Blind. He founded his own music theory school in 1850, adding organ lessons to the curriculum the next year; in 1853 these courses were integrated in the new music school of the Amsterdam section of Toonkunst. In 1858 Bastiaans settled in Haarlem, where he was appointed city organist and carillonneur and played on the celebrated Christian Müller organ of the Grote Kerk until his death. An acknowledged authority on the organ, he was often asked to examine newly built instruments, and in 1867 he studied pneumatic mechanics in Paris. He published several books of harmonized chorales for the Dutch Reformed Church and wrote for the monthly *Caecilia* from 1855. As a hymnologist he was on the board of the Nederlandsche Koraalvereeniging from 1864 and adviser for the Vereeniging voor Nederlandsche Muziekgeschiedenis from 1869.

Bastiaans's main importance lies in his propagation of the music of J.S. Bach in the Netherlands. In 1850 he founded a Bach society in Amsterdam and gave a Bach recital in the Westerkerk. He was a co-founder of the Bach Society in Haarlem (1867) and the national Algemeene Bachvereeniging in Rotterdam (1870). Both Bastiaans and J.A. van Eijken featured Bach's organ works in their programmes, and the Bach societies and Toonkunst began to perform his chamber and vocal music. Bastiaans also set about removing vocal items from organ concerts, evidence of a purist tendency that may be seen in his own four-part chorale harmonizations. These consist almost entirely of simple triads, in his opinion more fitting for church use than the 'worldly' 7th chords, which were best reserved for chorale preludes; in this he was influenced by Renaissance chorale settings, to which Becker had introduced him. He advocated the formation of choirs in the Reformed churches, to perform his chorales in alternation with the congregational singing. His treatise on harmony also stresses the supremacy of the triad in a manner that owes much to the theories of Moritz Hauptmann. Bastiaans's compositions reveal an indebtedness to Bach filtered through the influence of Mendelssohn and A.F. Hesse, though with more chromatic harmony. After 1850 his works became more sober in style.

JAN TEN BOKUM

Bastianelli, Giannotto (*b* San Domenico di Fiesole, Florence, 20 June 1883; *d* Tunis, 22 Sept 1927). Italian critic, composer and pianist. Largely self-taught, he became music critic of the newspapers *La nazione* (Florence) from 1915 to 1918 and *Il resto del Carlino* (Bologna) during 1919–23. He also taught composition and music history at the Nuova Scuola di Musica, Florence (1917). From 1909 to 1915 he regularly contributed to the influential Florentine cultural periodical *La voce*. His books, notably *La crisi musicale europea* (1912) in which he explored in depth the idea of decadence, are among the most thought-provoking written by any Italian musician of the time; and he had a knowledge and understanding of current trends (Skryabin, Schoenberg, etc.) which was then rare. His ideas exerted an important influence on progressive Italian musical opinion, and particularly on other composers: in 1911 he was the chief spokesman for a short-lived pressure group known as La Lega dei Cinque or 'I "Cinque" Italiani', whose other members were Pizzetti, G. F. Malipiero, Respighi and Renzo Bossi. Bastianelli's propaganda advocated 'the *risorgimento* of Italian music . . . which from the end of the golden 18th century till today has been, with very few exceptions, depressed and circumscribed by commercialism and philistinism' (Bastianelli, 1911). Parallels have been drawn between his philosophical ideas and those of some of the literary contributors to *La voce*, who showed a similar spirit of restless search and of a moral commitment more deeply felt than systematic. At the end of his life he turned increasingly towards the ideal of a new classicism, as his posthumous book *Il nuovo dio della musica* reveals clearly. Bastianelli was an imaginative but usually rather undisciplined composer; and he wrote very little music after his early 30s. This was regrettable, for such works as *Sul Bisarno* (1914) seem to presage a new assurance without losing the wayward evocativeness, sometimes strangely Slavonic in character, found in all his best pieces; while *Natura morta* (written in memory of Skryabin and clearly influenced by that composer's later music) and *Umoresca* both show a continuing search for new musical means. He committed suicide.

JOHN C.G. WATERHOUSE

Bastianini, Ettore (*b* Siena, 24 Sept 1922; *d* Sirmione, 25 Jan 1967). Italian baritone. He studied with Flamio Contini in Florence and made his début in 1945, as a bass, singing Colline at Ravenna. He also sang Tiresias (*Oedipus rex*) at La Scala in 1948. After further study he made a second début in 1951, as a baritone, at Bologna as Germont. In 1953 he sang Andrey in the Western première of *War and Peace* at Florence and made his Metropolitan début as Germont, later singing Gérard, Marcello, Posa, Enrico Ashton, Scarpia and Amonasro. He returned to La Scala in 1954 as Yevgeny Onegin and continued to sing there until 1964. His only Covent Garden appearance was in 1962 as Renato. He was specially distinguished in Verdi roles, many of which he recorded; he sang Posa and Luna in Vienna and Salzburg under Karajan. At the peak of his short career his voice was rich and warm, his phrasing both musical and aristocratic.

BIBLIOGRAPHY

GV (F. Serpa; R. Vegeto)

HAROLD ROSENTHAL/R

Bastin, Jules (*b* Brussels, 18 March 1933; *d* Brussels, 2 Dec 1996). Belgian bass. He studied in Brussels, making his début there at La Monnaie in 1960 as Charon in Monteverdi's *Orfeo*. He sang throughout Europe and in North and South America, in a repertory ranging from Rameau's *Hippolyte et Aricie*, through Mozart (notably Osmin and Dr Bartolo) and Rossini, to roles such as Titurel, Varlaam, Graumann (*Der ferne Klang*), Würfl (*The Excursions of Mr Brouček*), the King of Clubs and the Cook (*The Love for Three Oranges*) and the Theatre Director and the Banker (*Lulu*). In 1993 he took part in the first performance of Debussy's *Rodrigue et Chimène* at Lyons.

Bastin's ample, sonorous voice, jovial presence and gift for comedy made him a memorable Baron Ochs; but he was perhaps at his finest in French repertory, as can be heard in his vivid recordings of such roles as Méphistophélès (*La damnation de Faust*), Balducci (*Benvenuto Cellini*), Somarone (*Béatrice et Bénédict*) and Pandolfe (*Cendrillon*).

ELIZABETH FORBES

Bastini [Bastaini], **Vincentio** [Vincenzo di Pasquino] (*b* Lucca, *c*1529; *d* Lucca, 1591). Italian cornettist and composer. He appears to have spent his entire life in Lucca, employed by the city as a cornettist; many other members of his family were similarly employed in the 16th and 17th centuries. His service began on 27 December 1543, when he was engaged at a monthly salary of three scudi. At the same time four other players were taken on at much higher salaries: Bastini was probably paid less because he was both young and local (the accounts show a consistent tendency to pay more to musicians from outside Lucca). He published two books of madrigals, the *Primo libro de madrigali a cinque et a sei voci* (Venice, 1567) and *Secondo libro de madrigali a cinque et a sei voci* (Venice, 1578, inc.). They contain respectively 29 and 34 pieces; the first volume also includes four- and seven-part pieces, the second an eight-part dialogue for two four-part choirs, as well as pieces for four voices. In his choice of texts Bastini exhibited a highly developed taste for Petrarch: the first book includes a complete setting of the sestina *L'aer gravato*, the second book the 11-stanza canzone *Vergine bella*, likewise set complete.

PATRICIA ANN MYERS

Baston, John (*fl* 1708–39). English composer, recorder player and cellist. From 1708 to 1714 he and his brother Thomas (*fl* 1708–27), a violinist and probably also a recorder player, played in concerts at Stationers' Hall and Coachmakers' Hall, London, and at Greenwich. When the Lincoln's Inn Fields Theatre opened in 1714, they probably became members of its orchestra; they performed there regularly in the interval 'entertainments', often in Baston's own recorder concertos, which have prominent solo violin parts. By 1722 he had moved to the rival Drury Lane Theatre, where he played in the interval music (and occasionally within the plays) until 1733, always in a concerto or solo for the 'little flute' (recorder); the concertos are twice named in advertisements as being by Dieupart and Robert Woodcock. In 1727 he (cello) and his brother (violin) were among the orchestra that played in the Lord Mayor's Day Royal Entertainments. Baston was one of the original subscribers to the Society of Musicians in 1739.

His *Six Concertos in Six Parts for Violins and Flutes, viz. a Fifth, Sixth and Consort Flute* (London, 1729) are all showpieces for the soloist, who in nos.1 and 3 has a part for the normal treble recorder, in nos.2, 4 and 5 for the sixth flute (descant recorder in d″), and in no.6 for a fifth flute (descant recorder). Years of theatre experience showed Baston how to write lively, robust opening themes by balancing short phrases; they are, however, melodically undistinguished. The fast movements mostly provide busy chord-pattern work for the solo line, the simple harmonic style being unrelieved by any contrapuntal interest. Nos.3 and 6 (fast–slow) and 4 (slow–fast) have only two movements each; the others follow the Venetian three-movement model.

OWAIN EDWARDS/DAVID LASOCKI

Baston, Josquin (*fl* 1542–63). ?Netherlandish composer. He probably worked in the Netherlands, as some of his earliest works were published by Phalèse and Susato, and some of his songs have Dutch texts. An elegy for Johannes Lupi was attributed to him, apparently without grounds, by Van Maldeghem (Trésor musical, *Musique profane*, xii, Brussels, 1876); if the ascription is correct it may indicate that he was Lupi's pupil. He may be the musician named Johann (or Josquin) Baston (Basten or Paston) who was active at the courts of Austria, Denmark, Poland, Saxony and Sweden in the mid-16th century. He used a wide range of contrapuntal techniques in his chansons; his motets show features of the declamatory style that came into fashion in the mid-16th century.

WORKS

ALBERT DUNNING

Bastos, Rafael José de Menezes (*b* Salvador, Bahia, 26 Dec 1945). Brazilian ethnomusicologist. He took the BA in music (1968) and the MA in social anthropology (1976) at the University of Brasília, and completed the doctorate in human sciences (social anthropology) at the University of São Paulo (1990). His research work for his graduate studies was carried out in the High Xingu Indian reservation and dealt with the musical culture of the Kamayurá Indians. His doctoral dissertation, *A festa da Jaguatirica: uma partitura crítico-interpretativa*, deals with the complex relationship of Kamayurá music and ritual. He has been an adjunct professor of anthropology at the Federal University of Santa Catarina, teaching and researching the ethnology and ethnomusicology of South American lowland Indian cultures. He is a researcher for the Federal National Council for Research, coordinating various projects on music, culture and society, and a member of the Committee on Indigenous Affairs of the Brazilian Anthropological Association. From 1992 to 1994 he was a post-doctoral visiting scholar in anthropology at MIT, working on the project Musical Cognition and Structure: the Case of the Yawari of the Kamayurá Indians of Central Brazil, and he also worked at the Smithsonian Institution in 1994 as a research fellow. He has served in various professional national and international organizations, such as the Associação Brasileira de Antropologia, the Centro de Aperfeiçoamento do Pessoal de Nível Superior and the ICTM. Bastos has published extensively in the area of Brazilian Indian ethnomusicology and on Brazilian popular music. His scholarly approach is holistic and integrative.

GERARD BÉHAGUE

Baszny [Baschny], **Józef** (*d* Lemberg [now L'viv], after 1862). Polish composer, teacher and flautist, probably of Czech descent. He was choirmaster at Lemberg Cathedral, and from 1838 to 1844 vice-director of the music society in Lemberg. Later he taught singing and the flute in Kiev. He composed a three-act vaudeville *Skalmierzanki*, to a libretto by J.N. Kamiński (1828, manuscript in *PL-Wn*), and three operas: *Syn i córka* ('Son and Daughter'), *Więzienie Jana Kazimierza we Francji* ('The Imprisonment of Jan Kazimierz in France') and *Twardowski na Krzemionkach*, a five-act comic opera to another libretto by Kamiński. He also wrote sacred music, including a setting of the *Salve regina* (Lemberg, 1858), and some piano works, notably *Collection de polonaises* (1826) and *L'aurora boreale* (Lemberg, 1839).

ELŻBIETA DZIĘBOWSKA

Bataille, Gabriel (*b* ?Brie, *c*1575; *d* Paris, 17 Dec 1630). French composer and lutenist. Allusions to Brie in his poetry suggest that he may have come from that province. When he married on 12 February 1600 he was already in Paris. He had not at first been a professional musician: in his marriage contract he stated that he was a clerk to Germain Regnault, a member of parliament. By 1608, however, when Pierre Ballard published the first volume of Bataille's *Airs de différents autheurs, mis en tablature de luth*, he was actively engaged in music. In 1614 he was listed as a *maître de musique*. From 1619 until his death he was a member of the musical establishment of the queen, alternating the directorship each half-year with Antoine Boësset. His close friendship with Ballard, who had launched his career in music, is further shown by his having been a godfather to one of Ballard's children. When he died, both his sons, Gabriel (*c*1614–76) and Pierre, were musicians in the service of the queen.

Bataille's importance lies largely in his arrangements for solo voice and lute of polyphonic *airs de cour* by some of the leading court composers. Between 1608 and 1615, with Ballard's assistance, he published a popular series of six collections of such *airs*, which was later continued by Antoine Boësset, the leading court composer of the next generation. Most of the *airs* were originally composed by Pierre Guédron. Bataille did not change the vocal line and kept the setting very simple. Many of the sacred poems in *La pieuse alouette* (Valenciennes, 1619–21) are to be sung to the music in his collections.

Bataille also wrote his own songs. He set as *musique mesurée* ten psalms of Desportes in *vers mesuré* but mostly composed secular *airs*. A few, such as *Bacchus droit*, are typical *chansons pour boire*. He originally composed others for *ballets de cour* – *Ballet du roi* (*c*1616), *La délivrance de Renaud* (1617), *Ballet de Monseigneur le Prince* (1620), *Ballet des favoris* (*c*1626) and *Ballet des proverbes* (*c*1626) – but he never gained an important enough position at court to be able to compose as often for this major genre as did Guédron and Boësset. The remainder of his songs are simple *airs*, for four voices alone, for one voice accompanied by lute or for one voice unaccompanied. *Depuis que le flambeau* (1618) is unusual in its chromaticism and *C'en est fait ma belle Amarante* (1614) in having several fast ornaments.

WORKS

Edition: *Airs de cour pour voix et luth (1607–43)*, ed. A. Verchaly (Paris, 1961) [incl. 9 *airs* by Bataille]

Airs de différents autheurs, mis en tablature de luth par Gabriel Bataille (1608^{10}, 1609^{13}, 1611^{10}, 1613^{9}, 1614^{8}, 1615^{11}: all *R*); ed. P. Warlock (London, 1926)

15 airs, 4vv, 1613^{8}

34 airs, 1v: 21 in 1615^{12}, 5 in 1617^{9}, 1 in 1619^{10}, 3 in 1620^{11}, 4 in 1626^{11}

9 airs, 1v, lute: 5 in 1617^{8}/*R*, 1 in 1618^{9}/*R*, 3 in 1620^{11}/*R*

Batchelar [Batchilar], **Daniel.** *See* BACHELER, DANIEL.

Bate, Jennifer (*b* London, 11 Nov 1944). English organist. She studied the piano and organ with her father, H.A. Bate, and composition with Eric Thimann, and took a degree in music at Bristol University. She made her professional début in Birmingham Town Hall in 1967, her official London début in Westminster Abbey in 1969 and her Proms début, with music by Liszt, in 1974. In the same period she began to broadcast regularly for the BBC and developed an international career, with performances in several European countries and, in 1974, a tour of Australia, New Zealand and South America. She has subsequently performed frequently in duo recitals with the trumpeters Bram Wiggins and David Mason, and given concerts with the tenor Ian Partridge. Bate made her first recording, of works by Liszt, in 1977, and has since recorded prolifically, including the complete organ works of Messiaen (with whom she often performed), a series of 18th-century British music on organs of the period, and the complete organ music of Lennox Berkeley. She has taken part in many important London or British premières, among them Flor Peeters's Organ Concerto (1973), Fricker's Fifth Symphony (at the 1976 Proms), Panufnik's *Metasinfonia* (1984, making a subsequent première recording) and Messiaen's *Livre du saint sacrement* (1986, again followed by a première recording). In 1985 she gave the world première, in New York, of Peter Dickinson's Blue Rose Variations, a work dedicated to her. Bate has also acted as a consultant in organ restoration and construction, and has composed a number of works for the organ, all of which she has recorded.

RICHARD WIGMORE

Bate, Philip (Argall Turner) (*b* Glasgow, 26 March 1909; *d* London, 3 Nov 1999). British organologist. He was educated in Aberdeen, where his father was museum curator, and where he also took clarinet lessons. At the University of Aberdeen he studied pure science (BSc 1932) and did postgraduate research in geology. His main career was spent in the music department of the BBC, first as a balance and control assistant (1934–7), then as a studio manager and television producer (1937–9, 1946–56) and later (1956–68) in senior training positions. With the encouragement of Galpin he developed his interest in the history and physics of woodwind instruments and assembled an important collection of some 300 wind instruments and associated material which in 1968 he presented to the University of Oxford. The following year the Bate Collection of Historical Instruments was established at the Faculty of Music as a teaching assembly of historic instruments accessible to students. In 1946 he became founder-chairman and, from 1977 until his death, president of the Galpin Society. He was elected Fellow of the Society of Antiquaries in 1979. In 1988 he won the Curt Sachs Award of the American Musical Instrument Society. His main work was a valuable series of monographs on a wide range of wind instruments, together with entries for this dictionary. These have made him an acknowledged authority in the field.

WILLIAM WATERHOUSE

Bate, Stanley (*b* Plymouth, 12 Dec 1911; *d* London, 19 Oct 1959). English composer and pianist. His musical talents were recognized early, and by 1931 he had composed two operas. Between 1932 and 1936 he studied at the RCM with Vaughan Williams, R.O. Morris, Gordon Jacob and Arthur Benjamin, one of his fellow students being Peggy Glanville-Hicks, whom he was later to marry. He won various prizes, went on to study with Boulanger in Paris and Hindemith in Berlin. Bate's Piano Concertino, first performed at the Eastbourne Festival in 1937, brought his name before a wider audience, and he became closely associated with the London stage, writing music for several plays and working as musical director for the ballet company Les Trois Arts at the Lyric Theatre, Hammersmith. As well as composing prolifically, Bate also made his name as a pianist, and in the early 1940s he toured Australia as a lecturer and soloist, before spending a few years in the USA, where his music was well received. He returned to London in 1949. He became depressed at the lack of recognition his music received in the UK, and this led to his suicide.

Performances of Bate's music have been rare since the première of the Third Symphony at the Cheltenham Festival in 1965. Despite its overt indebtedness to Hindemith, Vaughan Williams and Walton, the symphony is his finest work, notable especially for its orchestration. Bate was highly prolific, but his music, with a few exceptions, lacks enduring quality.

MICHAEL BARLOW

Bateman, Robert (*fl* 1609; *d* London, 11 Feb 1618). English composer. The details of his life which are known have all been deduced from his will. He was a member of the Company of Musicians and apparently played the violin and viol. Evidently a man of some means, Bateman bequeathed over £300 to relations and friends, with the residue of his estate going to his wife Joan. It is possible that he was one of the many Englishmen who worked for a time on the Continent, though no direct evidence for this has come to light. Works by him were published in Hamburg in 1609, 1617 and 1621, and it is interesting to note that his 'late servant Valentine Fludd', to whom he bequeathed 'his best treble violyn, his bass viall and his tenor', was engaged at the court of Brandenburg in Berlin in 1627. Bateman left two more violins to his servant

(?apprentice) John Bolles. He was buried in the church of St Alphage on 12 February 1618.

Bateman's music was certainly ideal for the troupes of English comedians and actors to use either at home or abroad; they may have been responsible for taking it to the Continent. All his surviving pieces are short dances, light in style and very attractive. Their concise, simple forms and textures show no originality or personal characteristics beyond a marked fondness for sequential repetition; in any case it cannot be assumed that Bateman was himself responsible for the five-part versions of his pieces published in Germany. A collection of masque music compiled by Sir Nicholas L'Estrange in the 1620s is the principal manuscript source for Bateman's music (*GB-Lbl* Add.10444), though only treble and bass are given.

WORKS

ANDREW ASHBEE

Batement (Fr.). *See* ORNAMENTS, §7.

Bates, Django (Leon) (*b* Beckenham, 2 Oct 1960). English composer, keyboard player and tenor horn player. He studied at the RCM (1979) for only two weeks, then worked freelance in the early 1980s in bands led by the saxophonists Tim Whitehead and Dudu Pukwana; he also performed with Bill Bruford's Earthworks. He was a founder member in 1983 of the influential 21-piece big band Loose Tubes, which in 1987 became the first jazz ensemble to appear at the BBC Promenade Concerts. In 1991 he formed the jazz orchestra Delightful Precipice around his quartet Human Chain, initially to provide music for the Snapdragon Circus. In 1997, Human Chain joined with the Swedish vocalist Josefine Crønholm for *Quiet Nights*, commemorating the award to Bates of the Jazzpar Prize, Denmark.

Bates's prodigious talents have been reflected in resourceful reworkings of both contemporary and traditional jazz idioms: his compositions for Loose Tubes and Delightful Precipice, in particular, won acclaim for their unpredictable mixture of elements from sources as diverse as jazz, rock, Caribbean, ethnic and classical music. In the 1990s his output widened to include substantial concert works revealing the influence of pre-serial Stravinsky and American music, and characterized by considerable technical virtuosity, imaginative flair and sardonic humour; representative examples were recorded by the London Sinfonietta (*Good Evening . . . Here is the News*, 1996). The album *Quiet Nights* (1998), by the quintet of the same name, juxtaposed pop and jazz standards by Arlen, Ellington and Jobim with music by Bates featuring a sensitive application of electronic sonorities.

MERVYN COOKE

Bates, Joah (*b* Halifax, bap. 19 March 1741; *d* London, 8 June 1799). English organist and concert organizer. He studied music with Hartley, organist at Rochdale, and later, when he was at Manchester Grammar School, with John Wainwright, deputy organist of the collegiate church. A distinguished academic career took him to Eton (1756), where he studied with Edward Webb, and King's College, Cambridge, where he was elected a Fellow in 1770 and later appointed a tutor. He tutored the second son of John Montagu, 4th Earl of Sandwich, and is thought to have written a treatise on harmony about this time. Later he held various civil service posts, as commissioner of the Victualling Office, commissioner of the Customs and as director of various hospitals. He invested the whole of his and his wife's (*see* BATES, SARAH) fortunes in the Albion Mills project, and was nearly ruined when the mills were destroyed by fire in 1791.

Bates was a fierce champion of Baroque music and particularly of Handel's work in the face of strong competition in the form of the *galant* music of J.C. Bach's generation. In this he was inspired by his father, Henry Bates, who presented Handel festivals in Halifax with London singers during the 1760s. Joah Bates's enthusiasm was given substantial support when he was taken on as private secretary by the Earl of Sandwich, 1st Lord of the Admiralty, also an avid Handelian. Sandwich, Bates and Sir Watkin Williams Wynn were prime movers in establishing the Concert of Ancient (Antient) Music in 1776, of which Bates was the energetic director of music until he was succeeded by Greatorex in 1793. In company with Sir Watkin and Lord Fitzwilliam, Bates also planned the Westminster Abbey music festival in London to mark the centenary of Handel's birth. Miscalculation brought it forward a year to 1784, but it was a huge success and the commemoration concerts, which were held under the patronage of George III and involved all the leading singers and instrumentalists who could come (525 performers were named, and Burney gave a total of 828), were directed by Bates playing a harpsichord coupled to an organ by keys extending 'nineteen feet from the body of the organ, and twenty feet seven inches below the perpendicular of the set of keys by which it is usually played'.

OWAIN EDWARDS, WILLIAM WEBER

Bates [née Harrop], **Sarah** (*b* Lancs., *c*1755; *d* London, 11 Dec 1811). English singer, wife of JOAH BATES. She came from a poor family and worked in a factory in Halifax. As a girl she sang in choirs, and in 1772 was in the contingent of singers from the north at the Gloucester Music Meeting. She had the good fortune when singing at Halifax to attract the attention of Dr Howard of Leicester who is said to have introduced her to John Montagu, 4th Earl of Sandwich. She was able to devote herself to music in London, studying with Lord Sandwich's private secretary Joah Bates, whom in 1780 she married, and with Antonio Sacchini, then a popular singer. In the four years between her London début (in *Judas Maccabaeus*, Covent Garden, 14 February 1777) and her marriage she came to be in such demand as an oratorio soloist that she reputedly saved a dowry variously estimated between £6000 and £9000 (later lost when the Albion Mills burnt down in 1791). She was admired particularly for her sympathetic interpretation of Handel, and for many years was soloist at the Concert of Ancient Music which her husband directed. She was less apt to add extemporary embellishment than other singers, but her flexibility and control were effectively shown in expressive arias requiring depth of feeling. Some commentators felt they had heard nothing comparable since Mrs Cibber and considered her the finest soprano of her day, comparing her favourably with Mme Mara and Mrs Billington.

OWAIN EDWARDS

Bates, Thomas (bur. Westminster, London, 18 Aug 1679). English viol player, teacher and composer. The earliest reference to Bates is by John Playford, who, in his *Musicall Banquet* (1651), listed him among the 'excellent and able Masters' of the voice and viol in London. Bates probably served the royalist cause during the Civil War: as 'Captain' Bates he petitioned unsuccessfully for a place among the vicars-choral at St Paul's Cathedral when the choir was reconstituted in 1660–61, stating that he had formerly been in the choir of St John's College, Oxford. He was sworn as one of Charles II's musicians on 19 June 1660, receiving two posts. One was as viol player and the other as teacher of the royal children, with salaries of £40 and £50 a year respectively. Bates also served as bass viol player in the Chapel Royal; a warrant dated 30 August 1662 orders him to attend on Sundays and holy days. In spite of this potential income, payments were sparse and records show that Bates faced continual financial difficulties (*AshbeeR*, i, v, viii). He was admitted as a lay-vicar at Westminster Abbey on 23 June 1666, apparently serving until his death. Some time before February 1674 he married a widow, Abigail Hudgebut, perhaps mother of John, the publisher. They lived in the parish of St Margaret's, Westminster. Bates was buried in Westminster Abbey.

Playford included two ayres, three corants, two sarabands, a country dance, an almain and a jig by Bates in *Musick's Recreation on the Viol, Lyra-way* (1669). The manuscript *GB-Mp* MS BrM 832 has a saraband (attributed elsewhere to Simon Ives (ii)) and a corant by 'John Bates'. All these pieces are in tablature. A thematic index of Bates's music can be found in G. Dodd, ed.: *A Thematic Index of Music for Viols* (London, 1980–).

ANDREW ASHBEE

Bates, William [Jack Catch] (*fl* London *c*1750–*c*1780). English composer and singing teacher. In a court case in 1763, he was accused, probably unjustly, of attempting to sell his pupil, the singer Ann Catley, to Sir Francis Blake Delavel for immoral purposes. He wrote much music for the theatres and pleasure gardens of London and was evidently in considerable demand, judging by the number of his publications, though he was not mentioned by any contemporary writer on music. The quality of his works is generally mediocre, with much facile writing in parallel 3rds. They range in style from the Baroque idioms still present in the early Six Sonatas to the deliberate imitation of the Mannheim orchestral style in the overtures to *Pharnaces* and *The Theatrical Candidates*.

PETER WARD JONES

Bateson, Thomas (*b* ?1570–75; *d* Dublin, March 1630). English composer. It is possible that he came from the Wirral of Cheshire; he may well have been born before 1575, since he evidently had a son in 1592. Bateson was appointed organist of Chester Cathedral in 1599, and the

various payments made to him between 1601 and 1608 include one for 'mending the organs'. By 24 March 1609 he had moved to Christ Church Cathedral, Dublin, where he was organist and a vicar-choral. In 1612 (some sources give 1615) he received the BMus degree from Trinity College, Dublin, and was admitted MA in 1622. He made his will on 2 March 1630, and died a fortnight before the quarterly rent was due on his house (presumably this would have been payable on 25 March). On 30 April a new lease on his house was granted to his widow. Three of Bateson's children were baptized at Chester between 1603 and 1607.

Of Bateson's church music only one anthem survives. A service by him was sung at Chester until the early years of the 19th century, but this has since disappeared. He composed a madrigal for *The Triumphes of Oriana* (RISM 1601[16]), but it arrived too late for inclusion in that collection, appearing instead at the beginning of Bateson's own first madrigal volume (1604). In his madrigals Bateson shows himself to be an accomplished, if not a faultless, craftsman. His style is rooted in that of Morley, but he also reveals more serious intentions that bring his work closer to that of Wilbye. It may have been from the conclusions of certain of Weelkes's madrigals that Bateson caught the idea of using, in an imitative paragraph, the thematic point in augmentation in the bass as the determinant of the harmonic structure; like Weelkes, he used brief fragmented textures, especially for setting exclamations. Bateson's best madrigals in this first collection are those more elaborately scored ones in which the lyric permits passages of serious expression, and most of his five- and six-voice madrigals are of good quality. Two reset lyrics from Italian madrigal anthologies already published in England, while *Hark, heare you not*, entitled 'Orianaes farewell', is a posthumous tribute to Queen Elizabeth, with the Oriana refrain suitably rephrased.

Although there is a rather larger quantity of more serious verse in Bateson's second madrigal collection (1618), the passages of touching pathos that had provided many of the most striking moments in the earlier volume are in general less arresting than before. One piece, *If floods of teares*, is a viol-accompanied song recalling the pre-madrigalian English tradition. Of the lighter pieces in Bateson's second volume, some are prim and rather lifeless, but others, like *Camilla faire* and *Cupid in a bed of roses*, are admirable. Bateson's second collection confirms the impression given by his earlier volume of a good composer whose best work is distinctive without being in any way original.

DAVID BROWN

Bath. City in the county of Somerset, south-west England.

1. History. 2. Festival.

1. History. The musical history of Bath goes back no further than the early 18th century when from about 1704 the celebrated 'Beau' Nash first established the city as a fashionable resort. Nash soon promoted a subscription for a band of five or six musicians who were paid a guinea a week and who at first played under some large trees in a grove until the physicians persuaded Nash to permit them to play in the Pump Room itself. Eventually the little band was enlarged to seven players whose engagement at two guineas a week covered performances at the Pump Room in the mornings and at balls in the Assembly Rooms in the evenings. As early as 1747 'breakfast' concerts were announced.

It was in Bath that William Croft died in 1727, and shortly before Handel died it was announced that he intended to visit Bath for his health, though in fact he was unable to do so. J.C. Smith, who was the son of Handel's amanuensis and who eventually inherited the greater part of Handel's manuscripts, lived in retirement there from 1774 until his death. The earliest musician of note to work in Bath was Thomas Chilcot, a competent composer and organist of Bath Abbey from 1728; he also organized concerts and introduced the music of Handel to Bath audiences, and he is the reputed teacher of Thomas Linley senior. Linley was the leading professional musician of his day in Bath and responsible for the regular series of subscription concerts until he undertook the London oratorios from 1774. All his six children were born in Bath, including Thomas Linley junior, who as a boy enjoyed the friendship of Mozart, and Elizabeth Ann, the famous singer who married Sheridan. William Herschel was organist of the Octagon Chapel from 1766 to 1782, a time when his astronomical pursuits were beginning to dominate his interests in music. Benjamin Milgrove, from at least the 1760s until his death in 1810, was precentor of the Countess of Huntingdon's Chapel, for which he published 16 hymns in 1769; he was also at one time a member of the Pump Room band. A knowledgeable amateur of music who settled in Bath in the 18th century was Henry Harington, a physician by profession who also enjoyed a reputation as a glee composer. He was associated with the beginnings of the Bath Catch Club and the Harmonic Society of Bath.

The famous male soprano Venanzio Rauzzini settled in Bath in about 1777 and joined with the violinist Franz Lamotte in managing the subscription concerts, which Lamotte appears to have continued in succession to Linley. Rauzzini took over sole responsibility in 1780. W.T. Parke in his *Musical Memoirs* stated that at these concerts he brought forward 'a succession of singers of the first eminence, at a subscription amounting to no more than about two shillings and ninepence per night, being less than a third of those at the concerts in London'. Parke implied that Rauzzini lost money by this, but was defeated by opposition when he sought to increase the subscription. Haydn, on his visit to Bath in 1794, stayed with Rauzzini, in celebration of whose dog 'Turk' he wrote a round. Michael Kelly in his *Reminiscences* described musical evenings in Bath at Rauzzini's private residence. In 1807 Rauzzini engaged the soprano Catalani, who was a favourite in the city during the next 20 years. Following Rauzzini's death in 1810 the flautist Andrew Ashe (*d* 1838) continued the subscription concerts.

Despite the decline of Bath as a fashionable resort in the 19th century, it remained an important treatment centre, and continued to attract international musicians until the end of the century and beyond. The 'Pump Room' orchestra grew slowly until it was disbanded in 1939. From 1822 to 1827 the subscription concerts were administered and conducted by Sir George Smart; his own copies of the programmes for nine of these concerts are now in the British Library. The French conductor Jullien directed many concerts in the city with his Grand Orchestra between 1845 and 1859. Paganini played three times in 1831–2, and the violinist Joachim, the cellist Piatti and Bottesini, the double-bass virtuoso, performed frequently in Bath during the last half of the century. Jenny Lind gave four acclaimed recitals between 1847 and 1862, while the period 1827–65 witnessed many concerts of music from Italian operas given by leading singers of days, including Malibran, Viardot-Garcia, Mario, Grisi, Pasta, Lablache, Tamburini, Rubini and Donzelli. Liszt played three times in Bath in September 1840, Charles Hallé gave frequent piano recitals between 1855 and 1894, Clara Schumann made six appearances between 1867 and 1873 and Hans von Bülow gave four piano recitals in the period 1874–80. Other pianists to appear in the city during the last quarter of the century incuded Anton Rubinstein, Paderewski, Rosenthal, D'Albert and Dohnányi.

John David Loder, writer of the well-known violin tutor, *General and Comprehensive Instruction Book for the Violin* (1814), was for a time (*c*1820–35) in business as a music publisher in Milsom Street, Bath. Andrew Loder, probably the uncle of John David Loder, published music from 4 Orange Grove, Bath, between about 1820 and 1826. Two distinguished organists were born in Bath – James Kendrick Pyne (*b* 1852, son of J.K. Pyne senior, organist of Bath Abbey, 1840–90) and T. Tertius Noble (*b* 1867).

The earliest Assembly Rooms in Bath, known as 'Simpson's Rooms', on the Terrace Walks, were opened in 1708 and burnt in 1820. In 1728 the New Assembly Rooms ('Wiltshire's Rooms') were opened on the opposite side of the Terrace Walks, and afterwards became the Bath Literary and Scientific Institution. For many years both were used for concerts, but were superseded when the present Assembly Rooms in Bennett Street (known as 'The Upper Rooms') were built in 1771.

2. Festival. A series of international classical and jazz concerts, supplemented by occasional opera, dance, world music and non-musical events. It lasts for 17 days in May–June, and is organized by the Bath Festivals Trust with funds from Bath City Council, South West Arts, sponsors, charitable trusts and other donations. The Festivals Trust succeeded the former Festival Society in 1993, and is also responsible for other kinds of festival at different times of the year (literature, film etc.).

The 18th-century architecture of Bath's principal buildings, dating from its social heyday as a spa, has both influenced and circumscribed the nature of the music festival, which seeks to turn its surroundings to artistic advantage. The lack of any large auditorium other than Bath Abbey has led on occasion to additional concerts within the festival scheme in the neighbouring cities of Bristol and Wells.

The festival was instituted in 1948 as 'The Bath Assembly' under the artistic direction of Ian Hunter. It featured musicians of international repute in association with visiting orchestras and ensembles, in programmes almost entirely devoted to music of the 18th century. Thomas Beecham associated himself with the festival in 1955 (and conducted a production of Grétry's rarely heard *Zémire et Azor*), but mounting financial deficits forced a reconsideration of festival policy.

After being suspended in 1956–7, it was resumed on a broader musical basis under the management of Ian Hunter, at whose invitation Yehudi Menuhin became involved and was appointed artistic director from 1959. An orchestra Menuhin had formed in London to conduct for recording purposes became the Bath Festival Orchestra, and served as the nucleus for most of the concerts (it was renamed the Menuhin Festival Orchestra after his and Hunter's connection with Bath ceased in 1968). Michael Tippett was associated in 1969 and was the sole artistic director for five festivals, 1970–74, aiming to change the 18th-century bias to achieve a wider appeal and to focus attention on new music.

Tippett's successor was William Glock (1975–84), who in 1979 obtained Arts Council support to extend the festival from ten to 17 days, introduced more artists of international distinction and obtained festival commissions for new music to balance the concerts of early music he also favoured. William Mann was artistic director in 1984, and brought a strong Hungarian flavour to the programmes; he was succeeded by Amelia Freedman, who in successive years featured music from different European countries and from the USA in turn. She also incorporated jazz (which first appeared in the Menuhin era via John Dankworth) as a regular element in festival programmes.

After a year with two programme directors, Nicholas Kraemer and Jolyon Laycock, Tim Joss was appointed artistic director and chief executive in 1995, pursuing a programme policy that embraces early, 18th- and 19th-century and contemporary music, jazz, world and folk. The commitment to contemporary music and new commissions is being reaffirmed, and an education programme, linked to the main concert programme, has been set up.

WATKINS SHAW/FRANK BROWN (1), NOËL GOODWIN (2)

Bath, Hubert (*b* Barnstaple, 6 Nov 1883; *d* Harefield, 24 April 1945). English conductor and composer. He studied piano and composition at the RAM from 1901, winning the Goring Thomas Scholarship in 1904 for his opera *The Spanish Student*. Much of his work was for film and he is best remembered for *A Cornish Rhapsody*, his miniature piano concerto for the film *Love Story* (1944). For the concert hall he composed rousing marches, light concert suites and single genre movements. He was well known in the theatre and his other works include *The Visions of Hannele*, a symphonic poem based on incidental music for the stage. His operas, after Longfellow, Hardy, Gerald du Maurier and others, were less popular than the patriotic operetta *Young England*, written with Clutsam and Basil Hood, and first produced during World War I.

Bath's cantatas, especially *The Wedding of Shon Maclean* and *The Wake of O'Connor*, were taken up by choral societies all over Britain; mostly early compositions, they are no longer performed. His greatest popularity after *A Cornish Rhapsody* was to be found in his pioneering and original music for brass band contests: *Freedom*, first used in 1922, and *Honour and Glory* are technically testing and still played. Although he composed much of serious intent, it is Bath's lighter music that has endured.

WORKS
(*selective list*)

STAGE

The Spanish Student (op, after H.W. Longfellow), London, 1904; Young England (operetta, B. Hood), Birmingham, Prince of Wales, 20 Nov 1916 [musical collab. G.H. Clutsam]; Bubbles (op, 1, after A. Gregory: *Spreading the News*), Belfast, 1923; The Sire de Maletroit's Door (op, 1); The Three Strangers (op, 1, after T. Hardy), inc.; Trilby (op, 3, after G. du Maurier)

VOCAL

Cants: The Legend of Nerbudda, dramatic cant. (F.J. Fraser) 1908; The Wedding of Shon Maclean, a Scottish rhapsody (R. Buchanan), 1909 [for the Leeds Festival]; The Wake of O'Connor, an Irish rhapsody (Buchanan), 1913; The Jackdaw of Reims; Look at the Clock; The Men on the Line; Orpheus and the Sirens; Psyche's Departure

Many partsongs, solo songs and recitations with music

INSTRUMENTAL

Music for films, incl. The Thirty-Nine Steps, 1935 [musical collab. J. Beaver]; Rhodes of Africa, 1936; Love Story, 1944 [incl. A Cornish Rhapsody]

Orch: The Visions of Hannele, sym. poem, 1913, rev. 1920; African Suite, 1915; Devonia; Egyptian Suite; Norwegian Suite; Petite suite romantique; Pierrette by the Stream; Scenes from the Prophets; 2 Troubadour suites; Woodland Scenes

Many individual orch. movts., incl. Summer Nights, waltz, 1901; 2 Sea Pictures, 1909; Princess Mary, waltz, 1923; Midshipman Easy, ov.; 2 Japanese Sketches

Marches: Out of the Blue, 1931; Admirals All; Atlantic Charter; Empire Builders; The Nelson Touch

Brass band: Freedom, 1922; Honour and Glory, 1931

Org solos, incl. Toccatina, 1914; Heroic Prelude, 1928

Pf solos, incl. Coquette; Sonatina in F; Song of Autumn

PHILIP L. SCOWCROFT

Bathe, William (*b* Dublin, 2 April 1564; *d* Madrid, 17 June 1614). Irish teacher and writer. He was the son of Judge John Bathe. Anthony Wood wrote that he studied at Oxford and constructed a 'harp of a new device' which he presented in 1584 to Queen Elizabeth, to whom he taught mnemonics. By January 1585 he was in the service of Sir John Perrott, and shortly afterwards took possession of family estates in Ireland, including Drumcondra Castle. In October 1591 he left England for Spain; in August 1595 he entered the novitiate at Tournai, and studied successively at Saint Omer and Padua, where he was ordained priest in the order of Jesuits in 1599. In 1601 he was attached to the papal nuncio at the Spanish court, and three years later was appointed director of the Irish college in Lisbon. In 1606 he settled in Salamanca, where he published a language tutor, the *Janua linguarum* (1611), which was subsequently translated into many languages.

Bathe's treatise on music is first listed in Maunsell's 1595 catalogue as an 'Introduction to the true arte of Musicke, wherein are set downe, exact and easie rules, with Arguments, and their Solutions, for such as seeke to knowe the reason of the truth, which Rules, be meanes, whereby any by his owne industrie, may shortly, easily, and regulerly attaine to all such things, as to this Arte doe belong. by William Bathe, Student in Oxforde, Pr. by Abell Jeffes. 1584'. Arber recorded that in 1597 Jeffes made over the publication rights to Thomas East. No original of this, the first music textbook to appear in the English language, is known to exist, but a 17th-century manuscript copy is held in Aberdeen University; this formed the basis for an edition of the treatise (ed. C. Hill, Colorado Springs, CO, 1979). Bathe later produced a largely rewritten version under the title *A Briefe Introduction to the skill of Song: Concerning the practise, set forth by William Bathe, Gentleman. In which work is set downe X. sundry wayes of 2. parts in one upon the plainesong. Also a Table newly added of the comparisons of Cleves, how one followeth another for the naming of Notes: with other necessarie examples, to further the learner* (ed. B. Rainbow, Kilkenny, 1982). This undated revision, which has survived, is presumably that referred to in the registers of the Stationers' Company for 1596 (see Arber). In it the author roundly criticized current methods of music teaching, with their 'crabbed confused tedious rules', and claimed that using his own method he had 'in a month or less instructed a child about the age of eight years to sing ... at the first sight'.

Although Hawkins devoted most of chapter 101 of his *General History* to a discussion of Bathe's two works, he failed to recognize their historic position in English musical literature and the important innovation that they contained. Cursory inspection suggests that both books are wholly traditional; however, more careful reading shows that while the gamut is described, Bathe immediately contrasts its complexities with a more straightforward method of assigning fixed names to the notes of a scale, using the syllables *ut*, *re*, *mi*, *fa*, *sol* and *la*. The system is shown in a simple diagram using the Mixolydian scale, but as Bathe did not elaborate further on his innovation, its essential significance was not emphasized. As a result Hawkins overlooked the books' central feature – the replacement of hexachordal solmization with a system of movable sol-fa – and later writers accepted his inaccurate account without challenge.

Bathenius, Jacob. *See* BAETHEN, JACOB.

Bathori, Jane [Berthier, Jeanne-Marie] (*b* Paris, 14 June 1877; *d* Paris, 25 Jan 1970). French mezzo-soprano and producer. She studied at the Paris Conservatoire with Hortense Parent (piano) and the Belgian tenor Emile Engel, whom she married in 1908, and made her début at Nantes in 1900. Toscanini engaged her for the first La Scala performance of Humperdinck's *Hänsel und Gretel* (1902), and in Brussels she appeared in opera with her

husband. Soon, however, she decided to devote herself to concert work. Her sympathetic and authentic interpretations of works by many French composers of her time – Debussy, Ravel, Chabrier, Satie, Roussel, Milhaud and others – was very important. With Ravel's *Shéhérazade* she achieved wide acclaim. She gave the première of his *Histoires naturelles* (dedicated to her) and of his *Chansons madécasses*, both occasions creating a sensation.

During World War I Bathori managed the Théâtre du Vieux Colombier, producing such works as Chabrier's *Une éducation manquée*, Debussy's *La demoiselle élue* and Honegger's *Le dit des jeux du monde*. The Paris group of Les Six owed much to her efforts in promoting their music and, in turn, her work as a singer influenced composers. In recitals she often accompanied herself, achieving a unity of style in a wide range of songs. She made many important recordings, particularly in the 1930s, of works by French and other composers. Her two books on singing are of great interest to interpreters of French song.

In 1926 Bathori visited Argentina on a recital tour. Each year thereafter she visited Buenos Aires, taking part in the first Latin American performances of many important works (e.g. Honegger's *Le roi David* and *Judith*), and even taking some stage roles at the Teatro Colón, where in 1933 she sang Concepción in Ravel's *L'heure espagnole*. In 1935 she was awarded the Croix de la Légion d'Honneur for her services to French music. During World War II she lived and taught in Buenos Aires, and in 1942 she became organizer there of the music section of the French institute of higher studies. At the end of the war she returned to Paris, taught singing, and gave many talks on French radio.

DAVID COX

Bati, Luca (*b* Florence, 1546; *d* Florence, 17 Oct 1608). Italian composer. He was a pupil of Francesco Corteccia. In 1571 he applied unsuccessfully for the post of *maestro di cappella* in the church of the Cavalieri di S Stefano, Pisa. Between November 1579 and June 1582 he was *maestro di cappella* and organist of Amelia Cathedral, Umbria: an inventory of music (1615) at the cathedral lists a *Lamentationi* and *Vesperi*, both for 5 voices and both lost. He was *maestro di cappella* at Pisa Cathedral from 6 March to 15 November 1596 when the post lapsed owing to a fire in the cathedral. On 1 February 1599 he was appointed *maestro di cappella* of the Medici court and of Florence Cathedral, which included overseeing the music for the baptistry of S Giovanni. On 6 May 1600 he was given a benefice as a canon in the Medici church of S Lorenzo with the title 'SS Vitale and Agricola'. He held all these appointments until his death. Towards the end of his life he was probably a member of the Accademia degli Elevati, which was founded by his former pupil Marco da Gagliano in June 1607. Another notable pupil was Jacopo Corsi. An inscription on Bati's portrait, still in the canons' chapter room at S Lorenzo, gives the year of his death and honours him as much for having taught Gagliano as for his positions at the Medici court and S Lorenzo.

In 1589 Bati composed music (now lost) for the *intermedi* of *L'esaltazione della croce* (text by Cecchi), a *sacra rappresentazione* performed by boys of the Compagnia di S Giovanni Evangelista, a lay religious confraternity, for the festivities attendant on the marriage of Grand Duke Ferdinand I and Christine of Lorraine. He also wrote music (also lost) for *Le fiamme d'amore* (text by Gino Ginori), a mascherata presented on 26 February 1595 on a float that toured the streets of Florence during Carnival. He also composed the third and fourth choruses, now also lost, for Caccini's *Il rapimento di Cefalo* (text by Chiabrera) given in Florence on 9 October 1600 as one of the festival entertainments for the wedding of Maria de' Medici and Henri IV of France. His surviving madrigals and sacred works show him to have been a highly skilled composer. Modern features of his style include careful declamation, use of concertato-like contrast, and incorporation of the canzonetta style into a five-part madrigal ensemble. Not involved in the new monodic experiments, his works reveal elements of the polyphonic tradition of the florentine school. Standing between the composers Corteccia and Marcoda Gagliano, Bati's contribution was to sustain and reinforce authorative stylistic dignity.

WORKS

Il primo libro de madrigali, 5vv (Venice, 1594[11])
Il secondo libro de madrigali, 5vv (Venice, 1598[11]), ed. in Gargiulo, 1991
Works in 1601[5], 1602[6], 1602[9], 1604[17], 1605[13], 1605[14], 1606[11]
Sacred works, incl. masses, Mag, TeD, motets, hymns: *I-Fd*, S Lorenzo Archivo del Capitolo, Florence
Intermedi for L'esaltazione della croce (G. Cecchi), sacra rappresentazione, Florence, 1589, lost
Le fiamme d'amore (G. Ginori), mascherata, Florence, 26 Feb 1595, lost
2 choruses for G. Caccini: Il rapimento di Cefalo (Chiabrera), Florence, 9 Oct 1600, lost

EDMOND STRAINCHAMPS/PIERO GARGIULO

Batimientos (Sp.). *See* BEATS.

Batius, Jacob. *See* BAETHEN, JACOB.

Bátiz, Enrique (*b* Mexico City, 4 May 1942). Mexican conductor and pianist. He began piano studies in 1950 with Francisco Agea, and continued from 1960 with György Sandor. Bátiz attended the Southern Methodist University in Dallas, but in 1962 moved to the Juilliard School of Music for piano studies with Adele Marcus, graduating there in 1965. In the same year he was a semi-finalist in the Marguerite Long Piano Competition. He then moved to Poland where from 1967 to 1970 he studied the piano with Zbigniew Drzewiecke and conducting with Stanisław Wisłocki. In 1969 he made his conducting début with the Orquesta Sinfónica de Xalapa in Mexico. Two years later he made his most important contribution to Mexican music, the founding of the Orquesta Sinfónica Nacional de Mexico, an ensemble he conducted until 1983, and again from 1990. He also served (1983–9) as music director of the Mexico City PO, and from 1984 has been a principal guest conductor with the RPO in London. In these various capacities Bátiz has made more than 150 recordings, including cycles of Beethoven and Tchaikovsky symphonies. He has also appeared as guest conductor with major orchestras in Europe, the Americas and Asia, and is particularly esteemed for his performances of Latin music in which colour and rhythm predominate.

CHARLES BARBER

Baton (Fr. *baguette*; Ger. *Taktstock*; It. *bacchetta*). The stick with which the conductor of an orchestra or similar ensemble beats the time. An approximation of the modern baton, a thin, tapered stick, perhaps half a metre long, was evidently first used in the late 18th century, but the use of a roll of paper or violin bow for this purpose continued into the 19th century. A more distant predecessor of the baton was the precentor's staff mentioned by various writers from the 15th century to the 17th. For further historical information *see* CONDUCTING.

Bâton (Fr.). *See* ENDPIN.

Bâton, Charles [*le jeune*] (*b* Versailles, early 18th century; *d* Paris, after 1754). French composer and virtuoso on the hurdy-gurdy, son of Henri Bâton, who revolutionized the construction of the instrument. The jurist Antoine Terrasson, a contemporary of Bâton *le jeune*, an amateur player of the veille, and author of a history of the vielle, recounted his progress:

> Mr Bâton ... had laboured to make the most of his father's work, and having improved himself in performance on the hurdy-gurdy, as in the composition of music, he earned himself a reputation which procured for him the honour of instructing several princesses to play that instrument. Mr Bâton, after having for a long time performed with success music written for the musette and for the hurdy-gurdy, was the first to set about composing pieces expressly for the hurdy-gurdy – that is, pieces wrought in accordance with the hand positions and the characters befitting that instrument. It was in this style that Mr Bâton produced, to begin with, a first volume which he dedicated to the late *Mademoiselle* [the King's niece]; some years after that he produced a second one which he dedicated to *Madame la Duchesse* [of Orleans]; finally, he has just produced a third volume composed of six sonatas which suffice to show that the hurdy-gurdy is capable of all the beauty and of all the expression of the other instruments.

Bâton was considered, along with Danguy, one of the foremost players of his time. His music consists almost exclusively of suites and dance movements and character pieces. These works reveal refinement combined with virtuosity consisting of rapid scales and arpeggios easily executed on the hurdy-gurdy. Many articulation markings provide a useful source for the study of performing practice related to the instrument. The suites for two hurdy-gurdies are constructed on the basis of equality, and establish a dialogue and interchange between the two instruments. His sonatas, while by no means the most technically demanding works for the hurdy-gurdy, fully exploit the capabilities of the instrument. They reveal an awareness for the *galant* style in their harmonic rhythms and melodies. In these works, Bâton sometimes pushes the harmonic limits for the hurdy-gurdy: in the concluding movement of the second sonata, for example, he explores dissonance by introducing neapolitan harmonies (D♭s) against the C–G drones.

Bâton continued the work of his father by searching for ways to improve the hurdy-gurdy to make it more acceptable as an instrument for chamber music. A detailed notice entitled 'Trois touches augmentées à la vielle, & une autre changée de place' appeared in the *Mercure de France* in September 1750. It described Bâton's new design for the hurdy-gurdy, executed by François Feury, which extended the instrument's range and offered a more convenient layout of its keyboard. A second, briefer notice in the *Mercure de France*, June 1752, headed 'Vielle nouvelle', and a lengthy essay entitled 'Memoir sur la vielle en D-la-ré' in the same journal (143–57) in October of that year, revealed that Bâton and Feury had created an instrument with a range of almost three octaves (*d′–c″″*). The introduction of a D–A tuning, as opposed to the standard C–G tuning, made possible the execution of many pieces written for flute or violin. Further, Bâton eliminated the *trompette*, the vibrating bridge which creates a sharp articulation at the beginning of each note, in favour of the articulation which results from the keys themselves when depressed by the fingers of the left hand, resulting in a more legato execution. In conclusion, he says that after Marie Leczynska, Louis XV's queen and an avid player of the hurdy-gurdy, had examined the essay, he gave her a demonstration at Compiègne on 20 July 1752, repeating the demonstration the next day for Madame la Dauphine (Marie-Josèphe) and that they were all pleased with the new instrument. In spite of this initial success the new instrument never received the public approbation for which Bâton had hoped.

In 1753 Bâton entered the Querelle des Bouffons with a pamphlet *Examen de la 'Lettre de M. Rousseau, sur la musique françois' dans lequel on expose le plan d'une musique propre à notre langue* (Paris, 1954). A reviewer wrote: 'here is an adversary who limits himself to talking sense, a man who does not attack M Rousseau because his name is *Jean-Jacques* or because he was born in *Geneva*' (*Journal de trévoux*). In his pamphlet Bâton agreed with Rousseau that the Italian language had advantages over the French for lyric poetry and singability, but disagreed that French music was largely worthless and strongly refuted Rousseau's notion that fugues, counterpoint and complex harmony were (in Rousseau's term) 'une sottise'. Perhaps because the pamphlet was so well written, another disputant accused Diderot of having written it and Bâton of merely having posed as its author, but there is no evidence of that. Later French writers accused Bâton of having pretended to dispute with Rousseau only in order to agree with him; this unjust charge may have arisen from Bâton's reasonableness and his careful avoidance of the polemical tone and character

assasination used so freely by many of Rousseau's opponents.

WORKS
all published in Paris

op.	
1	[6] Suites, 3 for 2 hurdy-gurdies/musettes/fl/rec/ob, 3 for hurdy-gurdy/musette fl/rec/ob (1733)
–	Recueil de pièces, 2 musettes/hurdy-gurdies/other insts (1733)
2	La vielle amusante: divertissement en 6 suites, 1 hurdy-gurdy/musette/fl/rec/ob, bc (*c*1734)
3	6 sonates, hurdy-gurdy/musette, bc (1741), 2 for 2 hurdy-gurdies
4	Les amusements d'une heure, 2 suites, 2 hurdy-gurdies/musettes (1748/*R*)

Bâton, Henri [*l'aîné*] (*b* late 17th century; *d* Versailles, ?1728). French luthier and player on the musette and hurdy-gurdy. As early as 1672 Borjon de Scellery remarked upon the popularity of the musette among the French noblemen and the hurdy-gurdy among noble ladies. Bâton *l'aîné* took advantage of the continuing fashion for rustic instruments, and worked at transforming the musette and hurdy-gurdy from folk instruments into art ones. His younger contemporary Terrasson wrote:

> Mr Bâton, luthier at Versailles, was the first who worked at perfecting the hurdy-gurdy [*vielle*]: he had in his place several old guitars which had not been used for a long time. In 1716 the idea struck him to turn them into hurdy-gurdies, and he carried off this invention with such a great success that people wished to have only hurdy-gurdies mounted on the bodies of guitars; and these sorts of hurdy-gurdies effectively have a stronger and at the same time sweeter sound than that of the old hurdy-gurdies. Mr Bâton also added to that instrument's keyboard the low *e'* and the high *f'''*; he ornamented his hurdy-gurdies with ivory purfling; he gave the neck a form more beautiful and closely resembling the necks of bass viols – so that then all the ladies wished to play the hurdy-gurdy, and soon the preference for this instrument became general…Mr Bâton imagined that, since the hurdy-gurdies mounted on the bodies of guitars had had so much success, that instrument would take on yet more mellow sounds by mounting it on the bodies of lutes and of theorboes. Accordingly, in 1720 he carried out this new idea, and the hurdy-gurdies in the form of a lute had an even greater success than the others. It was then that the hurdy-gurdy began to face up to the other instruments and to be admitted into concerts: Messrs Baptiste [Anet] and Boismortier even composed duets and trios for the hurdy-gurdy and the musette, and all the pieces which had previously been composed for the musette also became hurdy-gurdy pieces.

The success of Bâton's ideas can be gauged in many ways: by the number of paintings and engravings of the period in which members of the nobility were portrayed playing musettes or hurdy-gurdies, by the number of stage works of the period which featured the instrument, by the many title-pages which suggested that their music was suited for these instruments, by the several instruction books published, by the number of makers who turned out these instruments, and by the number of virtuosos on them. The instruments were heard at the Concert Spirituel at Christmas 1731, 1732 and 1733, and were praised by those glad to hear simple tunes but criticized by those who regarded rustic instruments as too primitive.

NEAL ZASLAW

Batrachus, Johannes. *See* FROSCH, JOHANNES.

Batsh, 'Umar al- (*b* Aleppo, 1885; *d* Aleppo, 11 Dec 1950). Syrian composer and mūwashshaḥ expert. He learned classical *muwashshaḥ* songs and their accompanying *samah* dances in Aleppo, memorizing thousands of pieces. He quickly excelled in composing new *muwashshaḥ* and extended the individual performer's role. He was extremely knowledgeable about rare modes (*maqāmāt*) in Arab music, and composed *muwashshaḥ* within any given *maqām* to demonstrate its particular modal characteristics. Once he composed a *muwashshaḥ* based on 14 consecutive *maqāmāt*, with the *maqām* names in the lyrics. He also invented the *samah* cross-dance technique (dancers cross paths to different rhythms and melodic sections of the *muwashshaḥ*).

In 1947 he began teaching *muwashshaḥ* and *samah* at the Oriental Musical Institute in Damascus (Al-ma'had al-mūsīqī al-sharqī); he taught many future masters including Ṣabāḥ Fakhrī. He instructed the girls of the Damascus Dawhet al-'adab School in *samah*; their performance at the university theatre was the first instance of socially acceptable public female dance. In 1949 he returned to Aleppo, where he taught at Fu'ād Rajāī's Music Institute and instructed the radio station's male professional chorus.

SAADALLA AGHA AL-KALAA

Battaglia (It.: 'battle'). A piece of music descriptive of a battle. *See* BATTLE MUSIC.

Battaille, Charles (Amable) (*b* Nantes, 30 Sept 1822; *d* Paris, 2 May 1872). French bass. At first he was trained as a doctor, like his father, and subsequently practised as such in Caen, but he moved to Paris and from 1845 to 1847 studied at the Conservatoire with the younger Garcia. He made his début at the Opéra-Comique as Sulpice in *La fille du régiment* (22 June 1848). A versatile actor, capable of florid singing and possessing an extensive range, he was soon entrusted with principal roles in new operas by Halévy, Adam, Thomas and others, one of his best being that of Peter the Great in Meyerbeer's *L'étoile du nord* (16 February 1854). His career was interrupted by a serious throat ailment in 1857, but in 1860 he appeared at the Théâtre Lyrique as Jacques Sincère in Halévy's *Val d'Andorre* (a role he had created 12 years earlier) and in the première of Gounod's *Philémon et Baucis* (2 February). In the following year he sang both at the Théâtre Lyrique and the Opéra-Comique (in a revival

of *L'étoile du nord*), but, after a final appearance at the Théâtre Lyrique early in 1863, he retired from the stage. Battaille taught singing at the Conservatoire from 1851, and published work on the pedagogy of singing based on his medical expertise. Between 1865 and 1867 he gave lectures in several large venues in Paris; these included a talk on the French version of Mozart's *Don Giovanni*. Towards the end of his life, he was elected *sous-préfet* of Ancenis (Loire-Inférieure) and, when the area was attacked by smallpox during the Franco-Prussian War, he practised as a doctor again.

Battement [batement, battements] (Fr.). A term used to denote particular ornaments. *See* ORNAMENTS, §7.

Battements (Fr.). *See* BEATS.

Batten. Composer, possibly identifiable with BATTY.

Batten [Battin, Battyn], **Adrian** (*b* Salisbury, bap. 1 March 1591; *d* London, 1637). English composer. According to the registers of St Thomas's, Salisbury, he was one of the seven children of Richard Batten and Elizabeth Nowell. Richard Batten's will, proved in 1619, states that he was a joiner. Evidence of Adrian Batten's early musical training is scanty; a note on the manuscript *GB-Ob* Tenbury 791 f.400 reads: 'These songs of Mr John Holmes were prickt from his own pricking in the year 1635 by Mr Adrian Batten, one of the Vicars Choral of St Paul's in London who some times was his scoller'. John Holmes was a lay vicar of Winchester Cathedral from 1599 to 1622, and it is probable that Batten was a chorister there and stayed on after his voice had changed. The relevant records are unfortunately missing from the cathedral, but on the outside of the east wall of Bishop Gardiner's chantry is carved 'Adrian Battin: 1608:'. Perhaps this marked the end of his time as a chorister. Further evidence of his stay at Winchester can be found in the registers of the church of St Swithun-upon-Kingsgate, for on 14 March 1614, Adrian, son of Adrian 'Battin' was baptized.

In the following month Batten moved to London and became a lay vicar of Westminster Abbey with a yearly salary of £8. While at the abbey he was a parishioner of St Margaret's, Westminster, and the registers there record the baptisms of Thomas Batten, 'son of Adryan' on 5 June 1616, and Richard on 8 September 1621. The death of a daughter Susan is recorded on 22 May 1623, and those of his two sons Thomas and Richard on 16 July and 31 August 1625. The year 1625 also saw the death of James I; Adrian Batten is mentioned in the Lord Chamberlain's accounts as one of the singers at his funeral. During his time at Westminster Abbey Batten occasionally augmented his income by copying music. The abbey muniments record in 1622: 'Item paied to Mr Batten for pricking Mr Weekes his service and Mr Talles his Magnificat & nunc dimittis as alsoe Mr Tomkins service xxxs'. Batten's name appears in the Westminster Abbey treasurer's accounts as a lay vicar until the end of October 1626. It would therefore seem that in that year, and not 1624 as is usually stated, he moved to St Paul's Cathedral. His name first appears in the indenture book of Dean Donne on 22 December 1628, when he is named as one of the six vicars-choral. His name continues to appear in similar documents up to 3 December 1635, and in that same year he is mentioned as a vicar-choral there in the Bishop of London's Visitation. In the indentures book of Dean Wynyffe on 13 May 1637 only five vicars-choral are named, Batten's name being absent. On 22 July 1637 letters of administration of the estate of Adrian Batten, late of the parish of St Sepulchre, Newgate Street, London, were granted to John Gilbert, a clothier of the city of Salisbury, with the consent of Edward, John and William Batten, his brothers.

Batten composed a large number of services and anthems, but apparently no secular or instrumental music. It is thought, though sometimes questioned, that he was the copyist of the most extensive source for English church music of the period, the so-called 'Batten Organbook' (*GB-Ob* Ten. 791). He was a competent craftsman, writing in a style which was devotional and restrained. Burney said he was 'a good harmonist of the old school, without adding anything to the common stock of ideas, both in melody and harmony, with which the art was furnished long before he was born'. Most of the criticisms which are levelled at Batten could be applied to almost any of his contemporaries, but Batten makes a convenient 'whipping boy'. It is true that he was no innovator; he displayed a certain reluctance to stray from the home key and his melodic invention could not match that of Gibbons and Tomkins, his more distinguished contemporaries. Nevertheless, there is a certain naive charm about much of his work; the verse anthems, *Hear my prayer O Lord*, *Out of the deep* and *O Lord thou hast searched me out* are excellent examples. The last named contains a quaint and not altogether unsuccessful attempt at word-painting. The five-part full anthems *Hear the prayers, O our God* and *We beseech thee* display a depth of feeling which is at least equal to that found in Gibbons's music, and the eight-part *O clap your hands*, while not reaching the heights of Gibbons's setting of the same words, makes telling use of massive homophonic passages alternating with polyphony. His 'Full' service, which is similar in scope to the 'Great' services of Byrd and Tomkins, is worthy of attention, though in general it would be true to say that he was more successful in simpler forms.

WORKS

SERVICES

Full Service (TeD, Jub, Ky, Cr, Mag, Nunc), 7/8vv, *GB-Lcm*, *Och*

Hear the prayers, O our God, 5vv, *Lcm, Ojc*
Hide not thou thy face, 4vv, 1641[5]
Holy, holy, holy Lord God, 6/5vv, *GB-Cp, DRc, Lbl, Y*
I heard a voice, 6/6vv (short section for double 5-part choir), *Cp, DRc, Lbl, Lcm, Y*
I will always give thanks, inc. verse anthem, B cantoris only extant, *Lcm*
Jesus said unto his disciples, inc. verse anthem, *Cp*
Let my complaint come before thee, 4vv, *Lsp, Y*
Lord, I am not high minded, inc., 5vv, *Lcm*
Lord, we beseech thee, 4vv, 1641[5]
Lord, we beseech thee, 4vv, *Lcm*
Lord, who shall dwell, 6vv, *Lcm, Y, US-BEm, SM*
My soul truly waiteth, 4vv, *GB-DRc, Lsp, Y*
O clap your hands together, 8vv, *DRc, Lcm, Y*
O God, my heart is ready, inc., 1/4vv, *Ob*
O God that art my righteousness, inc. verse anthem, B cantoris only extant, *Lcm*
O God the king of glory, inc. verse anthem, B cantoris only extant, *Lcm*
O how happy a thing it is, inc. verse anthem, chorus parts differ in sources, *Cp, Lcm, Y*
O Lord our governor, inc. verse anthem, *Y*
O Lord, thou hast searched me out, 2/4vv, *Cp, DRc, GL, Lbl, LF, Ob, Och, Y, US-NYp* (also incorrectly attrib. N. Giles)
O praise God in his holiness, inc. verse anthem, B cantoris only extant, *GB-Lcm*
O praise the Lord, 4vv, *Lcm*
O praise the Lord, 4vv, *Lcm*
O praise the Lord, 4vv, 1641[5]
O sing joyfully, 4vv, *Y*
Out of the deep, 1/4vv, 1641[5]
Out of the deep, 2/5vv, *Cp, DRc, Y*
Out of the deep, inc., *DRc, Lbl, Och, US-BEm* (also attrib. Hutchinson)
Ponder my words, O Lord, inc., 6/5vv, *GB-Cp, DRc, Lbl, Y*
Praise the Lord, O my soul, 6vv, *Lcm, Och, US-BEm*
Praise the Lord, O my soul (2p. Praise the Lord, O Jerusalem), inc., 6/5vv, *GB-Cp, DRc, Lbl, Y*
Sing we merrily unto God, inc., 7vv, *Lcm*
Turn thou us, O good Lord, 5/5vv, *Cp, DRc, Lbl, Lcm, Y*
We beseech thee, almighty God, 5vv, *Lcm, Ojc, Y, US-BEm*
When the Lord turned again, 4vv, 1641[5]
Clifford's The Divine Services and Anthems (London, 1664) preserves the texts for the following anthems, though no music survives: Almighty God, which madest Thy blessed Son; Almighty God, whose praise this day; Behold now praise the Lord; Bow down thine ear; I am the resurrection; If ye love me; In Bethlehem town; Not unto us, O Lord; O sing unto the Lord; Save us, good Lord, waking; So God loved the world; The Lord is my shepheard.

The anthem, O Lord let me know mine end, attrib. Batten in *GB-Cp*, is by Solomon Tozer, a lay clerk of Exeter.
The Preces for Trebles in *Lcm* 1045–1051, listed in the Daniel and le Huray catalogue, is by J. Barnard.

Batteux, Abbé **Charles** (*b* Alland'huy, Ardennes, 6 May 1713; *d* Paris, 14 July 1780). French aesthetician. He was professor of rhetoric at the universities of Reims and Paris, the Collège de Lisieux and the Collège de Navarre, and then of Greek and Roman philosophy at the Collège Royal, Paris. It was his *Les beaux-arts réduits à un même principe* (Paris, 1746/*R*; ed. J.-R. Mantion, Paris, 1989) that made him famous, and Diderot drew upon his *Lettres sur l'inversion et sur la traduction* (published in *Cours de belles-lettres distribué par exercices*, Paris, 1747–8) when writing his own *Lettre sur les sourds et muets*. Batteux was elected to the Académie des Inscriptions in 1754 and became a member of the Académie Française in 1761. In 1777 he coordinated the 45 volumes of the *Cours d'études* for the pupils of the Ecole Royale Militaire.

His works on aesthetics, the most important being *Les beaux-arts* and *Principes de la littérature* (Paris, 1764; Eng. trans., 1761) are principally devoted to the exposition and elucidation of the classical doctrines of which he was a late exponent. His aesthetics are based on the theory of imitation, which he connects with the concept of the beauty of nature: art does not reproduce nature as it is, but seeks to attain an invisible truth by picking out 'characteristics' and 'features' and recombining them into a fictive entity which is truer than reality. While poetry sets out to imitate actions, 'the principal object of music and dance must be to imitate sentiments and passions'. He rejects the idea that its combinations of sound make music sufficient unto itself; it must always be linked to meaning and 'make up a picture'. This very classical concept, in which music is subjected to a significant model, depends largely on a frequently mentioned analogy with painting, the separation of colour (a material with calculable relationships) from design (which gives painting life and meaning), and had already formed the basis of arguments levelled against Rameau at the time of the *Querelle des Lullystes* in 1733. Rousseau was to take the theme up again in his *Essai sur l'origine des langues*, but giving it a different direction by propounding the hypothesis of an original, non-articulated language.

On the level of morphological poetics, Batteux adopts the Aristotelian model, modernizing it and making it

systematic. There are two important modifications. First, lyric poetry, a subject on which Aristotle says nothing, is introduced into the 'arts of imitation' and justified by the idea of *fiction possible*, whereas its existence had simply been affirmed in earlier theoretical works on poetry. This hypothesis was the subject of a debate with J.A. Schlegel (father of the famous Romantic theorist), the German translator of *Les beaux-arts* (1751), to whom Batteux replied in his *Principes de la littérature*. Secondly, lyric drama (opera) is introduced into the dramatic system, particularly in connection with the concept of the *merveilleux vraisemblable*. On this point Batteux's theory, like that of Gabriel Bonnot de Mably in his *Lettres sur l'opera* of 1741, allots lyric tragedy a position parallel to that of its dramatic homologue (lyric tragedy is conceived of on the model of classical tragedy, the general laws of the latter still applying while the particular rules, objects and methods are modified), thus allowing it full validity in the system of the classical French theatre. In the theories he puts forward for making these innovations, Batteux takes up the structural and transformational spirit of Aristotelian poetics: his system can be represented as a table in which the various positions are articulated with each other, and not merely juxtaposed. He breaks with the strongly normative tone, more anxious to specify advice on production than to provide an explanation of texts through ordered analysis, which had been characteristic of works on poetics from Horace to Nicolas Boileau.

CATHERINE KINTZLER

Battiferri, Luigi (*b* Sassocorvaro, nr Urbino, 1600–10; *d* 1682 or later). Italian composer and organist. He studied under Frescobaldi and became a priest. He was a leading musician at Ferrara for a number of years and was also prominent at Urbino: he held a succession of posts as *maestro di cappella* at both these places and elsewhere, but he held no official positions as an organist. In 1642 he was at S Angelo in Vado in his native region, and from 5 July 1650 to 5 May 1653 he was at Spoleto Cathedral. From 1 October 1653 he was employed at Ferrara, first at the Accademia della Morte and then, in 1657–8, at the Accademia dello Spirito Santo. He was at Urbino Cathedral from 1658 until he returned to Ferrara in the summer of 1660, where he served the Accademia della Morte until 1662 and then the Accademia dello Spirito Santo. In 1665 he was *maestro* of Pesaro Cathedral. From 1666 he lived principally at Urbino, though he was for a third time at the Accademia dello Spirito Santo, Ferrara, in 1669 and 1670. He was still living in 1682, when he endowed a chapel in the principal church at his birthplace; he probably died shortly afterwards. All but the first of his five extant volumes of music appeared in a single year, 1669, when he was probably over 60, and he may well have regarded them as representative of the music he had written during his active years as a musician. His impressive ricercares marked the end of the school of organ music associated with Ferrara; they were copied by Fux and Zelenka and were probably known to Bach. The numerous solo motets that form his opp.4–6 are cantata-like pieces and were doubtless composed for performance in the academies at Ferrara with which he was connected.

Battin, Adrian. *See* BATTEN, ADRIAN.

Battishill, Jonathan (*b* London, May 1738; *d* Islington, London, 10 Dec 1801). English organist and composer. In 1747 he became a chorister of St Paul's, where he made rapid progress in his musical studies under William Savage, almoner and master of the choristers, whose articled pupil he became after his voice broke. His proficiency on the organ, especially his extempore playing, soon attracted attention, and he acted as William Boyce's deputy at the Chapel Royal for some time. He also developed a fine tenor voice and frequently appeared as a soloist in London concerts, one of his early engagements being in a performance of Handel's *Alexander's Feast* at the Great Room, Dean Street, on 16 March 1756, where he was described as 'Mr Batichel'. About this time he was appointed conductor at Covent Garden, directing from

the harpsichord, and he also began to compose songs for Drury Lane Theatre. On 11 June 1758 he became a member of the Madrigal Society, and on 2 August 1761 a member of the Society of Musicians. He was also a 'priviledged member' of the Noblemen's and Gentlemen's Catch Club from *c*1762, but twice forfeited his membership for non-attendance at meetings. In 1771 he gained the club's gold medal with his glee *Come bind my hair, ye wood nymphs fair*.

In 1764 Battishill was appointed organist of the united parishes of St Clement Eastcheap and St Martin Orgar, and in 1767 of Christ Church, Newgate Street, holding both posts until his death. On 19 December 1765 he married Elizabeth Davies, a singing actress at Covent Garden Theatre and the original Margery in *Love in a Village*. The marriage was not a success, and his wife eventually lived openly with the actor Anthony Webster, with whom she went to Ireland in 1776; she died in Cork in October 1777. From about 1775 Battishill himself apparently lived with a woman who, on his death, called herself Ann Battishill.

From the mid-1770s Battishill's compositional activity declined and he took increasingly to over-indulgence in drink, for which he had always had a propensity. This was undoubtedly a factor in his failure to exploit his talents more fully, and resulted in his not being appointed organist of St Paul's on the death of John Jones in 1796. From childhood he had been a keen reader, and his later years were spent mostly among his books, of which he had amassed some 6000 to 7000 volumes, consisting chiefly of theology and classical authors. In accordance with his own wishes he was buried in St Paul's, near the grave of William Boyce, after a funeral service that included his own anthem *Call to Remembrance*.

Most of Battishill's compositions date from the period 1760–75, and reflect his many-sided activities during this time. His main operatic venture, *Almena*, proved a theatrical failure, but that was attributed to dramatic faults on the part of the librettist Rolt, rather than to deficiencies in the music, composed jointly with Michael Arne. Of his many songs, *Kate of Aberdeen* was highly popular, as was the catch *I Loved Thee Beautiful and Kind*. It was, however, for his seven-part anthem *Call to Remembrance*, with its fine command of the old full style of writing and effective suspensions, that he was most widely admired, and the work long survived in cathedral repertories.

In addition to his extempore playing, his performances of Handel's keyboard works were highly regarded, and his memory, both musical and otherwise, was reputed to have been exceptional, as shown by the occasion on which he played and sang from memory to Samuel Arnold several airs from the latter's oratorio *The Prodigal Son*, which he had not heard for 20 years.

WORKS

all first performed and published in London

STAGE

The Rites of Hecate (pantomime, J. Love), Drury Lane, 26 Dec 1763, collab. J. Potter, *GB-Lbl*

Almena (Eng. op, 3, R. Rolt), Drury Lane, 2 Nov 1764, collab. M. Arne; songs pubd (1765)

2 songs in Garrick's revival of A Midsummer Night's Dream, 23 Nov 1763; 1 song each in Townley's High Life below Stairs, 31 Oct 1759, and revivals of Moore's The Foundling, 3 Oct 1765, and The Gamester (?1771)

SACRED VOCAL

12 Hymns, The Words by Revd. Mr Charles Wesley (*c*1765)

2 Anthems as they are Sung at St Paul's Cathedral (1767): Call to Remembrance, 3–7vv, org; How long wilt Thou Forget me, 1–5vv, org

Call to Remembrance (Ps xxv.6), 3–7vv, org (1797); rev. by author

6 Anthems and 10 Chants, ed. J. Page (1804); anthems: Behold how Good and Joyful, 1–5vv, org; I Waited Patiently for the Lord, 1–5vv, org; O Lord look down from Heaven, 7vv, org; Save me, O God, 5vv, org; The Heavens Declare the Glory of God, 1–5vv, org; Unto Thee lift I up mine Eyes, 3–4vv, org

5 anthems in Harmonia Sacra, ed. J. Page, i–iii (1800): Behold how Good and Joyful, 1–5vv, org; Call to Remembrance, rev. version, 3–7vv, org; Deliver us, O Lord our God, 5vv, org; How long wilt Thou Forget me, 1–5vv, org; I will Magnify Thee, O God, 3–6vv, org

2 pieces in A Collection of Hymns, ed. J. Page (1804): O Lord, how Beauteous are Thy Courts, sacred ode, SATTB, org, 1764; Jesus Lord we Look to Thee (C. Wesley), hymn, unison vv, org

Hymns and chants pubd in 18th- and 19th-century anthologies, and in *GB-Lbl*

OTHER WORKS

The Shepherd and Shepherdess, a Favourite Cantata (1764)

A Collection of Favourite Songs sung at the Publick Gardens and Theatres (*c*1765)

A Collection of Songs, 3–4vv, 2 vols. (*c*1776)

Select Pieces, ed. J. Page, org/pf (*c*1805)

Songs, glees and catches pubd singly and in 18th-century anthologies; also *GB-Bu, Lbl, US-Cn*

PETER WARD JONES

Battista, Luigi Alberto Federigo. *See* BAPTISTE, LUDWIG ALBERT FRIEDRICH.

Battistelli, Giorgio (*b* Albano Laziale, 25 April 1953). Italian composer. He studied composition with Giancarlo Bizzi at the L'Aquila Conservatory, and in 1974 he co-founded the Gruppo di Ricerca e Sperimentazione Musicale 'Edgard Varèse', and the Gruppo Sperimentale 'Beat 72' in Rome. An invitation from the Deutscher Akademischer Austauschdienst brought him to Berlin (1985–6) and after being appointed artistic director of the Cantiere Internazionale d'Arte in Montepulciano (1993) he took on the artistic direction of the Orchestra Regionale Toscana in 1996. From the outset, his interests have lain principally in theatrical experimentation and formal exploration – aspects which he places above work on the musical material – with some tendency towards minimalism. He has written various works for the stage and since 1987 has also written the texts, which are sometimes inspired by personal responses to films or historical facts; these include the monodrama *Aphrodite* (1983), the chamber fantasy *Jules Verne* (1987), *Le combat d'Hector*

et d'Achille (1989), a 'representation of bodies and of memory for speaking musicians' entitled *Keplers Traum* (1989–90, and winner of the 1992 SIAE Prize for a world première outside Italy), *Frau Frankenstein* (1992), *Prova d'orchestra* (1995) and *The Cenci* (1997). The sense of drama is implicit in his purely instrumental works, in which various transformations or restatements of motifs, timbres and intervals can be read acoustically as the development of imaginary characters. The very titles of his orchestral and chamber compositions seem to emphasize this connection with symbolic scenarios: *Il racconto di Monsieur B.* (1980), *La fattoria del vento* (1988) and *Tre voci* (1996). In all his work a rhythmic noise element sometimes assumes a central aesthetic position, often verging on mere effect (*Experimentum mundi*, 1981).

WORKS

(selective list)

Stage: Experimentum mundi (opera di musica immaginistica, 1, after M.Diderot, J.-J. Rousseau, Voltaire and others: *Encyclopédie*), 1981, Rome, 1981; Aphrodite (monodramma di costumi antichi, P. Louÿs), 1983, Rome, 1988; Jules Verne (fantasia da camera in forma di spettacolo, Battistelli), 1987, Strasbourg, 1987; Le combat d'Hector et d'Achille (représentation de corps et de mémoire, Homer and others), 1989, Strasbourg, 1989; Keplers Traum (chbr op, Battistelli), 1989–90, Linz, 1990; Globe Theatre (ballet), 1990, Bielefeld, 1990; Frau Frankenstein (monodramma del Prometeo moderno, after M.W. Shelley), 1992, Berlin, 1993; Teorema (parabola in musica, 2, after P.P. Pasolini), 1992, Florence, 1992; Prova d'orchestra (6 scene musicali di fine secolo, Battistelli, after F. Fellini), 1995, Strasbourg, 2 Nov 1995; Die Entdeckung der Langsamkeit (music-theatre, 5 scenes, M. Klögl), 1997, Bremen, 1997; The Cenci (music-theatre, Battistelli and N. Ward, after A. Artaud), 1997, London, 11 July 1997

ANGELA IDA DE BENEDICTIS

Battistini. Italian family of musicians. They were active in Novara in the 18th century.

(1) Giacomo Battistini (*b c*1665; *d* Novara, 5 Feb 1719). Composer. He was probably born in northern Italy. From 14 April 1694 he was *maestro di cappella* of Novara Cathedral, and provided the cathedral with a completely new and varied repertory; he was also active in the theatre (1694–5). For financial reasons he left the cathedral on 1 April 1706, becoming *maestro di cappella* of S Gaudenzio on 27 June; he held the post for the remainder of his life and reorganized the music there. Battistini's best-known works are the *Motetti sacri* (1698), the *Armonie sagre* (1700) and his pieces in the concertato style; these show a secure technique and a light though expressive style.

WORKS

Motetti sacri, 2–3vv, op.1 (Bologna, 1698)

Armonie sagre, 1–3vv, some with insts, op.2 (Bologna, 1700)

3 missae breves, 8vv, bc; 2 Mag, 8vv; Stabat mater, 4vv, 1704; Regina coeli, 4vv, org; Regina coeli, 8vv, org; Alma Redemptoris mater, 4vv, vn, org; Alma Redemptoris mater, 8vv, vn, org; Ave regina coelorum, 8vv, vn, org; Gaudeamus omnes, 4vv; O sacrum convivium, 4vv; several inc. compositions: all *I-NOVg*

Quasi rosa in Aprile ridens, motet, S, 2 vn, bc, *GB-Lbl*

Lost sacred works, incl.: Mass, 4vv, 4vv, 2 org, 2 orch, and 2 vesper settings, all perf. for the transfer of the relics of St Gaudentius, June 1711; Il trionfo della Pietà (orat, M.A. Porta), Novara, Chiesa di S Quirico, 20 Nov 1712; Mosé ricercato figura di S Gaudenzio (orat, G.A. Prina), Novara, n.d.

Lost stage works: Antemio in Roma, act 3 (dramma, 3, A.R.B. Villa), Novara, Nuovo, carn. 1695, collab. A. Besozzi and D. Erba; Antioco (melodramma, 3, N. Minato), Novara, Nuovo, carn. 1698

(2) Giuseppe Battistini (*b* Novara, *c*1695; *d* Novara, 13 April 1747). Organist and composer, son of (1) Giacomo Battistini. He became first organist of S Gaudenzio at an early age, and succeeded his father as *maestro di cappella* on 27 November 1719, remaining there until 1745. None of his compositions is known to survive. His brother Francesco (*b c*1708) was also a musician.

(3) Gaudenzio [Girolamo Gaudenzio] **Battistini** (*b* Novara, 30 June 1722; *d* Novara, 25 Feb 1800). Organist and composer, son of (2) Giuseppe Battistini. After abandoning an ecclesiastical career, he studied music with his father and uncle. In 1747 he succeeded his father as *maestro di cappella* of S Gaudenzio, having substituted for several years. After spending some time in Milan (perhaps 1748) studying harmony and counterpoint, he remained at S Gaudenzio for 53 years. In 1779 he directed Sarti's opera *Medonte re d'Epiro*, which opened the Teatro Nuovo; his engagement as *maestro concertatore* was renewed in 1780, 1783 and 1785. Battistini sometimes incorporated concertato techniques into his basically polyphonic style, but his music maintains an uncommon standard of solidity and dignity.

WORKS

all in I-NOVg

Passio secundum Lucam; Passio secundum Marcum

Ky-Gl, solo vv, chorus, orch, org, 1779; Requiem, 4vv, 1785, with fugal Cum Sancto, 4vv, org, orch

12 Salve regina, 4–8vv; Regina coeli, 4vv, 4vv, str, org; Statuit ei Dominus, 4vv; Dixit, 4vv, orch, org

15 motets, 4vv, vc; collection of grad, off and comm for Advent, Lent and Holy Week; masses, Mag and other liturgical works

Battistini, Mattia (*b* Rome, 27 Feb 1856; *d* Colle Baccaro, nr Rieti, 7 Nov 1928). Italian baritone. After a brief period of study with Venceslao Persichini and Eugenio Terziana, Battistini seized a sudden chance to sing the leading role of Alfonso XI in Donizetti's *La favorite* at the Teatro Argentina in Rome on 11 December 1878, when his immediate success inaugurated a career of nearly 50 years. His early London appearances, in 1883 and 1887, attracted no special attention; his major English triumphs came at Covent Garden in 1905 and 1906, when he was heard in several of his leading roles,

including Rigoletto, Germont, Amonasro and Yevgeny Onegin.

By that time Battistini had established himself throughout Europe, and especially in Russia, as a baritone almost without rival in the older repertory and scarcely less famous in later and widely varied roles. The Russian aristocracy and imperial family treated him as an equal; the tsar loaded him with honours; on one occasion his personal intervention is said to have secured the release of a man condemned to death. In Germany and Austria, Poland and Spain, he was equally idolized; and his adoring compatriots saluted him with such fanciful titles as 'Il re dei baritoni' and 'La gloria d'Italia'. After an early engagement at Buenos Aires he never again visited America, and was doubtless the most important singer of his day to have resisted the pull of the Metropolitan – owing, it is said, to his dread of the Atlantic crossing. His vocal powers were almost undimmed by age. When, after a lapse of 16 years, he made a series of concert appearances at the Queen's Hall, London, in 1922 and the two following years, his unimpaired tone and technique astonished his audiences.

Battistini's voice was an unusually high baritone, verging on the range of a tenor, with some corresponding weakness in the lowest register. The quality was noble: clear, strong, vibrant, capable also of a deliberately 'villainous' harshness when required, even of a kind of scornful snarl that could prove dramatically telling; then suddenly melting into the extremes of tenderness and delicacy. He had fabulous agility and breath control, and could spin out long phrases in the smoothest legato or execute the most flamboyant of flourishes, all with a natural instinct for the grand manner. His Mozart singing, as recorded, seems too wilful for modern taste; but his majestic style is clearly perceptible even in the delivery of a single line of recitative, such as the simple and lapidary 'Povero Lionello!' which precedes Plunkett's 'Il mio Lionel' in Flotow's *Marta*. This is one of the best of some 100 records that he made between 1903 and 1924. Noteworthy, too, is a group of 1907 recordings from *Ernani*, including a 'Vieni meco, sol di rose' of surpassing delicacy and a finely modulated 'Eri tu' from *Un ballo in maschera* made during the same recording session.

Mattia Battistini as Don Carlo in Verdi's 'Ernani'

DESMOND SHAWE-TAYLOR/R

Battle, Kathleen (*b* Portsmouth, OH, 13 Aug 1948). American soprano. She studied with Franklin Bens at the Cincinnati College-Conservatory and in the early 1970s was engaged by James Levine for both the Ravinia Festival and the Metropolitan Opera. She made her début in 1976 as Susanna with New York City Opera. In 1977 she sang Oscar at San Francisco, then made her Metropolitan début as the Shepherd in *Tannhäuser*, subsequently singing Rosina, Despina, Zerlina, Blonde, Pamina, Zdenka, Strauss's and Massenet's Sophie and Handel's Cleopatra. She made her British début in 1979 at Glyndebourne as Nerina (Haydn's *La fedeltà premiata*) and sang Adina at Zürich in 1980. At Salzburg she has sung Despina, Susanna and Zerlina. She made her Covent Garden début in 1985 as Zerbinetta, returning as Norina in 1990. In 1993 she sang Marie (*La fille du régiment*) at San Francisco. A notoriously temperamental artist (now banned from appearing at the Metropolitan), Battle is gifted with a high, sweet soprano of considerable charm, which she governs with technical finesse; she also has an attractive and vivacious stage presence, and her work is skilful and stylish, if not always highly individual. Her numerous recordings include Zerlina, Blonde and Zerbinetta, Fauré's Requiem and Brahms's *German Requiem*, and an admired interpretation of Handel's Semele.

RICHARD DYER, ELIZABETH FORBES

Battle music. Compositions descriptive of battles form a minor but distinctive category of 16th-century music, both vocal and instrumental, with a sporadic continuation, mainly instrumental, down to the early 19th century. The Italian term 'battaglia' has sometimes been applied to the whole of this repertory, but the composers themselves generally used titles in their own languages (Fr. *guerre*, *bataille*; Ger. *Schlacht*; Sp. *batalla*). This article deals with musical representations of battles, rather than the music that might have accompanied actual battles (for which *see* MILITARY CALLS). Battle-pieces do, however, incorporate fragments of military music from time to time, such as the 'tan-ta-ra, tan-ta-ra' motif in Byrd's keyboard work *The Battle*; the words are written in the manuscript (My Ladye Nevells Booke, 1591) just before 'the battels be joyned'.

Some of the typical devices of battle music – rallying-cries, imitations of fanfares – are anticipated in 14th-century cacce (see HAM, i, no.52), and in chansons such as the four-part *A l'arme, a l'arme* by Grimace and the three-part *Alla bataglia* in the Pixérécourt Chansonnier (*F-Pn* fr.15123). Isaac's four-part *A la battaglia* (likely to have been performed in 1485) makes modest use of ostinato figures and has several alternations of duple and triple time (a regular feature later). It lacks words in its only complete source but elsewhere is associated with a

text exhorting the soldiers of Florence to take arms against the Genoese.

The most famous and influential of 16th-century battle-pieces was Janequin's four-part chanson *La guerre*, written to commemorate the Battle of Marignano (1515), at which François I secured a victory over Swiss mercenaries employed by Duke Ercole Sforza of Milan. First published by Attaingnant in 1528, it was frequently reprinted, once (by Susato in 1545) with an optional fifth voice added by Verdelot. Janequin's own five-part version of the work (1555) is a substantial revision. The *prima pars*, preliminary to the battle itself, is set in fairly straightforward chanson style; the longer *secunda pars* is a vivid portrayal of the course of the battle, with a largely onomatopoeic text, triadic motifs, and lively rhythms set against a relatively static harmonic background. *La guerre* depended for much of its effect upon the text; nevertheless, Francesco Canova da Milano made a lute arrangement of the whole work (1536 and many reprints). No doubt more amenable to instrumentalists was a 'reduced version' in the form of a pavan of four strains, the first three being derived from the *prima pars*; like its model this enjoyed long popularity. What is perhaps the earliest version, for four-part consort, was printed in Jacques Moderne's *Musicque de joye* (*c*1544). In Hans Neusidler's *Ein new künstlich Lautten Buch* (1544) the pavan is entitled *Sula bataglia* and the fourth strain is separately labelled 'Der hupff auff' (ed. in DTÖ, xxxvii, Jg.xviii/2, 1911/*R*, p.56). At Castell'Arquato is a keyboard arrangement of the pavan from *c*1600, followed by a saltarello and *La tedeschina*, the latter based on a single chord (like the lute piece *La guerre* in Attaingnant's *Introduction* of 1529).

One of many pieces written in imitation of the chanson *La guerre* is *La bataglia taliana* by Matthias Hermann Werrecore, a riposte to Janequin's piece in that it describes a victory of Francesco Sforza, most probably the Battle of Pavia (1525), at which François I was taken prisoner. Werrecore set his piece *a* 4 and in the same F Ionian mode as Janequin and, like him, made extensive use of onomatopoeic syllables. The distinctive musical motif at the start of Janequin's *secunda pars*, to the words 'Fan frere le le lan fan fan', is quoted within the first of Werrecore's three *partes*. While *La guerre* had a fragment of German at the end (1528 version: 'toute frelore bigot' – all is lost, by God), *La bataglia taliana* has text in Italian, French, German and Spanish. The work was published in Vienna in 1544 (RISM 1544[19]) and reprinted in Venice in 1549 and 1552 with considerable variant readings. It seems that Neusidler lost little time in making his lute arrangement (1544[23]: ed. in DTÖ, xxxvii, p.46).

The influence of *La guerre* (both text and music) is still apparent in Andrea Gabrieli's eight-part madrigal *Sento un rumor/Alla battaglia*, published posthumously in 1587 (RRMR, li, 1984, nos.10–11). The battle concerned (if there was one) cannot be identified from the text. Gabrieli and Annibale Padovano also each wrote an *Aria della battaglia* for wind instruments in eight parts, published in *Dialoghi musicali* (1590[11]). Banchieri's *La battaglia* (in his *Canzoni alla francese*, 1596; ed. in RRMR, xx, 1975) is once again unspecific as to the event. It is in a single section, within which the same music (with the two four-part choirs reversed) is used to portray trumpets (to the syllables 'Ta ra ra tun ta ra') and drums ('Tra pa ta pa ta pa'). According to the title-page, the music could be either sung or played.

Janequin appears to have been the starting-point too for the substantial repertory of keyboard battle-pieces by 17th-century Spanish and Portuguese composers. Among the earliest examples, Correa de Arauxo's *Tiento de 6° tono* (MME, vi, 1948, no.23; said to be based on the first part of a *batalla* by Morales) and two *Batallas del 6° tono* by José Ximénez (CEKM, xxxi, 1975, nos.14–15) all adopt Janequin's mode and reflect his opening gesture. Later examples by Cabanilles and others were no doubt intended to exploit the trumpets *en chamade* and echo effects of the Iberian organ, but they remain essentially grounded in Renaissance techniques.

Byrd's *The Battle* owes no particular debt to Janequin; the earliest English example of the genre, it still appears in sources of the mid-17th century. Nevertheless, the item that follows it in the Nevell book, *The Barley Break*, with its characteristic battle-piece scenario (the marshalling of forces, the contest, the retreat from the field) is an altogether more engaging work. Other examples for virginals are the strange *A Battle, and No Battle* attributed to Bull and *The Batell of Pavie* set by William Kinloch (*GB-En* 9447); the latter betrays only the most tenuous links with *La bataglia taliana*. English lute sources contain a number of battle-pieces, including one for two lutes (in *GB-Lbl* Eg.2046).

Battle music of the Baroque period is only occasionally linked to recent events. Rather, composers cultivated the genre for its expressive potential, or for dramatic or allegorical purposes. The allegorical usage, already seen in Vecchi's ten-part vocal *Battaglia d'amor e dispetto* of 1587, is evident in Monteverdi's *Il combattimento di Tancredi e Clorinda* (1624) and the other *canti guerrieri* of his eighth book of madrigals (1638). The *stile concitato* developed by Monteverdi proved a valuable resource in opera and in instrumental compositions such as Biber's *Battalia* of 1673 for strings in nine parts and continuo. This employs special effects including rebounding pizzicato in the double basses as well as the expected rapid note repetitions; the suite ends on a subdued note with the descending semitones of *Lamento der vernundten Musquetirer*. A comparable English work (referring to an actual event) is Jenkins's *Newark Siege* (MB, xxvi, 1969, 2/1975, no.23), the minor-key ending reflecting the royalist composer's view of the outcome. Battle music was quite often used as religious allegory. Banchieri, in *L'organo suonarino* (1605), recommended the performance of a *battaglia* at Easter to symbolize Christ's victory over death; and, where his text called for it, Bach drew on the conventions of battle music, most wonderfully perhaps in the *St John Passion* aria 'Es ist vollbracht', at the words 'Der Held aus Juda siegt mit Macht'.

A final spate of battle-pieces describing recent events occurred between about 1780 and 1815. Examples are František Kočzwara's *The Battle of Prague*, a sonata for piano or harpsichord with optional violin, cello and drums (*c*1788), and J.B. Vanhal's programmatic keyboard sonata *Le combat naval de Trafalgar et la mort de Nelson* (*c*1806). Other conflicts of the Napoleonic era are depicted in Beethoven's *Wellingtons Sieg, oder Die Schlacht bei Vittoria* (op.91, 1813); in Peter Winter's *Schlachtsymphonie* with chorus and J.F. Reichardt's *Schlachtsymphonie* (both 1814); and Weber's cantata *Kampf und Sieg* (1815), celebrating the Battle of Waterloo. But Beethoven's piece caused some embarrassment even among his own circle, and more familiar to modern listeners are the

trumpets and drums whose use underlines the prayer for peace in his Mass in D. A musical battle from the Romantic period is Liszt's symphonic poem *Hunnenschlacht* (1857), inspired not directly by the event (which supposedly took place in the year 451) but by a painting by Wilhelm Kaulbach. As far as battle music is concerned, the 20th century has lost its naivety, and unquestioning portrayals in music of military conquests are hardly to be expected. Kodály's *Háry János* suite (1927) includes a movement entitled 'The Battle and Defeat of Napoleon' in which march tunes and trumpet calls are treated in a spirit of caricature. On another plane are the unforgettable evocations of battle sounds in Britten's *War Requiem* (1961), the true nature of what they represent being starkly revealed in the poems of Wilfred Owen.

ALAN BROWN

Batton, Désiré-Alexandre (*b* Paris, 2 Jan 1798; *d* Versailles, 15 Oct 1855). French composer. He was a pupil at the Paris Conservatoire from 1806 to 1817; he won the Prix de Rome in 1817 with the cantata *La mort d'Adonis*. Before he left for Italy his most successful comic opera, *La fenêtre secrète*, was given at the Opéra-Comique on 17 November 1818, and during the following year it was performed at Brussels and Copenhagen. In Rome Batton wrote both sacred and secular vocal music, including an unperformed opera, *Vellèda* (from Chateaubriand's *Les martyrs*). Moving to Germany, he then composed several orchestral works for the Munich concert society.

After his return to Paris his theatrical compositions met with little success, except for his part in the nine-man collaboration opera, *La marquise de Brinvilliers* (1831). Although the music in his other *opéras comiques* often received critical praise, the works suffered from poor librettos; *Le camp du drap d'or* was whistled so loudly that the music could not be heard. The aspects of Batton's music that received criticism (such as exaggerated orchestration and ambitious formal planning) look impressively resourceful today, and in combination with his melodic grace they reveal a gifted composer forced into premature retirement by the lack of musical opportunities in Restoration Paris. In 1851, Batton was made inspector of the branch schools of the Conservatoire. (J.-M. Bailbé and others: *La musique en France à l'Epoque romantique: 1830–1870*, Paris, 1991.

Battre, H. (*fl c*1430–40). Composer. Nothing is known of his life, though two of the texts he set provide possible clues to his place of origin or employment: *Gaudens exulta* is in praise of Ciney, a town in the province of Namur (now in south-east Belgium); and *Chomos condrosi* is thought to refer to the region around Ciney known as the Condroz. The exclusive association of his works with a source in which he is the only named composer (the so-called 'Battre fascicle' of *I-TRmp* 87) may indicate that he was its compiler. It seems unlikely on stylistic grounds that he is the later 15th-century composer BATTY (or Batten).

Battre's small yet varied output shows considerable originality; his music often unfolds in unpredictable ways. *Gaude virgo* is especially unusual in that it exploits the effects of contrasted vocal groupings (based on a distinction between 'pueri' and 'mutate voces'), while *Chomos condrosi*, a two-part canon with a freely composed third voice, is remarkable for its setting of a macaronic text (in Latin and Greek) which actually describes the compositional technique being employed. Although this is his only canonic work, several others use imitation as a structural rather than a decorative device. If Battre's music shows a tendency towards complexity of line and texture (with occasionally clumsy results), he is also capable of a simpler, more declamatory style, as can be seen for example in the hymn *Stirps regia*.

Battuta (It.: 'beat', 'bar', 'measure'). *A battuta*, like *a tempo*, means a return to the strict beat. In the scherzo of Beethoven's Ninth Symphony *ritmo di tre battute* and *ritmo di quattro battute* designate that the one-in-a-bar beats should be grouped in threes and fours respectively. Vivaldi used the performance instruction *battute* ('beaten') for repeated semiquavers (P410/RV163) and Kolneder (*Aufführungspraxis bei Vivaldi*, Leipzig, 1955) raised the possibility that this was an instruction to play *col legno*.

For bibliography *see* TEMPO AND EXPRESSION MARKS; *see also* BEAT (i).

DAVID FALLOWS

Battuto [battute] (It.). Term used in the 17th and 18th centuries to describe the technique of strumming the strings of the guitar. *See* RASGUEADO.

Batty (*fl c*1450–80). Composer. Nothing is known of his life. His only two known compositions (both in *CZ-Ps* D.G.IV.47) are respectively three- and four-voice settings of the compline antiphon *Regina celi*. Both paraphrase the plainchant elaborately in the superius, and both make occasional use of imitation. Batty may be identifiable with Batten, whose sole surviving piece (in *CZ-HKm* II A 7) is a three-voice Sanctus whose superius either paraphrases an unidentified chant or merely cites fragments of plainchant melodies. All three works are indebted to the English idiom.

Both 'Batty' and 'Batten' may be misnomers, and it is not impossible that one or both of these names are central European 'misspellings'; in this case they may perhaps be identifiable with Ludovicus Patier (who was at the Savoy court in 1454–5) or Luisot Patin (documented at Naples in 1480). However, both of the latter could equally well have been homonyms. A connection with the earlier composer H. Battre (represented in *I-TRmp* 87) seems less likely on the grounds of stylistic differences.

Battyn, Adrian. *See* BATTEN, ADRIAN.

Bätz [Baetz, Baitz, Beets, Beetz, Betz]. Firm of organ builders of German origin, active in the Netherlands. The first organ builder of the family was Johann Heinrich Hartmann Bätz (*b* Frankenroda, nr Eisenach, 1 January, 1709; *d* Utrecht, 13 December 1770). Having learned cabinet making, Johann Heinrich was apprenticed to the organ builder J.C. Thielemann in Gotha for four years starting in 1729. In 1733 he joined the organ workshop of Christiaan Müller in the Dutch Republic and helped to build the organ in the Bavokerk of Haarlem. In 1739 he settled in Utrecht as an independent organ builder. His work shows many similarities with the work of Müller in its cases, pipes and mechanisms. He built at least 16 new organs, many of them quite large, with two to three manuals. The most significant instruments are: Grote Kerk, Gorinchem (1760; rebuilt by Witte), Evangelische Lutherse Kerk, The Hague (1761–2), Hoorn, Oosterkerk, (1762; only the case is extant), Petruskerk, Woerden (1766–8), Zierikzee (1768–70). This last was his *opus magnum*, having three manuals, pedal and 46 stops, and being similar to Müller's organ in Haarlem, but it was destroyed in a fire in 1832.

Gideon Thomas Bätz (bap. Utrecht, 8 June 1751; *d* Utrecht, 30 Jan 1820) inherited the workshop after his father's death. Although a very able organ builder he was not a good businessman, and initially the firm was run with his younger brother Christoffel (bap. 15 August, 1755; *d* nr Breukelen, 1 May 1800) under the leadership of his uncle Johann Heinrich Wilhelm Bätz. Gideon Thomas took over the leadership at the age of 21. Following a dispute over the inheritance Christoffel left to start his own organ building workshop in 1778. He built the *rugwerk* of the Medemblik organ, as well as the organ of Loenen aan de Vecht. Gideon Thomas and Christoffel built at least 22 new organs. The organs are smaller than those of their father, reflecting the changing musical requirements and the economic situation of the time; many have one manual and several divided stops. However, the external forms and specifications are more varied than those of their father. They also built a number of cabinet organs. The most significant organs by Gideon Thomas were at Heukelum (1779), Breukelen (1787) Lutheran church, Edam, (1809), Vleuten (1812), Franciscus Xavieriuskerk, Amersfoort (1819), and Weesp (1822).

Under the brothers Jonathan (*b* Utrecht, 5 Feb 1787; *d* Utrecht, 18 July 1849) and Johan Martin Willem (bap. Utrecht, 15 March 1789; *d* Utrecht, 19 Nov 1836), sons of Christoffel, great growth took place. Jonathan was the most important of the two, and Aristide Cavaille-Coll paid him a visit on 16–17 October 1844. Johan Martin Willem lived in Amsterdam between 1812 and 1818 and was a piano maker. He returned to Utrecht to work for his brother until 1831. By then Christiaan Gottlieb Friedrich Witte (*b* Rothenburg, nr Hanover, 12 Jan 1802; *d* Utrecht, 1873) had become the star worker of Jonathan's company. Witte had learned his trade with Bethmann in Hannover and joined the Bätz workshop in 1826. He was the foreman during the building of the organ of the Ronde Lutherse Kerk, Amsterdam. In 1839 Witte married a granddaughter of Gideon Thomas Bätz, and took over the business after Jonathan's death. The sons of Johan Martin Willem (Johan Christiaan, Jonathan (ii) and Johan Martin Willem (ii)) remained active in the workshop. Witte's son Johan Frederik (1840–1902) succeeded his father in 1873. With the death of the latter, the Bätz-Witte dynasty came to an end.

Between 1820 and 1849, when Jonathan Bätz had the leadership, 22 new organs were built. Most of them are extant. As well as the charming, small organs in Nieuwenhoorn, Weesp, 's-Gravenland, Harderwijk, Mijdrecht, the Amstelkerk in Amsterdam, the Lutheran church in Woerden, and the Gothic Room of the Palace of King Willem II at The Hague, he built a number of significant larger organs, such as the three-manual organs in the Domkerk, Utrecht (in a neo-Gothic case with many pipes from the 1571 organ by Peter Janszoon De Swart), the Ronde Lutherse Kerk, Amsterdam and the Nieuwe Kerk, Delft. Organs by the Wittes can be found in Gorinchem, Buren, Tiel, Delft (Oude Kerk), Bunschoten, Naarden,

Kapelle, Geervliet, Rijswijk, Utrecht, Oldenzaal, West-Terschelling, De Rijp, Culemborg, Delfshaven, Dordrecht, Ophemert, Puttershoek and Rotterdam. The organs in Naarden and Delft have 16′ Principals in the *rugwerk*. The J.F. Witte organ in St Jacobskerk, The Hague (1882; demolished), was the largest organ built in the Netherlands in the 19th century. A large organ by him in the Oude Lutherse Kerk, Amsterdam (1885), survives.

Bätz organs are distinguished by their traditional Dutch style, having a very solid construction using the best materials, a very musical sound and great reliability. After Jonathan Bätz's death Witte in many ways broke with the 18th-century Bätz tradition in favour of a fuller, more monumental sound. Also, Witte introduced novelties such as three manual-divisions in one case, keyboards to the side of the organ, accentuation of the treble stops, the importance of the treble labial Cornet, and the introduction of tuning expressions. Some of Witte's cases are in neo-Gothic or neo-Romanesque style while others follow the more traditional Bätz look.

BARBARA OWEN, ADRI DE GROOT

Bauchspiess, Severus. *See* GASTORIUS, SEVERUS.

Bauckholt, Carola (*b* Krefeld, 21 Aug 1959). German composer. She studied at the Cologne Academy of Music (1978–84) with Kagel, among others. After working with the TAM (Theater am Marienplatz) in Krefeld-Fischeln (1976–84), she co-founded the Thürmchen publishing imprint (1985) and Thürmchen Ensemble (1991), both of which specialize in experimental music and music theatre. As a composer, she has taken the process of listening to her immediate surroundings as a point of departure, subtly imitating and transforming the sounds of everyday life in her compositions. Many of her works (until the mid-1980s) incorporate elements of music theatre (i.e. slides, videos, objects, semantic associations etc.). In *In gewohnter Umgebung I–III* (1991–4) and other works, ordinary sounds are imitated by instruments which assume activities connected with the production of these sounds, such as rubbing or striking. *Geräusche* (1992) uses new instrumental sounds to particularly good effect. Later compositions, such as *Doina* (1996) and *Kurbel und Wolke* (1997), link signifiers (gestural, semantic or associative) to vocal and instrumental sound with increasing diversity. Her many honours include prizes from the international competition of WDR (1989), the Carl Maria von Weber Competition, Dresden (1993) and the Gedok Competition (1994), the Swiss Stiftung Boswil Award (1995) and the Dresden Blaue Brücke Award (1996).

MARTINA HOMMA

Baud-Bovy, Samuel (*b* Geneva, 27 Nov 1906; *d* Geneva, 2 Nov 1986). Swiss musicologist and conductor. In Geneva he took an arts degree at the university and was a violin pupil of Fernand Closset at the conservatory. He then studied conducting with Nilius and music history with Adler in Vienna (1926–7), composition with Dukas and musicology with Pirro in Paris (1928–9) and conducting with Weingartner at Basle and Scherchen at Geneva; in 1936 he took the doctorat ès lettres at Geneva University.

After a visit to Greece (1929–31), where he studied sacred music and folksong, he returned to Geneva Conservatoire as orchestral instructor (1933–73) and conductor (1942–73), also serving as co-principal (1947), principal (1957) and honorary principal (1970). Concurrently at the university he was director of studies (1931), assistant professor (1942) and honorary professor (1958) of modern Greek. In 1938 he became director of the Société de Chant Sacré; he was also president of the Association des Musiciens Suisses (1955–60) and of the International Society for Music Education (1961–3). In 1975 he was awarded the Prix de la Ville de Genève and in 1977 he became a member of the executive board of the International Council for Traditional Music.

Baud-Bovy's main area of research was Greek traditional music, in particular Kleftic ballad from mainland Greece, and the music of Crete and the Dodecanese islands. He was among the first scholars of Greek traditional music to make a systematic collection of the music as well as the texts from one area (the Dodecanese). Consistent aspects of his research were his preoccupation with the 15-syllable text line (its origins, evolution and

relationship to the melodic strophe), and the comparison of melodic variants as a means of determining their possible origin. His work constitutes the most substantial contribution by any one author to the study of Greek traditional music.

LUCY DURÁN

Baude de Rains [Baude Fresnel] (*b* Reims, mid-14th century; *d* 1397–8). French harpist and organist. He was musician to Philip the Bold of Burgundy and may be identifiable with BAUDE CORDIER.

Baudelaire, Charles (Pierre) (*b* Paris, 9 April 1821; *d* Paris, 31 Aug 1867). French poet. In 1921 Proust could call him the 'greatest poet of 19th century', but during his own lifetime the praise was more reserved. An 1852 caricature by his friend the photographer Nadar lampooned him as a 'nervous, testy and irritable young poet', who was still 'probably the best' of his generation. Ten years later, a condescending Sainte-Beuve would portray the now 41-year-old Baudelaire as a 'nice, refined boy'.

By that time Baudelaire's reputation had been well established not only as a poet and art critic – with important essays on Delacroix and Constantin Guys – but also as a translator of the macabre stories of Edgar Allan Poe. Published continuously over nearly two decades, Baudelaire's Poe translations represented the most stable part of a troubled literary career, becoming so popular that in France the names of the two authors, as Théophile Gautier later remarked, were practically inseparable.

The reputation spawned by his poetry was quite another matter. The publication of *Les Fleurs du mal* in 1857 thrust Baudelaire into the public eye not only as an artist but as the victim of an obscenity trial, leading to the censoring of the edition and the subsequent bankruptcy of his Parisian publisher. While such negative publicity made Baudelaire infamous, he nonetheless managed to win admiration from established poets such as Alfred de Vigny, whom Baudelaire met in 1861 during a misguided attempt to gain entrance into the Académie Française, as well as from the much younger Verlaine and Mallarmé, who wrote enthusiastically about his work in 1865.

It was in fact the generation of Verlaine and Mallarmé that embraced Baudelaire's oeuvre most passionately. In the salons of the Third Republic the heavy scent of his evil flowers was to hang over a whole community of modern artists, affecting writers no less than musicians. Commenting on this influence in 1921, Koechlin went so far as to assert that if Baudelaire had not existed, it would have been necessary for modern French music 'to invent him'. His poems (brought out in complete edition by 1870) were treated to memorable settings by Duparc, Fauré, Chabrier, d'Indy; Debussy completed the extraordinary *Cinq poèmes de Baudelaire* in 1889 and left among his many unfinished theatre works an opera based on Baudelaire's translation of Poe's *The Fall of the House of Usher*.

Baudelaire's only other contribution to the world of music comes in the form of a long essay on Wagner (published in 1861 after the Paris performance of *Tannhäuser*), in which his attempt to describe the experience of Wagner's music leads him to speculate on the vast system of 'reciprocal analogy' governing all creation. While this theory of correspondence may not transform our understanding of Romantic art, the essay on the whole offers a remarkable opportunity for us to rehear Wagner through the ears of one of the century's most imaginative listeners.

KATHERINE BERGERON

Baudewyn, John. *See* BALDWIN, JOHN.

Baudiot, (Charles-)Nicolas (*b* Nancy, 29 March 1773; *d* Paris, 26 Sept 1849). French cellist, teacher and composer. He and Lamare joined Baillot in Paris in 1792 to play Boccherini quintets. He was a pupil of the elder Janson and became a cello professor (second class) at the newly founded Paris Conservatoire in 1795. His appointment was suspended in 1802 but he resumed office from 1805 until 1827 when he retired to undertake a number of tours. During the Empire he continued to perform chamber music with Baillot and other faculty members, and joined the Opéra orchestra. He became principal cello in the imperial chapel and retained the post during the Restoration. In 1818 he became a member of the Société Academique des Enfants d'Apollon. Although he was much esteemed in France, the *Allgemeine musikalische Zeitung* of April 1820 described his playing as cold. Fétis, too, inclined to that view, though he praised his pure tone and fine intonation. Baudiot played a Stradivari cello of 1725.

Baudiot's compositions are almost entirely for the cello, including numerous duos, variations and fantasias on popular melodies. He wrote two concertinos and two concertos for the cello, three string quintets and collaborated on works with Pleyel, Herz and Pixis. Late in life he published a number of songs and *romances*. His treatises include a cello method in collaboration with Baillot, Levasseur and Catel (1805/*R*) and a treatise on transposition (1837–8) with transposition exercises for piano, violin and viola. His *Méthode de violoncelle*, published in two parts (1826 and 1828), continues the tradition of J.L. Duport, but also integrates aspects of B.H. Romberg's technique, including use of the lower strings.

HUGH MACDONALD/VALERIE WALDEN

Baudo, Serge (*b* Marseilles, 16 July 1927). French conductor. He was the son of an oboe teacher and studied at the Paris Conservatoire, winning *premiers prix* in conducting and other subjects, and making his début in 1950 at the Concerts Lamoureux. He conducted frequently in Paris, toured for the Jeunesses Musicales de France until 1958 and in 1959 was appointed conductor of the Nice-Côte d'Azur RO. From 1962 to 1965 he was resident conductor at the Paris Opéra, and he was invited by Karajan to conduct *Pelléas et Mélisande* at La Scala in 1962. He made his début at the Metropolitan in *Les contes d'Hoffmann* in 1971, returning in the following three seasons. Baudo has conducted many notable premières, including Menotti's *L'ultimo selvaggio* (as *Le dernier sauvage*, 1963, Paris), Milhaud's *La mère coupable* (1966, Geneva), Messiaen's *Et exspecto resurrectionem mortuorum* (1965, Chartres) and *La Transfiguration* (1969, Lisbon) and works by Daniel-Lesur, Dutilleux, Nigg and Ohana. He was appointed principal conductor of the Orchestre de Paris in 1967 and music director of the Lyons Opera, 1969–71. After becoming music director (1971–87) of the Rhône-Alpes PO (from 1972 the Lyons National Orchestra), he founded and directed an annual Berlioz Festival to include the composer's operas, but resigned in 1989 when a curtailment of funds put an end to the operatic performances. Baudo has specialized in French and Russian music, giving performances imbued with subtlety and passion, and has composed a number of works including film scores. Among his most impressive

recordings are orchestral works by Debussy, Dutilleux, Ravel and Poulenc, *Pelléas et Mélisande* and the symphonies and choral works of Honegger. He has been created a Chevalier of the Légion d'Honneur and awarded the Ordre National de Mérite and the Ordre des Arts et des Lettres.

NOËL GOODWIN

Baudouin des Auteus (*fl* 1st half of the 13th century). Trouvère. The two works attributed to him are both of disputed authorship. Two settings of *M'ame et mon cors doing a celi* (R.1033) are extant, one in *F-Pa* 5198 and related manuscripts, the other in the Chansonnier du Roi and Noailles Chansonnier (*F-Pn* fr.844 and 12615). The latter unexpectedly couples an isometric poem of *pedes-plus-cauda* construction with a non-repetitive melody. The other song attributed to him is *Avril ne mai, froidure ne let tans* (R.283). The early suggestion that this poet was the Baudouin who appears in jeux-partis with Thibaut IV is now regarded with scepticism.

For general bibliography *see* TROUBADOURS, TROUVÈRES.

THEODORE KARP

Baudrexel, Philipp Jakob (*b* Füssen, Swabia, 2 May 1627; *d* Mainz, 23 March 1691). German composer and priest. He studied first with Johann Rudolph von Rechberg, Dean of Eichstätt and a canon of Augsburg Cathedral, who in the early 1640s sent him to Rome, where in 1644 he entered the Collegio Germanico. He studied composition with Carissimi, the director of music there. Baudrexel entered the priesthood in 1651, and three years later became parish priest of Kaufbeuren, Swabia, and a canon and director of the choir at Augsburg Cathedral. He retained these appointments until 1672, when he became court chaplain to Margrave Bernhard Gustav of Baden-Durlach at Fulda. After the margrave's death in 1679 Baudrexel went to Mainz as court chaplain to the Elector Karl Heinrich von Metternich. In the autumn of 1679 the elector died, but Baudrexel stayed in Mainz, first as court Kapellmeister and then from 1684 as director of music at the cathedral. Ill-health made the last two years of his life comparatively inactive.

It was for the choir at Augsburg Cathedral that Baudrexel published two collections of church music, the only publications of his about whose authenticity there can be no doubt. They are *Primitiae Deo et Agno coelestis hierarchiae cantatae* (Innsbruck, 1664) and *Psalmi vespertini de Dominica … cum hymnis de communi* (Cologne, 1668). They contain settings of the canticles, antiphons and motets for four, five and eight voices (*Te lucis ante terminum* from the second volume in A. Gottron, ed.: *Dreihundert Jahre Mainzer Kirchenmusik*, Mainz, 1943).

It has been suggested that Baudrexel may have been the translator of the German version of Carissimi's *Ars cantandi* that was published as an appendix to a musical tutor in 1692 by J. Koppmayer; unfortunately no copy of the original tutor seems to survive. (The attribution to Baudrexel of some organ pieces in F. Commer, ed.: *Collection des compositions pour l'orgue des XVI, XVII, XVIII siècles*, i, iii, Leipzig, 1866, seems unconvincing.)

GWILYM BEECHEY

Baudrier, Yves (Marie) (*b* Paris, 11 Feb 1906; *d* Paris, 9 Nov 1988). French composer. Essentially self-taught, he turned seriously to composition relatively late, having trained for law. Between 1929 and 1933 he took lessons with Georges Loth, organist of the Sacré-Coeur, and he received advice from Messiaen after their meeting in 1935. The next year he was a co-founder with Messiaen, Jolivet and Daniel-Lesur of the group La Jeune France, formed in opposition to the neo-classical tendencies prevailing in French music; he was the author of the group's manifesto. At about this time he had lessons in counterpoint with Daniel-Lesur at the Schola Cantorum. His subsequent career was associated largely with music for the cinema: he taught at the Institut des Hautes Etudes Cinématographiques (1945–60) and composed a number of film scores. In later years persistent ill-health curtailed his composing and other activities.

The association with Messiaen is rather misleading: Baudrier's music has a great deal more in common with that of Honegger. One of his most important works is *Le musicien dans la cité* (1937), an orchestral piece composed for an imaginary film. Its 'scenario' concerns a composer who wanders the streets of Paris at night, encountering 12 situations illustrated in the continuous movements of the suite. The plan has something in common with that of the *Pictures at an Exhibition*, though Baudrier's gift for the picturesque is not so sharp as Musorgsky's, and his orchestration is rather plainer than Ravel's. The score's most distinctive feature is its slightly bitter grotesque quality. In 1964 it was revised to accompany a television film.

WORKS

PAUL GRIFFITHS

Baudron, Antoine Laurent (*b* Amiens, 15 May 1742; *d* Paris, 1834). French composer and violinist. After

attending the Jesuit college in Amiens, he studied violin in Paris with Pierre Gaviniés. He joined the orchestra of the Comédie-Française in 1763 and became its leader and conductor in 1766; in this position he was responsible for the composition (or arrangement) of stage music for both old and new plays. He collaborated with Beaumarchais from 1770 and probably wrote the famous air 'Je suis Lindor' (from *Le barbier de Séville*) which Mozart later used as the theme of his 12 Variations K354/299*a*. At the request of the actor Larive, he composed new music for Rousseau's *Pygmalion* (1780), the Divertissement in *Le roi de Cocagne* (1781) and the *airs* in *Le mariage de Figaro* (1784), with the exception of the final vaudeville, which is Tissier's tune for *La fauvette*. He composed little after the Revolution but was greatly revered at the Comédie-Française and retired in 1822 on a pension equal to his full salary.

PHILIP E.J. ROBINSON

Bauer, Harold (*b* Kingston-upon-Thames, 28 April 1873; *d* Miami, 12 March 1951). American pianist of English birth. Born into a musical family, he began to study the violin at the age of six with his father and subsequently with Adolf Politzer, giving his first concerts by the time he was ten. At 15 he appeared in recital playing both the violin and the piano; he was compared unfavourably with Josef Hofmann, who had recently made his London début, and was advised to concentrate on only one instrument. He continued to study the violin and moved to Paris with the intention of establishing himself as a soloist. Again, he found himself at a disadvantage in that both Kreisler and Thibaud had recently made impressive début appearances, and had to turn to mundane accompaniment work to support himself. Having been introduced by the English pianist Graham Moore to Paderewski in London, Bauer renewed his acquaintance and was asked to play the second piano part for him while he was preparing a number of concertos. Paderewski secured other work for him, arranged for him to play in Russia and advised him to study intensively in order to pursue a career as a pianist. Bauer felt that it was too late for him to study in a conventional sense, and accordingly developed a highly personal method based on a quasi-balletic approach in which technical problems were resolved in terms of gestural responses to musical considerations. This method served Bauer so well that he soon became acknowledged as a player of formidable powers. In 1899 he made highly successful appearances in Scandinavia and the Netherlands and played with the Vienna PO under Richter, and in 1900 he made his American début with the Boston SO in the Brahms D minor concerto. Over the following years he became especially associated with the works of Beethoven, Schumann and Brahms, and in addition to his tours of the USA and Europe he also visited Australia and East Asia, becoming highly respected for the seriousness of his approach and his lack of mannerism.

Bauer was also drawn to the music of the French school, giving the Paris première of Debussy's *Children's Corner* suite and introducing Ravel's G major Concerto in New York (he had previously received the dedication of the same composer's *Ondine*). In addition he played virtuoso music by Alkan and Saint-Saëns, and was a champion of the avant garde of the day, featuring the works of Schoenberg, Skryabin, Laparra and others on his programmes. Equally, he maintained an affection for 17th- and early 18th-century keyboard composers. He was also active as a chamber musician, performing in trios with Thibaud and Casals and forming a piano duo partnership with Gabrilowitsch.

In 1917 Bauer took American citizenship, and in 1919 he founded the Beethoven Society of New York. He later became president of the Friends of Music of the Library of Congress and was associated with various educational establishments, most notably the Manhattan School of Music, where he was head of the piano department, continuing on its advisory board until his death. In the intellectuality of his approach and his lack of egocentricity, Bauer represented a more modern outlook than that of many of his contemporaries; yet his self-effacement did not preclude a degree of personal vision, as reflected in his transcriptions and editions of works by Franck, Schumann and Musorgsky. He was also highly inventive in his use of colouristic pedal effects, which he developed through his study of French music. He wrote *Harold Bauer, his Book* (New York, 1948).

CHARLES HOPKINS

Bauer, Joseph Anton (*b* Elbogen [now Loket], Bohemia, 17 June 1725; *d* ?Würzburg, 30 Aug 1808). Bohemian composer, trumpeter and keyboard player. He received his earliest trumpet tuition from his father, a tailor and town musician, and at the age of 23 he became court trumpeter to the Bishop of Augsburg. After further study, and after an impressive performance at the archbishop's court in Würzburg, he was appointed court trumpeter with a handsome salary; he also gained a reputation there as a good keyboard teacher. Bauer was only a dilettante composer. His published works, which appeared between 1770 and 1776, are quartets for keyboard, flute, violin

and cello. They all exhibit the same four-movement scheme: fast (sonata allegro)–slow–minuet and trio–fast. The keyboard is treated largely as a solo instrument; the flute is of secondary importance and the strings are almost exclusively handled as accompanimental components of the ensemble.

Bauer's daughter Catharina (*b* Würzburg, 1785), a noted keyboard player and composer in Würzburg, studied with her father and later with F.X. Sterkel; at the age of 13, she published a set of 12 keyboard variations op.1. This was followed by *12 Variationen über 'Wenn Lieschen nur wollt'* (op.2, 1799) and *12 Variationen über 'A Schisserl und a Reindl'* (op.3, *c*1799); Fétis also mentioned two collections of German dances and waltzes by a C. Bauer published in Munich, but these are likely to be by Charlotte Bauer.

ELLWOOD DERR

Bauer, Marion Eugénie (*b* Walla Walla, WA, 15 Aug 1882; *d* South Hadley, MA, 9 Aug 1955). American composer, teacher and writer on music. She studied in Portland, Oregon, and in Paris and Berlin, her teachers including Boulanger, Gédalge, Huss and Pugno. During twelve Summers between 1919 and 1944 she visited the MacDowell Colony where she produced many of her compositions and met other important women composers including Amy Beach, Mabel Daniels, Miriam Gideon and Ruth Crawford. Bauer taught music history and composition at New York University (1926–51), was affiliated with the Juilliard School of Music from 1940 until her death and lectured widely. Open to various styles, she was a champion of American music and modern composers, as evidenced by her participation in many organizations, e.g. founding member of the American Music Guild (1921), the Society of American Women Composers, the ACA and the AMC. She was secretary for the Society for the Publications of American Music, and a board member for the League of Composers and the ACA. Frequently she was the only woman in a position of leadership in these associations.

Like many women of her generation, she focussed her initial compositional activity on songs and piano solos. Her works of the 1930s and 40s were larger and more significant. Despite brief experiments with 12-note writing in the 1940s and 1950s, her music rarely ventured beyond extended tonality, emphasizing colouristic harmony and diatonic dissonance. Her compositions remained melodic in focus and grounded in 3rd-based harmony and periodic rhythm even when functional tonality was blurred. On occasion energetic rhythm propelled her works. In the 1920s her music had been seen as that of a left-wing modernist, but by the 1940s it was deemed conservative yet well-crafted. During her lifetime her music received many performances, including the 1947 première of *Sun Splendor* by the New York Philharmonic conducted by Stokowski and a 1951 Town Hall concert devoted to her music. Also recognized were her influence as a music critic and her intellectual approach to new music, demonstrated in writings such as *Twentieth Century Music* (New York, 1933, 2/1947). Addressing general readers as well as music specialists, her writings were widely published in journals; she also wrote a number of other books, and was editor of the *Musical Leader*.

WORKS

(*selective list*)

INSTRUMENTAL

Orch: A Lament on an African Theme, op.20a, str, 1927; Sun Splendor, ?1936; Sym. Suite, op.34, str, 1940; Pf Conc. 'American Youth', op.36, 1943, arr. 2 pf (1946); Sym. no.1, op.45, 1947–50; Prelude and Fugue, op.43, fl, str, 1948, rev. 1949

Chbr: Up the Ocklawaha, op.6, vn, pf (1913); Sonata no.1, op.14, vn, pf, 1921, rev. 1922; Str Qt, op.20, 1925; Fantasia quasi una sonata, op.18, vn, pf, 1925; Suite (Duo), op.25, ob, cl, 1932; Sonata, op.22, va/cl, pf, 1932; Concertino, op.32b, ob, cl, str qt/str orch, 1939, rev. 1943; Trio Sonata no.1, op.40, fl, vc, pf (1944); 5 Pieces (Patterns), op.41, str qt, 1946–9, no.2 arr. double ww qnt, db, 1948; Aquarelle, op.39/2a, double ww qnt, 2 db, 1948; Trio Sonata no.2, op.47, fl, vc, pf, 1951; Ww Qnt, op.48, fl, ob, cl, bn, hn (1956)

Kbd (pf solo unless otherwise stated): From the New Hampshire Woods, op.12, 1921; 3 Preludettes, 1921; 6 Preludes, op.15, 1922; Turbulence, op.17/2, 1924; A Fancy, 1927; Sun Splendor, ?1929, arr. 2 pf, ?1930; 4 Pf Pieces, op.21, 1930; Dance Sonata, op.24, 1932; Moods (3 Moods for Dance), op.46, 1950; Anagrams, op.48, 1950; Meditation and Toccata, org, 1951

Other inst: Prometheus Bound (incid music, Aeschylus), 2 fl, 2 pf, 1930; Pan and Syrinx [choreog. sketch for film], op.31, fl, ob, cl, pf, vn, va, vc (1937)

VOCAL

Choral: Wenn ich rufe an dich, Herr, mein Gott (Ps xxviii), op.3, S, women's chorus, org/pf, 1903; Fair Daffodils (R. Herrick), women's chorus, kbd (1914); Orientale (E. Arnold), S, orch, 1914, orchd 1932, rev. 1934; The Lay of the Four Winds (C.Y. Rice), op.8, male chorus, pf (1915); 3 Noëls (L.I. Guiney, trad.), op.22 nos.1–3, women's chorus, pf (1930); Here at High Morning (M. Lewis), op.27, male chorus, 1931; The Thinker, op.35, mixed chorus, 1938; China (B. Todrin), op.38, mixed chorus, orch/pf, 1943; At the New Year (K. Patchen), op.42, mixed chorus, pf, 1947; Death Spreads his Gentle Wings (E.P. Crain), mixed chorus, 1949, rev. 1951; A Foreigner Comes to Earth on Boston Common (H. Gregory), op.49, S, T, mixed chorus, pf, 1953

Other vocal: Coyote Song (J.S. Reed), Bar, pf (1912); Send Me a Dream (Intuition) (E.F. Bauer), 1v, pf, 1912; The Red Man's Requiem (E.F. Bauer), 1v, pf (1912); Phillis (C.R. Defresny), medium v, pf (1914); By the Indus (Rice), 1v, pf, 1917; My Faun (O. Wilde), 1v, pf, 1919; Night in the Woods (E.R. Sill), medium v, pf (1921); The Epitaph of a Butterfly (T. Walsh), 1v, pf (1921); A Parable (The Blade of Grass) (S. Crane), 1v, pf (1922); 4 Poems (J.G. Fletcher), op.16, high v, pf (1924); Faun Song, A, chbr orch, 1934; 4 Songs (Suite), S, str qt, 1935, rev. 1936; Songs in the Night (M.M.H. Ayers), 1v, pf (1943); The Harp (E.C. Bailey), 1v, pf (1947); Swan (Bailey), 1v, pf (1947)

J. MICHELE EDWARDS

Bauer, Ross (*b* Ithaca, NY, 19 Dec 1951). American composer and conductor. He studied at the New England Conservatory (BM 1975) with John Heiss and Ernst Oster and at Brandeis University (PhD 1984) with Martin Boykan, Arthur Berger and Seymour Shifrin. During the summer of 1982 he was a fellow at Tanglewood, where he worked with Berio. He has taught at Brandeis University (1981–5), Stanford University (1986–8), where he directed the ensemble Alea II, and the University of California, Davis (1988–), where he has founded and directed the Empyrean Ensemble. He also served as a founding member and chair of the Griffin Music Ensemble, Boston (1985–92). His honours include the American Academy & Institute of Arts and Letters Walter Hinrichsen Award (1984), a Guggenheim Fellowship (1988), a prize in the ISCM National Composers Competition (1989) and commissions from the Fromm and Koussevitzky foundations (1991, 1994). He was a MacDowell Colony fellow in 1996.

Bauer's music derives its structure, pitch succession and pitch centricity from relationships between hexachords and the collections of intervals and chords they comprise. An inventive and subtle manipulation of timbre is also characteristic of his work.

RICHARD SWIFT

Bäuerl, Paul. *See* PEUERL, PAUL.

Bauernflöte (Ger.). *See under* ORGAN STOP.

Bauernleier (Ger.). *See* HURDY-GURDY.

Baugé, André (*b* Toulouse, 4 Jan 1892; *d* Paris, 22 May 1966). French baritone. His mother was the soprano Anna Tariol-Baugé and his father, Alphonse, was a teacher of singing. His studies with them led to his début with the Opéra-Comique in 1917 as Frédéric in *Lakmé*. Other roles with the company included Don Giovanni and Pelléas, with the Rossini Figaro as his tour de force. At the Opéra in 1925 he sang Germont in *La traviata* and the title role in Rabaud's *Mârouf*. He appeared at Monte Carlo as Escamillo in 1924. His career took a new turn when at the Marigny Theatre in Paris he sang the title role in the French première of Messager's *Monsieur Beaucaire* in 1925, and from then onwards he became increasingly associated with operetta, enjoying a special success in Lehár's *Paganini*. He also appeared in some early French musical films and after World War II taught at the Ecole Normale. His recordings show a light, high baritone, firmly placed if somewhat dry-toned, better suited to Messager than to Rossini.

J.B. STEANE

Bauld, Alison (Margaret) (*b* Sydney, 7 May 1944). Australian composer. After studying at the National Institute of Dramatic Art, Sydney (1961–2) and working as a stage and television actress, she took a music degree at the University of Sydney in 1967. She moved to England in 1969, studying with Lutyens and Hans Keller and taking a PhD at the University of York in 1974. She won first prize at the Paris Rostrum in 1974 and was music director at the Laban Centre, London (1975–8), then composer-in-residence at the NSW State Conservatorium, Sydney, from 1978; since then she has taught at Hollins College, London. Many of her works have been heard in Europe, including at the Aldeburgh, York and Edinburgh Festivals.

Bauld's output focusses on works with a vocal or dramatic element, such as her ballad opera *Nell* (1988) which, like its antecedents, seeks to find a voice for the harshness of life in early colonial Australia. 'I consciously seek literary, aural and visual stimuli,' she has written. 'When the text is complete I know where I am going.' More recently, she has produced a series of keyboard tutors *Play your Way* (3 vols., 1992) and a novel, *Mozart's Sisters* (1997).

WARREN BEBBINGTON

Bauldeweyn [Balbun, Balduin, Bauldewijn, Baulduin, Baulduvin, Valdovin], **Noel** [Noe, Natalis] (*b c*1480; *fl* 1509–13). Netherlandish composer. His works combine aspects of the obsolete Netherlandish style of the late 15th century and the newer style of Josquin des Prez and his immediate successors. Bauldeweyn succeeded Jean Richafort as *magister cantorum* of St Rombouts, Mechelen, in 1509 and was in turn succeeded in 1513 by Jacques Champion. The position at St Rombouts was a prestigious

one, and the church itself was frequently used by the Burgundian court chapel. No further record of his life or career is known; the documents formerly interpreted as showing his activity at Antwerp Cathedral in 1512–17 and his death in 1529/30 have been shown to refer to two entirely different men, the choirmaster Noel Grant (or Brant) and the canon Nicolaus Bauldini (see Forney). The wide dissemination of his music in Bohemian, Spanish, German, Italian and Netherlandish sources dating from about 1510 to about 1575 is indicative of his high reputation. Seven masses are transmitted with ascriptions to Bauldeweyn, and the vihuelist Valderrábano composed a fantasia on 'un Pleni de una Missa de Bauldoin' otherwise unknown. There are 13 motets ascribed to him, though one of these, *Ave caro Christi cara*, has recently been attributed to Josquin. Contrafacta of two sections of *Missa 'En douleur en tristesse'* circulated as motets also. Of the two secular works ascribed to Bauldeweyn, only the chanson *En douleur en tristesse* (also transmitted with German words) is thought to be by him. Whereas most of Bauldeweyn's motets and one song are preserved in printed sources, none of his Masses reached publication with the possible exception of the *Missa 'Da pacem'* which was printed in 1539 as a work of Josquin

Bauldeweyn was a very skilful and individual contrapuntist and canonic writing in the manner of Josquin and his predecessors formed an important textual role in his music. Characteristic of his generation, more than half his compositions are for five or six voices, and much of his music had a strong harmonic sense and rhythmic drive. None of Bauldeweyn's works can be dated precisely, but differences in style make it possible to trace a tentative chronology; many of these differences also reflect Bauldeweyn's response to the character of the various modes. Early works, such as the six-voice *Missa sine nomine* or the Stabat virgo, both in the phrygian mode, show the occasionally harsh dissonance, low ranges and loose relation of text to music characteristic of late 15th and early 16th century northern style. The tendancy towards full scoring and the use of canon in two or three voices throughout most of *Missa sine nomine*, bring to mind the work of Ockeghem and others and, like the early *Missa 'Myn liefkens bruyn oghen'*, it is characterised both by independence in the contrapuntal lines as well as by imitative textures. Characteristic also of Bauldeweyn's early masses, including the four-voice *Missa sine nomine*, thematic repetition and ostinato are frequently employed as devices for structural expansion and coherence; where these occur at the end of sections they perform crucial elements in drivers to the cadence featuring complex sequences of cambiata and other motifs rather similar to that of mature compositions of Obrecht and Isaac, and works by Josquin. Comparable features characterize the later *Missa 'Da pacem'* and the five-voice *Missa Inviolata* which is the only one of his Masses structured on the old-fashioned cantus firmus principle. By way of contrast the *Missa 'En douleur, en tristesse'* which, like his chanson, is almost entirely canonic in conception, is more florid in style, consisting of long interweaving contrapuntal lines. The latest of the masses is probably the *Missa 'Quam pulchra es'*, a work in which dissonance treatment is thoroughly refined and scoring notably varied; the musical texture is frequently divided in antiphonal fashion, with full six-part writing reserved for important cadences. The recently-discovered motet *Sancta Maria virgo virginum*, in the same mode (Ionian on F) and for the same number of voices, has many features in common with the mass. The psalm motets *Exaltabo te* and *Benedicam Dominum* (possibly by Stoltzer) are also apparently very late works, and these show an interest in correct text declamation and in appropriate musical expression of the mood, reflecting the influence of Josquin and his followers. Bauldeweyn's music as a whole exhibits a strongly personal style and his best works compare favourably with those of his contemporaries.

Bauman, Thomas (Allen) (*b* Marinette, WI, 10 March 1948). American musicologist. He studied under Daniel

Heartz and others at the University of California, Berkeley, gaining the PhD in 1977 with a dissertation on music and drama. He has taught at the University of Pennsylvania (1977–84), Stanford University (1984–9) and the University of Washington, Seattle. He is currently coordinator of the musicology programme in the Northwestern University School of Music. He has also been an Andrew Mellon Faculty Fellow at Harvard University. His research interests include German opera in the late 18th and early 19th centuries, cultural studies and Mahler.

PAULA MORGAN

Baumann, Hermann (Rudolf Konrad) (*b* Hamburg, 1 Aug 1934). German horn player. After studying with Fritz Huth in Hamburg, he was appointed first horn in the Dortmund PO (1957–61) and in the Stuttgart RSO (1961–7). He won the ARD Competition in Munich in 1964, and made his début in 1967 in Strauss's Second Horn Concerto with the Vienna SO under Karl Richter. A turning-point in his career was the decision to give up orchestral playing in 1966 to accept a position as a teacher in the Folkwang Hochschule in Essen, where he became a professor in 1969. He remained there until 1996, with an interlude (1980–83) at the Musikhochschule in Stuttgart. Baumann has toured widely as a soloist and made many recordings, most notably the concertos of Mozart, which he was the first to record on the natural horn (1972, under Harnoncourt), and later recorded on modern horn (under Zukerman). He also recorded concertos by Weber, Strauss and Glier. He has given the first performances of Ligeti's Trio for violin, horn and piano, as well as Hans Georg Pflüger's Horn Concerto, dedicated to him.

EDWARD H. TARR

Baumann, Max Georg (*b* Kronach, upper Franconia, 20 Nov 1917; *d* 18 July 1999). German composer. He studied composition and conducting under Noetel, Blacher and Distler at the Berlin Musikhochschule (1939–43), where he returned as lecturer in 1946, remaining there except for a period as Kapellmeister in Stralsund (1947–9). In 1953 he was appointed professor and from 1963 to 1979 he was in charge of the school music department; he also conducted the Collegium Musicum. He received the arts prize of the city of Berlin in 1953. As a composer he continued the line of Reger and Hindemith, though he introduced new techniques and his cantata *Libertas cruciata* (1963), on letters from Resistance fighters, was the first German composition for stereo radio. Sacred music and organ works stand at the centre of his output; the Passion combines dramatic and liturgical forms, with structural austerity and colourful sonorities. A strong dramatic accentuation is present in the ballet *Pelleas und Melisande* and the oratorio *Der Venus süss und herbe Früchte*, which was composed in homage to Lucas Cranach the elder, photographs of whose paintings are projected during the performance.

WORKS

(*selective list*)

Orch: Conc. grosso no.1, op.22, str, 1950; Variations, op.29; Suite moderne, op.30, no.1, chbr orch; Pf Conc., op.36, 1952; Petite suite, op.38, 1953; Perspektiven 1, op.55, 1957; II, 1967; Sinfonia piccola, op.65, 1960; Conc., org, str, timp, 1964; Crucifixus, Meditation, 1973
Choral: 4 masses, motets (Ger. and Lat.); Passion, op.63, solo vv, chorus, speaking chorus, orch, 1959; Deutsche Vesper, op.64, 1v, spkr, chorus, orch, 1964; Ankunft des Herrn, op.66, 1960; Geburt des Herrn, op.66, no.1, 1966; Libertas cruciata, dramatic cant., S, spkr, chorus, speaking chorus, orch, 1963; Der Venus süss und herbe Früchte (orat, H. Sachs and others), solo vv, spkr, chorus, orch, 1972; Auferstehung, orat, S, Bar, B, spkr, chorus, speaking chorus, orch, 1980
Stage: Pelleas und Melisande, ballet, op.44, 1954; Das Glockenspiel, op.52, school op, 1956; Die Elixire des Teufels (op, 3, after E.T.A. Hoffmann)
Org: Orgelsuite, op.67 no.1; Psalmi, op.67 no.2, 1962; Sonatine, 1963; 3 Pieces, 1965; Fasciculus pro organo, 1967
Music for amateurs

WOLFRAM SCHWINGER/KLAUS KIRCHBERG

Baumbach, Friedrich August (*b* Gotha, bap. 12 Sept 1753; *d* Leipzig, 30 Nov 1813). German composer and writer on music. Between 1777 and 1789 he was intermittently active in the Hamburg theatre, first as a singer and later as a violinist and music director. He also visited St Petersburg (*c*1780), was music director of the newly established theatre in Riga in 1782–3 and appeared in Moscow in 1785. In 1790 he moved to Leipzig, where he wrote the articles on music for J.G. Grohmann's *Kurzgefasstes Handwörterbuch über die schönen Künste* (1794). At the beginning of his career he composed mainly instrumental chamber works, but in Leipzig he published many songs and small instrumental pieces for amateurs. His song *Die Forelle* has been cited as a source of inspiration for Schubert's setting. According to Schilling, he was also a respected piano and mandolin player.

WORKS

all published in Leipzig unless otherwise stated

Vocal: Choix d'airs et de chansons (1792); Lyrische Gedichte vermischten Inhalts, kbd acc. (1792); [3] Duetti notturni, i, pf acc. (1798); Gesänge am Clavier oder Pianoforte, i–ii (Gotha, *c*1798); 3 canzonette, pf acc. (Gotha, n.d.); at least 10 pubd songs, duets,

ballads; Komm und hülle mich in deine Schatten, 4vv, *D-Bsb*; aria, S, inst acc., *A-Wn*; 4 thanksgiving cants., *D-GOl* [no 1st name indicated]

Kbd: 6 sonate, acc. vn obbl, vc (1780); 6 sonates, op.1 (Berlin and Amsterdam, 1781); Air des 3 notes par J.J. Rousseau ... et 24 variations, acc. vn obbl, vc (Berlin, 1792); Russisches Volkslied mit [50] Veränderungen (Gotha, 1793); 3 rondeaux (1798); 3 sonates, acc. vn obbl, vc, op.3 (Bonn, 1805); 6 sonatas, acc. vn, vc, *Bsb*; others mentioned in *GerberNL*, *MGG1* suppl., lost

Other inst: 6 sonates, 2 vn (Dessau, ?1782); Variations sur un allegretto, vn, b (Hamburg, 1799); 3 sonates, vn, b, op.22 (Bonn, 1804); works for gui, mentioned in *MGG1* suppl., lost

Several pieces in contemporary anthologies

GUNTER HEMPEL

Baumgarten, Alexander Gottlieb (*b* Berlin, 17 June 1714; *d* Frankfurt an der Oder, 26 May 1762). German philosopher. The founder of aesthetics as a subdiscipline of philosophy, he was the son of a military chaplain in Berlin who had been assistant to the Pietist theologian and pedagogue A.H. Francke. He studied first at the Grauen Kloster school in Berlin, but in 1722 was sent to Francke's well-known school for orphans in Halle. In 1730 he entered Halle University as a student of theology and philosophy, but during this period he frequently went to Jena to attend lectures by the celebrated rationalist philosopher J.C. Wolff, who later, together with Leibniz, became the major influences on Baumgarten's own philosophical theories. In 1735 he received a master's degree with his first major work, the thesis *Meditationes philosophicae*. In 1737 he was appointed professor of philosophy and theology at the university of Frankfurt an der Oder. His several Latin works on metaphysics, ethics and practical philosophy widely influenced the teaching of these disciplines in German universities. Kant thought him one of the greatest philosophers of his time.

Baumgarten's most important contributions were the result of a systematic study of what he was the first to call aesthetics, a subject he introduced into the university curriculum as a branch of philosophy. In his usage, aesthetics treated only in part the problems of beauty. Rather, he created aesthetics as an aspect of empirical psychology concerned with the inferior faculty, that is the faculty of sensible knowledge. For him aesthetics together with logic (superior faculty) constituted a science he labelled 'gnoseology', or a theory of knowledge. He was most concerned with poetic aesthetics; and despite his purpose to give all the arts a place in a total scientific scheme of philosophy, he made little application of his new ideas to music and the other fine arts. However, his student and biographer Georg F. Meier developed these relationships in his *Betrachtungen über den ersten Grundsatz aller schönen Künste und Wissenschaften* (1757); this work influenced the growth of music aesthetics at the turn of the 19th century, for example in the philosophy of Moses Mendelssohn and J.G. Sulzer.

GEORGE J. BUELOW

Baumgarten, Karl [Carl] **Friedrich** (*b* Lübeck, *c*1740; *d* London, 1824). German composer, violinist and organist, active in England. He had organ lessons with J.P. Kunzen at Lübeck before he settled in London, at about the age of 18, as organist of the Lutheran Chapel in the Savoy. In addition to serving as an organist, he worked as a teacher, composer and violinist. The imputation made by Haydn, who heard him in London in 1792, that his violin playing lacked energy would seem to be contradicted by the fact that he was a well-known orchestral leader, for example at the Haymarket Theatre in 1763, at Dublin the following year, and for a long period at Covent Garden (1780–94); he was also a violinist in the Duke of Cumberland's band. Burney wrote that Baumgarten had then (1789) 'been so long in England that his merit [was] unknown to his countrymen on the Continent'; and Baumgarten had apparently forgotten his continental connections, for when he met Haydn he could hardly converse in German.

His music for the stage was only moderately successful. Burney wrote that Baumgarten deserved notice 'as an instrumental composer and profound harmonist'. Judging by what was published, this was a generous verdict. His chamber music is written in the style current during the late 18th century in England, in imitation of J.C. Bach, but it is undistinguished and technically undemanding. His organ fugues are archaically 'learned' by comparison with his other work, and rather dull. As an extemporizer at the organ, however, Baumgarten was highly admired; he was respected as a knowledgeable musician and a cultured person of wide interests including astronomy and mathematics. He also had an interest in music theory and wrote an unpublished treatise (*GB-Lbl* Add.36681).

WORKS

all printed works published in London unless otherwise stated

STAGE WORKS

all performed in London

William and Nanny, or The Cottagers (comic op), Covent Garden, 1779

Bluebeard, or The Flight of Harlequin (pantomime), Covent Garden, 1791; Grand March, arr. pf (Dublin, *c*1795)

Ov. to works by W. Shield: Harlequin junior, 1784; Robin Hood, 1784

Songs in pasticcios: Netley Abbey (W. Pearce), 1794, favorite songs (1794); Hercules and Omphale, 1794; Mago and Dago, 1794

OWAIN EDWARDS

Baumgarten, Samuel Christian [Christopher Frederick] (*b* *c*1729; *d* London, will proved 3 Aug 1798). English bassoonist and teacher, probably of German birth. He was in England at least as early as 1750, when he was elected a member of the Royal Society of Musicians. In 1754 and 1758 he took part in the Foundling Hospital performances of *Messiah*. He played at the Three Choirs festivals in Gloucester in 1763, Worcester in 1764 and Hereford in 1765 and was among the four principal bassoonists at the Handel Commemoration in Westminster Abbey in 1784 and in subsequent years; he was also bassoonist at the King's Theatre between 1760 and 1785. He appeared in concert at the Pantheon as late as 1790–91. Baumgarten's name occurs for the last time in the membership book of the Royal Society of Musicians in 1792, after which he retired to Hampstead. The fourth of his 12 children, Charlotte, was the mother of Cipriani Potter; there is no evidence that he was related to Karl Friedrich Baumgarten.

PHILIP H. PETER

Baumgartner [Baumgärtner], **Johann Baptist** [Jean Baptiste] (*b* Augsburg, 1723; *d* Eichstätt, 18 May 1782). German cellist and composer. The son of a flautist at the Augsburg court, he worked in the service of the prince-bishop and at the seminary of St Moritz in Augsburg (1742 and 1749). After the prince's death in 1768 he undertook a series of concert tours in England, Holland, Sweden, Denmark and Germany. For some time he lived in Amsterdam, and about 1774 published a cello tutor in The Hague entitled *Instructions de musique, théorique et pratique, à l'usage du violoncelle*. In 1775 he was appointed to the royal orchestra in Stockholm but never took up the post. He was nevertheless elected to the Swedish Academy of Music the following year. He then undertook further concert tours, including one to Hamburg. In 1777 he played with the flautist Ludwig Gering first in Augsburg and then in Salzburg, where he visited Leopold Mozart. He then travelled to Vienna to play before the Imperial Court. In December 1778 he joined the Hofkapelle of the Prince-Bishop of Eichstätt as a chamber musician with the high salary of 400 gilders.

WORKS

Fugue, vc (Vienna, 1797); Lieder für die Guitarre eingerichtet (Mainz, n.d.)
Arrs. of Fr. op airs, 2 vc, *S-Skma*; Capriccio, vc, *Skma*; Fantasies, vc, *A-Wgm*, *D-DO*; 2 sonatas, vc, b, *S-Skma*; 35 cadenzas, vc, *A-HE*

HERBERT SEIFERT

Baumgartner, Paul (*b* Altstätten, canton of St Gallen, 21 July 1903; *d* Locarno, 19 Oct 1976). Swiss pianist. He studied with Paul Müller in St Gallen, then with Walter Braunfels in Munich and (from 1925) Cologne, and finally with Eduard Erdmann. From 1927 to 1935 he taught in Cologne, and in 1937 was appointed head of the piano department at the Musikakademie in Basle, where in 1960 he started a series of master classes. From 1953 to 1962 he also taught at the Hanover Akademie für Musik und Theater. Baumgartner gave many concert tours, and played chamber music with, among others, Casals, Pierre Fournier and Végh. Although his repertory was based on the 19th century, he remained a champion of contemporary music; his performances of the complete Beethoven sonatas were also much admired. In 1962 he received the St Gallen Prize for Culture. His recordings included works by Beethoven, Mendelssohn and Brahms, and Bach sonatas with Casals.

JÜRG STENZL

Baumgartner, Rudolf (*b* Zürich, 14 Sept 1917). Swiss violinist, conductor and teacher. He studied music at Zürich University and under Stefi Geyer and Paul Müller at the conservatory there, and continued his violin studies in Paris with Flesch and in Vienna with Schneiderhan. He then embarked on a concert career that took him to most European countries as a soloist, and in chamber music as a member of the Stefi Geyer Quartet and later of the Zürich String Trio and the Zürich Chamber Trio. He was also leader of various chamber orchestras. In 1956, with Schneiderhan, he founded the Lucerne Festival Strings, an ensemble of soloists which he continued to direct. With it he toured widely and made numerous successful recordings, many in association with leading soloists, including Fournier, Haskil, Holliger and David Oistrakh. He made arrangements for the ensemble of Bach's *Art of Fugue* and *Musical Offering*, among other works, and directed premières of works by Conrad Beck, Françaix, Krenek, Rafael Kubelík, Ligeti, Martin, Martinů, Ohana, Penderecki, Xenakis and others. Baumgartner taught the violin from 1954 at the Lucerne Conservatory, of which he was appointed director in 1960. From 1969 to 1980 he was also artistic director of the Lucerne Festival.

RUDOLF LÜCK

Baumgartner, Wilhelm (*b* Rorschach, 15 Nov 1820; *d* Zürich, 17 March 1867). Swiss pianist, teacher and composer. His father died when he was young, but his exceptional intelligence assured him of a place at his school and the continuing of his education. In 1833 he was adopted by Joseph Waldmann, a clergyman from Messkirch, Baden, who educated him further. At the age of 14 he was composing and giving music lessons. He

attended the Gymnasium in Zürich from 1836 to 1838, and then studied at Zürich University. Resolving to become a professional musician, he studied the piano and theory with Alexander Müller, the director of a number of choirs; Baumgartner was occasionally asked to conduct in his master's absence. Having concluded his apprenticeship after three years, he moved in 1842 to St Gallen, where he taught the piano, gave recitals and composed songs. During this period he was in close contact with Friedrich Kücken, with whom he frequently discussed his compositions; he also became interested in German literature and theology.

On 7 October 1844 Baumgartner gave a farewell recital in St Gallen and moved to Berlin. Here he sought out Mendelssohn, who advised him to study the piano and composition with Taubert. At the same time he gained entry into élite artistic circles, and he often accompanied Jenny Lind in song recitals; his activity as a composer diminished somewhat as he became more receptive to new influences. He followed the news of the political struggles in Switzerland with keen interest, and with a sense of patriotism awakening, he decided to return home to devote himself to the idea of freedom in his capacity as a musician. On 26 February 1845 he left Berlin and made his way back to Switzerland, stopping en route in Leipzig, Dresden and Munich; he arrived in Zürich on 26 April and remained there the rest of his life.

In Zürich, Baumgartner occupied himself chiefly with piano teaching. He gave no recitals (he hated virtuosity for its own sake) and played only in small artistic circles. He was also active as a choirmaster, often taking charge of the so-called Müller Choral Society, directing the city choral society (1851–62) and founding and directing his own male chorus (1862–6), which was later named the Zürich Male Chorus. He also directed the choral society of the canton of Zürich, and from 1849 until 1866 he led the student choral society, for which he was named music director of the university. He contracted tuberculosis in 1866 and died a year later.

Baumgartner's compositions are almost exclusively for the voice and the piano. More than half of his 170 vocal works are solo songs with piano accompaniment; about a quarter are for four-part male chorus, the best-known of which are *O mein Heimatland* op.11 no.1 and *Heisst ein Haus zum Schweizerdegen*, both of which are to texts by Gottfried Keller. His best-known solo song is *Mignon*, a setting of Goethe's *Kennst du das Land*. The subjects of his songs are freedom and the fatherland, love, nature and companionship. Expressive of personal moods and experiences, they are wholly Romantic, though not overly refined or sentimental. His compositions for piano solo consist mostly of dance pieces, character-pieces and songs without words.

LUISE MARRETTA-SCHÄR

Bäumker, Wilhelm (*b* Elberfeld, 25 Oct 1842; *d* Rurich, nr Erkelenz, 3 March 1905). German music historian. After studying philosophy and theology at the University of Bonn, he was ordained a Roman Catholic priest. His chief work is *Das katholische deutsche Kirchenlied*, still the basic study of its topic. The second volume of the work (1883) was originally the completion of a work of the same title begun by K.S. Meister, of which only the first volume had been published (1862); in 1886 Bäumker published an edition of Meister's volume so revised and enlarged with fresh material as to make it quite a new work. In addition to discussing both tunes and texts of the hymns, the study includes a full bibliography of the various collections in which they are found. A third, supplementary volume (1891) brings the subject through the 18th century, and a final volume, edited from Bäumker's papers after his death by Joseph Gotzer, extends the coverage as far as 1909. Bäumker's other works include small monographs on Palestrina, Lassus and the Dance of Death, as well as *Zur Geschichte der Tonkunst in Deutschland*, an account of the German medieval theorists, their treatises, and the beginnings of German vernacular church song.

J.R. MILNE/BRUCE CARR

Baur. French family of musicians.

(1) Jean Baur (*b* Bouzonville, Moselle, 1719; *d* ?Paris, after 1773). Composer and harpist. He settled in Paris in 1745, four years before Goepfert introduced the pedal harp there. He used the pedal harp in his chamber works, and his sonatas with clavecin or fortepiano accompaniment mark him as the earliest known composer to differentiate between the harp and keyboard instruments. His daughter Marie-Marguerite Baur (*b* Paris, 1748; *d* Paris, after 1790) was also a harpist; she made her début at the Concert Spirituel in 1762.

WORKS

all published in Paris between 1763 and c1773

6 sonates, vc, b, op.1; 6 sonates, avec plusieurs pièces en sons harmoniques, vc, op.2; Sonates, fl/vn, bc, 2 sets (1761); Qt, fl, vn, b, hp (1769); Premier recueil d'ariettes de différents auteurs, acc. hp, op.4; Deuxième recueil d'airs connus, avec quelques préludes et caprices propres à exercer les mains, hp, op.5 (*c*1770); 4 sonates, 2 for hp, clavecin/pf, 2 for hp, vn ad lib, op.6 (?1773); 4 sonates: 2 for hp, clavecin/pf, 2 for hp, vn ad lib, op.7; 4 sonates: 2 for hp, clavecin/pf, 2 for harp, vn ad lib, op.8; Premier recueil d'airs, ariettes, menuets et gavottes, avec plusieurs caprices, hp; 6 sonates: 4 for 2 vn, 2 for vn, b

(2) Barthélemy Baur [*le fils*] (*b* Paris, 1751; *d* Tours, 1823). Harpist and composer, son of (1) Jean Baur. He settled in Tours, where he and his wife taught the harp,

the piano and singing. His two known works, both published in Paris, are a *Recueil d'ouvertures* op.1 (*c*1771) arranged for harp, and *Trois sonates* for harp op.2, both with ad lib accompaniment for violin and cello.

(3) **Charles-Alexis Baur** (*b* Tours, 1789; *d* London, after 1820). Harpist, pianist, teacher and composer, son of (2) Barthélemy Baur. From 1805 he studied with his parents and then with F.-J. Naderman in Paris. In 1820 he settled in London as a teacher. His compositions, all for harp, include six sonatas opp.1–2, duets with piano and flute, a collection of *ariettes* and an arrangement of Grétry's *La caravane du Caire*.

ALICE LAWSON ABER-COUNT

Baur, Jürg (*b* Düsseldorf, 11 Nov 1918). German composer and teacher. He rose to prominence at the age of 18 when his first string quartet was given its première by a professional quartet at the Düsseldorf Hindenburg secondary school. Between 1937 and 1948 he attended the Cologne Musikhochschule as a pupil of Jarnach (composition), Karl Hermann Pillney (piano) and Michael Schneider (organ and sacred music), though his studies were interrupted by the war; he later studied musicology at Cologne University (1948–51). In 1946 he was appointed lecturer in music theory at the Düsseldorf Conservatory and from 1952 to 1960 he was choirmaster and organist at St Paulus, also in Düsseldorf. During 1960 Baur held a scholarship from the Federal German government to study at the Villa Massimo in Rome for six months; he returned to Rome for a second stay in 1968 and was guest of honour there in 1980. He was director of the Düsseldorf Conservatory (1965–71) and was appointed professor in 1969. In 1971 he succeeded B.A. Zimmermann as teacher of composition at the Cologne Musikhochschule, remaining there until 1990. Baur's many distinctions include the Recklinghausen Young Generation Prize (1956), the Robert Schumann Prize of the city of Düsseldorf (1957), the Federal Cross of Merit (first class, 1970), and honorary membership of the German Music Council (1988), the North Rhine-Westphalia Service Award and the City of Duisburg Music Prize (1994).

Born in the generation between Blacher and Henze, Baur achieved widespread recognition as a composer fairly late in his career. Under the influence of Jarnach, he had already encountered the music of Bartók, Stravinsky and Hindemith in the late 1930s, but after the war he heeded Jarnach's advice in avoiding the more extreme manifestations of the musical avant garde. The works of the early 1950s maintain Jarnach's principles of economy of means and formal clarity, with Bartók as the most obvious stylistic model. Baur only gradually turned his attention to dodecaphonic techniques, studying the music of Webern with particular intensity. However, although serial structures influenced his musical thinking, especially in the String Quartet no.3 (1952), the *Quintetto sereno* (1958), also notable for its use of aleatory effects, the Sonata for two pianos (1957) and the *Ballata romana* (1960), Baur's sound world seems far removed from the Expressionism of the Second Viennese School. During the early 1960s Baur strove to achieve an accessible yet modern style that remained independent of the avant garde. His most successful works at this time include the exhilarating *Concerto romano* for oboe and orchestra (1960–61) and *Romeo und Julia* (1962–3), in which the tragic elements of Shakespeare's play are distilled into a powerful and cohesive entity. In accordance with his desire to maintain links with past traditions, Baur then developed a strong predilection for the quotation of earlier music in his work, though without the ironic, dissociative tone of many of the collage compositions of this period. The range of musical inspiration is surprisingly wide, encompassing such composers as Schumann, Dvořák, Bartók, Johann Strauss, Gesualdo, Mozart and Schubert. Primarily a composer of orchestral and instrumental music, Baur has produced some radical works for less mainstream instruments such as the recorder and the accordion. Although he has rarely written for the theatre, his vocal music demonstrates a remarkable sensitivity to poetic texts, the extended choral work *Perchè* (1967–8, after Ungaretti) numbering among his most powerful compositions.

WORKS

ORCHESTRAL

Conc., str, 1941–8; Overture, 1946–50; Partita über 'Wie schön leuchtet der Morgenstern', tpt, str, 1946–91; Carmen Variations, 1947; Va Conc., 1951–2; Musik, str, 1952; Sinfonia montana, 1953; Concertante Music, pf, orch, 1958; Concertino, fl, ob, cl, str, timp, 1959; Conc. romano, ob, orch, 1960–61; Romeo und Julia, 1962–3; Piccolo mondo, 1963; Lo specchio, 2 cycles, 1965–6; Sym. ERIK LEVI

Bausewein, Kaspar (*b* Aub, nr Ochsenfurt, 15 Nov 1838; *d* Munich, 18 Nov 1903). German bass. He studied in Munich, making his début there in 1854 at the Hofoper, where he was engaged for 46 years. A fine actor, equally gifted for comic and serious opera, he had a wide repertory ranging from Mozart's Figaro and Leporello and Rossini's Don Basilio to Caspar (*Der Freischütz*) and the three Wagner roles that he created: Pogner in *Die Meistersinger* (1868), Fafner in *Das Rheingold* (1869) and Hunding in *Die Walküre* (1870). He retired in 1900 after a farewell performance as Lord Cockburn in *Fra Diavolo*.

ELIZABETH FORBES

Baussnern [Bausznern], **Waldemar von** (*b* Berlin, 29 Nov 1866; *d* Potsdam, 20 Aug 1931). German composer. He studied at the Berlin Hochschule für Musik under Friedrich Kiel (1882–5) and completed his studies in Bargiel's masterclass at the Preussische Akademie der Künste, Berlin (1885–8). He briefly served as the conductor of the Mannheim Musikverein in 1891, before becoming conductor of the Mannheim-Ludwigshafen Lehrergesangverein (1891–4). In 1894 he moved to Dresden, where he held the posts of Liedermeister of the Dresdner Liedertafel (until 1901) and director of the Dresdner Bachverein (1896–7). In 1902 he founded the Dresdner Chorverein. He taught composition, instrumentation and score-reading at the Cologne conservatory (1903–8), was the director of the Ducal Orchestral School in Weimar (1908–16), becoming professor there in 1910, and was later director of the Hoch Conservatory in Frankfurt (1916–23). He was appointed Second Permanent Secretary at the Berlin Akademie der Künste in 1923 and combined the post with teaching composition at the Berlin Akademie für Kirchen- und Schulmusik.

True to his classicist teachers, Kiel and Bargiel, Baussnern was committed to the German Classical-Romantic expressive ideal. His works unite contrapuntal formal principles and chromatic polyphony with an exploration of sound characteristic of the New German School. They reveal a particular affinity for the philosophical and suggest a preoccupation with questions surrounding the meaning of existence.

WORKS
(*selective list*)

OPERAS

Dichter und Welt (J. Petri), 1894, Weimar, 4 June 1897; Dürer in Venedig (3, A. Bartels, after A. Stern), 1897, Weimar, 3 March 1901; Herbort und Hilde (2, E. König), 1901, Mannheim, Hof- und National, 15 Feb 1902; Der Bundschuh (3, O. Erler), 1903, Frankfurt, Stadt, 27 May 1904; Guniöd (P. Cornelius), 1906, Cologne, 15 Dec 1906 [completion of op by Cornelius]; Satyros (2, Baussnern, after J.W. von Goethe), 1922, Basel, 1923

VERA GRÜTZNER

Bautista, Julián (*b* Madrid, 21 April 1901; *d* Buenos Aires, 8 July 1961). Argentine composer of Spanish origin. He started his piano studies very young with Pilar Fernández de la Mora and at the age of 14 began his composition training with the composer Conrado del Campo. Later he taught harmony at the faculty of the Madrid Conservatory. In 1930, together with prominent young composers such as the Halffter brothers, as a member of the Generation of '27, he co-founded in Madrid the Grupo de los ocho (Group of Eight), whose works were characterized by a colourful style with some neo-classical nuances. Bautista's Spanish works (some of which were destroyed when his house was bombarded during the Spanish Civil War) are concise, with diatonic harmony and frequent modulations. The ballet *Juerga* (1921) was first performed in Paris in 1929, and the *Obertura para una ópera grotesca* (1932) won first prize in an international contest sponsored by Union Radio de Madrid. He won two more prizes in 1923 and 1926 with his String Quartets nos.1 and 2 respectively. At the end of the Spanish Civil War he settled in Buenos Aires, his first few years there being largely occupied in the composition of film scores. The output of his Argentine years is low but significant. The *Catro poemas galegos*, which have been compared with Falla's *El retablo* and his Harpsichord Concerto, present a very simple, archaic and rustic melodic line above pseudo-primitive, harsh harmonies, with great economy of means. This work was performed at the 1948 Amsterdam ISCM Festival. His later style is primarily contrapuntal, using advanced harmonies while maintaining a traditional form. His Second Symphony (1957) is the culmination of his orchestral production. This well constructed cyclical work is based on a melodic cell formed by two minor thirds, one ascending and the other descending, forming a chromatic progression. His last work, the Third String Quartet, represents the culmination of his chamber music. Written in 1958, it was the winner of a chamber music competition in Buenos Aires; formally it is close to Bartók's last quartets and shows the composer in his maturity.

WORKS
(*selective list*)

Stage: Interior (drama lírico, 1), 1920, destroyed; Juerga (ballet-pantomima, 1), 1921

Orch: All'antica, suite, 1932; Obertura para una ópera grotesca, 1932; Sinfonía breve, 1956; Sym. no.2 'Ricordiana', 1957

Bawdwine, John. *See* BALDWIN, JOHN.

Bawr, (Alexandrine-)Sophie (Goury de Champgrand), Mme **de** [Comtesse de Saint-Simon, Baronne de Bawr; M. François] (*b* Paris, 8 Oct 1773; *d* Paris, 31 Dec 1860). French composer and author. Though born out of wedlock to a marquis and an opera singer, she was recognized and reared by both parents. In her early years she took lessons from the singer Pierre Garat and the composers Grétry and Nicolas Roze and sang her own songs in salons (she was also an accomplished pianist). She was encouraged in composition by Adrien Boieldieu and the singer Jean Elleviou and may have been friendly with the singer-composer Sophie Gail. During her long life she published, mainly as Mme de Bawr, a number of touching and harmonically expert songs, wrote history books, novels, stories, one-act plays, *mélodrames*, as well as an opera. Some of her writings were translated into German or Spanish. An early feminist, she argued in her writings that the position of women in the arts needed to be improved.

She was briefly married (1801–2) to the social theorist Claude Henri de Rouvroy, Comte de Saint-Simon (1760–1825); Grétry was a witness at the wedding. She ran a salon for Saint-Simon so that he might meet prominent musicians and writers. She illegally retained the title 'Comtesse' after marrying the young Russian Baron de

Bawr in about 1809; however, de Bawr soon died (in about 1810). Left penniless, Mme de Bawr turned to a more systematic professional musical career that lasted decades. During the Bourbon Restoration, she was granted a pension by Louis XVIII.

For the *Encyclopédie des dames* she wrote an *Histoire de la musique* (Paris, 1823) and she published her memoirs, *Mes souvenirs* (Paris, 1853).

WORKS

(*selective list*)

Stage: Les chevaliers du lion (mélodrame, 3, Bawr), lib (Paris, 1804), ?music lost; Léon, ou Le château de Montaldi (op, 3, Bawr), Paris, Théâtre de l'Ambigu-Comique, 22 Oct 1811, lost; Un quart d'heure de dépit (oc, 1), 1813–22, music lost, lib in *F-Pan*

Songs (romances, for 1v, pf, hp or gui): D'aimer besoin puissant (Viot), after 1800; J'étais heureux (Paris, after 1800); A la mémoire d'un être chéri (O, toi qui ne peux plus m'entendre) (Bawr), in *Le souvenir des ménestrels*, no.20 (1814), 78–9

RALPH P. LOCKE

Bax, Sir **Arnold (Edward Trevor)** (*b* Streatham, 8 Nov 1883; *d* Cork, 3 Oct 1953). English composer. Recognized between the wars as one of England's leading young symphonic composers, he wrote evocative, sometimes challenging scores that retained the impulse of a Romantic style.

1. Life. 2. Works. 3. Critical and public acceptance.

1. Life. Bax attended the RAM (1900–05), where he studied composition with Corder; he won a Macfarren Scholarship after two years, but did not attract as much recognition as his contemporaries Benjamin Dale and York Bowen. Though he developed a commanding piano technique, he had no inclination to pursue a career as a performer. He did appear from time to time, however, as an accompanist at the London Music Club, where he was heard by Debussy and Schoenberg. It was his brother Clifford, a writer and playwright, who introduced him to poetry and to Ireland. Influenced by W.B. Yeats's poem *The Wanderings of Oisin*, Bax visited the west coast of the country in 1902, an experience he described (1943) with the proclamation: 'the Celt within me stood revealed'. Fortunate to have a private income, he was able to travel extensively as a young man. Ireland was a favourite destination; for many years he returned to the remote Donegal village of Glencolumbkille for weeks at a time. In his autobiography, he also describes extended visits to Dresden in 1906 (during which he heard an early performance of Strauss's *Salome*) and 1907, and to Russia in 1910. Following his marriage to Elsita Sobrino, the daughter of soprano Luisa and pianist Carlos Sobrino, he moved to Dublin, where he and his wife lived until the spring of 1914. In Ireland he adopted the pseudonym Dermot O'Byrne, under which he published poetry, short stories and three of his four plays, two of which may have been intended as opera librettos.

Between 1911 and the outbreak of World War I, Bax attended all six London seasons of the Ballets Russes. He had already written the Russian ballet score *King Kojata* (1911), which, although never orchestrated, provided musical material for a number of other works. A heart condition made him unfit for military service and although he acted as a special constable at one point, the war seems to have had remarkably little effect on his life or music. A far more profound impact came from the Easter Rising in Dublin in 1916 and the subsequent execution of its leaders, some of whom he knew. He documented these events in his poetry, which, when printed in 1918 as *A Dublin Ballad and Other Poems*, was banned by the British censor.

During the war, Bax had a passionate love affair with the pianist Harriet Cohen and in 1918 he left his wife and two children for her. In the mid-1920s he met Mary Gleaves and for over 20 years maintained relationships with both women. With peace he became one of the leading younger composers of the day, a position reinforced by performances of the significant new works he had written during the war. On the return of the Ballets Russes, he became acquainted with the ballerina Tamara Karsavina, for whom he wrote *The Truth About the Russian Dancers* (1920, rev. 1926), borrowing some of the music from his aborted ballet *King Kojata*. During the 1920s, at the height of his success, he completed his first three symphonies, some choral works, a variety of shorter pieces and chamber music. Although he was briefly considered the leading British symphonist, the première of his Fifth Symphony (15 January 1934) was shortly followed by premières of Vaughan Williams's Fourth Symphony (10 April 1935) and Walton's First Symphony (incomplete, 3 December 1934; complete, 6 November 1935).

In the late 1930s Bax wrote less and less, remarking that he wanted to 'retire, like a grocer'. His knighthood in 1937 came as a surprise to him, as did the post of Master of the King's Music in 1942. At the beginning of World War II he concentrated on his autobiography, *Farewell, My Youth* (London, 1943), a witty sequence of vignettes of people he had met and places he had visited before 1914. He moved to Sussex and for the rest of his life lived in a room above the bar at The White Horse, Storrington. Among his late works are scores for the films *Malta GC* (1942) and *Oliver Twist* (1948), both of which became popular in the concert hall. When Cohen damaged her right hand in 1948, he composed a *Left-Hand Concertante* (1949) for her. By the end of his life much of his earlier music had been forgotten. He was represented to the public by his late and, on the whole, less demanding output, resulting in a somewhat negative critical assessment followed by a long-term neglect of his works after his death. His full output, however, has since been performed and recorded.

2. Works. Bax's early works consist mainly of songs and piano music, but also include the short tone poem *Cathaleen-ni-Hoolihan* (1903–5) and a few other compositions performed while he was a student. Early songs, such as his setting of William Allingham's *The Fairies* (1905), are notable for their complex piano parts, doubtless reflecting his activity as an accompanist at the time. With *The White Peace* ('Fiona Macleod', 1907), one

Arnold Bax, mid-1920s

of his most popular songs, this tendency became less pronounced. Attempts to write an opera on the story of Deirdre produced a five-act libretto and some musical sketches, but these resulted in the tone poems *Into the Twilight* (1908) and *Roscatha* (1910) rather than an operatic work.

Influenced by the orchestral technique of Wagner, Strauss, Glazunov, Sibelius, Debussy, Ravel and Stravinsky, Bax developed a vivid orchestral style. His first popular success came with the impressionistic tone poem *In the Faery Hills* (1909, rev. 1921), conducted by Henry Wood at the 1910 Proms. This succinct and attractive piece is full of characteristic features and its programme, culled from Celtic folklore, indicates the importance of literature in spurring Bax's creativity. Increasingly complex orchestral music followed, not all of which was performed; the technically difficult tone poem *Spring Fire* (1913), for example, was not heard until long after his death. During World War I, Bax wrote the tone poems *The Garden of Fand* (1913–16), *November Woods* (1917) and *Tintagel* (1917–19), all of which sublimate personal emotion in favour of a musical evocation of nature. In the latter two, the sonata matrix which was to dominate many of his symphonic movements can be discerned, but in each case the poetic programme changes the formal emphasis, resulting in individual structures. At first considered challenging and new, these works quickly found a ready public. *Tintagel* remained in the repertory when much of Bax's music was no longer heard. *In memoriam* (1917), on the other hand, written in memory of Patrick Pearse who was executed with the leaders of the Dublin Easter Rising, was not performed until it was recorded by Handley and the BBC PO in 1998.

Irish events are also reflected in a succession of chamber works and in some of Bax's most striking Irish songs. The First String Quartet (1918), which brings a classical clarity of texture and form to its Celtic inspiration, includes a particularly beguiling folksong-like third movement; the Second Quartet (1925), written in a much grittier and more demanding idiom, features some of Bax's most determined contrapuntal writing. The Viola Sonata (1922), the Phantasy Sonata for viola and harp (1927) and the Sonata for Flute and Harp (1928), later arranged as Concerto for Seven Instruments (1936), are typical examples of Bax's tributes to friends such as Lionel Tertis, Raymond Jeremy, May Harrison, Maria Korchinska and Leon Goossens.

Bax produced a romantic Skryabinesque piano sonata as early as 1910. During World War I he wrote a second, an introspective single movement like the first, and in 1921 a third in three movements. The last of these, orchestrated and given a new slow movement that combines eerie stillness with sudden crises, became the First Symphony (1922). The score is both fiercely new, and still romantic in impulse. Contemporary commentators saw the music as Bax's reaction to the war; Bax was ambivalent, however, and it seems more likely that the work reflected his reaction to the Irish events of Easter 1916. This supposition is reinforced by the subjective and passionate Second Symphony (1924, orchestrated 1926), the slow movement of which quotes from and extends the climactic running string motif of *In memoriam*.

During the late 1920s, Bax's attempts to take his orchestral music forward led to a number of false starts. Eventually, after the lightweight *Overture, Elegy and Rondo* (1927), he completed the Third Symphony (1929). This became a pivotal work which, thanks to Wood, enjoyed a short-lived but wide public success. *Winter Legends* (1930) for piano and orchestra followed. Both of these works are in three movements and include extended reflective closing sections ('epilogues'), one of the most distinctive features of Bax's style. During the 1930s Bax wrote four more symphonies, broadly similar in form and language to the first three. In the Fourth (1931), associations between music and nature create a serene emotional character. The Fifth (1932), overtly influenced by Sibelius, includes a popular finale and epilogue in which a grandly reiterated chorale theme builds to a brilliant climax. The Sixth (1934), tautly realized and full of memorable invention and colourful, idiosyncratic orchestration, represents the pinnacle of Bax's symphonic writing. In both the ternary slow movement and tripartite finale, Bax evolves a form that reconciles the competing elements of orchestral tone poem and symphonic development. The final climax and haunting epilogue suggest a passing of worlds; only at the very end of the work is the serenity for which Bax had been searching for 30 years finally achieved.

In the late 1930s Bax worked on the Violin Concerto (1937–8) and the Seventh Symphony (1938–9), both of which are in a more relaxed idiom than the earlier music. In his last years he composed comparatively little, though as Master of the King's Music he wrote *Morning Song* (1946), a short piece for piano and orchestra for Princess Elizabeth's 21st birthday, obligatory fanfares for the 1947 royal wedding and a *Coronation March* (1953).

3. Critical and public acceptance. During his lifetime, Bax saw his works widely performed; only a

small proportion of his output achieved popularity, however, and certainly until the 1930s his music was considered new and difficult. Nevertheless, his works were championed by many artists. He began to be promoted for his later music during World War II, and in the late 1940s a limited repertory of relatively undemanding compositions – the Seventh Symphony, the Violin Concerto, the two film scores *Malta GC* and *Oliver Twist*, the *Morning Song* and the *Left-Hand Concertante* – kept his name in the public eye. These works did little to affirm his critical acceptance among a new generation of critics, however. Only *The Garden of Fand* and *Tintagel* remained in circulation from his earlier output.

The BBC broadcast of Bax's symphonies during 1954–5 and Cohen's broadcast of *Winter Legends* in 1954 introduced a new generation to Bax's music. The Third Symphony was recorded under the auspices of the British Council during World War II, and smaller record companies recorded the Fourth in 1964 and the Sixth in 1967. During the 1970s pioneering revivals of Bax's early orchestral music by the Kensington SO under Leslie Head led the BBC to schedule a number of Bax centenary programmes. These in turn led to further recordings, particularly by Chandos, of Bax's music supported by the Arnold Bax Charitable Trust (established 1985).

WORKS

DRAMATIC

King Kojata (Tamara) (ballet), pf, 1911; Between Dusk and Dawn (ballet), 1917; The Frog Skin (ballet), 1918, lost; The Truth about the Russian Dancers (incid music, J.M. Barrie), 1920, rev. 1926; Malta GC (film score), 1942, orch suite, 1943; Golden Eagel (incid music, C. Bax), 1945; Oliver Twist (film score), 1948, orch suite, 1948; Journey into History (film score), 1952

ORCHESTRAL

Tone poems: Cathaleen-ni-Hoolihan, small orch, 1903–5; A Song of Life and Love, 1905, lost; A Song of War and Victory, 1905; Into the Twilight, 1908; In the Faery Hills, 1909, rev. 1921; Roscatha, 1910; Christmas Eve on the Mountains, 1911, rev. *c*1921; Nympholept, 1912–15; The Garden of Fand, 1913–16; The Happy Forest, 1914–21; November Woods, 1917; Tintagel, 1917–19; The Tale the Pine-Trees Knew, 1931; A Legend, 1944

Syms.: Sym., F-f, op.8, 1907 [not orchd]; Spring Fire, sym., 1913; Sym. no.1, E♭, 1922; Sym. no.2, e and C, 1924–6; Sym. no.3, 1929; Sym. no.4, 1931; Sym. no.5, 1932; Sym. no.6, 1934; Sym. no.7, 1938–9

With solo inst(s): Sym. Variations, E, pf, orch, 1918; Phantasy (Conc.), d, va, orch, 1920; Winter Legends, sinfonia concertante, pf, orch, 1930; Vc Conc., 1932; Saga Fragment, tpt, str, pf, perc [arr. of pf qt]; Vn Conc., 1937–8; Concertino, pf, orch, 1939, unfinished; Morning Song (Maytime in Sussex), pf, orch, 1946; Concertante, eng hn, cl, hn, orch, 1948–9; Concertante (Conc.), pf LH, orch, 1949; Variations on the Name Gabriel Fauré, hp, str, 1949 [also for pf]

Other works: Variations (Improvisations), 1904; A Connemara Revel, 1905; An Irish Ov., 1906; Festival Ov., 1911, rev. 1918; Symphonietta, 1911, unfinished; 4 Pieces (4 Sketches, 4 Irish Pieces), 1912–13, rev. as 3 Pieces, 1928; Prelude to Adonais, 1912, lost; Summer Music, 1917–20, rev. 1932; Sym. Scherzo, 1917, rev. 1933 [arr. of pf work]; Russian Suite, 1919 [arr. of 1912–15 pf works for Diaghilev]; Mediterranean, 1922 [arr. of 1920 pf work]; Cortège, 1925; Romantic Ov., chbr orch, 1926; Northern Ballad no.1, 1927–31; Ov., Elegy and Rondo, 1927; Prelude for a Solemn Occasion (Northen Ballad no.3), 1927–33; Ov. to a Picaresque Comedy, 1930; Sinfonietta, 1932; Northern Ballad no.2, 1933–4; Ov. to Adventure, 1936; Rogue's Comedy Ov., 1936; London Pageant, march and trio, 1937; Paean, 1938 [arr. of 1920 pf work]; Work in Progress, ov., 1943; Victory March, 1945 [based on film score Malta GC]; Coronation March, 1952; 9 fanfares
